### EDITOR'S PREFACE

#### TO THE FIRST EDITION.

Professor Masper does not need to be introduced to English readers. His name is well known in this country as that of one of the chief masters of Egyptian science as well as of ancient Oriental history and archæology. Alike as a philologist, a historian, and an archæologist, he occupies a foremost place in the annals of modern knowledge and research. He possesses that quick apprehension and fertility of resource without which the decipherment of ancient texts is impossible, and he also possesses a sympathy with the past and a power of realizing it which are indispensable if we would picture it aright. His intimate acquaintance with Egypt and its literature, and the opportunities of discovery afforded him by his position for several years as director of the Bulaq Museum, give him an unique claim to speak with authority on the history of the valley of the Nile. In the present work he has been prodigal of his abundant stores of learning and knowledge, and it may therefore be regarded as the most complete account of ancient Egypt that has ever yet been published.

In the case of Babylonia and Assyria he no longer, it is true, speaks at tirst hand. But he has thoroughly studied the latest and best authorities on the subject, and has weighed their statements with the judgment which comes from an exhaustive acquaintance with a similar department of knowledge. Here, too, as elsewhere, references have been given with an unsparing hand, so that the reader, if he pleases, can examine the evidence for himself.

Naturally, in progressive studies like those of Egyptology and Assyriology, a good many theories and conclusions must be tentative and provisional only. Discovery crowds so quickly on discovery, that the truth of to-day is often apt to be modified or amplified by the truth of to-morrow. A single fresh fact may sholly new and unexpected light upon the results we have a long

id cause them to assume a somewhat changed aspect. But

what must happen in all sciences in which there is a healthy growth, and archaeological science is no exception to the rule.

The spelling of ancient Egyptian proper names adopted by Professor Maspero will perhaps seem strange to many English readers. But it must be remembered that all our attempts to represent the pronunciation of ancient Egyptian words can be approximate only; we can never ascertain with certainty how they were actually sounded. All that can be done is to determine what pronunciation was assigned to them in the Greek period, and to work backwards from this, so far as it is possible, to more remote ages. This is what Professor Maspero has done, and it must be no slight satisfaction to him to find that on the whole his system of transliteration is confirmed by the cunciform tablets of Tel el-Amarna. The system, however, is unfamiliar to English eyes, and consequently, for the sake of "the weaker brethren," the equivalents of the geographical and proper names he has used are given in the more usual spelling at the end of the work.

The difficulties attaching to the spelling of Assyrian names are different from those which beset our attempts to reproduce, even approximately, the names of ancient Egypt. The cunciform system of writing was syllabic, each character denoting a syllable, so that we know what were the vowels in a proper name as well as the consonants. Moreover, the pronunciation of the consonants resembled that of the Hebrew consonants, the transliteration of which has long since become conventional. When, therefore, an Assyrian or Babylonian name is written phonetically, its correct transliteration is not often a matter of question. But, unfortunately, the names are not always written phonetically. The cunciform script was an inheritance from the non-Semitic predecessors of the Semites in Babylonia, and in this script the characters represented words as well as sounds. Not unfrequently the Semitic Assyrtancontinued to write a name in the old Sumerian way instead of spelling it phonetically, the result being that we do not know how it was preponneed in their own language. The name of the Chaldean Noah, for instance, is written with two characters which ideographically signify "the sun" or "day of hte." and of the 1 st of which the Sumerian values were ut, below, this, tem, and per, while the second had the value of zi. Were it not that the Chaldwan historian Bêrôssos writer the name Xisuthros, we should have no clue to its Senific pronunciation.

Professor Masper - lear sing and indefatigable industry are well known to me, but I confess I was not prepared for the exhaustive acquaintance he shows 'Assyriological literature. Nothing seems to have escaped his notice.

and books published during the present year, and half-forgotten articles

in obscure periodicals which appeared years ago, have all alike been used and quoted by him. Naturally, however, there are some points on which I should be inclined to differ from the conclusions he draws, or to which he has been led by other Assyriologists. Without being an Assyriologist himself, it was impossible for him to be acquainted with that portion of the evidence on certain disputed questions which is only to be found in still unpublished or untranslated inscriptions.

There are two points which seem to me of sufficient importance to justify my expression of dissent from his views. These are the geographical situation of the land of Magan, and the historical character of the annals of Sargon of Accad. The evidence about Magan is very clear. Magan is usually associated with the country of Melukhkha, "the salt" desert, and in every text in which its geographical position is indicated it is placed in the immediate vicinity of Egypt. Thus Assur-bani pal, after stating that he had "gone to the lands of Magan and Mclukhkha," goes on to say that he "directed his road to Egypt and Kush," and then describes the first of his Egyptian campaigns. Similar testimony is borne by Esar-haddon. The latter king tells us that after quitting Egypt he directed his road to the land of Mclukhkha, a desert region in which there were no rivers, and which extended "to the city of Rapikh" (the modern Raphia) "at the close of the wadi of Ecypt" (the present Wadi El-Arish) After this he received camels from the king of the Arabs, and made his way to the land and city of Magan. The Tel el-Amaroa tablets enable us to carry the record back to the fifteenth century B.C. In certain of the tablets now at Berlin (Winckler and Abel, 42 and 45) the Phoenician governor of the Pharaoh asks that help should be sent him from Mclukhkha and Egypt: "The king should hear the words of his servant, and send ten men of the country of Melukhkha and twenty men of the country of Egypt to defend the city of Goball for the king." And again, "I have sent [to] Pharaoh" (literally, "the great house") "for a garrison of men from the country of Melukhkha, and . . . the king has just despatched a garrison [from | the country of Mclukhkha." At a still earlier date we have indications that Meluklikha and Magan denoted the same a gon of the world. In an old Eabylonian geographical list which belongs to the early days of Chaldean history, Magan is described as "the country of bronze,' and Mclukhkha as "the country of the samdu," or 'malachit ." It as this list which originally led Oppert, Lenormant, and myself independently to the conviction that Magan was to be looked for in the Similtic Peninsula. Magan included, however, the Midian of Scripture, and the city of Magan, called Makkan in Semitic Assyrian, is probably the Makna of classical geography, new represented by the ruins of Mukna.

As I have always maintained the historical character of the annals of Sargon of Accad, long before recent discoveries led Professor Hilprecht and others to adopt the same view, it is as well to state why I consider them worthy of credit. In themselves the annals contain nothing improbable; indeed, what might seem the most unlikely portion of them-that which describes the extension of Sargon's empire to the shores of the Mediterranean - has been confirmed by the progress of research. Ammi-satana, a king of the first dynasty of Babylon (about 2200 B.C.), calls himself "king of the country of the Amorites," and the Tel el-Amarna tablets have revealed to us how deep and long-lasting Babylonian influence must have been throughout Western Asia. Moreover, the vase described by Professor Maspero on p. 600 of the present work proves that the expedition of Naram-Sin against Magan was an historical reality, and such an expedition was only possible if "the land of the Amorites," the Syria and Palestine of later days, had been secured in the rear. But what chiefly led me to the belief that the annals are a document contemporaneous with the events narrated in them, are two facts which do not seem to have been sufficiently considered. On the one side, while the annals of Sargon are given in full, those of his son Naram-Sin break off abruptly in the early part of his reign. I see no explanation of this, except that they were composed while Naram-Sin was still on the throne. On the other side, the campaigns of the two monarchs are coupled with the astrological phenomena on which the success of the campaigns was supposed to depend. We know that the Babylonians were given to the practice and study of astrology from the carliest days of their history; we know also that even in the time of the later Assyrian monarchy it was still customary for the general in the field to be accompanied by the asipu, or "prophet," the ashshaph of Dan. ii. 10, on whose interpretation of the signs of heaven the movements of the army depended; and in the infancy of Ohaldaean history we should accordingly expect to find the astrological sign recorded along with the event with which it was bound up. At a subsequent period the sign and the event were separated from one another in literature, and had the annals of Sargon been a later compilation, in their case also the separation would assuredly have been made. That, on the contrary, the annals have the firm which they could have assumed and ought to have assumed only at the beginning of contemporaneous Babylonian history, is to me a strong testimony in tayour of their genuineness.

It may be added that Bac, loniar scal-cylinders have been found in Cyprus, one of which is of the age of Sargon of Accad, its style and workmanship being the same as that of the cylinder figured on p. 601 of this volume, while the other, though of later date, belonged to a person who describes himself as "the

servant of the deified Naram-Sin." Such cylinders may, of course, have been brought to the island in later times; but when we remember that a characteristic object of prehistoric Cypriote art is an imitation of the scal-cylinder of Chaldaea, their discovery cannot be wholly an accident.

Professor Maspero has brought his facts up to so recent a date that there is very little to add to what he has written. Since his manuscript was in type, however, a few additions have been made to our Assyriological knowledge. A fresh examination of the Babylonian dynastic tablet has led Professor Delitzsch to make some alterations in the published account of what Professor Maspero calls the ninth dynasty. According to Professor Delitzsch, the number of kings composing the dynasty is stated on the tablet to be twenty-one, and not thirty-one as was formerly read, and the number of lost lines exactly corresponds with this figure. The first of the kings reigned thirty-six years, and he had a predecessor belonging to the provious dynasty whose name has been lost. There would consequently have been two Elamite usurpers instead of one.

I would further draw attention to an interesting text, published by Mr. Strong in the Babylonian and Oriental Record for July, 1892, which I believe to contain the name of a king who belonged to the legendary dynasties of Chaldea. This is Samas-natsir, who is coupled with Sargon of Accad and other early monarchs in one of the lists. The legend, if I interpret it rightly, states that "Elam shall be altogether given to Samas-natsir;" and the same prince is turther described as building Nippur and Dur-ilu, as King of Babylon and as conqueror both of a certain Baldakha and of Khumba-sitir, "the king of the cedar-forest." It will be remembered that in the Epic of Gilgames, Khumbaba also is stated to have been the load of the "cedar-forest."

But of new discoveries and facts there is a constant supply, and it is impossible for the historian to keep pace with them. Even while the sheets of his work are passing through the press, the excavator, the explorer, and the decipherer are adding to our previous stores of knowledge. The past year has not fallen behind its predecessors in this respect. In Egypt, Mr. de Morgan's unwearied energy has raised as it were out of the ground, at Kom Ombo, a vast and splendidly preserved temp. of whose existence we had hardly dreamed; has discovered twelfth-dynasty jewellery at Dahshur of the most exquisite workmanship, and at Meir and Assiut has found in tombs of the sixth dynasty painted models of the trades and professions of the day, as well as fighting battalions of soldiers, which, for freshness and lifelike reality, contrast favourably with the models which come from India to-day. In

Babylonia, the American Expedition, under Mr. Haines, has at Niffer unearthed monuments of older date than those of Sargon of Accad. Nor must I, in conclusion, forget to mention the lotiform column found by Mr. de Morgan in a tomb of the Old Empire at Abusir, or the interesting discovery made by Mr. Arthur Evans of scals and other objects from the prehistoric sites of Krete and other parts of the Ægean, inscribed with hieroglyphic characters which reveal a new system of writing that must at one time have existed by the side of the Hittite hieroglyphs, and may have had its origin in the influence exercised by Egypt on the peoples of the Mediterranean in the age of the twelfth dynasty.

# TRANSLATOR'S PREFACE TO THE FIRST EDITION.

In completing the translation of so great a work as "Les Origines," I have to thank Professor Maspero for kindly permitting me to appeal to him on various questions which arose while preparing the volume for English readers. His patience and courtesy have alike been unfailing in every matter submitted for his decision.

\* I am indebted to Miss Bradbury for kindly supplying, in the midst of much other literary work for the Egypt Exploration Fund, the translation of the chapter on the gods, and also of the earlier parts of Chapters I., III., and VI. She has, moreover, helped me in my own share of the work with many suggestions and hints, which her intimate connection with the late Miss Amelia B. Edwards fully qualified her to give.

As in the original there is a lack of uniformity in the transcription and accentuation of Arabic names, I have ventured to alter them in several cases to the form most familiar to English readers.

The spelling of the ancient Egyptian words has, at Professor Maspro's request, been retained throughout, with the exception that the French on has been invariably represented by  $\hat{u}$ , e.g. Khucamou by Khuâmâ. In the copious index, however, which has been added to the English edition, the forms of Egyptian names familiar to readers in this country will be found, together with Professor Maspero's equivalents.

The translation is further distinguished from the French original by the enlargement of the general map, which combines the important geographical information given in the various separate maps scattered throughout the work.

By an act of international courtesy, the director of the Imprimerie Nationale has allowed the beautifully cut hieroglyphic and cunciform type used in the original to be employed in the English edition, and I take advantage of this opportunity to express to him our thanks and appreciation of his graceful act.

M. L. MCCLURE

London, October 11

# TRANSLATOR'S PREFACE TO THE SECOND ENGLISH EDITION.

A NEW edition of the English translation of this work having been called for within a little over a year from its publication, an opportunity was afforded the author to embody in it the results of the latest research. The part dealing with Egypt has consequently been enriched with additions to text and notes, and in the chapter on Chaldara the author has utilized fresh information from the recent works of Tallqvist, Winckler, and Hilprecht, and from Monsieur de Sarzec's latest publications.

The following extract from a letter of Professor Maspero to the translator will show that he has spared no pains to bring his work abreast of the most recent discoveries:—

"La correction des dernières épreuves n'a pas marché aussi vite que je l'aurais souhaité, parceque je voulais étudier les livres nouveaux qui ont paru depuis l'an passé dans le domaine de l'Assyriologie. J'espère pourtant ne pas vous avoir occasionné trop de retard, et vous avoir mis le texte au point des dernières découvertes sans vous avoir obligée à trop remanier la composition."

The translation has been carefully revised throughout, and the pagination of the new edition has been kept uniform with that of the first edition, and also with the French original, so as to facilitate reference.

The three coloured plates emitted in the first edition of the translation have now been added at the author's request.

l oanoa,

Febr ry, 1896.

# TRANSLATOR'S PREFACE TO THE THIRD ENGLISH EDITION.

The following extract from a letter by Professor Maspero to the translator will sufficiently indicate the changes made in this, the third edition of the English translation of "Les Origines:"—

"Cette fois-ci encoro je me suis efforcé de mettre mon texte au courant des progrès accomplis dans nos sciences depuis l'an dernier. Les découvertes d'Amélineau et de Morgan sont encore trop mal connues, et les aperçus que leurs auteurs nous en ont fournis sont trop sommaires, pourque j'aie osé en tirer parti; en revanche, j'ai inséré à leur place probable les documents nouveaux que l'etrie nous avait fait connaître à Ballas et à Neggadéh. Dans les chapitres consacrés à la Chaldée, j'ai pu, grâce à la complaisance amicale de Monsieur Heuzey, indiquer un certain nombre de faits signalés au commencement de cette année même: j'ai donné tous mes soins à compléter la bibliographie de chaque sujet et à revoir les traductions des textes originaux. J'ai été gêné quelquef is par le clichage, mais je crois n'avoir rien omis qu'il importat réellement de faire connaître au lecteur."

In spite of considerable difficulties, the pagination remains the same, the additional pages being numbered 453A, B, etc., and so inserted in the Index.

SANDGATE,
August, 1897.

### PREFACE TO THE FOURTH ENGLISH EDITION.

The fourth edition of the "Dawn of Civilization" is best introduced by a quotation from a letter addressed by Professor Maspero to the translator:

"This new edition contains much fresh matter. As far as Egypt is concerned, I have been able to bring it completely up to date, and have embodied in it the results of the latest discoveries made in the Nile valley by Amélineau, De Morgan, Petrie, and the expirits who assisted the latter in his excavations. The description of the manners and customs of the early Egyptians has been rewritten, and made as complete as possible without indulging in hypothesis. On pp. 112, 112A, and 112B will be found an account of the various methods of burial of which we are as yet cognizant. The theories entertained with regard to the history of the earliest dynastics have been inserted on pp. 232–232D, and are further dealt with on p. 235, and from the nee to the end of the chapter.

"Everything connected with the kings discovered in the necropolis of Abydos is still so obscure that I have treated the subject with the greatest reserve, and have classified those few sovereigns only whose proper names have as yet been ascertained. They all appear to me to belong to the first two dynastics of Manetho, those which he designates—rightly, as we now know—as Thinite. Whether the classification of Manetho and of the annalists who preceded him was in every instance correct is entirely another question, and it is quite posseble that many of the Pharaohs placed by them after Menes may have reigne! previous to that prince. This, however, is again merely a conjecture which can be emirmed only by the discovery of fresh monuments: we must be content for the present to know that the earliest kings remembered by the an ant Egyptians have now been brought to light: Thinite Egypt has emerged from the realm of legend and has entered the pale of history.

"As far as regards the XIIth Dynasty, I still adhere to the date which I

have hitherto adopted. The date recently proposed does not fit in with any well-authenticated facts. Supposing even that the text quoted by Borehardt were of a nature to furnish us with materials for an exact calculation, which is disputable, we are still confronted with the alternative between the fourth and the second millennium B.C. The reasons which led Borehardt to choose the second millennium are all a priori, and, outside the very small circle of scholars who derive their inspirations from Berlin, have called forth objections on every hand.

"I had hoped to have been able to accomplish for the peoples of the Euphrates what I have done for those of the Nile valley; but unfortunately Hilprecht's book, which would have placed so many new documents at my disposal, has not yet appeared, and after waiting for its publication for six months, further delay was rendered impossible on account of the urgent demand for this fourth edition. I have, however, inserted the fresh facts which have come to light in the course of the last three years, and in so doing have taken advantage of the interesting discoveries made by M. de Morgan at Susa. There, however, our historical advance has been more limited than in Egypt, and we have to deal with detail and not with an entire epoch."

Professor Maspero's words render further introduction superfluous, and a reference to the pages he has quoted will show how completely the volume has been brought abreast of last season's excavations in everything relating to Egypt.

#### CHAPTER I.

#### THE NILE AND EGYPT.

The river and its influence upon the formation of the country. The Alexandria its fifther valley and its first political exercises.

LONG, low, level shore, screedy rong above the ser, a chain of vaguely defined and ever shifting lakes and marshes, then the triangular plain beyond, whose apex is thrust thirty leagues into the land—this the Delta of Egypt, has gradually been acquired from the sea, and is as it were the gift of the Nile. The Mediterranean once reached to the foot of the sandy plateau on which stand the Pyramids, and formed a wide gulf where now stretches plain beyond plain of the Delta. The last undulations of the Aribran hills, from Gebel Mokattam to Gebel Genefich, were its boundaries on the east, while a sinuous and shallow channel running between Africa and Asia united the

Prome a drawing by Bendier, after a phet graph by the Dutch triveller Insing τ, talen in 1884. Herodoria in ) εστι Αγραπτίσιοι επικτητ is το γη και αξιν τοι ποταία. The sime expression has been attributed to Heere this of Miletus (Mellier Diron Leighn ulte Historic crum (ele imm v. l.) p. 19, fragin 279 of Diris, Hermes, vol xxii p. 125). It has often been elserved that this phriesectus Egyptian en the face of it, and it certainly recalls such forms of expression is the fellowin, taken from it formula frequently found on function stells. All things en ited by he is not time, the architecture of the present time, the

Mediterranean to the Red Sea. 1 Westward, the littoral followed closely the contour of the Libyan plateau; but a long limestone spur broke away from it at about 31° N., and terminated in Cape Abûkîr.2 The alluvial deposits first filled up the depths of the bay, and then, under the influence of the currents which swept along its castorn coasts, accumulated behind that rampart of sandhills whose remains are still to be seen near Benha. Thus was formed a miniature Delta, whose structure pretty accurately corresponded with that of the great Delta of to-day. Here the Nile divided into three divergent streams, roughly coinciding with the southern courses of the Rosetta and Damietta branches, and with the modern canal of Aba Meneggeh. The ceaseless accumulation of mud brought down by the river soon overpassed the first limits, and steadily encroached upon the sea until it was carried beyond the shelter turnished by Cape Abûkîr. Thence it was gathered into the great littoral current flowing from Africa to Asia, and formed an incurvated coast-line ending in the headland of Casios, on the Syrian frontier. From that time Egypt made no further increase towards the north, and her coast remains practically such as it was thousands of years ago: " the interior alone has suffered change, having been dried up, hardened, and gradually raised. Its inhabitants thought they could measure the exact length of time in which this work of creation had been accomplished. According to the Egyptians, Menes, the first of their mortal kings, had found, so they said, the valley under water. The sea came in almost as far as the Fayûm, and, excepting the province of Thebes, the whole country was a postilential swamp.4 Hence, the necessary period for the physical formation of Egypt would cover some centuries after Menes. This is no longer considered a sufficient length of time, and some modern geologists declare that the Nile must have worked at the formation of its own estuary for at least seventy-four thousand years.5 This figure is certainly exaggerated, for the

hieroglyphic texts have yielded rathing altogether corresponding to the exact terms of the Greek historians—gift (δωροι) of the Nile, or its natural product (ξργον) (Austoria, Meteorologica, 1 14, 11).

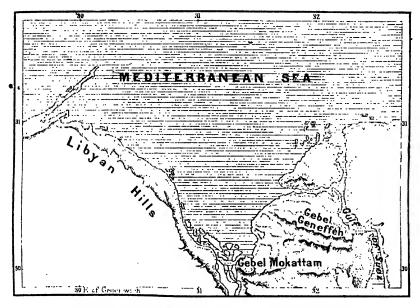

<sup>&</sup>lt;sup>1</sup> The formation of the Delt; was studied and explained at length, more than forty years ago, by There or Brandon, in his Legons de Géologie, vol. i. pp. 405-492. It is from this book that the theories set forth in the latest works on Fgypt are still taken, and generally without any important modification.

<sup>&</sup>lt;sup>2</sup> See Leil D. Blatmont, Irgons de Geologie, vol. i. p. 483, et seq., as to the part played in the formation of the const-line by the lime-stone ridge of Abükîr; its composition was last described by ONOAR FRAMS, Aus. Jun. 7 on Orient, vol. 1. pp. 175, 176.

<sup>\*</sup> Herodores, ii. 4; c xeix.

<sup>&</sup>lt;sup>5</sup> Others, as for example Schwinkfurth (Bulletin de l'Institut Égyptien, 1° série, vol. xii. p. 206), are more moderate in their views, and think "that it must have taken about twenty thousand years for that alluvial deposit which now forms the arable soil of Egypt to have attained wits present depth and fertility."

alluvium would gain on the shallows of the ancient gulf far more rapidly than it gains upon the depths of the Mediterranean. But even though we reduce the period, we must still admit that the Egyptians little suspected the true age of their country. Not only did the Delta long precede the coming of Menes, but its plan was entirely completed before the first arrival of the Egyptians. The Greeks, full of the mysterious virtues which they

THE MOUTH OF THE NILE PREVIOUS TO THE FORMATION OF THE DELTA.

attributed to numbers, discovered that there were seven principal branches, and seven mouths of the Nile, and that, as compared with these, the rest were but false mouths.\(^1\) As a matter of fact, there were only three chief outlets. The Canopic branch flowed westward, and fell into the Mediterranean near Cape Abûkîr, at the western extremity of the arc described by the coast-line.\(^2\) The Pelusiac branch followed the length of the Arabian chain, and flowed forth at the other extremity; and the Sebennytic stream almost bisected the triangle contained between the Canopic and Pelusiac channels. Two thousand years ago, these branches separated from the main river at

<sup>1</sup> Ψευδοστόματα was the word used by the Alexandrian geographers and retained by Strabo (xvi. pp. 788, 801); cf. Pinny, H. Nat., v. 10: "Duodecim enim repperiuntur, superque quattuor, que ipsi falsa ora appellant."

<sup>&</sup>lt;sup>2</sup> Lancret retraced the course of this branch, but death prevented him from publishing his discovery and an account of all which it involved (LANGRET, Notice sur la Branche Canopique, with an Addition by JOMARD, in the Description de l'Égypte, vol. viii. pp. 19-26).

the city of Cerkasoros, nearly four miles north of the site where Cairo now stands. But after the Pelusiae branch had ceased to exist, the fork of the river gradually were away the land from age to age, and is now some nine miles lower down. These three great waterways are united by a network of artificial rivers and canals, and by ditches—some natural, others dug by the hand of man, but all ceaselessly shifting. They silt up, close, open again, replace each other, and ramify in innumerable branches over the surface of the soil, spreading life and fertility on all sides. As the land rises towards the south, this web contracts and is less confused, while black mould and cultivation alike dwindle, and the fawn-coloured line of the desort comes into sight. The Libyan and Arabian hills appear above the plain, draw nearer to each other, and gradually shut in the horizon until it seems as though they would unite. And there the Delta ends, and Egypt proper has begun.

It is only a strip of vegetable mould stretching north and south between regions of drought and desolation, a prolonged oasis on the banks of the river, made by the Nile, and sustained by the Nile. The whole length of the land is shut in between two ranges of hills, roughly parallel at a mean distance of about twelve miles.<sup>3</sup> During the earlier ages, the river filled all this intermediate space, and the sides of the hills, polished, worn, blackened to their very summits, still bear unmistakable traces of its action. Wasted, and shrunken within the deeps of its ancient bed, the stream now makes a way through its own thick deposits of mud. The bulk of its waters keeps to the east, and constitutes the true Nile, the "Great River" of the hieroglyphic inscriptions.<sup>1</sup>

¹ According to Brugs II (Geogr. Ins., vol. i. pp. 214, 296), the name of Kerkasoros (Ill rodot) s, ii. 15, 17, 97), or Kerkésûra (Strabo, vvii. p. 806), has its Egyptian origin in Kerk osiri. But the Greek transcription of Kerk-osiri would have been Kerkosiris, of which Herr Wilchen has found the variant Kerkeviris among names from the Fayûm (Wilchen, Fypptische Engenacem in Griechischen Texten, in the Zeitschrift für Egyptische Sprache, 1883, p. 162). Herr Wilchen proposes to correct the text of Herodotus and Strabo, and to introduce the reading Kerkeviris in place of Kerkasoros or Kerkésûna. Professor Erman considers that Kerkeusiris means The Habitation of Osiris, and contains the radical Konké, Kerké, kerké, kerkérasusful Miamûn, and in the nestern name of Girgeh. The site of El-Akhas, which D'Anville identified with that of Kerkasoros (Memores geographiques sur PT-gypts, p. 73), is too far north. The amennt city must have be a situate in the neighbourhood of the present town of Embåbgh.

<sup>2</sup> By the end of the Byzantine period, the fork of the river lay at some distance south of Shetnuti, the present Shatanuti, which is the spot where it now is (Champolaton, 12 Lyppic sous les Pharaons, vol. ii. pp. 28, 147-151). The Arab geographers call the head of the Delia Batherl-Baganuti, the Cow's 13 Hy. America, in his Voyage on Typpic et en Nubic, p. 120, says, "May it not be that this name, denoting the place where the most fertile part of Egypt begins, is a remaiscence of the Cow Goddess, of Isis, ... symbol of fecundity, and the personification of Egypt?"

<sup>&</sup>lt;sup>3</sup> De Rozalen estimated the mean breadth as being only a little over nine miles (De la constitution physique de l'1 gypte et de ses rapports avec les anciennes institutions de cette contrée, in the Description de l'Egypte, vol. xx. p. 270).

<sup>\*</sup> Ialūr-āū, Iaūr āū, which becomes Iar-o, Ial-o in the Coptic (Виськей, Geogr. Ins., vol. i. pp. 78, 79; and Dictionnaire Geographique, pp. 81-88). The word Phiala, by which Timeu's the mathematician designated the sources of the Nile (Pliny, Hist. Nat., v. 9; cf. Solinus, Polyhist., ch. xxxv.),

#### THE APPEARANCE OF THE BANKS.

A LINE OF LADEN CAMELS EVERGES FROM A HOLLOW OF THE UNDURATING ROAD.

A second arm flows close to the Libyan desert, here and there formed into canals, elsewhere left to follow its own course. From the head of the Delta to the village of Derût it is called the Bahr-Yûsuf; beyond Derût-up to Gebel Silsileh-it is the Ibrâhimiyeh, the Sohâgîyeh, the Raiân. But the ancient names are unknown to us. This Western Nile dries up in winter throughout all its upper courses: where it continues to flow, it is by scanty accessions from the main Nile. It also divides north of Henassich, and by the gorge of Illahûn sends out a branch which passes beyond the hills into the basin of the Fayûm. The true Nile, the Eastern Nile, is less a river than a sinuous lake encumbered with islets and sandbanks, and its navigable channel winds capriciously between them, flowing with a strong and steady current below the steep, black banks cut sheer through the alluvial earth. There are light groves of the date-palm, groups of acacia trees and sycamores, square patches of barley or of wheat, fields of beans or of bersim,<sup>2</sup> and here and there a long bank of sand which the least breeze raises into whirling clouds. And over all there broods a great silence, searcely broken by the cry of birds, or the song of rowers in a passing boat. Something of human life may stir on the banks, but it is softened into poetry by distance. A half-veiled woman, bearing a bundle of herbs upon her head, is driving her goats before her. An irregular line of asses or of laden camels emerges from one hollow of the undulating road only to disappear within another. A group of peasants, crouched upon the shore, in the ancient posture

is only this name Ialo preceded by the masculino article phi, ph. Ptolony the geographer translated the native name by an exact equivalent, δ μέγας ποταμός, the great river (Bacasa, op. cit., pp. 78, 79).

1 From a drawing by Boudier, after a photograph by Insinger, taken in 1881.

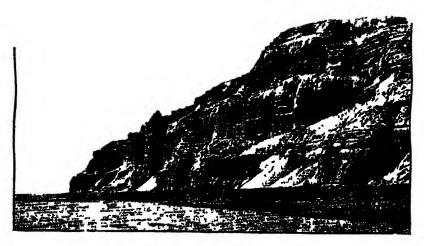

<sup>&</sup>lt;sup>2</sup> Bersim is a kind of trefoil, the Trifolium Alexandrinum of Linkers. It is very common in Egypt, and the only plant of the kind generally cultivated for fedder (RAFII NEAL-DILLIE, Histoire des plantes cultivees on Égypte, in the Description de l'Égypte, vol. xix. p. 59, 594.).

of knees to chin, patiently awaits the return of the ferry-boat. A dainty village looks forth smiling from beneath its palm trees. Near at hand it is all naked

filth and ugliness: a cluster of low grey huts built of mud and laths; two or three talker houses, whitewashed; an enclosed square shaded by sycamores;

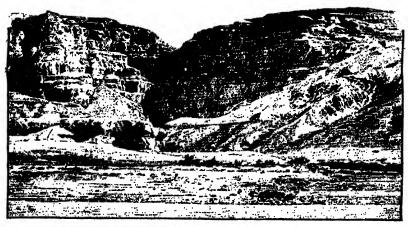

GIBIT ARÎLÊDA, DREADED BY IIII SAUGES

a few old men, each scated peacefully at his own door; a confusion of fowls, children, goats, and sheep; half a dozen boats made fast ashore. But, as we

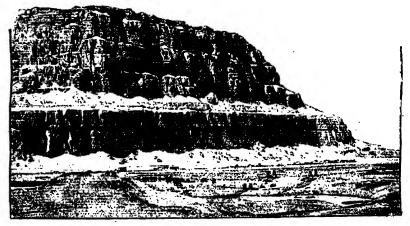

<sup>1-2</sup> From drawings by Boudier, after photographs by lusinger, taken in 1886

pass on, the wretchedness all fades away; meanness of detail is lost in light, and long before it disappears at a bend of the river, the village is again clothed with gaiety and serene beauty. Day by day, the landscape repeats

PART OF GEBEL SHÈKH HERÎDI.1

itself. The same groups of trees alternate with the same fields, growing green or dusty in the sunlight according to the season of the year. With the same measured flow, the Nile winds beneath its steep banks and about its

THE HILL OF KASE ES-SAYYAD.2

scattered islands. One-village succeeds another, each alike smiling and sordid under its crown of foliage. The terraces of the Libyan hills, away beyond the Western Nile, scarcely rise above the horizon, and lie like a white edging between the green of the plain and the blue of the sky. The

<sup>1-2</sup> From drawings by Boudier, after photographs by Insinger, taken in 1882.

Arabian hills do not form one unbroken line, but a series of mountain masses with their spurs, now approaching the river, and now withdrawing to the desert at almost regular intervals. At the entrance to the valley, rise Gebel Mokattam and Gebel el-Ahmar. Gebel Hemûr-Shemûl and Gebel Shêkh Embârak next stretch in echelon from north to south, and are succeeded by Gebel et-Têr, where, according to an old legend, all the birds of the world are annually assembled. Then follows Gebel Abûtêda, dreaded by the sailors for its sudden gusts.2 Limestone predominates throughout, white or yellowish, broken by veins of alabaster, or of red and grey sandstones. Its horizontal strata are so symmetrically laid one above another as to seem more like the walls of a town than the side of a mountain. But time has often dismantled their summits and loosened their foundations. Man bas broken into their façades to cut his quarries and his tombs; while the current is secretly undermining the base, wherein it has made many a breach. As soon as any margin of mud has collected between cliffs and river, halfah and wild plants take hold upon it, and date-palms grow there- whence their seed, no one knows. Presently a hamlet rises at the mouth of the ravine, among clusters of trees and fields in miniature. Beyond Siût, the light becomes more glowing, the air drier and more vibrating, and the green of cultivation loses its brightness. The angular outline of the dôm-palm mingles more and more with that of the common palm and of the heavy sycamore, and the castor-oil plant increasingly abounds. But all these changes come about so gradually that they are effected before we notice them. The plain continues to contract. At Thebes it is still ten miles wide; at the gorge of Gebelên it has almost disappeared, and at Gebel Silsileh it has completely vanished. There, it was crossed by a natural dyke of sandstone, through which the waters have with difficulty scooped for themselves a passage. From this point, Egypt is nothing but the bed of the Nile lying between two escarpments of naked rock.3

<sup>1</sup> In Marriz's Description of Egypt. Bulak Edition, vol. i. p. 31 (cfr. Bourrant, Topographic de PEgypte, vol. i. p. 87), we read: "Every year, upon a certain day, all the herous (Bourra, Andea bubulous of Covers) semble at this mountain. One after another, each puts his beak into a cleft of the hill until the cleft closes upon one of them. And then forthwith all the others fly away. But the bird which has been a night struggles until he dies, and there his body remains until it has fallen into dust." The same tale is told by other Arab writers, of which a list may be seen in Éthene Quatremère, Mémoires historiques et geographiques sur l'Égypte et quelques contras roisines, vol. 1. pp. 31-33. It faintly recalls that ancient tradition of the Cleft at Abydos, whereby souls must pass, as human-headed birds, in the leach the other world (Leele au Abydos, in the Proceedings of the Society of Biblical Archwology, vol. xv. pp. 119, 150).

<sup>&</sup>lt;sup>2</sup> EBLIS, Cicerone durch das alte- und neu-Egypten, vol. ii, pp. 157, 158.

<sup>\*</sup> The garge of Gobel Silsiloh is about 3910 feet in length (P. S. Gibard, Observations sur la vallée de l'Égypte et sur l'exhaussement séculaire du sol qui la recouvre, in the Description de l'Égypte, vol. xx. p. 35); its width at the narrowest point is 1610 feet (Isamber, Lyppte, p. 590). See De Rozière, De la Constitution physique de l'Égypte, in the Description de l'Égypte, vol. xxi. p. 26, et seq.,

Further on the cultivable land reappears, but narrowed, and changed almost beyond recognition. Hills, hown out of solid sandstone, succeed each other at distances of about two miles, low, crushed, sombre, and formless. Presently a forest of palm trees, the last on that side, announces Aswân and Nubia Five banks of granite, ranged in lines between latitude 21 and 18 N., cross Nubia from east to west, and from north-east to south-west, like so many ramparts thrown up between the Mediterranean and the heart of Africa. The Nile has attacked them from behind, and made its way over them one after

INDIANCE TO THE HEST CALARACT !

another in rapids which have been glorified by the name of cataracts. Classic writers were pleased to describe the river as hurled into the gulfs of Syene with so great a roar that the people of the neighbourhood were deafened by it.<sup>3</sup> Even a colony of Persians, sent thither by Cambyses, could not bear the noise of the falls, and went forth to seek a quieter situation.<sup>4</sup> The first cataract is a kind of sloping and sinuous passage six and a quarter miles in length, descending from the island of Philae to the port of Aswân, the aspect of its approach relieved and brightened by the ever green groves of Elephantinê.

and the recent work of Cuiuv, Le Nil, le Soudan, 11 qqpt, pp. 77, 78, with regard to the principal barrier at Gebel Sil deh. Chelu considers that it was broken through before the advent of man in Fgypt, where is Wilkinson (in Rawinson's Herodolus, v. 1 m. p. 298), followed by A. Wiedemann (Lapptische Genetichte, vol. ii. p. 255), maintains that it lasted until near the Hyksos or Shepherd times

blulca, Quast. Natural, 11. § 2.

Beyond Elephantinô are cliffs and sandy beaches, chains of blackened "roches moutonnées" marking out the beds of the currents, and fantastic reefs, sometimes bare, and sometimes veiled by long grasses and climbing plants, in which thousands of birds have made their nests. There are islets, too, occasionally large enough to have once supported something of a population, such as Amerade, Salûg, Schêl. The granite threshold of Nubia is broken beyond Schêl, but its *débris*, massed in disorder against the right bank, still seem to dispute the passage of the waters, dashing turbulently and roaving as they flow along through tortuous channels, where every streamlet is broken up into small cascades. The channel running by the left bank is always navigable.

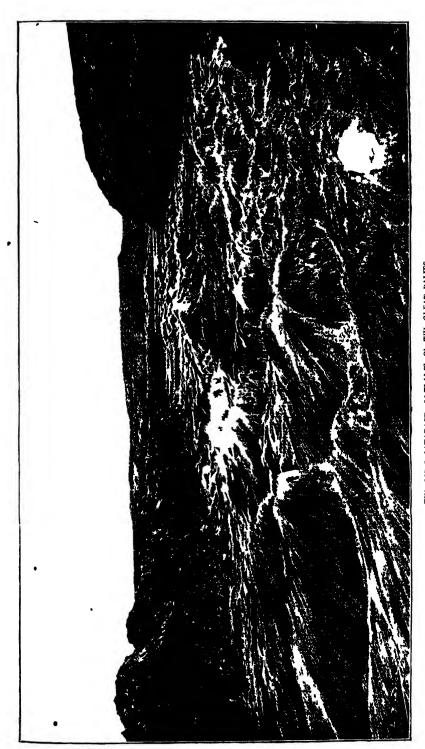

FAILANCE TO MUDIA.

During the inundation, the rocks and sandbanks of the right side are completely under water, and their presence is only betrayed by eddies. But on the river's reaching its lowest point a fall of some six feet is established, and there big boats, hugging the shore, are hauled up by means of ropes, or easily drift down with the current.<sup>2</sup> All kinds of granite are found together in this corner of Africa. There are the pink and red Syenites, porphyritic granite, yellow granite, grey granite, both black granite and white, and granites veined with black and veined with white.<sup>3</sup> As soon as these disappear behind us, visious sandstones begin to crop up, allied to the coarsest calcaire grossier. The hills bristle with small split blocks, with peaks half overturned, with rough and denuded mounds. League beyond

NUBIA. 15

the second granite bank is broken through, and the second cataract spreads its rapids over a length of four leagues: the archipelago numbers more than 350 islets, of which some sixty have houses upon them and yield harvests to their inhabitants. The main characteristics of the first two cataracts are

repeated with slight variations in the cases of the three which follow, - at Hannek, at Guerendid, and El-Hû-mar.<sup>2</sup> It is Egypt still, but a joyless Egypt bereft of its brightness; impoverished, disfigured, and almost desolate. There is the same double wall of hills, now closely confining the valley, and again withdrawing from each other as though to flee into the desert. Everywhere are moving sheets of sand, steep black banks with their narrow strips of cultivation, villages which are scarcely visible on account of the lowness of their huts. The syca-

LNIBANCE TO THE SECOND CAPARACE.3

more ceases at Gebel-Barkal, date-palms become fewer and finally disappear. The Nile alone has not changed. As it was at Philæ, so it is at Berber. Here, however, on the right bank, 600 leagues from the sea, is its first affluent, the Takazze, which intermittently brings to it the waters of Northern Ethiopia. At Khartûm, the single channel in which the river flowed divides; and two other streams are opened up in a southerly direction,

<sup>&</sup>lt;sup>1</sup> A list of the Nubian names of these rocks and islets has been somewhat incorrectly drawn up by J. Rivaud, Tableau de l'Typpte, de la Nubic et des lieux cuconvoisins, pp. 55-60 (towards the end of the volume, after the Vocabulaires). Rifaud only counted forty-four cultivated islands at the beginning of this contury.

<sup>&</sup>lt;sup>2</sup> The cataract system has been studied, and its plan published by E. D. Gotten an (Descataractes du Nil et specialement de celles de Hannek et de Kaybar, 1867, Paris, Ito), and later again by Chi Lu (Le Nil, le Soudan, l'Égypte, pp. 29-73).

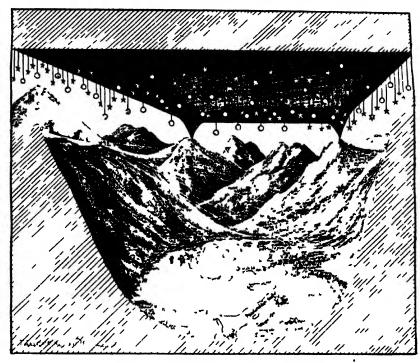

View taken from the top of the rocks of Abusîr, after a photograph by Insinger, in 1881

cach of them apparently equal in volume to the main stream. Which is the true Nile? Is it the Blue Nile, which seems to come down from the distant mountains? Or is it the White Nile, which has traversed the immense plains of equatorial Africa. The old Egyptians never knew. The liver kept the secret of its source from them as obstinately as it withheld it from us until a few years ago. Vainly did their victorious armies follow the Nile for months together as they pursued the tribes who dwelt upon its banks, only to find it as wide, as full, as irresistible in its progress as ever. It was a fresh-water sea, and sea – iaima, iôma—was the name by which they called it.

The Egyptians therefore never sought its source. They imagined the whole universe to be a large box, nearly rectangular in form, whose greatest diameter, was from south to north, and its least from east to west.<sup>2</sup> The earth, with its alternate continents and seas, formed the bottom of the box; it was a narrow, oblong, and slightly concave floor, with Egypt in its centre.<sup>3</sup> The sky stretched over it like an iron ceiling, flat according to some,<sup>4</sup> vaulted according to others.<sup>5</sup> Its carthward face was capriciously sprinkled with lamps hung from strong cable,<sup>6</sup> and which, extinguished or unperceived by day, were lighted, or became visible to our eyes, at night.<sup>7</sup> Since this ceiling could not remain in mid-air without support, four columns, or rather four forked

- 1 Maspero, Les Contes populaires de l'Egypte ancienne, 2nd edition, pp 20, 177. With regard to the ancient comparison of the Nile to a sca, see Latronne, Recherch's géographiques et critiques su le liere " De Mensura Orbis Terra," composé en Islande au commencement du ix sucle par Dieuil; text, p. 25, § 8. For Arab authorities on the same subject, see S. de Saoy, Chrestomathie arabe, 2nd edition, vol. 1, pp. 13-15.
- <sup>2</sup> Manero, Lindes de Mythologie et d'Archéologie égyptiennes, vol. i. pp. 159-162, 330, et seq., and vol. ii. pp. 205-208 (cf. Bulletin de l'Institut égyptien, 2nd series, vol. vi. pp. 19, 20, and Itecue de l'Illatoire des Religions, vol. aviii. pp. 206-270). For analogous ideas, even in Byzantine times, seo Litronne's memoir on the Opinions cosmographiques des Peres de l'Église ((Luires choisies, 2nd series, vol. i. p. 382, et seq.).
- <sup>2</sup> Horapollo, Hieroglyphica (Ltinans' edition), i. xxi. p. 31: ή Αίγυπτίων γή, ἐπεὶ μέση τής οἰκουμένης ὑπάρχει. Compare a tragment by Homer Thimedistes, in Storics, Felog., i. 52: Ἐπεὶ δὲ ἐν τῷ μέσῳ τής γής ἡ των τρογωνων ἡμῶν ἰεροτάτη χωρά. . . . A late hieroglyphic group is so arranged as to express the same who, and can be read the middle land.
- 4 To my knowledge, Of Veria was the first to protect that "the Egyptians believed that the sky was of iron or steel" (The December of the Feret VAimant, lear nomed lear mage dans VAncience Egypte, in the Melanges d'arc'éologie, vol. 1. pp. 9, 10. So well established was the belief in a sky-centing of iron, that it was preserved in common speech by means of the name given to the metal itself, viz. Bai-ni-pit (in the Ceptic Benipi benipi) metal of heaven (Charas, l'Antiquité historique, 1st edition, pp. 64-67).
- This is sufficiently proved by the more form of the character , used in the hieroglyphs for heaven, or the heavenly deities.
- Certain arched stells are surmounted by the hierorlyph given in the preceding note, only in these cases it is curved to represent the vaulted sky. Brugsch has given several good examples of this conception of the firmament in his Religion and Mythologic der alten Lyppter, p. 203, et seq.
- The variants of the sign for night \*\*. The most significant. The end of the rope to which the star is attached passes over the sky, —, and falls free, as though arranged for drawing a lamp up and down when lighting or extinguishing it. And furthermore, the name of the stars—khabisa—is the same word as that used to designate an ordinary lamp.

tiunks of trees, similar to those which maintained the primitive house, were supposed to uphold it. But it was doubtless feared lest some tempest should overturn them, for they were superseded by four lofty peaks, using at the four

N AITEMIT TO RETRESENT THE TOTALIAN UNIVERSE."

cardinal points, and connected by a continuous chain of mountains. The Egyptians knew little of the northern peak: the Mediterranean, the "Very Green," unterposed between it and Egypt, and prevented their coming near enough to

The words designating hunneaucs, storms, or any kind of citaelysm, are followed by the sign ###, which represents the sky as detached and fulling from its four supporting pillers. Megicians sometimes threatened to overthrow the four pillers if the gods would not obey their orders.

Section taken at Heimopolis To the left, is the lank of the sun on the celested river

I the name of *Uaz-oret*, the Very Greene, was first recognized by Birch (The Annals of 71 times 111, in Archivologia, volument p. 162, and p. 46 of the report); E of Robel (Votice de piel pies t ster hieroglyphiques recomment publics par M. Greene dans P. Ithenseum Francais, 1855, pp. 12-14 of the report), and especially Birch is (Geog. Inch., vol. 1 pp. 57-40) completed this doministration. The Red Scales called Quin-Ourt the Very Black.

see it. The southern peak was named Apit-to,1 the Horn of the Earth; that on the east was called Bakhû, the Mountain of Birth; and the western peak was known as Manû, sometimes as Onkhit, the Region of Life.2 Bakhû was not a fictitious mountain, but the highest of those distant summits seen from the Nile in looking towards the Red Sca. In the same way, Manû answered to some hill of the Libyan desert, whose summit closed the norizon.8 When it was discovered that neither Bakhu nor Manu were the limits of the world, the notion of upholding the celestial roof was not on that account given up. It was only necessary to withdraw the pillars from sight, and imagine fabulous peaks, invested with familiar names. These were not supposed to form the actual boundary of the universe; a great river-analogous to the Ocean-stream of the Greeks-lay between them and its utmost limits. This river circulated upon a kind of ledge projecting along the sides of the box a little below the continuous mountain chain upon which the starry heavens were sustained. On the north of the ellipse, the river was bordered by a steep and abrupt bank, which took its rise at the peak of Manû on the west, and soon rose high enough to form a screen between the river and the earth. The narrow valley which it hid from view was known as Dait from remotest times.1 Eternal night enfolded that valley in thick darkness, and filled it with dense air such as no living thing could breathe.5 Towards the east the steep bank rapidly declined, and ceased altogether a little beyond Bakhû, while the river flowed on between low and almost level shores from east to south, and then from south to west.6 The sun was a disc of fire placed upon a boat.7 At the same equable rate, the river carried it round the ramparts

Dead (Naville's edition, vol. i. pls. xxx., cxliv.).

<sup>1</sup> Compare the expressions, Nότου κέρας, Έσπέρου κέρας, of the Greek geographers. Barasca was the first to note that Apit to is placed at the southern extremity of the world (G. Ins., vol. i. pp. 35, 36; vol. ii. p. 52). He has hypothetically identified the Horn of the Earth with the Mountains of the Moon of the Arab geographers. I believe that the Egyptians of the great Theban period (eighteenth to twentieth dynastics) indicated by that name the mountain ranges of Abyssinia. In the course of their raids along the Blue Nile and its affluents, they saw this group of summits from afar, but they never reached it.

<sup>&</sup>lt;sup>2</sup> With regard to Bákhá and Maná, see an article by Brussch (Veber den Ost- und Westpunkt des Sonnenlaufes nach è a altagyptischen Vorstellungen, in the Zeitschrift, 1861, pp. 73-76), which is a digest of indications turnished by Dunchen. See also Brussch, Die altägyptische Völkerlafel (in the Verhandlung des 5 (rien'alisten Congresses, vol. 11., Afrikanische Sektion, pp. 62, 63), and Marpero, l'tudes de Mythologie et d'Anchéologie egyptiennes, vol. ii pp. 6-8 (cf. Revue de l'Histoire des Religions, vol. xv pp. 270-272) Brussch places the mountain of Bakhû at Gebel Zmūrud, å little too far south.

<sup>&</sup>lt;sup>3</sup> In Ptolemaic lists, Manû is localized in the Libyan none of Lower Egypt, and ought to be found somewhere on the road lease; through the desert to the Wady Natran (Brossen, Dictionnaire geographique, p. 259).

<sup>&#</sup>x27;The name of Datt, and the epithet Datti, "dweller in Datt," which is derived from it, are frequently met with in Pyramid texts. Hence they must belong to the older strata of the language.

Kakûi samûi, Marpeno, Liules de Mythologie et d'Archeologie egyptiennes, vol. ii. p. 31 (cf. Revue de l'Histoire des Religions, vol. xvii. p. 274).

Mastero, Études de Mythologie et d'Archéologie égyptic nnes, vol. ii. pp. 16-18 (cf. la Revue de l'Histoire des Religions, vol. xviii. pp. 266-268, where all these conceptions are indicated for the first time).
 So the native artists represented it; as, for example, in several vignettes of the Book of the

of the world. From evening until morning it disappeared within the gorges of Dait; its light did not then reach us, and it was night. From morning until evening its rays, being no longer intercepted by any obstacle, were freely shed abroad from one end of the box to the other, and it was day. The Nile branched off from the celestial river at its southern bend; hence the south was the chief cardinal point to the Egyptians, and by that they oriented themselves, placing sunrise to their left, and sunset to their right.3 Before they passed beyond the defiles of Gobel Silsilch, they thought that the spot whence the celestial waters left the sky was situate between Elephantinê and Phile, and that they descended in an immense waterfall whose last leaps were at Syene. It may be that the tales about the first cataract told by classic writers are but a far-off echo of this tradition of a barbarous age.3 Conquests carried into the heart of Africa forced the Egyptians to recognize their error, but did not weaken their faith in the supernatural origin of the river. They only placed its source further south.4 and surrounded it with greater marvels. They told how, by going up the stream, sailors at length reached an undetermined country, a kind of borderland between this world and the next, a "Land of Shades," whose inhabitants were dwarfs, monsters, or spirits.5 Thence they passed into a sea sprinkled with mysterious islands, like those enchanted archipelagoes which Portuguese and Breton mariners were wont to see at times when on their voyages, and which vanished at their approach. islands were inhabited by serpents with human voices, sometimes friendly and sometimes cruel to the shipwrecked. He who went forth from the islands could never more re-enter them: they were resolved into the waters and lost within the bosom of the waves.6 A modern geographer

<sup>&</sup>lt;sup>1</sup> The classic writers themselves knew that, according to Egyptian belief, the Nile flowed down from heaven: 'Οσιρίς ἐστιν ὁ Νείλος, ὅν ἐξ οὐρανοῦ καταφέρεσθαι οἰονται (Polphyry, in Euslaus, Prap. Trang., iii. 11, 54, et seq.). The legend of the Nile having its source in the ocean stream was but a Greek transposition of the Egyptian doctrine, which represented it as an arm of the celestial river whereon the sun sailed round the carth (Ηικορογίς, ii. 21; Ποροκίς, i. 37).

<sup>&</sup>lt;sup>2</sup> This Egyption method of orientation was discovered by Charas, Les Inscriptions des Mines d'or, 1862, p. 32, et seq.

<sup>\*</sup> MANTERO, Îtudes de Uythologie et d'Archéologie sypptiennes, vol. ni. pp. 17, 18 (cf. Rerue de l'Histoire des Religions, vol. xvni. pp. 269, 270); cf. p. 11 of the present volume.

It was perhaps a recollection of some such legend as this which led the Nubians speaking to Burckhardt, to describe the second cataract "as though falling from heaven" (BURGERIANDE, Travels in Nubia, p. 78, noto 2) There must have been a time when the sources of the Nule stopped near Wady Halfah, or Semneh, before recoding further towards Central Africa.

<sup>&</sup>lt;sup>5</sup> In the time of the sixth dynasty, in the account of the voyages of Hukhûf, mention is made of The Land of Spirits (Schiarabella, Una Tomba Egiziana imedia della VI: Dinastia con iscozioni storiche e geografiche, pp. 21, 33, 31; cf. Maspero, Revue Critique, 1892, vol. 11. pp. 362, 366). The Land of Spirits was vaguely placed near the Land of Phannt—that is to say, towards the Aromatifica Regio of the Graco-Roman geographers.

This is the subject of a tale which was discovered and published by M. Golinscheff, in 1881 (Sur un ancien conte égyptien, 1881, Berlin), and in the Abhandlungen of the Oriental Congress at Berlin, African Section, pp. 100-122). See also Mastero, Les Contes populaires de l'Ancienne Egypte, 2nd edit., pp. 131-146.

can hardly comprehend such funcies; those of Greek and Roman times were perfectly familiar with them. They believed that the Nile communicated with the Red Sea near Suakin, by means of the Astaboras, and this was certainly the route which the Egyptians of old had imagined for their navigators.1 The supposed communication was gradually transferred farther and farther south; and we have only to glance over certain maps of the sixteenth and seventeenth centuries, to see clearly drawn what the Egyptians had imagined—the centre of Africa as a great lake, whence issued the Congo, the Zambesi, and the Nilc.2 Arab merchants of the Middle Ages believed that a resolute man could pass from Alexandria or Cairo to the land of the Zindjes and the Indian Ocean by rising from river to river.3 Many of the legends relating to this subject are lost, while other, have been collected and embellished with fresh features by Jewish and Christian theologians. The Nile was said to have its source in Paradise, to traverse burning regions inaccessible to man, and afterwards to fall into a sea whence it made its way to Egypt. Sometimes it carried down from its celestial sources branches and fruits unlike any to be found on earth.4 The sea mentioned in all these tales is perhaps a less extravagant invention than we are at first inclined to think. A lake, nearly as large as the Victoria Nyanza, once covered the marshy plain where the Bahr el-Abiad unites with the Sobat, and with the Bahr cl-Ghazâl. Alluvial deposits have filled up all but its deepest depression, which is known as Birket Nû; but, in ages preceding our era, it must still have been vast enough to suggest to Egyptian soldiers and boatmen the idea of an actual sea, opening into the Indian Ocean. The mountains, whose outline was vaguely seen far to southward on the further shores, doubtless contained within them its mysterious source." There the inundation was made ready,

<sup>&</sup>lt;sup>1</sup> Cf. Chassinat, Ca et lù, § ni, in the Recueil de Travaux, vol. xvii. p. 53; and Maspeno, Notes sur differents points de Grammaine et d'Histoire, § v., ibid., pp. 75-78.

In Memoires historiques et geographiques sur l'Lypple, vol. il. pp. 22, 23, 151, et seq., Éthenne Quatremian has collected various passages bearing on this subject, from the works of Arab writers Even in 1559, Figure Bev admitted that the gree equatorial lakes might send out "two strains, of which the one would flow westward, follow the northern vally, and rush down the great entiract of Gebel Reget" to run into the Mediterranean. "The second would turn in the opposite direction, form the inver of Melinius which is some seventy-five leagues north of the equator," and open into the Indian Ocean (Figali B v. Aperya theorique de la Geographie geognostique de l'Afrique centrale, in the Memoires de l'Institut 1 (100), vol. 2, p. 108, and the map to p. 114).

<sup>&</sup>lt;sup>3</sup> A. Kirlier, Edipus Egyptiacus, vol. i. p. 52; Ll.Tronni, Sur la situation du Paradis terrestre, in Eures choisies, 2nd series, vol. i. pp. 415-422. Joinville: has given a special chapter to the description of the sources and wonders of the Nile, in which he believed as firmly as in an article of his creed (Histoire de Saint Louis, ch. xl.). As late as the beginning of the seventeenth century. Wendelines devoted part of his Admiranda Nili (§ iii. pp. 27-37) to proving that the river did not rise in the earthly Paradise. At Gürnah, forty years ago, Rhind picked up a logend which stated that the Nile flows down from the sky (Thebes, its Tombs and their Tenants, pp. 301-304).

and there it began upon a fixed day. The celestial Nile had its periodic rise and fall, on which those of the earthly Nile depended. Every year,

SOUTH AFRICA AND THE SOURCES OF THE NILE, BY ODOARDO LOPEZ,1

towards the middle of June, Isis, mourning for Osiris, let fall into it one of the tears which she shed over her brother, and thereupon the river swelled and descended upon earth.<sup>2</sup> Isis has had no devotees for centuries,

108/96

<sup>&</sup>lt;sup>1</sup> Facsimile of the map published by Kircher in Œdipus Ægyptiaeus, vol. i. (Iconismus II.), p. 53.

<sup>2</sup> The legend of the tears of Isis is certainly a very ancient one. During the embalmment, and then throughout all the funeral rites of Osiris, Isis and Nephthys had been the wailing women, and their tears had helped to bring back the god to life. Now, Osiris was a Nile god. "The night of the great flood of teers issuing from the Great Goddess" is an expression found in Pyramid texts (Unus, line 395), and is in all probability a reference to the Night of the Drop (Lepaue-Renoue, Nile Mythology, in the Proceedings of the Society of Biblical Archaelogy, vol. xiii. p. 9). Our earliest authentic form of the tradition comes to us through Pausanias (x. 32. § 10): Σοικότα δὲ ἀνδρὸς ἡκουσα Φοίνικος άγειν τῆ Ἰσιδι Αἰγυπτίους τὴν ἐορτὴν, ὅτε αὐτὴν τὸν Ὅσιριν πένθειν λέγουσι. Τηνικαῦτα δὲ καὶ ὁ Νεῖλος ἀναβαίνειν σθίσιν ἄρχεται, καὶ τῶν ἐπιχωρίων πολλοῖς ἐστιν εἰρημένα, ὡς τὰ αδξουμα τὸν ποταμὸν καὶ ἄρδειν τὰς ἀρούρας ποιοῦντα δάκρυά ἐστιν τῆς Ἰσιδος. The date of the phenomenon is fixed for us by the modern tradition which places the Night of the Drop in June (Βαυσεομ, Materiaux pour servir à la construction du calendrier des anciens Ěgyptiens, p. 11, et seq.).

and her very name is unknown to the descendants of her worshippers; but the tradition of her fertilizing tears has survived her memory. Even to this day, every one in Egypt, Mussulman or Christian, knows that a divine drop falls from heaven during the night between the 17th and 18th of June, and forthwith brings about the rise of the Nile.<sup>1</sup>

Swollen by the rains which fall in February over the region of the Great Lakes, the White Nile rushes northward, sweeping before it the stagnant sheets of water left by the inundation of the previous year. On the left, the Bahr el-Ghazal brings it the overflow of the ill-defined basin stretching between Darfür and the Congo; and the Sobat pours in on the right a tribute from the rivers which furrow the southern slopes of the Abyssinian mountains. The first swell passes Khartûm by the end of April, and raises the water-level there by about a foot, then it slowly makes its way through Nubia, and dies away in Egypt at the beginning of June. Its waters, infected by half-putrid organic matter from the equatorial swamps, are not completely freed from it even in the course of this long journey, but keep a greenish tint as far as the Delta. They are said to be poisonous, and to give severe pains in the bladder to any who may drink them. Happily, this Green Nile does not last long, but generally flows away in three or four days, and is only the forerunner of the real flood.2 The melting of the snows and the excessive spring rains having suddenly swollen the torrents which rise in the central plateau of Abyssinia, the Blue Nile, into which they flow, rolls so impetuously towards the plain that, when its waters reach Khartûm in the middle of May, they refuse to mingle with those of the White Nile, and do not lose their peculiar colour before reaching the neighbourhood of Abû Hamed, three hundred miles below. From that time the height of the Nile increases rapidly day by day. The river, constantly reinforced by floods following one upon another from the Great Lakes and from Abyssinia, rises in furious bounds, and would become a devastating torrent were its rage not checked by the Nubian cataracts. Here six basins, one above another, in which the water collects, check its course, and permit it to flow thence only as a partially filtered and moderated stream.8 It is signalled at Syene towards the 8th of June, at Cairo

<sup>&#</sup>x27; Lawr, Manners and Customs of the Modern Egyptians, 4th edit., vol. ii. p. 221. The date varies, and the Fall of the Drop may take place either during the night of the 17th to 18th, of the 18th to 19th, or of the 19th to 20th of June, according to the year.

<sup>&</sup>lt;sup>2</sup> SYLVESTRE DE SAOY has collected the principal Arabic and European texts bearing upon the Green Nile, in his Relation de l'Égypte par Abd-Allatif, pp. 332-338, 341-316. I am bound to say that every June, for five years, I drank this green water from the Nile itself, without taking any other precaution than the usual one of filtering it through a porous jur. Neither I, nor the many people living with me, ever felt the slightest inconvenience from it.

<sup>&</sup>lt;sup>3</sup> The moderating effect of the catalacts has been judicially defined by E. De Gottberg in Des Catalactes du Nil, pp. 10, 11.

by the 17th to the 20th, and there its birth is officially celebrated during the "Night of the Drop." 1 Two days later it reaches the Delta, just in time to save the country from drought and sterility. Egypt, burnt up by the Khamsîn, a west wind blowing continuously for fifty days, seems nothing more than an extension of the desert. The trees are covered and choked by a layer of grey dust. About the villages, meagre and laboriously watered patches of vegetables struggle for life, while some show of green still lingers along the canals and in hollows whence all moisture has not yet evaporated. The plain lies panting in the sun-naked, dusty, and ashenscored with intersecting cracks as far as eye can see. The Nile is only half its usual width, and holds not more than a twentieth of the volume of •water which is borne down in October. It has at first hard work to recover its former bed, and attains it by such subtle gradations that the rise is scarcely noted. It is, however, continually gaining ground; here a sandbank is covered, there an empty channel is filled, islets are outlined where there was a continuous beach, a new stream detaches itself and gains the old shore. The first contact is disastrous to the banks; their steep sides, disintegrated and cracked by the heat, no longer offer any resistance to the current, and fall with a crash, in lengths of a hundred yards and more. As the succe-sive floods grow stronger and are more heavily charged with mud, the whole mass of water becomes turbid and changes colour. In eight or ten i days it has turned from greyish blue to dark red, occasionally of so intense a colour as to look like newly shed blood. The "Red Nile" is not unwholesome like the "Green Nile," and the suspended mud to which it owes its suspicious appearance deprives the water of none of its freshness and lightness. It reaches its full height towards the 15th of July; but the dykes which confine it, and the barriers constructed across the mouths of canals, still prevent it from overflowing. The Nile must be considered high enough, to submerge the land adequately before it is set free.2 The ancient Egyptians

<sup>&</sup>lt;sup>1</sup> See the description of festivals and superstitious rites pertaining to The Drop, in LANL, Manners and Customs of the Modern Egyptians, 4th edit., vol. ii. p. 224.

There are few documents to show what the Egyptians considered the proper height of a good inundation. However, we are told in a Ptolemaio inscription that at the moment when "in its own season the Nile comes forth from its sources, if it reaches to the height of twenty-four cubits (12 ft. 6 in.) at Elephantinê, then there is no searcity; the measure is not defective, and it comes to inundate the fields" (Brusson, Angabe einer Nilhöho nach Ellen in einem Hieroglyphischen Teste, in the Zilschrift, 1865, pp. 43, 44). Another text (Brusson, Die Biblischen sieben Juhro der Hungersnoth, p. 153) fixes the height to be registered by the nilometer at Elephantine at twenty-eight cubits, and at seven, by the nilometer of Diospolis, in the Delta. The height of twenty-four cubits, taken from the nilometer at Elephantine, is confirmed by various passages from ancient and modern writers. The indications given in my text are drawn from the nilometer of Roda, as being that from which quotations are usually made. In computing the ancient levels of the rising Nile at Memphis, I have adopted the results of the calculations undertaken by A. de Rozider, De la constitution physique de l'Égypte, in the Description, vol. xx. pp. 351-381. He shows from Le Père

measured its height by cubits of twenty-one and a quarter inches. At fourteen cubits, they pronounced it an excellent Nile; below thirteen, or above fifteen, it was accounted insufficient or excessive, and in either case meant famine, and perhaps pestilence at hand. To this day the natives watch its advance with the same anxious eagerness; and from the 3rd of July, public criers, walking the streets of Cairo, announce each morning what progress it has made since evening.1 More or less authentic traditions assert that the prolude to the opening of the canals, in the time of the Pharaohs, was the solemn casting to the waters of a young girl decked as for her bridal-the "Bride of the Nile." Even after the Arab conquest, the irruption of the river into the bosom of the land was still considered as an actual marriage; the contract was drawn up by a cadi, and witnesses confirmed its consummation with the most fantastic formalities of Oriental ceremonial.3 It is generally between the 1st and 16th of July that it is decided to break through the dykes. When that proceeding has been solemnly accomplished in state, the flood still takes several days to fill the canals, and afterwards spreads over the low lands, advancing little by little to the very edge of the desert. Egypt is then one sheet of turbid water spreading between two lines of rock and sand, fleeked with green and black spots where there are towns or where the ground rises, and divided into pregular compartments by raised roads connecting the villages. In Nubia the river attains its greatest height towards the end of August; at Cairo and · in the Delta not until three weeks or a month later. For about eight days it remains stationary, and then begins to fall imperceptibly. Sometimes there is a new freshet in October, and the river again increases in height. But the . rise is unsustained; once more it falls as rapidly as it rose, and by December the river has completely retired to the limits of its bed. One after another, the streams which fed it fail or dwindle. The Tacazze is lost among the sands before rejoining it, and the Blue Nile, well-nigh deprived of

<sup>(</sup>Memoire sur la vallée du Nil er sur le nilomètre de l. el de Roudah, in the Description, vol. xviii. p. 555, et seq.) that the merease in the number of cubits is only apparent, and that the actual rise is almost invariable, although the registers of the nilometers advance from age to age. A table of most of the known rises, both ancient ar. stein, is to be found in the recent work of Cirély, le Ail, le Soudan, l'Lyppte, pp. 81-93.

<sup>&</sup>lt;sup>1</sup> In his Manners and Customs, 4th edit, vol u. pp. 225-236, Lank described the cricis of the Nile. Their proclamations have scarcely changed since his time, excepting that the introduction of steam-power has supplied them with new images for indicating the rapidity of the rise.

<sup>\*</sup> G. LUMBROSO has collected the principal passages in ancient and modern writers relating to The Bride of the Nile, in L'Hyitto al tempo dei Greci e dei Romani, pp. 6-10. This tradition furnished G. Erres with material for a remance called Die Nilbraut, wherein he depicts Coptic life during the first years of Arab rule with much truth and vivacity.

<sup>&</sup>lt;sup>3</sup> SYLVESTRE DE SAOY, Le Livre des Lioiles errantes, par le Scheilh Schemseddin Mohammed bin Abilsorûr al-Bukeri al-Sudiki, in the Notices et Extraits des Manuscrits, vol. i. p. 275.

tributaries, is but scantily maintained by Abyssinian snows. The White Nile is indebted to the Great Lakes for the greater persistence of its waters, which feed the river as far as the Mediterranean, and save the valley from utter drought in winter. But, even with this resource, the level of the water falls daily, and its volume is diminished. Long-hidden sandbanks reappear, and are again linked into continuous line. Islands expand by the rise of shingly beaches, which gradually reconnect them with each other and with the shore. Smaller branches of the river cease to flow, and form a mere network of stagnant pools and muddy pends, which fast dry up. The main channel itself is only intermittently navigable; after March boats run aground in it, and are forced to await the return of the inundation for their release. From the middle of April to the middle of June, Egypt is only half alive, awaiting the new Nile.

Those juddy and heavily charged waters, rising and retiring with almost mathematical regularity, bring and leave the spoils of the countries they have traversed: sand from Nubia, whitish clay from the regions of the Lakes, ferruginous mud, and the various rock-formations of Abyssinia.2 These materials are not uniformly disseminated in the deposits; their precipitation being regulated both by their specific gravity and the velocity of the current. Flattened stones and rounded pebbles are left behind at the cataract between Syene and Kench, while coarser particles of sand are suspended in the undercurrents and serve to raise the bed of the river, or are carried out to sea and form the sandbanks which are slowly rising at the Damietta and Rosetta mouths of the Nile. The mud and finer particles rise towards the surface, and are deposited upon the land after the opening of the dykes.3 Soil which is entirely dependent on the deposit of a river, and periodically invaded by it, necessarily maintains but a scanty flora; and though it is well known that, as a general rule a flora is rich in proportion to its distance from the poles and its approach to the equator, it is also admitted that Egypt offers an exception to this rule. At the rost, she has not more than a thousand

<sup>&</sup>lt;sup>1</sup> The main phases of the use are chiefly described from the very full account of Le Pèrer, Memoire sur la vallée du Nil et le minuetre de l'isle de Rondah, in the Description de l'Égypte, vol. xvni. pp. 555-645

<sup>&</sup>lt;sup>2</sup> All manner of marrels were related by the ancents as to the nature and fertilizing properties of the waters of the Nile. A scentific analysis of those waters was first made by Righardt, Analyse de l'eau du Nil et de quelques caux salves, in the Dé ade égypticane, vol. i. pp. 261-271. The result of the most recent examination is to be found, in great detail, in Chillu's work, Le Nil, le Soudan, l'Égypte, pp. 177-179.

<sup>3</sup> On the nature and movements of the alluvial deposits, see P. S. Girard, Observations sur la raile d'Égypte et sur l'exhaussement séculaire du sol qui la recouvre, in the Description de l'Égypte, vol. xix. p. 140, sqq.; and E. de Roza ur, De la constitution physique de l'Égypte et de ses rapports avec les anciennes institutions de cette contrée, in the Description de l'Égypte, vol. xx. p. 328, et seq.

species, while, with equal area, England, for instance, possesses more than fifteen t hundred; 1 and of this thousand, the greater number are not indigenous. Many of them have been brought from Central Africa by the river; birds and winds have continued the work, and man himself has contributed his part in making it more complete.2 From Asia he has at different times brought wheat, barley, the clive, the apple, the white or pink almond, and some twenty other species now acclimatized on the banks of the Nile. Marsh plants predominate in the Delta; but the papyrus, and the three varieties of blue. white, and pink lotus which once flourished there, being no longer cultivated. have now almost entirely disappeared, and reverted to their original habitats,8 The sycamore and the date-palm, both importations from Central Africa, have better adapted themselves to their exile, and are now fully naturalized on Egyptian soil. The sycamore grows in sand on the edge of the desert as vigorously as in the midst of a well-watered country. Its roots go deep in search of water, which infiltrates as far as the gorges of the hills, and they absorb it freely, even where drought seems to reign supreme. The heavy, squat, gnarled trunk occasionally attains to colossal dimensions, without ever growing very high. Its rounded masses of compact foliage are so wide-spreading that a single tree in the distance may give the impression of several grouped together; and its shade is dense, and impenetrable to the sun. A striking contrast to the sycamore is presented

<sup>1</sup> Gay-Lesse, Du sol Egyption, in the Bulletin de l'Institut Egyption, 2nd series, vol ii, p. 221. Raffinal-Dlliff (Flore Legyptiace Illustratio, in the Description de l'I gypte, vol aix, pp. 69-114) chume lates 1030 species. Wilkinson (Manners and Customs, 2nd edit., vol. ii p. 103) counts about 1300, of which 250 are only to be found in the desert, thus bringing down the number belonging to Egypt proper to the figures given by Delile and Gay-Lussac. As in 1800 and Souwerverth (Illustration de la Flore d'I gypte, in the Mémoires de l'Institut egyption, vol. ii, pp. 25-260) have lately raised the list to 1260, and since then fresh researches have brought it up to 1313 (Schweinverth, Sin la Flore des anciens jardius arabes, in the Bulletin de l'Institut I gyption, 2nd series, vol. viii. p. 331). Couleblum had already been struck by the poverty of the Egyptian flora as computed with that of France (Reglexions sur quelque points de comparation à élablir entre les plantes d'Egypte et celles de France, in the Description de l'Egypte, vol. aix, pp. 8, 9).

<sup>&</sup>lt;sup>2</sup> A, RAISEMAI-DILLIL, Memoire our les plantes qui croissent spontanement en l'gypte, in the Description de l'Égypte, vol. xix. p. 23, et seq. Serveintent, l'égétaux cultires en l'gypte et qui so retrour nt à l'état spontané dans le so dans et dans l'interieur de l'Afrique, in the Bulletin de l'Institut Égyptien, 1st series, vol. xii. p. 200, et seq.

For the lotus in general, see Rattinal-Diller, Flore d'Égypte (in the Description, vol. xix. pp. 415-435), and F. Weene. Die Psionzen im Alten Egypten, pp. 17-74. The white lotus, Nymphica lotus, was called soshini in Egyptem (Lori r, Sur les noms egyptiens du lotus, in the Recuil de Tracuux, vol. i. pp. 191, 192, and La Flore plaraonique d'apres les documents hiéroglyphiques et les specimens déconverts dans les to abes, No. 129, pp. 53-55). The blue lotus, Nymphica cardea, the most frequent in tomb scenes (Sommeinfeur, De la Flore pharaonique, in the Bulletin de l'Institut Fypptien, 2nd series, vol. iii. p. 60, et seq.), was called sarpedù (Loui r, Sur les noms gyptiens, in the Recueil de Travaux, vol. i. p. 191). The lose lotus was called nakhabû, nahbû (abid., pp. 192, 193). Pleyte (Die Egyptische Lotus, p. 9) thinks that this lust kind was introduced into Egypt somewhat lage, towards the time of Darius and Nerxes.

<sup>&</sup>lt;sup>4</sup> F. Wenig, Die Pflanzen im Alten Egypten, pp. 280-292, has made a fairly exhaustive collection of ancient and modern material referring to the Egyptian sycamore (núhit, nihe).

by the date-palm. Its round and slender stem rises uninterruptedly to a height of thirteen to sixteen vaids; its head is crowned with a cluster of flexible leaves arranged in two or three tiers, but so scanty, so pittlessly slit, that they fail to keep off the light, and cast but a slight and uninfreshing shadow. Few tiers have so elegant an appearance, yet

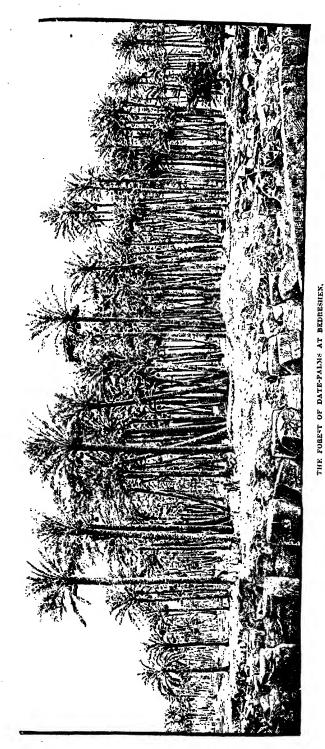

SYCAM 115 AT THE ENPEANOR OF THE MUDIRIYIH OF ASSULT

tew are so monotonously elegant. There are palm trees to be seen on every hand; isolated clustered by twos and threes at the mouths of ravines and about the villages, planted in regular file along the banks of the river like rows of columns, symmetrically arranged in plantations,—these are the invariable background against which other trees are grouped, diversifying the landscape. The feathery tamarisks and the

Inc I gyptim name for the timinsk, asair, asre, is idented with that given to it in Semite larguages, both an eight and medern (I out I La Flore phara magic, No 88, p 88). This would suggest the question whether the timinsk did not originally come from Asia. In that case it must have been brought to I gypt from remote antiquity, if rit figures in the Pyramid texts. Blicks of Ails mud, and Memphite and Thoban tombs have yielded us leaves, twigs, and even whole branches of the tamanisk (Somming in I I is defined to Decouvertes lot iniques dans less anciens tombeaux de PI jypte, in the Bulletin de FInstitut ejyptien, 2nd series vol vi p 253)

View taken from the rains of the temple of Rameses II., after a photograph by Emil Brugsch-Bey.

nubk, the moringa, the carob, or locust tree, several varieties of acacia and mimosa -the sont, the mimosa habbas, the white acacia, the Acacia Farnesiana 7- and the pomegranate tree,8 increase in number with the distance from the Mediterranean. The dry air of the valley is marvellously suited to them, but makes the tissue of their foliage hard and fibrous, imparting an aorial aspect, and such faded tints as are unknown to their growth in other climates.9 The greater number of these trees do not reproduce themselves spontaneously, and tend to disappear when neglected. The Acacia Seyal,10 formerly abundant by the banks of the river, is now almost entirely confined to certain valleys of the Theban desert, along with a variety of the kernelled dôm-palm, " of which a poetical description has come down to

¹ The nabéea, or nabk, Zicupleus Spina Christi, Drss., is the milist of the ancient Egyptian lists (Louir, La Flore pharaonique, No. 112, pp. 44, 45; Demiches, in Moldenke, Ueber die in alt-Lypptischen Texten ernähnten Bänne, pp. 108, 109, note; Masteno, Notes au jour le jour, § 12, in the Proceedings of the Society of Biblical Archaelogy, 1890-91, vol. xiii. pp. 496-501). The fruit and wood of the free has been found in tombs, more especially in those of the twentieth dynasty (Schwins-

The Moringa aptera, from which Ben oil is obtained, the myrobalanum of the ancients, was called bakha, and its oil is mentioned in very early texts (Lorer, Recherches sur plusieurs plantes commus des auciens L'appliens, in the Recueil de Travaux, vol. vii. pp. 103-106; and La Flore pharaonique, No. 95, pp 39, 10). For its presence in Theban tombs, see Schwlinfurth, Los dernières Decourertes, in the Bulletin de l'Institut egyptien, 2nd series, vol. vi. p. 270.

<sup>2</sup> The carob tree, Ceratonia siliqua, was called dúnraga, teuraka (Loui.v. La Flore pharaonique, No. 96, p. 40; and Recaell de Traraux, vol. xv. pp. 120-130). Unor a thought that he had found some remains of it in Egyptian tombs (Die Pflanzen des Alten "Egyptens, p. 132), but Schweinstern (Sur la Flore des anciens jurdins arabes d'Lappte, in the Bulletin de l'Institut égyptien, 2nd series, vol. vin. pp. 306, 331, 335) does not ado it his testimony.

306, 331, 335) does not ado it his testimony. 108198

The sont tree, in ancient Egyptian, should, should, has long been identified with the Acadia. Nilotica, Dec. His history may be found in Schweinevern's memoir, Antzühlung und Beschreibung

der Acacia-Arten des Nil-Gebiets, in Limano, xxxv. (new series, i.) pp. 333, 334.

Mimosa habbas, A. RAFLINAV-DLLILE, Flore Legyptiaco Illustratio, in the Description de l'Agypte. vol. xix. p. 111.

The Acucia albida is still not uncommon on the ancient site of Thebes, near Medinet Habu (WILKINSON, Manners and Customs, 2nd edit., vol. ii, p. 405, note 2).

7 This is the acacia bearing bunches of feathery and fragrant yellow flowers, and known in the South of France as the cassia tree. It is common throughout the Nile valley. Loret thinks that its harry seeds were called pirshonk and sennârû (Le Kyphi, parfum sacre des anciens Égyptiens, pp.

52-54; and La Flore pharaonique, No. 94, p. 33). But did the tree exist in Egypt in Pharaonic times?

The pomegranate tree do not appear on Ugyptian monuments before the time of the eighteenth dynasty; perhaps it was first a reduced into Egypt about that time. It is occasionally represented (Champolilion, Monuments, p. clyxiv.; Lit us, Donkin., iii. 48), and the flowers have been found in several Theban tombs (S aways when, Les dernières Découvertes botaniques, in the Bulletin de PInstitut egyption, 2nd series, vol. vi. p. 268). Both Loure (Recherches sur plusieurs plantes commen des anciens L'gyptiens, in the Leenetl, vol. vir. pp. 198-111) and Moldenke (Anthemen, Pomegranate Tree, in Litudes urcheologiques dedices . Lecmans, pp. 17, 18, and Veber die in den altägyptischen Texten erwähnten Baüme, pp. 114, 115) have recovered its ancient Egyptian name of ankrama, anhramon.

A. RAFFENAU-DI LILE, Mémoire sur les plantes qui ornissent spentanément en Égypte, in tho

Description, vol. xix. pp. 35, 36.

1º The Acucia Seyal is probably the aska of ancient texts (Louer, Les arbres ask, sib, et shent, in the Recueil, vol. ii. p. 60, et seq., and La Flore phuraonique, No. 93, p. 39; Moldenkk, Ueber die in altägyptischen Texten erreähnten Baüme, pp. 87-92).

11 This is the Hyphene Argun, MART., or the Medemia Argun, Hooker, called by the ancients Mama ni kkanini, or kernelled dom-palm (Louer, Etude sur quelques arbres égyptiens, in the Recueil, vol. ii. pp. 21-26, and La Flore pharaonique, No. 29, p. 16; Moldinker, Weber die in altägyptischen Texten erwähnten Baume, pp. 71-73). Its fruit is occasionally found in Theban tombs (UNGER, Die

us from the Ancient Egyptians. The common dôm-palm bifurcates at eight or ten yards from the ground; these branches are subdivided, and terminate in bunches of twenty to thirty palmate and fibrous leaves, say to

ACACIAS AL FILL FATLANCE TO A GARLEN DET IDELIMINED

cight feet long. At the beginning of this century the tree was common in Upper Egypt, but it is now becoming scarce, and we are within measurable distance of the time when its presence will be an exception north of the first cataract. Willows are decreasing in number, and the persea, one of the secred trees of Ancient Egypt, is now only to be found in gardens. None of the remaining tree species are common enough to grow in luge clusters, and Egypt, reduced to her lofty groves of date-palms, presents the singular

In Tendensia, Sur landiquet de l'ancert du cheral, in the Actes sur un royage en l'gyple, pp 2-1 The African ought of the denkey was first brought to li lit by H. Miller-I dwards, in the Comptes rendus de l'Icademie des services 1809, vol. Int. p. 1229

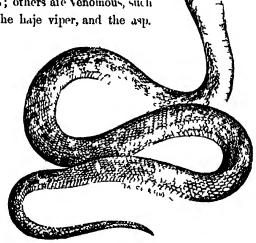

The pig is ruch represented on Layiti in monaments. In Landauxi (Sur Vintroduction et la domesticate du porc che les ancient l'appliens, p. 2) thought it unknown under the first dynastics. Nevertheless there de instances of its eccurrence under the fourth dynasty (Laisius, Benhm., n. 5, and Perkin, Medum. p. 39, and pl. xxi).

The ichneumon was called I haturu, I hatul, shatul, in Tellitan (Litter, Lo Nom I gyptic)

gazelles, including the Egyptian gazelles, and antelopes with lyre-shaped horus, are as much West Asian as African, like the carnivoræ of all sizes, whose

prey they are—the wild cat, the wolf, the jackal, the striped and spotted hyenas, the leopard, the panther, the hunting leopard, and the lion. On the other hand, most of the serpents, large and small, are indigenous. Some are harmless, like the colubers; others are venomous, such as the scytale, the cerastes, the haje viper, and the asp. The asp was worshipped by

the Egyptians under the name of uneus.<sup>2</sup> It occasionally attains to a length of six and a half feet, and when approached will erect its head and inflate its throat in readiness for durting forward. The bite is fatal, like that of the cerastes, birds are literally struck down by the strength of the poison, while the great mammals, and man himself, almost in-

THE CLERES OF FOLIT,

variably succumb to it after a longer or shorter death-stringgle. The uncus is rarely found except in the desert or in the fields, the scorpich crawls everywhere, in desert and city alike, and if its string is not always followed by death, it invariably causes terrible pain. Probably there were once several kinds of gigantic scripent in Egypt, analogous to the pythous of equatorial Africa. They are still to be seen in representations of functions, but not elsewhere;

<sup>\*</sup> The renemous serpents of Explit have been described by Isidom Georgian Saint Hilland in the Description, vol and pp. 77-96. The effects of their posons have been studied by Di Pancifri, Leperionze interno agli effette del vole is della Auga Egiziana e delle Ceraste, Naples, 1879, and Bulletin de l'Institut egyption, 18t series, vol un pp. 187-193, vol un pp. 89-92.

As, for example, in the Book of the Dead (Naville, Todienbuch, vol 1 pl liv and p 188 of the Introduction), and in composite mythological scenes from 103al Theban tombs (I 111 BLER, Tombeau de Set. F., in the Memories de la Vission du Caire, vol 11, 2nd part, pls x, xl, xli, xliu, cte)

for, like the elephant, the giraffe,1 and other animals which now only thrive far south, they had disappeared at the beginning of historic times. hippopotamus long maintained its ground before returning to those equatorial regions whence it had been brought by the Nile. Common under the first dynasties, but afterwards withdrawing to the marshes of the Delta, it there continued to flourish up to the thirteenth century of our cra.2 The crocodile, which came with it, has, like it also, been compelled to beat a retreat. Lord of the river throughout all ancient times, worshipped and protected in some provinces, execrated and proscribed in others, it might still be seen in the neighbourhood of Cairo towards the beginning of our century.<sup>3</sup> In 1810, it no longer passed beyond the neighbourhood of Gebel et-Têr,4 nor beyond that of Manfalût in 1819.5 Thirty years later, Mariette asserted that it was steadily retreating before the guns of tourists, and the disturbance which the regular passing of steamboats produced in the deep waters.6 To-day, no one knows of a single crocodile existing below Aswan, but it continues to infest Nubia, and the rocks of the first cataract: 7 one of them is occasionally carried down by the current into Egypt, where it is speedily despatched by the fellâhîn, or by some traveller in quest of adventure. The fertility of the soil,"

The exactitude with which the characteristic details of certain kinds are drawn, shows that the Egyptians had themselves seen the originals of the monstrons serpents which thoy depicted (MASPERO, I tudes de Mythologie Gyptienne, vol. i. p. 32, No. 3; of the Rerne de l'Histoire des Religions, vol. xv. p. 296)

In texts of the fifth and exth dynasties, the sign of the elephant is used in writing Abû, the name of the town and island of Elephantine (Inscription d'Uni, 1, 38, in Maniette's Abydos, vol. in. pl. 48; cf. Schlarahlell, Uni Tomba Eyiliana inedita della VI\* Dinastia, p. 23, 1, 5); from that time onward, it is so clumsily drawn as to justify the idea that the people of Aswan henceforth saw the beast itself but rarely. The sign of the giraffo appears as a syllabic, or as a determinative, in several words containing the sound sarâ, sorâ.

<sup>2</sup> Shaister de Sacy, Relation de l'Typpte par Abd-Allatif, pp. 143-145, 165, 166. The French consul, Du Waillet, noticed one of these animals near Dannetta, at the beginning of the eighteenth century (Le Mascrier, Description de l'Égypte, p. 31). Heremandr (Travels in Nubla, p. 62) relates that in 1812 a troop of hippopotami passed the second entancet, and descended to Wady Halleh and Dère. One of them was carried along by the current, came down the rapids at Aswan, and was seen at Dêrad, a day's march north of the first entaract.

s Shortly afterwards, ISDO. GERFRON SALMI-HILARL stated that "they are now no longer to be found in all the hundre i leagues of the Lower Nile and can only be seen as high sup the river as Thebes" (Description be erocodiles a Laypte in the Description de l'Eyypte, vol. xxiv. p. 408). He was mistaken, as is prove' by the evidence of several later travellers.

4 MARMONT mentioned them as being still there, near to the Convent of the Pulley (Voyages du duo de Ruguse, vol. iv. p. 44).

BAYLE ST.-JOHN, Village Life in opt. with Sketches of the Satel, vol. i. p. 268. In Le Nil, by Maxime Ducamp, p. 108, there is an Arab legend (about 1849) professing to explain why erocodiles cannot base below Shekh Abadeh. The legend cited by Bayle St.-John was intended to show why they remained between Manfalüt and Asynt.

MARIETTE, Itinéraire des invites aux fêtes de l'inauguration du canal de Suez, 1869, p. 175.

7 In 1883, I saw several stretched out on a sandbank, a few hundred yards from the southern point of the island of Elephantine. The same year, two had been taken alive by the Arabs of the entaract, who offered them for sale to travellers.

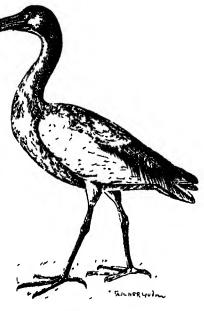

<sup>a</sup> The birds of modern Egypt have been described by J.-C. Savigny, Système des oiseaux de l'Égypte et de la Syrie, in the Description de l'Egypte, vol. xxiii. p. 221, et seq. In pls. vii.-xiv. of his Monumenti civili, Rosellini has collected a fair number of drawings of birds, copied from the tombs

BIRDS. 35

and the vastness of the lakes and marshes, attract many migratory birds; passerine and palmipedes flock thither from all parts of the Mediterranean. Our European swallows, our quails, our geese and wild ducks, our herons—to

mention only the most familiar—come here to winter, sheltered from cold and inclement weather. Even the non-migratory birds are really, for the most part, strangers acclima-

tized by long sojourn. Some of them—the turtledove, the magpie, the kinglisher, the partridge, and the sparrow—may be classed with our European species, while others betray their equatorial origin in the brightness of their colours. White and black ibises, 1 red flamingoes, pelicans, and cormorants enliven the waters of the river, and animate the reedy swamps of the Delta in infinite variety. They are to be seen ranged in long files upon the sand-banks, fishing and basking in the sun; suddenly the flock is seized with panic, rises heavily, and settles away further off. In hollows of

THE IBES OF LGYIE?

the hills, eagle and falcon, the meilin, the bald-headed vulture, the kestrel, the golden sparrow-hawk, find inac essible retreats, whence they descend upon the plains like so many pillaging and well-armed barons. A thousand little chattering birds come at eventide to perch in flocks upon the frail boughs of tamarisk and acacia. Many sea-fish make their way upstream to swim in fresh waters—shad, mullet, perch, and the labrus—and carry their excursions far into the Said.<sup>3</sup> Those species which are not Mediterranean came originally, and still come annually, from the heart of Ethiopia with the rise of the Nile, including two kinds of Alestes, the soft-shelled turtle, the Bagus

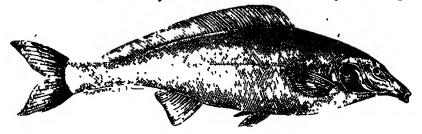

of Thebes and Beni Has in (cf. the text in vol. 1 of the Monumenti en ti pp. 146-190). Loss 1 has offered some most ingenious identifications of names inscribed upon the incient monuments with various modern species (Notes sur la Faune pharaonique, in the Zeitschrift vol. NN. pp. 24-50)

Facts relating to the fibrs have been collected by Cevii R, Momorie aur l'dies des anciens I guptiens, in the Annides du Museum d'histoire naturelle, 1801, vol. iv. p. 116, et seq., and by J. C. Saviens, Histoire naturelle et mythologique de l'libis. An extract from the Interesse oppinited in the Description de l'Ligypte, vol. axiii. p. 435, et seq. One ancient species of this is believed to have disappened from Egypt, and is now only to be met with towards the regions of the Upper Nile. But it may still be represented by a few families in the great reedy growths an umbering the western part of 1 ako Menzaleh.

<sup>\*</sup> See above, p. 19, for an account of this tradition.

Drawn by Faucher-Gudin, after a statue in the British Museum. The dedication of this statue took place about 880 u.c. The giver was Sheshonqu, high-priest of Amon in Thebes, afterwards King of Egypt under the name of Sheshhonga IL, and he is represented as standing behind the leg of the god, wearing a panther skin, with both arms upheld in adoration. The statue is mutilated; the end of the nose, the heard, and part of the tray have disappeared, but are restored in the illustration. The two little birds hanging alongside the greec, together with a bunch of cars of corn, are fat quals.

The most important pussage in this connection is to be found in MASPERO, Memoire for quelques puppins du Louvie, pp. 99, 100 ; reproduced by Brussen in the Dictionnaire geographique, pp. 860, 861.

lapping head and tail through which the rising waters may overflow at the time appointed, bringing to Egypt "all things good, and sweet, and pure," whereby

gods and men are fed. Towards the summer solstice, at the very moment when the sacred water from the gulfs of Syene reached Silsileh, the priests of the place, sometimes the reigning sovereign, or one of his sons, sacrificed a bull and geese, and then cast into the waters a sealed roll of papyrus. This was a written order to do all that might insure to Egypt the benefits of a normal inundation. When Pharaoh himself deigned to officiate. the memory of the event was preserved by a stela engraved upon the rocks.2 Even in his absence, the festivals of the Nile were among the most solemn and joyous of the land.3 According to a tradition transmitted from age to age, the prosperity or adversity of the year was dependent upon the splendour and fervour with which they were celebrated. Had

THE SHRIPL OF THE SILD AT LIGGER

the faithful shown the slightest lukewarmness, the Nile might have refused

1 Questions relating to the flowing of the first waters of the rising Nile past Silsilch have been treuted of by Brugson, Materiaux pour servir à la reconstruction du calendrier des anciens Égyptions, p 37, it sig, and especially by E. Dr. Rot Gé, Nur le nouveau système proposé par M. Bruysch pour linterpretation du calendrier egyptien, in the Zeitschreft, 1866, pp. 3-7. It was probably some tradition of this custom which gave birth to the legend telling how the Khalif Omar commanded the river in writing that it should bring about a propitious inundation for the land of Egypt (Mouliand, Les Mercelles de l'Égypte, tru slation by Pierre Vattier, pp 165-167).

2 Of these official stelle, the three lutherto known belong to the three Pharmbes II. (Chandellion, Notices, vol. i. p. 641, et seq.; Liesius, Donkm, iii. 175 a), Mînephtah (Champellion, Monuments, pl cair.; Rosellivi, Monum. Strici., pp. 302-301, and pl. cax 1; Lersic, Denkm., iii. 200 d; Brugson, Recueil de monuments, vol. ii. pl. lxxiv. 5, 6, and pp 53, 81), and Ramses III. (Charpollion, Monuments, 11. c.; Leveurs, Denlin iii 217 d). They have been translated by L STERN, Die Nilstele von Gebel Nilstleh, in the Zeitschrift, 1873, pp. 125-135.

\* The Nile festivals of the Greece Roman period have been described by Helioporus, the remance writer, Athiopica, book in § 9. His description is probably based upon the lost works of some Ptolemaic author.

 The source of the Nile is reproduced from a bas-relief in the small temple of Philie, built by Trajan and his successors (Wilkinson, Materia Hieroglyphica, ser. 11, pl. alii. fig. 4; Champolinon, Monuments, pl. xciii. 1; Rosellini, Monumenti del Culto, pl. xxvii. 3; Dunichen, Geogr. Ins., vol. 11. pl. lxxix.). The window or door of this temple opened upon Biggeh, and by comparing the drawing of the Egyptian artist with the view from the end of the chamber, it is easy to recognize the original of his cliff silhouette in the piled-up rocks of the island. By a mistuke of the modern copylet's, his drawing faces the wrong way.

to obey the command and failed to spread freely over the surface of the country. Peasants from a distance, each bringing his own provisions, ate their meals together for days, and lived in a state of brutal intoxication as long as this kind of fair lasted. On the great day itself, the priests came forth in procession from the sanctuary, bearing the statue of the god along the banks, to the sound of instruments and the chanting of hymns.

"I. Hail to thee, Hapi !—who appearest in the land and comest—to give life to Lgypt;—thou who dost hide thy coming in darkness—in this very day whereon thy coming is sung,2—wave, which spreadest over the orchards created by Ra--to give life to all them that are athlist—who refusest to give drink unto the desert—of the overflow of the waters of heaven; 3 as soon as thou descendest,—Sibû, the earth-god, is enamoured of bread,—Napii, the god of grain, presents his offering,—Phah maketh every workshop to prosper 4

"II.—Lord of the fish! as soon as he passeth the catalact—the bilds no longer descend upon the fields;—creator of corn, maker of buley, he prolongeth the existence of temples.—Do his fingers cease from their labours, or doth he suffer?—then are all the millions of beings in misery;—doth he wane in heaven? then the gods—themselves, and all men perish;

"III.—The cattle are driven mad, and all the world—both great and small, are in torment!—But if, on the contrary, the prayers of men are heard at his rising—and (for them) he maketh himself Khuumû,5—when he arriveth, then the earth shouts for joy,—then are all belies joyful,—cach back is shaken with laughter,—and every tooth grindeth.

" IV .- Bringing food, rich in sustenance,-creator of all good things,-lord

The text of this hymn has been preserted in two papers in the British Museum, the second sillier paperus (Select Papyri, vol. i. pl. xxi i. 6 pl. xxi i.) and the seconth American paperus (thid, 1] exxiv. 1, 7, pl. exxiv.) It has been translated in fill by Masii bo (Hymne an Nil, 1865) of Historian enemos des pruples de Forent, 4th edit, pp. 11-13), by 1 s. Cook (Records of the Past, 1st series, vol. iv. p. 105 et seq.), by Amii i va (Bib' obluque i. Vi e de des hautes studes, Section des se unces religiouses, vol. in pp. 311-371) and by Geth vote (Record de Francis, vol. xiii. pp. 1-20). Some tew strophes have been turned into German by Bis asch (Record Mythologie, pp. 639-641)

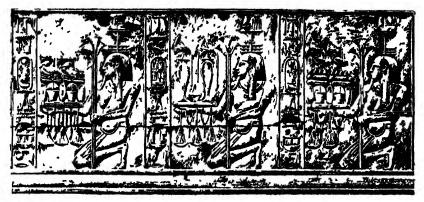

\* Interally, "Concealing the passage of the one derkness—on the day of the songs of passage of the text dludes to the passage of the celestral over giving into the Nile through the dim regions of the West. The origin of the color never revealed, nor yet the day on which he will reach E<sub>2</sub> ypt to mundate the soil, and when the will each the with the song of hymns.

Laterally, "To let the desert dank of the overflow of heaven, is his abhoremos?" The orchards created by Ra are naturally favoured of the Nile god, but hill and desert, which are Set's, are abhorrent to the water which comes dos an heaven, and is norther more nor less than the flowing of Osias Gt. p. 21, note 3

4 Freed from mythological allusions, the end of this phrase significs that at the coming of the waters the earth returns to life and brings forth bread, the corn sprouts, and all crafts flourish under the suspices of Phich, the artificer and mason-god

Interally, "Answered are men when he sends forth (his waters), being in the form of Kinnum". Khnumu, lord of Liephantine and of the catricet, is a Nile-god, and inasmuch of he is a supreme derry, he has formed the world of alluvid earth mugled with his waters. Fi order to comprise within one image ill that the Nile can do when rising in answer to the prayers of men, the Egyptian poet states that the god takes upon himself the form of Khnumu; that y to say, he becomes a creator for the faithful, and works to make for them all gool things out of him alluvial earth

of all seeds of life, pleasant unto his elect,—if his friendship is secured—he produceth fodder for the cattle,—and he provideth for the sacrifices of all the

NIII-CODE FLOW LIE IN MPIL OF SETE I AT ABYDOS BRINGING FOOD TO IVERY NOWE OF BETYPE,

gods, -tiner than any other is the incense which cometh from him;—he taketh possession of the two lands—and the granaries are filled, the storehouses are prosperous,—and the goods of the poor are multiplied.

othing. To make boats to be that is his strength. Stones are not sculptured for him—nor statues whereon the double crown is placed; he is unseen;—no tribute is paid unto him and no offerings are brought unto him,—he is not channed by words of mystery;—the place of his dwelling is unknown, nor can his shrine be found by virtue of magic writings;

"VI. -There is no house large enough for thee,— nor any who may penetrate within thy heart!— Nevertheless, the generations of thy children rejoice in thee—for thou dost rule as a king—whose decrees are established for the whole earth,—who is manifest in presence of the people of the South and of the North,—by whom the tears are washed from every eye,—and who is lavish of his bounties.

"VII. -Where sorrow was, there doth break forth joy-and every heart rejecteth. Sovkû, the crocodile, the child of Nit, leaps for gladness, before the Nine gods who accompany thee have ordered all things, the overflow

<sup>1</sup> From a drawing by Faucher-Gudin, after a photograph by Beato.

Interestly, "He makes prospectly (surad) at the baton (a blat) of all wishes, withholding nothing to cause boats (amma) to be, that is his strength." It was said of a man or a thing which depended on some high personage—as, for example, on the Phurush of high priest of, Am a that he or it was at the baton (a blat) of the Phurush or high priest. Our author represents the Nile as putting its if at the baton of all wishes to make Egypt prosperous. And since the tritle it the country is almost cutticly curried on by water, he immediately idds that the forte of the Nile is that in which it best succeeds, has in supplying such abundance of riches as to oblige the dwellers by the river to build boats enough for the freight to be transported.

The goddess Nit, the helier born from the midst of the primoidal waters, had two cross whiles as her children, which are sometimes represented on the monuments as language from her bosom. Both the part played by these animals, and the reason for connecting them with the goddess, are still imperfectly understood.

giveth drink unto the fields—and maketh all men valiant;—one man taketh to drink of the labour of another,—without charge being brought against him.<sup>1</sup>

"IX.—If thou dost enter in the midst of songs to go forth in the midst of gladness, —if they dance with joy when thou comest forth out of the unknown, —it is that thy heaviness is death and corruption.—And when thou art implored to give the water of the year,—the people of the Thebaid and of the North are seen side by side,—each man with the tools of his trade,—none tarrieth behind his neighbour;—of all those who clothed themselves, no man clotheth himself (with festive garments)—the children of Thot, the god of riches, no longer adorn themselves with jewels, —nor the Nine gods, but they are in the night!—As soon as thou hust answered by the rising,—each one anointeth himself with perfumes.

"X.—Establisher of true riches, desire of men,—here are seductive words in order that thou mayest reply;—if thou dost answer mankind by waves of the heavenly Ocean,—Napri, the grain-god, presents his offering,—all the gods adore (thee),—the birds no longer descend upon the hills;—though that which thy hand formeth were of gold—or in the shape of a brick of silver,—it is not lapis-lazuli that we eat,—but wheat is of more worth than precious stones.

"XI.—They have begun to sing unto thee upon the harp,—they sing unto thee keeping time with their hands,—and the generations of thy children rejoice in thee, and they have filled thee with salutations of praise;—for it is the god of Riches who adorneth the earth,—who maketh barks to prosper in the sight of man—who rejoiceth the heart of women with child—who loveth the increase of the flocks.

"XII.—When thou art risen in the city of the Prince,—then is the rich man filled—the small man (the poor) disdained the lotus,—all is solid and of good quality,—all herbage is for his children.—Doth he forget to give food?—prosperity forsaketh the dwellings,—and earth falleth into a wasting sickness."

¹ This is an allusion to the quarrots and lawsuits resulting from the distribution of the water in years when the Nile was porrect bad. If the inundation is abundant, disputes are at an end.

The heaviness of the god here means the heaviness of his waters, the slowness and difficulty with which they rise and spread over the soil.

See Bruesch, Religion and Mythologie, p. 441, on the identity of Shopsû, the god of riches, with Thot, the ibis or cynocephalus, lord of letters and of song.

<sup>&</sup>lt;sup>2</sup> Here again the text is councit. I have corrected it by taking as a model phrases in which it is said of some high personage that he comes before the king amid words of praise, and goes forth in the midst of songs -AQO Kink MIDTO THE KINK HOSTE (C 26 of the Louvre, in Pirrett, Reould des inscriptions incidites, vol ii p. 25, ) The court of Egypt, like that of Byzantium, had its formulæ of songs and graduated recitatives to mark the entrance and departure of great personages; and the Nile, which brings the inundation, and comes forth from unknown sources, is compared with one of these great personages, and hailed as such according to the rules of efiquette.

Literally, "delusive words." The gods were cajoled with promises which obviously could never be kept; and in this case the god allowed himself to be taken in all the same, and answered them by the inundation.

The word Nile is of uncertain origin. We have it from the Greeks, and they took it from a people foreign to Egypt, either from the Phœnicians, the Khîti, the Libyans, or from people of Asia Minor. When the Egyptians themselves did not care to treat their river as the god Hâpi, they called it the sea, or the great river. They had twenty terms or more by which to designate the different phases which it assumed according to the seasons, but they would not have understood what was meant had one spoken to them of the Nile. The name Egypt also is part of the Hellenic tradition; perhaps it was taken from the temple-name of Memphis, Hârkûphtah, which barbarian coast tribes of the Mediterranean must long have had ringing in their ears as that of the most important and wealthiest town to be found upon the shores of their sea. The Egyptians called themselves Romitû, Rotû, and their country Qîmit, the black land. Whence came they? How far off in time are we to carry

2 See above, p 16 for what is said on this subject, of also 1 6, note 4

114 255) 15 well 14 to the country (Olyes 4, 1v 301, 314 257)

I takus tah Maluphtah means the mansion of the dulles of the g & Phtah This is the dym 1 3 propoed by heresen (Geografies, vol 1 p 85) I ven in the list century a similar d rivition had eccurred to Loising viz try phash, which he translated the extilly house of 11th (Jam NSKI, Opercula, 11 Wall edition, vol 1 pp 426, 4.7) C infirmation of this conjecture might I found in the name Held estis, which was sometimes applied to the country. As a matter of fact If that I was the got with whom the Greeks adentified Phtsh Another by others, first prip set ly Reini en (Veber die Namen A applens ber den Semilen und Griechen in the Sitzungsberichte of the to demy of Sciences in Victua, 1851), and alo, ( d with slight modifications by I pres (Lapplen and ce Bucher Moses, p 132, et seq ), derives Agyptos from A. Kuphtor, the island of kaphtor. In that se, the Caphton of the Bible would be the Delta, not Crete Gregorian (Klein Sel riften, vol 1 11 32, 381), f llowed by Wildemann (Here lots Jucites Buch, p 47 note 1), considers it an archice, but purely Greek form, taken from you, a vulture, like acytains The impetuous river with its many arms, suggested to the Hellenes the rice of a bird of prey of powerful learns. The name rail, aero's, which is occasion illy, though a irely, applied to the airer, is incentestably in favour t this etymology "

"Romain is the more encient form, and is currently used in the Lyrumid texts. By clision of it final t, it has become the copies tome, tome the Priomis it Heart to or Millies in let Herovers (ii 113). Roms is one of the words which have inspired Prof. Lie being with the idea cocking traces of the Ancient Egyptica in the Gypsy tongue (Om Liquenern in his A pyptologic level, pp. 26, 27, of Vidensh Solol Icelandlinger, Christiania 1870). Leta lota, is the amounted as remain, without the interactive used. It is thing significance with a mixed by Chantiller Civilies a rate of pyptic, 2 it cair, p. 201). In the Rocci commence it is with the name of using, which is given in Cauchis (13) to the eldest son of Mizraim (I. I rates are monum mixed in part attribute aux six 710 incres dynasties de Manethon, p. 6). Rochisionieris (Sur les namedes 1) d. Mizraim, in the John of assatique, 1886, 8th series, vol. vii. pp. 19.) 201 of a large liners in 40-89) takes it in the name of the fill thin, and the poore classes in difficult in to the term. Animum, which would stand for the wealthy classes, the zauat of Mohammedan times

A digost of ancient discussions on this name 12 to be found in Champotton (L'1 gypte seus 1 I haraons, vol 1 pp 73, 71), and the like service has been done for modern research on the sulject 13 Brussen (Geogr Ins., vol 1 pp 73, 74) The name was known to the Greeks under the form Ahemra, Khinka (De Iside et Oelside, § 33, Puthey edition, p 58 7) but it was raicly used, at

le 19t for literary purposes.

<sup>&#</sup>x27;The least unlikely etymology is still that which derives Neilos from the Hebrew nata, a river, et nal hal, a terient (I iisis, Rudestung, zue Chronologie der Agypter, p. 275). It is also derived from A nalu, the branches of the Nile in the Delta (Grous, in the Bulletin de l'Institut Lgypten, id series vol in pp. 165-175).

back the date of their arrival? The oldest monuments hitherto known scarcely transport us further than six thousand years, yet they are of an art so fine, so well determined in its main outlines, and reveal so ingeniously combined a system of administration, government, and religion, that we infer a long past of accumulated centuries behind them. It must always be difficult to estimate exactly the length of time needful for a race as gifted as were the Ancient Egyptians to rise from barbarism into a high degree of culture. Nevertheless, I do not think that we shall be misled in granting them forty or fifty centuries wherein to bring so complicated an achievement to a successful issue, and in placing their first appearance at eight or ten thousand years before our era. Their carliest horizon was a very limited one. Their gaze might wander westward over the ravine-furrowed plains of the Libyan desert without reaching that fabled land of Manû where the sun set every evening; but looking eastward from the valley, they could see the peak of Bûkhû, which marked the limit of regions accessible to man.

Beyond these regions lay the beginnings of To-mutri, the land of the gods, and the breezes passing over it were laden with its perfumes, and sometimes wafted them to mortals lost in the desert.<sup>4</sup> Northward, the world came to an end towards the lagoons of the Delta, whose inaccessible islands were believed to be the sojourning-place of souls after death.<sup>3</sup> As regards the south, precise knowledge of it scarcely went beyond the defiles of Gebel Silsileh, where the last remains of the granite threshold had perhaps not altogether disappeared. The district beyond Gebel Silsileh, the province of Konusit, was still a foreign and almost mythic country, directly connected with heaven by means of the cataract.<sup>6</sup> Long after the Egyptians had broken through this restricted circle,

<sup>&</sup>lt;sup>1</sup> This is the date admitted by Chalas, of all savants the least disposed to attribute exaggulated antiquity to races of men (Litades sur Lantiquite historique, 2nd edit., pp. 6-10).

<sup>2</sup> See what is said above on the mountain of Monti, p. 18.

BRI 650R (Die altagyptische Vollertatel, in the Verhandlungen des 5ten Orientalisten-Congresses, vol. n. pp. 62-64) identities the me intain of Bakhu with the Emerald Mountain of classic geography, known to-day as Gebel Zabarth. The name of Bakhu does not seem to have been restricted to an insignificant chain of hills. The taxes of Bakhu does not seem to have been restricted to an original chain of hills. The texts prove that it was applied to several mountains situate north of Gebel Zabarah, especially to Gebel ed Dukhan. Gebel Charib, one of the peaks of this region, attains a hoight of 6180 feet and insight from after (Sehweinfruhert, La terra incognita dell' Egitto propramente detto, in l'Exploratore, 1878).

BRUGSCH, Dictionnative ging of league, pp. 382-385, 396-398, 1231, 1234-1236. The perfumes and the odoriferous woods of the Divine I. 7 were celebrated in Egypt. A traveller or hunter, crossing the desert, "could not but be vivid, "appressed by suddenly becoming aware, in the very mide of the desert, of the penetrating scent of the rebûl (Pulicharia undulata, Schweine), which once followed as throughout a day and two nights, in some places without our being able to distinguish whence it came; as, for instance, when we were crossing theirs of country without any traces of vegetation whatever" (Goldenschill, Une excussion a liceoidee, in the Recueil, vol. xiii. pp. 93, 94).

<sup>\*</sup> MASPERO, Litudes de Mythologie et d'Archeologie egyptiennes, vol. ii. pp. 12-14 (of. the Recue de l'Histoire des Religious, vol. xvii. pp. 259-261). Prop. Latrin (Aus Ægyptens Vorzeit, p. 53, et seq.) was the first to show that the sojourning-place of the Egyptian dead, Sokhit Larå, was localized in one of the nomes of the Delta.

MASPERO, Études de Mythologie et d'Archéologie égyptiennes, vol. ii. pp. 17, 18 (cf. the Revue de l'Histoire des Religions, vol. xviii. pp. 269, 270).

the names of those places which had as it were marked out their frontiers. continued to be associated in their minds with the idea of the four cardinal points. Bâkhû and Manû were still the most frequent expressions for the extreme East and West. 1 Nekhabit and Bûto, the most populous towns in the neighbourhoods of Gebel Silsilch and the ponds of the Delta, were set over against each other to designate South and North.2 It was within these narrow limits that Egyptian civilization struck root and ripened, as in a closed yessel. What were the people by whom it was developed, the country whence they came, the races to which they belonged, is to-day unknown. The majority would place their cradle-land in Asia,3 but cannot agree in determining the route which was followed in the emigration to Africa. Some think that the people took the shortest road across the Isthmus of Suez.4 others give them longer peregrinations and a more complicated itinerary. They would have them cross the Straits of Bab el-Mandeb, and then the Abyssinian mountains, and, spreading northward and keeping along the Nile, finally settle in the Egypt of to-day. A more minute examination compels us to recognize that the hypothesis of an Asiatic origin, however attractive it may seem, is somewhat difficult to maintain. The bulk of the Egyptian population presents the characteristics of those white races which have been found established from all antiquity on the Mediterranean slope, of the Libyan continent; this population is of African origin, and came to Egypt from the West or South-West.6 In the valley, perhaps, it may have

<sup>&</sup>lt;sup>1</sup> Becorcii, Veber den Ost-und Westpunkt des Sonnanlaufes nach den altagyptischen Vorstellungen, in the Zeitschrift, 1864, pp. 73-76.

<sup>&</sup>lt;sup>2</sup> Brugson, Dictionnaire geographique, pp. 213-215, 351-353

<sup>&</sup>lt;sup>2</sup> The greater number of contemporary Egyptologists, Brighout, Edges, Lauth, Liebter, have adhed to this opinion, in the train of E. de Rota (Richerches sur les monuments, pp. 1-11); but the most extreme position has been taken up by Hommer, the Assyrologist, who is inclined to derive Egyptian evaluation entirely from the Babylonian. After having summarily announced this tless in his Ge chichte Babylonians and Assyriens, p. 12, et seq., he has set it forth at length in a special treatise, Der Babylonische Uispring der agyptischen Kultur, 1892, wherein he endeavours to prove that the Heliopolitan myths, and hence the whole Egyptian religion, are derived from the cults of Erida, and would make the name of the Egyptian city Ona, or Ana, identical with that of Nûn-ki, Aûn, which is bound by the Chaldeau.

<sup>&</sup>lt;sup>4</sup> E. die Rouge, Rochechts wer les monuments qu'on peut attribuer aux six premières dynasties, p. 4; Bie asch, Geschichts Lyptens, p. 8. Wiedin and Agypteche Cleschichte, p. 21, et soq.

Brugsen has adopted this opinion in his l'gyptische Beiträge zur Volkerl unde der altesten Welt (Deutscho Revue, 1881, p. 48).

This is the theory preferred by naturalists and ethnologists (R. Hautmann, Die Nigritür, vol. 1 p. 180, et seq.; Morton, who was at first heatile to this view, accepted it in the Transactions of the American Ethnological Society, vol. iti. p. 215; cf. Nort-Guiddon, Types of Mankind, p. 318; Haux, Apergu sur les ruces humaines de la basse vallée du Nil, in the Bulletin de la Société d'anthropologie, 1886, pp. 718-743). A Viennese Egyptologist, Hern Reinisch, even holds that not only are the Egyptians of African origin, but that "the human races of the ancient world, of Europe, Asia, and Africa, and desconded from a single family, whose original seat was on the shores of the great lakes of equatorial Africa," (Der einheitliche Ursprung der Sprachen der Alten Well, nachgeulesen

met with a black race which it drove back or destroyed; and there, perhaps, too, it afterwards received an accretion of Asiatic elements, introduced by way of the isthmus and the marshes of the Delta. But whatever may be the origin of the ancestors of the Egyptians, they were scarcely settled upon the banks of the Nile before the country conquered, and assimilated them to itself, as it has never ceased to do in the case of strangers who have occupied it. At the time when their history begins for us, all the inhabitants had long formed but one people, with but one language.

This language seems to be connected with the Semitic tongues by many of its roots.<sup>2</sup> It forms its personal pronouns, whether isolated or suffixed, in a similar way.<sup>3</sup> One of the tenses of the conjugation, and that the simplest and most archaic, is formed with identical affixes. Without insisting upon resemblances which are open to doubt, it may be almost affirmed that most of the grammatical processes used in Semitic languages are to be found in a rudimentary condition in Egyptian. One would say that the language of the people of Egypt and the languages of the Semitic races, having once belonged to the same group, had separated very early, at a time when the vocabulary and the grammatical system of the group had not as yet taken definite shape. Subject to different influences, the two families would treat in diverse fashion the elements common to both. The Semitic dialects continued to develop for centuries, while the Egyptian language, although earlier cultivated, stopped short in its growth. "If it is obvious that there was an original connexion between the language of Egypt and that of Asia,

durch Vergleichung der Afrikanischen, Frytræischen und Indogermanischen Sprachen, mit Zugrundlegung des Teda, Vienna, 1873, p. v.).

<sup>3</sup> MARPERO, Des Pronoms personnels en egyptien et dans les langues semitiques, in the Ménoire de la Société de linguistique, vol. ii. p. 1, et seq. A very forcible exposition of différent conclusions may be found in a memoir by Lepage-Renouf (Proceedings of the Society of Biblical Archeology, 1888-89, pp. 217-264).

This is the opinion which has generally obtained among Egyptologists since Benfi y's rescarches. Ueber das Verhältniss der Agyptischen Sprache zum Semitischen Sprachstamm, 1844; cf. Samwanzi, Das Alle Agyption, vol. part in. p. 2003, et seq.; E. de Roi oi., Recherches sur les monuments, pp. 2-1; Larrens, Ueber die Annahme, in the Nakschrift, 1876, pp. 91, 92; Brusson, Geschichte Egyption, pp. 8, 9; Ed. Meyer, Geschichte Egyption, pp. 23. Edman (Egypten, pp. 54, 55) is tempted to explain the relationships found between Egyptian and the idioms of Northern Africa as the effects of a series of emigrations when place at different times, probably for enough apart, the first wave having passed over Egypt at a very remote period, another over Syria and Arabia, and, finally, a third over Eastern Africa. Prof. En. has also published a very substantial memoir, in which he sets forth with considerable caution those points of contact to be observed between the Semitic and Egyptical languages (A. Emman, Ims Verhallniss der Egyptischen zu den Semitischen Sprachen, in the Zeitschrift der Morgenlandischen Geseltschaft, vol. xlvi. pp. 85–129). The many Semitic words introduced into classic Egyptian from the time of the XVIIIth dynasty must be carefully excluded from the tornes of the comparison. An extensive list of these will be found in Boxdx, Dem Hebinisch-Phönisischen Sprachzweige angehörige Lehmeörter in hieroglyphischen und hieratischen Texten, Leipzig, 1886.

this connexion is novertheless sufficiently remote to leave to the Egyptian race a distinct physiognomy." 1 We recognize it in sculptured and painted portraits, as well as in thousands of mummied bodies out of subterranean

slender, with a proud and imperious air in the carriage of his head and in his whole bearing. He had wide and full shoulders, well-marked and vigorous pectoral muscles, muscular arms, a long, fine hand, slightly developed hips, and sinewy legs. The detail of the knee-joint and the muscles of the calf are strongly marked beneath the skin; the long, thin, and lowarched feet are flattened out at the extremities owing to the custom of going barefoot. The head is lather short, the face oval, the forehead somewhat activating The eyes are wide and fully opened, the cheek-bones not too marked, the nose fairly p omment, and either straight or aquiline. The mouth is long, the lips full, and lightly ridged along their outline; the teeth small, even, well-set, and remarkably sound; the ears are set high on the he id. At birth the skin is white, but darkens in proportion to its exposure to the sun.8 Men are genefally painted red in the pictures, though, as a matter of fact, there must already have been all the shades which we see among the present population, tion a most delicate rose-tinted complexion to that of a smoke-coloured bronze. Women, who

THE NOBLE TYPL OF EGYPTIAN.

were less exposed to the sun, are generally painted yellow, the tint paler in proportion as they rise in the social scale. The hair was inclined to be wwy, and even to curl into little ringlets, but without ever turning into the wool of the negro. The heard was scanty, thick only upon the chin. Such was the highest type; the commoner was squat, dumpy, and heavy. thest and shoulders seem to be enlarged at the expense of the pelvis and

<sup>1 1.</sup> De Rouge, Recherches our les monuments qu'on peut attribuer aux six premieres dynastics, p 3 All the features of the two portraits given below are taken either from the stitues, the bis-1 1/1 is, or the many mummies which it fell to my lot both to see and to study during the time I was in 1 sipt They correspond pretty closely with the o drawn by HAMY, Apergu sur les ruces humaines de la basse valles du Nel, p. 4, et soq. (of. Bulletin de la Societé d'Anthropologie, 18-6, p 721, et seq) With regard to this question, see, more recently, R. Virginow, Anthropologie Agyptens, in the (' 11esponder Blatt der d Anihr. <sup>2</sup> According to Vikenow (Anthropolegic A typitens, 1-1), this impression is not borne out by ficts Sundry Orientalists, especially Birch (Igylt from the Inchest Times to dec. 309-310) and beach (The Ancient Impress of the Last 1p-303-310), have noted considerable differences of type among the prisonings represented upon monuments of different periods. Vikenow (Die Mumen der Konige im Museum von Balay, p-17, et Sit ungsbeichte of the Academy of Berlin, 1888, pp. 782, 783, and Anthropolegie Egyptens, 1-1) has endeavoured to show that the difference was even greater than had been stated, because the ancient Egyptian was brachycephalic, while the modern is dole hosephalic

of the Delta may bear upon her shoulders the head of a twelfth-dynasty king. A citizen of Cairo, gazing with wonder at the statues of Khafra or of Seti I. in the Gizeh Museum, is himself, feature for feature, the very image of those ancient Pharaohs, though removed from them by fifty centuries.

Until quite recently nothing, or all but nothing, had been discovered which

A FILLAH WOMAN WITH THE FEATURES OF AN INCIPAL KING.1

could be attributed to the primitive races of Egypt, even the flint weapons and implements which had been found in various places could not be ascribed to them with any degree of certainty,<sup>2</sup> for the Egyptians continued to use stone long after metal was known to them. They made stone arrowheads, hammers, and knives, not only in the time of the Pharaohs, but under the Romans, and

whom all the great folks of Cairo were well known which of the sheikhes my diawing was like, he inhesitatingly named a sheikh of the Divan, whom, indeed, it did fairly resemble "Himy pointed sit a similar resemblance between the head to which Jomard refers and the portrait of a foliah from Upper Egypt, painted by Lefebure for the collections of the Museum of Natural History (profit des races huntaines de la base vallée du Vil, pp. 10-12; cf. Bulletin de la Société d'anthrophogie, 1886, pp. 727-729) these are the two types reproduced by Faucher-Gudin on p. 18

The face of the woman here given was taken separately, and was subsequently attached to the arre of an Egyptian woman whom Naville had photographed sitting beside a colossal head. The res of the statue has been restored.

This question, brought forward for the first time by Hamy and François Lenormant (Decouvertes reales de l'âge de pierre en L'gypte, in the Comptes rendus de l'âge de pierre en L'gypte, in the Comptes rendus de l'âge de Sciences, 22 nov 1864), two rise to a long controversy, in which many European savants took part. The whole account of its given nearly in full by Salouon Revacil, Description raisonnée du musée de Saint-Germain, of 1 pp. 87, 88. The examination of the sites led me to believe, with Mariette, that the manuatories pointed out before 1896 were certainly not anterior to historie times, but I never doubted, tooms have imagined, that there had been a real stone ago in Egypt

during the whole period of the Middle Ages, and the manufacture of them has not yet entirely died out.1 These objects, and the workshops where they were made, might therefore be less ancient than the greater part of the inscribed monuments. But if so far we had found no examples of any work belonging to. the first ages, we met in historic times with certain customs which were out of harmony with the general civilization of the period. A comparison of these customs with analogous practices of barbarous nations threw light upon the former, completed their meaning, and showed us at the same time the successive stages through which the Egyptian people had to pass before reaching their highest civilization. We knew, for example, that even as late as the Casars, girls belonging to noble families at Thobes were consecrated to the service of Amon, and were thus licensed to a life of immorality, which, however, did note prevent them from making rich marriages when age obliged them to retire from office.2 Theban women were not the only people in the world to whom such licence was granted or imposed upon them by law; wherever in a civilized country we see a similar practice, we may recognize in it an ancient custom which in the course of centuries has degenerated into a religious observance.8 The institution of the women of Amon is a legacy from a time when the practice of polyandry obtained, and marriage did not yet exist.4 Age and maternity relieved them from this obligation, and preserved them from those incestuous connections of which we find examples in other races.<sup>5</sup> A union of father and daughter, however, was perhaps not wholly forbidden,6 and that of brother and sister seems to have been

¹ Griffith has called attention to a bas-relief of the XIIth dynasty at Beni-Hasan representing the making of flint knives (Newberge-Griffith, Beni-Hasan, vol 11 pl. vii) An entire collection of flint tools—axes, adzes, knives, and sic 'des—mostly with wooden handles, was found by Prof. Petrie in the ruins of Kahun, at the entrance to the Fayûm (Illahun, etc., pp. 12, 51-55): they dated from the XIIth dynasty, more than 'bre thousand years before our era Mariette had previously pointed out (Bulletin de l'Instituc égyptien, 1857–1871, 1st series, vol. xi. p. 58; cf. De l'âge de la pierre en Égypte, in the Reun l de Travanze, vol. vii. p. 129) the fact that a Coptic Reis, Salfb of Abydos, in charge of the ex-victors there, shaved his head with a flint knife, according to the custom of his youth (1820–35). I have the min, who died at over eighty years of age, in 1887; he was still faithful to his flint implement, while his sons and the whole population of El Khatbeh were using nothing but steel ravors. As scalp was scraped nearly raw by the operation, he used to cover his head with fresh leaves to cool the inflamed skin.

<sup>&</sup>lt;sup>2</sup> Strand, xvii. § 46, p. 817; Diodorus (i. 47) speaks only of the tombs of these Pallacides of Amon, his authority, Hecatæus of Abdera, appears not to have known their mode of life.

Inppert, Kulturgeschichte der Menschheit in ihrem organischen Aufbau, vol. ii. p. 15.

As, for instance, among the Medes, the class of the Magi, according to Xanthos of Lydia (fragm. 28 in Miller-Didor, Frag. kist. grac., vol i. p. 43) and of Ctesias (fragm. 30, edit. Müller-Didor, p. 60).

<sup>&</sup>lt;sup>6</sup> E. DE Rovaé hold that Rameses II. married at least two of his daughters, Bint Anati and Honittui. The Achamenian kings did the same: Artaxerxes married two of his own daughters (Plutabeh, Artaxerxes, § 27).

regarded as perfectly right and natural; 1 the words brother and sister possessing in Egyptian love-songs the same significance as lover and mistress with us.4 Paternity was necessarily doubtful in a community of this kind, and hence the tie between fathers and children was slight; there being no family, in the sense in which we understand the word, except as it centred around the mother. Maternal descent was, therefore, the only one openly acknowledged, and the affiliation of the child was indicated by the name of the mother alone.3 When the woman ceased to belong to all, and confined herself to one husband. the man reserved to himself the privilege of taking as many wives as he wished, or as he was able to keep, beginning with his own sisters. wives did not enjoy identical rights: those born of the same parents as the eman, or those of equal rank with himself, preserved their independence. the law pronounced him the master, nibû, to whom they owed obedience and fidelity,4 they were mistresses of the house, nibit pirû, as well as wives, himitû, and the two words of the title express their condition. them occupied, in fact, her own house, pira, which she had from her parents or her husband, and of which she was absolute mistress, nebit. She lived in it and performed in it without constraint all a woman's duties; feeding the fire, grinding the corn, occupying herself in cooking and weaving, making clothing and perfumes, nursing and teaching her children.6 When her husband visited her, he was a guest whom she received on an equal footing. It appears that at the outset these various wives were placed under the authority of an older woman, whom they looked on as their mother, and who defended their rights and interests against the master; but this custom

<sup>&</sup>lt;sup>1</sup> This custom had been noticed in early times, among others by Diodones, i. 27, who justifies it by eiting the marriage of Osiris with his sister list; the testimony of historians of the classical period is daily confirmed by the ancient monuments.

<sup>&</sup>lt;sup>2</sup> Mastero, Etudes egyptiennes, vol. i. pp. 221, 228, 232, 233, 237, 239, 240, etc.

The same custom existed among the Lycius (Hibrorit, 172, Nicolus of Danascus, frigm. 129, in Millia-Phinor, Prag. hist. ar., vol. m. p. 461, etc.) and among many semi-civilized peoples of ancient and modern times (J. Illinora, The Origins of Civilization, p. 13), etc.) The first writer to notice its existence in Egypt, to my knowledge, was Schow, Charle Pappacea grave scripta Musi Borgian. Velities, pp. and a xive.

On the most ancient monuments which we possess, the wite says of herself that she is 'the one devoted to her master—who does very day what her master loves, and whom, for that reason, her moster loves" (Lepsure, Denha., ii. 10 b); in the same way a subject who is the favourite of a king says that "he loves his master, and that his master loves him" (Lepsure, Denham, ii. 20).

The title nibit pira is ordinarily interpreted as if the woman who here it were mistress of the house of her husband. Prof. Petril (A Season in Fappi, pp. 8, 9) considers that this is not an exact translation, and has suggested that the women called nibit pira are widows. The explanation cannot be applied to passages where the woman, whether matried or otherwise, says to let lover, "My good friend, my desire is to share thy goods as thy house-mistress" (Masii no, I'tules appliences, vol. i. p. 247); evidently she does not ask to become the widow of her beloved. The interpretation proposed here was suggested to me by a species of marriage still in vogue among several tribes of Africa and America (Lippert, Kulturgeschichte der Menschheit, vol. 11, p. 27, et seq.)

<sup>&#</sup>x27;Compare the touching picture which the author of the Papyrus moral de Boulag gives of the soul mother, at the end of the Theban period (Charles, l'Egyptologie, vol. ii. pp. 12-51).

gradually disappeared, and in historic times we read of 'it as existing only in the families of the gods. The female singers consecrated to Amon and other deities, owed obedience to several superiors, of whom the principal (generally the widow of a king or high priest) was called chief-superior of the ladies of the harem of Amon. 1 Besides these wives, there were concubines, slaves purchased or born in the house, prisoners of war, Egyptians of inferior class, who were the chattels of the man and of whom he could dispose as he wished.2 All the children of one father were legitimate, whether their mother were a wife or merely a concubine, but they did not all enjoy the same advantages; those among them who were born of a brother or sister united in legitimate marriage, took precedence of those whose mother was a wife of inferior rank or a slave.8 In the family thuse constituted, the woman, to all appearances, played the principal part. Children recognized the parental relationship in the mother alone. The husband appears to have entered the house of his wives, rather than the wives to have entered his, and this appearance of inferiority was so marked that the Greeks were deceived by it. They affirmed that the woman was supreme in Egypt; the man at the time of marriage promised obedience to her, and entered into a contract not to raise any objection to her commands.4

We had, therefore, good grounds for supposing that the first Egyptians were semi-savages, like those still living in Africa and America, having an lanalogous organization, and similar weapons and tools. A few lived in the desert, in the easis of Libya, or in the deep valleys of the Red Land – Doshirit, To Doshiru- between the Nile and the sea; the poverty of the

Most of the princesses of the family of the high priest of the Theban Amon had this title (Masplao, Les Monies royales de Deir-el-Behart, in the Mem de la Mission franç, du Caire, vol. i. pp. 575-580). In that species of modern African marriage with which I have compared the earliest Egyptian marriage, the wives of one may be register subject to the authority of an old woman, to whom they give the title of modern; if the comparison is exact, the harem of the god would form a community of this kind, in which the clier would be the superiors of the younger women. Here again the divine family would, reserve an institution which had long ceased to exist among mortals.

<sup>2</sup> One of the concubines of Khamabotpu at Eni-Hasan, after having presented her master with a son, was given by him in mania, to an inferior officer, by whom she had several other children (Champollon, Mon. de l'Égyple, vol. 11. p = 30, 332, 115; Lersille, Denka, vol. ii. 128, 130, 132).

This explains the history of the chile. A Thothmes I., and of the other princes of the family of Admes, as we shall have occasion to see further on.

<sup>4</sup> Diodocts Siguits, i. 80. Here, as in all he says of Egypt, Diodocus has drawn largely from the historical and philosophic romance of Hecataus of Abders

Leman (Egyptea, pp. 59, 60) and Ed. Moyer (Gesch. Egyp., pp. 21-30) have devoted merely a few pages to the subject: a new theory has been started by Prof. Petrie (A History of Egypt, vol. i. pp. 12-15) which seems as yet to have found no acceptance amongst Egyptologists. The examination of the hieroglyphic signs has yielded valuable information; they have often preserved for us a representation of objects, and consequently a record of customs flourishing at the time when they were originally drawn (Maserro, Notes au jour le jour, § 5, in the Proceedings of the Bib. Arch Quarterly Review, 1891, pp. 316, 311; Perrus, Epigraphy in Egyptian Research, in the Assatic and Amelineau, and De Mofgan have confirmed the deductions which the study of the Pharonic monuments had led me to make, and in most cases I have merely had to add to my existing notes a reference to their works in order to bring this volume abreast of our present knowledge.

country fostering their native savagery. Others, settled on the Black Land, gradually became civilized, and we have found of late considerable remains of

those of their generations who, if not anterior to the times of written records, were at least contemporary with the earliest kings of the first thistorical dynasty. Their houses were like those of the fellahs of to-day, low huts of wattle daubed with puddled only, or of bricks dired in the sun. They contained one

It is the panther's skin which is seen, for instance, on the shoullers of the neuro pris it is of VIIIth dynasty (Witkinson, Manners and Customs, 2nd edit, vol 1 p 27), vol 1, l) it was instance for certain orders of priests, or for dignitaries performing priestly functions of a prescribed

of the body, the animal's tail touching the heels behind,1-as we see later in several representations of the negroes of the Upper Nile. They smeared their limbs with grease or oil,2 and they tattooed their faces and bodies, at least in part, but in later times this practice was retained by the lower classes only.3 On the other hand, the custom of painting the face was never given up. To complete their toilet, it was necessary to accentuate the arch of the eyebrow with a line of kohl (antimony powder). A similar black line surrounded and prolonged the oval of the eye to the middle of the temple. a layer of green coloured the under lid,4 and ochre and carmine enlivened the tints of the cheeks and lips.5 The hair, plaited, curled, oiled, and plastered with grease, formed an erection which was as complicated in the case of the man as in that of the woman. Should the hair be too short, a black or. blue wig, dressed with much skill,6 was substituted for it; ostrich feathers waved on the heads of warriors,7 and a large lock, flattened behind the right ear, distinguished the military or religious chiefs from their subordinates.8 When the art of weaving became common, a belt and loin-cloth of white

nature (Statues A 60, 66, 72, 76, in the Louvre, E or Rouge, Notice sommute des Monuments de la Calerie Égyptionne, 1872, pp. 44, 36, 38, 39; In priv., Denhm., ii. 18, 19, 21, 22, 30, 31 h, 32, etc.; cf. Wii kinson, op. cit., 2nd edit, vol. 1, pp. 181, 182, 12kian, Egypton, p. 286). The saccritotal costume is a survival of the ancient attire of the head of the family. Those who inherited or who had obtained the right of wearing the panther's skin on certain occasions, bore, under the ancient empire, the title of Oirá-basit, "chiefs of the fur" (Marillate, Les Mustabus, pp. 252, 253, 254, 275, etc.).

CHAMPOLLION, Monuments, vol. 1 pl. ceclxxxi. bis, 4; ROSELLINI, Mon. civili, pl. xli., text, vol. ii. pp. 21, 22, where the women are seen tattooed on the bosom. In most of the bas-reliefs also of the temples of Philæ and Kom Ombo, the goddesses and queens have their breasts scored with long incisions, which, starting from the circumference, unite in the centre round the nipple. The "cartonnages" of Akhnim show that, in the age of Severus, tittooing was as common as it is now among the provincial middle classes and the fellahfin (Masperu, Lindes de Myth. et d'Arch.

Egyptiennes, vol. i. p. 218; cf. Bulletin de l'Institut egyptien, 2nd series, vol vi. p. 89).

The green powder (uazit) and the black pulverized vegetable charcoal, or antimony (maszimit), formed part of the offerings considered indispensable to the decensed; but already in the age of the Pyramids the use of green paint appears to have been an affectation of archaism, and we meet with it only on a few monuments—such as the statues of Sapi in the Louvre (E. de Rouge, Notice sommaire, p. 50 A, 36, 37, 28) s and the stella of Hathor-nofer-notpu at Gizch (Masyino, Civide du visiteur, pp. 212, 213, Nos 991 et 1990). The use of black kelli was in those times, as it is still, sapposed to cure or even prevent ophthaling, and the painted eye was called uzait, "the healthy," a term ordinarily applied to the two eyes of heaven—the sun and moon (Masyero, Notes au jour le jour, § 25, in the Proceedings of Bib. Arch. Society, 1891-92, vol. xiv. pp. 313-316).

<sup>5</sup> The mummies of Honittai and Nsitan hashra (MAPERO, Les Momies royales, in the Mem. de la Miss, vol. i. pp. 577, 579) had their hair dressed and their faces painted before burial.

• Wigs figure, from the earliest antiquity, in the list of offerings. The use of them is common among many savage tribes in Africa at the present day. The blue wir has been found in Abyssinia, and examples, taken by Jules Borelli, are exhibited in the Museum of the Trocadero.

These may be observed on the head of the little sign ( , representing foot-soldiers in the current script; in later times they were confined to the mercenaries of Libyan origin.

In historic times only children ordinarily wore the sidelock; with grown men it was the mark of princes of the royal family, or it indicated the exercise of high priestly functions (WILKIRSON, Manners and Customs, 2nd edit., vol. i. pp. 162, 163, 182).

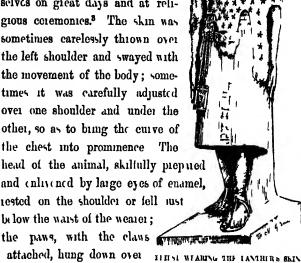

COSTUME. 55

linen replaced the leathern garment.1 Fastened round the waist, but so low as to leave the navel uncovered, the loin-cloth frequently reached to the knce,

> the hinder part was frequently drawn between the legs and attached in front to the belt, thus forming a kind of drawers 2 Tails of animals and wild beast's skin were henceforth only

the insignia of authority with which

priests and princes adorned themselves on great days and at religious ceiemonies.8 The skin was sometimes carelessly thrown over the left shoulder and swayed with the movement of the body; sometimes it was carefully adjusted over one shoulder and under the other, so as to bring the curve of the chest into prominence. The rested on the shoulder or fell just below the waist of the wearer:

at the ends of their sticks; once arrived at the scene of their work, they deposited it in a corner with their provisions until they required it.1 The women were at first contented with a loincloth like that of the men; 2 it was enlarged and lengthened till it reached the ankle below and the bosom above, and became a tightly fitting garment, with two bands over the shoulders, like braces, to keep it in place? The feet were not always covered; on certain occasions, however, sandals of coarso leather, planted straw, split reed, or even painted wood, adorned those shapely Egyptian feet, which, to suit our taste, should be a little shorter 4 Both omen and women loved ornaments, and covered then necks, breasts, aims, wrists, and ankles with many rows of necklaces and bracelets. The bracelets were made of elephant ivory, mother-of-pearl, or even flint, very cleverly perforated.' The necklaces were composed of stings of pierced shells,6 interspersed with seeds and little pebbles, either sparkling or of unusual shapes." Subsequently imitations in terra-cotta replaced the natural shells, and precious stones were substituted for pebbles, as were also beads of enamel, either round, peur-shaped, or cylindrical: the neck-

with holes, through which ran the threads.1 Weapons, at least among the

MAN WI ARING WIG AND NECKI ACES 6

nobility, were an indispensable part of costume. Most of them were for hand-to-hand fighting: sticks, clubs, lances furnished with a sharpened bone or stone point, axes and daggers of flint, sabres and clubs of bone or wood variously shaped, pointed or rounded at the end, with blunt or sharp blades,—in-

offensive enough to look at, but, wielded by a vigorous hand, sufficient to break an arm, crush in the ribs, or smash a skull with all desirable precision.<sup>5</sup> The plain or triple curved bow was the favourite weapon for attack at a distance,<sup>5</sup> but in addition to this there were the sling, the javolin, and

a missile almost forgotten nowadays, the boomerang; we have no proof, however,

Schweinfurth has identified, among others, the Cassia absus, L., "a weed of the Soudan whose seeds are sold in the drug bazaar at Cairo and Alexandria under the name of shishm, as a remedy, which is in great request among the natives, for ophthalmia" (Les Dernières Déconvertes botaniques dans les anciens tombeaux de l'Igypte, in the Bulletin de l'Institut égyptien, 2nd series, vol. vi. p. 257). For for necklaces of pebbles, ef. MASPERO, Unide du visiteur, pp. 270, 271. No. 1129. A considerable number of those pebbles, particul rly those of strange shape, or presenting a currous combination of colours, must have been regarded as amulets or fetishes by their Egyptian owners; analogous cases, among other peoples, have been pointed out by E. B. Tylos, Primitive Culture, vol. ii. p. 180, et seq., 205, et seq. For the imitations of cowries and shells in blue culum lled terra-cotta, cf. MASPERO, Guide du sistieur, p. 271, No. 4130, p. 276, No. 4160; they are numerous at Abydos, side by side with the real cowries. Some coarse imitations of the Nevila polita were found at (icbel Tukh by De Morgan; they were cut in a species of hard crystalline perphyry (Eth. prehist, p. 59).

The nature of these little perforated slips has not been understood by the majority of savants; they have been put aside as doubtful chiects, or have been wrongly described in our museum catalogues.

The term mubit for the lance or javelin is found in the most ancient formulas of the pyramids (Popi I., 1, 124, in the Recueil de Travaux, vol. vi. p. 165). The mubit, lance or javelin, was pointed with flint, hone, or metal, after the fastion of arrowheads (Charas, Limbes sur l'antiquit historique, 2nd edit., p. 382, et seq. 395). Sec. J. d. Morgan, Filmographic prehistorique, pp. 79-84, for the most characteristic shapes of lance and provided found in the ancient Egyptian sottlements.

<sup>3</sup> In several museums, notable at Leyden, we find Egyptian axes of stone, particularly of serpentine, both rough and polished (Chalas, "In" s sur l'antiquité historique, 2nd edit., pp. 381, 382). For the flut axes and daggers found in the oldest rums et Dn Morgas, Ethn. prehist., pp. 72-78.

• Drawn by Faucher-Gudin, from partition of Pharaoh Sen I of the XIX of dynasty (Roselling, Monumenti Storici, pl. v. 18): the lower probable the necklace has been completed.

In primitive times the bone of an annual wived as a club. This is proved by the shape of the object held in the hand in the sign (Masplio, Notes an jour le jour, § 5, in the Proceedings of the Biblical Archeological Society, 1890-91, vol ani. pp. 310, 311). the hieroglyph , , , which is the determinative in writing for all ideas of violence or brute force, comes down to us from a time when the principal weapon was the club, or a bone serving as a club.

For the two principal shapes of the bow, see LLPSUV, Der Bogen in der Ricroglyphik (Zeitschrift, 1872, pp. 79-88). From the carliest times the sign of portrays the soldier equipped with the bow and bundle of arrows; the quiver was of Asiatic ongin, and was not adopted until much later (MASPERO, Notes au jour le jour, § 18, in the Proceedings of the Biblical Archeological Society, 1891-92, vol. xiv. 184-187). In the contemporary texts of the first dynasties, the idea of

that the Egyptians. handled the boomerang 1 with the skill of the Austra-

lians, or that they knew how to throw it so as to bring it back to its point of departure. Such was approximately the most ancient equipment as far as we can ascertain; but at a very early date copper and iron were known in Egypt.<sup>3</sup> Long before historic times, the majority of the weapons in wood were replaced by those of metal,daggers, sabres, hatchets, which preserved, however, the shape of the old wooden instruments Those wooden weapons which were retained, were used for hunting, or were only brought out on solemn occasions when tradition had to be respected. The war-buton became the commander's wind of authority. and at last degenerated into the walk-

which grew in the Nile, the white and the blue, have seed-vessels similar to those of the poppy: the capsules contain small grains of the size of millet-The fruit of the pink lotus "grows on a different stalk from that of the flower, and springs directly from the root; it resembles a honeycomb in form," or, to take a more prosaic simile, the rose of a watering-pot. The upper part has twenty or thirty cavities, "each containing a seed as big as an olive stone, and pleasant to eat either fresh or dried."1 This is what the ancients called the bean of Egypt.2 "The yearly shoots of the papyrus are also gathered. After pulling them up in the marshes, the points are cut off and rejected, the part remaining being about a cubit in length. It is eaten as a delicacy and is sold in the markets, but those who are fastidious partake of it only after baking."3 Twenty different kinds of grain and fruits, prepared by crushing between two stones, are kneaded and baked to furnish cakes or broad; these are often mentioned in the texts as cakes of nabeca, date cakes, and cakes of figs. Lily loaves, made from the roots and seeds of the lotus, were the delight of the gourmand, and appear on the tables of the kings of the XIXth dynasty; 4 bread and cakes made of cereals formed the habitual food of the people. Durrah is of African origin; it is the "grain of the South" of the inscriptions.6 On the other hand, it is supposed that wheat and six-rowed barley came from the region of the Euphrates.7 Egypt was among the first to procure and cultivate them.8 The soil there is so kind to man, that in many places no agricultural toil is required. As soon as the

<sup>2</sup> Diodorus Siculus, i. 10, 31; Theophrastus, Hist. Pl., iv. 10; Strado, xvii. 799.

4 Tiû, which is the most ancient word for broad, appears in early times to have been used for every kind of paste, whether made with fruits or grain; the more modern word âpi applies specially to bread made from cereals. The ally leaves are mentioned in the Papprus Anastasi, No. 4, p. 14, 1, 1.

<sup>&</sup>lt;sup>1</sup> Herodurus, ii. 92. The root of two species of lotus is still held in much esteem by the half-savage inhabitants of Lake Menzalch, but they prefer that of the Nymphza Gerulea (Savary, Lettres sur l'Égypte, vol. i. p. 8, note 8; Raffeni at Dille, Flore d'Égypte, in the Description, vol. xix p. 425).

<sup>&</sup>lt;sup>3</sup> Henodorus, ii. 92. On the papyrus of Egypt in general, and on its uses, whether as an edible or otherwise, see Fu. Wesne, Die Pfanzon im Alten Egypton, pp. 71-129.

<sup>•</sup> From the Ancient Empire downwards, the rations of the workmen were distributed in corn or in loaves. The long flat load of the recover, the principal offering brought for the dead; another eval loaf of with a jar of water is the determinative for the idea of funeral repost. , which shows that its use dates from early prehistoric times in Egypt.

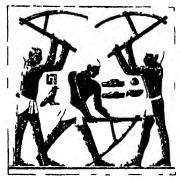

The African origin of the common. A., Iloleus Sorghum, L., is admitted by E. DE CANDOLIE., Origine des plantes cultivies, pp. 305-307. Les seeds 'raye been found in the tombs (Loret, La Flore Pharaonique, p. 12, No. 20), and a representation of it in the Theban paintings (Re : ILINI. Monumenti civili, pl. xxxvi. 2, and text, vol. i. p. 361, et seq.). I have found it mentioned under the name of dirati in the Papyrus Anastasi, No. 14, p. 13, l. 12; p. 17, l. 4.

r Wheat, saut, sau, is the corn of the north of the inscriptions. Barley is inti, ioti. On the Asiatic origin of wheat, see E. de Candolle, Origine des plantes cultivées, pp. 285-288; his conclusions appear to me insufficiently supported by fact. The Semitic name of wheat is found under the form kamha in the Pyramids (Maspero, La Pyramide du roi Teti, in the Recueil, vol. v. p. 10).

<sup>\*</sup> The position which wheat and barley occupy in the lists of offerings, proves the antiquity their existence in Eg.pt. Mariette found specimens of barley in the tembs of the Ancient Empi.

water of the Nile retires, the ground is sown without previous preparation,

and the grain, falling straight into the mud, grows as vigorously as in the bestploughed furrows.1 Where the earth is hard it is necessary to break it up, but the atreme simplicity of the instruments with which this was done shows what a feeble resistance it offered. For a long time the hoe sufficed. It was composed either of a large stone tied to a wooden handle, or was made of two pieces of wood of unequal length, united at one of then extremities, and held together towards the

This was the tradition of all the ancients. Herodotus related that, according to the Lyptime, while of Egypt, with the exception of the Theban nome, was a vist swamp pr vious to the time " 1 8 (HII ODOILS, 11 4) Aristotle (Meteorolog, 1 x1v) adds that the Red Sea, the Mediterrinein, in uct now occupied by the Delta formed one set

convex surface, furrowed lengthways by a depression, in the bottom of which the Nile is gathered and enclosed when the inundation is over. In the summer, as soon as the river had risen higher than the top of its banks, the water rushed by the force of gravity towards the lower lands, hollowing in its course long channels, some of which never completely dried up, even when the Nile reached its lowest level.1 Cultivation was easy in the neighbourhood of these natural reservoirs, but everywhere else the movements of the river were rather injurious than advantageous to man. The inundation scarcely ever covered the higher ground in the valley, which therefore remained unproductive; it flowed rapidly over the lands of medium elevation, and moved so sluggishly in the hollows that they became weedy and stagnant pools.2 In any year the portion not watered by the river was invaded by the sand: from the lush vegetation of a hot country, there was but one step to absolute aridity. At the present day an ingeniously established system of irrigation allows the agriculturist to direct and distribute the overflow according to his needs From Gebel Ain to the sea, the Nile and its principal branches are bordered by long dykes, which closely follow the windings of the river and furnition sufficiently stable embankments. Numerous canals lead off to right left, directed more or less obliquely towards the confines of the valley; they are divided at intervals by fresh dykes, starting at the one side from the river, and ending on the other either at the Bahr Yusuf or at the rising of the desert. Some of these dykes protect one district only, and consist merely of a bank of earth; others command a large extent of territory, and a breach in them would entail the ruin of an entire province. These latter are sometimes like real ramparts, made of crude brick carefully cemented; a few, as at Qosheish, have a core of hewn stones, which later generations have covered with masses of brickwork, and strengthened with constantly renewed buttresses of earth. They wind across the plain with many unexpected and apparently aimless tunes; on closer examination, however, it may be seen that this irregularity anot to be attributed to ignorance or caprice. Experience had taught the Egyptians the art of picking out, upon the almost imperceptible relief of the soil, the easiest ones to use against the inundation: of these they have followed carefully the st. sities, and if the control the dykes appears singular, it is to be ascribed to the natural configuration of the ground. Subsidiary embankments thrown up between the principal ones, and parallel

<sup>&</sup>lt;sup>1</sup> The whole description of the damage which can be done by the Nilo in places where the inundation is not regulated, is borrowed from Lanaut of Belleponds, Memoire sur les principaus travaux d'utilité publique, p. 3

<sup>&</sup>lt;sup>2</sup> This physical configuration of the country explains the existence at a very early date of those gigantic serpents which I have already montioned; of p 33, note 5, of this History.

to the Nile, separate the higher ground bordering the river from the low lands on the confines of the valley; they divide the larger basins into smaller divisions of varying area, in which the irrigation is regulated by means of special trenches.1 As long as the Nile is falling, the dwellers on its banks leave their canals in free communication with it; but they dam them up towards the end of the winter, just before the return of the inundation, and do not reopen them till early in August, when the new flood is at its height. The waters then flowing in by the trenches are arrested by the nearest transverse dyke and spread over the fields. When they have stood there long enough to saturate the ground, the dyke is pierced, and they pour into the next basin until they are stopped by a second dyke, which in its turn forces Them again to spread out on either side. This operation is renewed from dyke to dyke, till the valley soon becomes a series of artificial ponds, ranged one above another, and flowing one into another from Gebel Silsileh to the apex of the Delta. In autumn, the mouth of each ditch is dammed up anew, in order to prevent the mass of water from flowing back into the stream. The transverse dykes, which have been cut in various places, are also repaired, and the basins become completely landlocked, separated by narrow causeways. In ome places, the water thus imprisoned is so shallow that it is soon absorbed by the soil; in others, it is so deep, that after it has been kept in for several weeks, it is necessary to let it run off into a neighbouring depression, or straight into the river itself.2

History has left us no account of the vicissitudes of the struggle in which the Egyptians were engaged with the Nile, nor of the time expended in bringing it to a successful issue. Legend attributes the idea of the system and its partial working out to the god Osiris: 3 then Menes, the first mortal king, is said to have made the dyke of Qoshoish, on which depends the prosperity of the Delta 1 and Middle Egypt, and the fabulous Meris is supposed to have extended the blessings of the irrigation to the Fayûm. In reality, the

The arst precise information about the arrangement of a basin, or a series of basins, was offected at the beginning of our contary by Martin, Description geographions des provinces de Bentsay for du Fayoum, in the Description de Citypple, vol. xvi. p. 6, et seq. 19 a confutions to which to basing of 1 pper Egypt and of the Delta are subject has been well described by Chile, Le Nil, be outlined, Physple, p. 323, et seq.

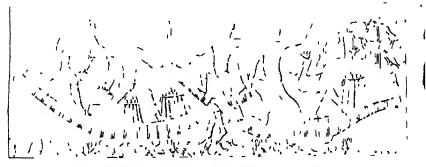

P. S. Girand, Memoiro sur l'Agriculture, l'Industrie et le l'ommerce de l'Egypte, in the Description l'Egypte, vol. xvii. pp. 10-15. For the technical det als of the progressive tilling and emptying of basius, see again Child, Le Nil, le Soudan, l'Egypte, pp. 325-333.

Diod. Sictions, i. 19, who borrowed this information from the hymns of the Alexandrine period.

Binner, Egypt's Place in Universal History, vol. ii. p. 41, interpreting a passage of Herodotus (1), thinks that it was the dyke of Qosheish, the construction of which the Egyptians attributed Mines.

regulation of the inundation and the making of cultivable land are the work of unrecorded generations who peopled the valley. The kings of the historic period had only to maintain and develop certain points of what had already been done, and Upper Egypt is to this day chequered by the network of waterways with which its earliest inhabitants covered it. The work must have begun simultaneously at several points, without previous agreement, and, as it were, instinctively. A dyke protecting a village, a canal draining or watering some small province, demanded the efforts of but few individuals; then the dykes would join one another, the canals would be prolonged till they met others, and the work undertaken by chance would be improved and would spread with the concurrence of an over-increasing

THE HERRING OF A CANAL CONNENHATING WITH THE NEEL

What happened at the end of last century, shows us that the system grew and was developed at the expense of considerable quarrels and bloodshed. The inhabitants of each district carried out the part of the work most conducive to their own interest, seizing the supply of water, keeping it and discharging it at pleasure, without considering whether they were injuring their neighbours by depriving them of their supply or by flooding them; hence arose perpetual s ite and fighting. It became imperative that the rights of the weaker slould be respected, and that the system of distribution should be co-ordinated, for the country to accept a beginning at least of social organization analogous to that which it acquired later: the Nile thus determined the political as well a the physical constitution of Egypt.2

The country was divided among communities, whose members were supposed to be descended from the same seed (pâit) and to belong to the same

separates the river from the hills. A canal surrounds it on three sides, and makes,

as it were, a natural ditch about its walls; during the inundation it is connected with the mainland only by nairow causeways - shaded with mimosas-and looking like a raft of verdure aground in the current.1 The site is as happy as it is picturesque; not only does the town command the two arms of the river, opening closing the waterway at will, but from time immemorial the most frequented of the routes into Central Africa has terminated at its gates, bringing to it the commerce of the Soudan It held sway, at the outset, over both banks, from range to range, northward as far as Deyrút, where the true Bahr Yusuf leaves the Nile, and southward to the neighbourhood of Gebel Sheikh Haridi. The extent and original number of the other principalities is not so easily determined. The most important, to the north of Siùt, were those of the Hare

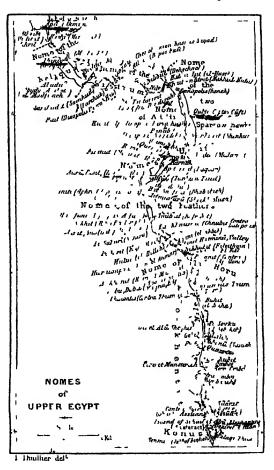

and the Oleander. The principality of the Hare never reached the dimensions of that of its neighbour the Terebinth, but its chief town was khminic whose antiquity was so remote, that a universally accepted tradition made it the scene of the most important acts of creation.<sup>2</sup> That of the Oleander,

<sup>&</sup>lt;sup>1</sup> Boudier's drawing, reproduced on p 25, and taken from a photograph by Beato, gives most faithfully the aspect presented by the plan and the modern tewn of Stout during the inundation.

<sup>\*</sup> Khmunu, the present Ashmunom, is the Hermopolis of the Greeks, the town of the god Thot.

on the contrary, was even larger than that of the Terebinth, and from Hininsû, its chief governor ruled alike over the marshes of the Fayûm and

the plains of Beni-Suef.1 To the south, Apû on the right bank governed a district so closely shut in between a bend of the Nile and two spurs of the range, that its limits have never varied much since ancient times. anhabitants were divided in their employment between weaving and the culture of cereals. From early times they possessed the privilege of furnishmg clothing to a large part of Egypt, and their looms, at the present day, still make those checked or stimed "melayahs" which the fellah women wear over their long blue tunie- 4 Beyond Apu, Thinis, the Girgeh of the Anabs, situate on both banks of the river, rivalled

khmûnû in antiquity and Siût in wealth: its plains still produce the tichest harvests and feed the most numerous herds of sheep and oxen in the Said. As we approach the cataract, information becomes scarcer. Qûbti

For the geography of the name of the Heavy, of which it is the capital, see Maspino, Notes an arch jour, § 19, in the Proceedings of the Biblical Archaelogical Society, 1891-92, vol. xiv. pp. 1-7-204.

Illiumsû is the Heracleopol Magna of the Greeks, the present Herassich, called also Almas-cl-Mach. The Egyptian word for the tree which gives its name to this principality, is Nûsî 10 michira, Geschichte Ryppiens, pp. 209, 210). Loret has shown that this tree, Nûsit, is the cleander our Partre Nirou des anciens I appliens, in the Recueil de Transacz, vol. xv. p. 102)

Apû was the Panopolis or Chemmis of the Greeks, the town of the god Min or ithyphallic Khimu (better H. Dictionnaire geographique, pp. 575, 1380). Its manufactures of linen are mentioned by ribo (avid. 2. 813); the inajority of the beautiful Coptic woven fabrics and embroideries which have the blought to Europe lately, come from the necropolis of the Arth period at Apû.

and Aûnû of the South, the Coptos and Hermonthis of the Greeks, shared peaceably the plain occupied later on by Thebes and its temples, and Nekhabît and Zobû watched over the safety of Egypt.¹ Nekhabît soon lost its position as a frontier town, and that portion of Nubia lying between Gebel Silsilch and the rapids of Syene formed a kind of border province, of which Nubît-Ombos was the principal sanctuary and Abû-Elephantine the fortress: ² beyond this were the barbarians, and those inaccessible regions whence the Nile descended upon our earth.

The organization of the Delta, it would appear, was more slowly brought about. It must have greatly resembled that of the lowlands of Equatorial Africa, towards the confluence of the Bahr el Abiad and the Bahr el Ghazâl. Great tracts of mud, difficult to describe as either solid or liquid, marshese dotted here and there with sandy islets, bristling with papyrns reeds, water-lilies, and enormous plants through which the arms of the Nile sluggishly pushed their ever-shifting course, low-lying wastes intersected with streams and pools, unfit for cultivation and scarcely available for pasturing cattle.8 The population of such districts, engaged in a ceaseless struggle with nature, always preserved relatively ruder manners, and a more rugged and savage character, impatient of all authority. The conquest of this region began from the outer edge only. A few principalities were established at the apex of the Delta in localities where the soil had earliest been won from the river. It appears that one of these divisions embraced the country south of and between the bifurcation of the Nile: Aûnû of the North, the Heliopolis of the Greeks, was its capital. In very early times the principality was divided, and formed three new states, independent of each other. Those of Aunu and the Haunch were opposite to each other, the first on the Arabian, the latter on the Libyan bank of the Nile. The district of the White Wall marched with that of the Haunch on the north, and on the south touch if the territory of the Oleander. Further down the river, between the more important branches, the governors of Saïs and of Bubastis, of Athribis and of Busiris, shared among themselves the primitive Delta.4 Two fermior provinces of unequal size, the Arabian on

<sup>&</sup>lt;sup>1</sup> Nûkl abît, Nekhabît, the hiereglyphic. — of which was first correctly read by E. de Rougé (Cours professé au Collège de France, 1869), is el-n'ıb, the Erlithyia of the Greeks (Brusser, Dictionaire Géographique, pp. 351-353), and Nobû, Ediû, Apollinopolis Magna (Brussen, Dictionaire Géographique, pp. 921, 322).

<sup>&</sup>lt;sup>2</sup> The nome of Elephantine was called Khonfit, the advanced, the point of Egypt (Lucius, Dir Bogen in der Hieroglyphik, in the Zeitschrift, 1872, pp. 86-88; cf. Brugsch, Die Biblischen sieben Jahre der Hungersnoth, p. 26, et s.q.).

<sup>&</sup>lt;sup>2</sup> All the features of this description are taken from notes of my travels; it is the aspect presented in those districts of the Delta where the artificial regulation of the water has completely disappeared owing to the invoterate negligence of the central government.

<sup>4</sup> See p. 4 of this volume for the description of this primitive Delta.

the east in the Wady Tumilat, and the Libyan on the west to the south of Lake Marcotis, defended the approaches of the country from the attacks of Asiatic Bedâwins and of African nomads. The marshes of the interior and the dunes of the littoral, were not conducive to the development of any great industry or civilization. They only comprised tracts of thinly populated country, like the principalities of the Harpoon and of the Cow, and others whose limits varied from century to century with the changing course of the river. The work of

rendering the marshes salubrious and of digging canals, which had been so successful in the Nile Valley, was less efficacious in the Deha, and proceeded more slowly. Here the embankments were not supported by a mountain chain: they were continued at random across the marshes, cut at every turn to admit the waters of a canal or of an arm of the river. The waters left their usual bed at the least disturbing influence, and made a fresh course for themselves across country. If the inundation were delayed, the soft and badly drained soil again became a slough: should it last but a few weeks longer than usual, the

work of several generations was for a long time undone. The Delta of one epoch rarely presented the same aspect as that of previous periods, and Northern Egypt never became as fully mistress of her soil as the Egypt of the south.<sup>1</sup>

These first principalities, however small they appear to us, were yet too large to remain undivided. In those times of slow communication, the strong attraction which a capital exercised over the provinces under its authority did not extend over a wide radius. That part of the population of the Terebinth, living sufficiently near to Siût to come into the town for a few hours in the morning, returning in the evening to the villages when business was done, would not feel any desire to withdraw from the rule of the prince who governed there. On the other hand, those who lived outside that restricted circle were forced to seek elsewhere some places of assembly to attend the administration of justice, to sacrifice in common to the national gods, and to exchange the produce of the fields and of local manufactures. Those towns which had the good fortune to become such rallying-points naturally played the part of rivals to the capital, and their chiefs, with the district whose population, so to speak, gravitated around them, tended to become independent of the prince. When they succeeded in doing this, they often preserved for the new state thus created, the old name, slightly modified by the addition of an epithet. The primitive territory of Siût was in this way divided into three distinct communities; two, which remained faithful to the old emblem of the tree-the Upper Terebinth, with Siût itself in the centre, and the Lower Terebinth, with Kûsit to the north; the third, in the south and east, took as their totem the immortal serpent which dwelt in their mountains, and called themselves the Serpent Mountain, whose chief town was that of the Sparrow Hawk. The territory of the Oleander produced by its dismemberment. the principality of the Upper O cander, that of the Lower Oleander, and that of the Knife. The territor of the Harpson in the Delta divided itself into the Western and Eastern Farpoon.3 The fission in most cases could not have been accomplished withou saruggles; but it did take place, and all the principalities having a domain of any considerable extent had to submit to it, however they may have striven to ad it. This parcelling out was continued as circumstances afforded opportunity, until the whole of Egypt, except the

<sup>&</sup>lt;sup>1</sup> For the geography of the Delta, consult the work of J. d. Rougi, lieugraphic ancience de la Basse-Egypte, 1891, in which are brought together, discussed, and carefully co-ordinated, the information scattered about in alphabetical order in the admirable Dictionnaire Géographique of Brugsch.

J. DE ROUGI, Geographie ancienne de la Bass-Lgypte, pp. 30-56.

half desert districts about the cataract, became but an agglomeration of petty states nearly equal in power and population.1

The Greeks called them nomes, and we have borrowed the word from them; the natives named them in several ways, the most ancient term being "nûit," which may be translated domain," and the most common appellation in recent times being "hospû," which signifies district.1 The number of the nomes varied considerably in the course of centuries: the hieroglyphic monuments and classical authors fixed them sometimes at thirty-six, sometimes at torty, sometimes at forty-four, or even fifty. The little that we know of their history, up to the present time, explains the reason of this variation. ('easelessly quarrelled over by the princely families who possessed them, the nomes were alternately humbled and exalted by civil wars, marriages, and conquest, which caused them continually to pass into fresh hands, either entire or divided. The Egyptians, whom we are accustomed to consider as a people respecting the established order of things, and conservative of ancient tradition, showed themselves as restless and as prone to modify or destroy the work of the past, as the most inconstant of our modern nations. The distance of time which separates them from us, and the almost complete absence of documents, gives them an appearance of immobility, by which we are liable to be unconsciously deceived; when the monuments still existing shall have been uncarthed, their history will present the same complexity of incidents, the same agitations, the same instability, which we suspect or know to have been characteristic of most other Oriental nations. One thing alone remained stable among them in the midst of so many revolutions, and which prevented them from losing their individuality and from coalescing in a common unity. This was the belief in and the worship of one particular deity. If the little capitals of the petty states whose origin is lost in a remote past-Edtù and Denderah, Nekhabît and Bûto, Siút, Thinis, Khmûnû, Sais, Bubastis, Athribis- had only possessed that importance which resulted from the presence

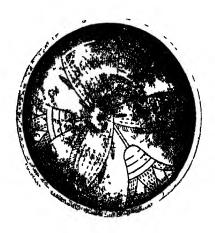

Examples of the subdivision of weart nomes and the creation of tribin nomes are met with brighter primitive times. We find, for example, the nome of the Western Harpoon divided under on Greeks and Romans into two districts—that of the Harpoon proper, of which the chief town was intensit; and that of Remain, with the Oraphis of classical geographers for its capital (Battosia, it homotic Geographique, pp. 1012–1020).

The definition of the word no.ce, and those passages in ancient authors where it is used will tound in Jablonski, Opuscult, ed. T. Wallon, vol. 1 pp. 169-176.

For the various meanings of this word, see MA 1930, Sur le sens des mots Nûit et Hâd, in the edings of the Biblied Archwological Society, 1889-90, vol. xii. p. 236, et seq.

But user, Geogr. Ins., vol. i. pp. 18-21; ef Mastero, I tudes I giptuanes, vol. n. pp. 183-186 word took, which in the Copte texts has replaced hosps and muit, signified originally limit. in; it is, properly speaking, the territory marked out and limited by the stells which belongs to one or a yillage.

of an ambitious petty prince, or from the wealth of their inhabitants, they would never have passed safe and sound through the long centuries of existence which they enjoyed from the opening to the close of Egyptian history. Fortune raised their chiefs, some even to the rank of rulers of the world, and in turn abased them: side by side with the earthly ruler, whose glory was but too often eclipsed, there was enthroned in each nome a divine ruler, a deity, a god of the domain, "nûtir nûiti," whose greatness never perished. The princely families might be exiled or become extinct, the extent of the territory might diminish or increase, the town might be doubled in size and population or fall in ruins: the god lived on through all these vicissitudes, and his presence alone preserved intact the rights of the state over which he reigned as sovereign. If any disaster befellhis worshippers, his temple was the spet where the survivors of the catastropho rallied around him, their religion preventing them from mixing with the inhabitants of neighbouring towns and from becoming lost among them. The survivors multiplied with that extraordinary rapidity which is the chafactoristic of the Egyptian fellah, and a few years of peace sufficed to repair losses which apparently were irreparable. Local religion was the tie which bound together those divers elements of which each principality was composed, and as long as it remained, the nomes remained; when it vanished, they disappeared with it.

his rising, even as others in the West hailed him on his entrance into night. It was the duty of certain genii to open gates in Hades, or to keep the paths daily traversed by the sun. These genii were always at their posts, never free to leave them, and possessed no other faculty than that of punctually fulfilling their appointed offices. Their existence, generally unperceived, was suddenly revealed at the very moment when the specific acts of their lives were on the point of accomplishment. These being completed, the divinities fell back into their state of inertia, and were, so to speak, reabsorbed by their functions until the next

SOME TAPPIOUS ITASIS OF THE TOTALITY DISTRICT

cosion. Scarcely visible even by glimpses, they were not easily copieted, then real forms being often unknown, these were approximately enjectured from their occupations. The character and costume of an acher, or of a spear-man, were ascribed to such as roamed through Hades, to pierce the dead with arrows or with javelins. Those who provided around sets to cut their throats and hack them to pieces were represented as women armed with knives, carvers donit—or else as lacerators nolate. Some appeared in human torm, others as animals—bulls or lions, tame or monkeys, screents, fish, ibises, hawks; others dwelt in manimate things.

This is the subject of a vignette in the Book of the Ibad, ch. XVI (XXVIII's edition, pl. XVI X' ad La, pl. XXII Da), where the concerptali are placed in echelon upon the slages of the hill on the borron, right and left of the right at solar d. k, to which they offer washing to restrictly us.

such as tices, sistiums, stakes stuck in the ground; and lastly, many betrayed a mixed origin in their combinations of human and animal forms. These latter would be regarded by us as monsters, to the Egyptians, they were bein s, react perhaps than the rest, but none the less real, and their like might be encountered in the neighb inhood of Egypt. How could men who believe I themselves surrounded by sphinges and griffins of flesh and blood doubt that there were bull-headed and bank-headed divinities with human busts? The existence of such paradoxical creatures was proved by much authentic estimony, more than one hunter had distinctly seen them as they im along the furth steplanes of the horizon, beyond the heads of gazelles of which he was in chase; and shepher is die ided them for their flocks as truly as they die ited the horis, or the great felidae of the desert.

This action of gods, like nations of men, contained foreign elements, the orem of which was known to the Ezyptems themselves. They knew that Hather, the maleh cow, had taken up her abode in their land from very count times, and they called her the Ludy of Pûmît, after the role of her native country. Bish had followed her in course of time and claim d his share of honours and wor hip along with her. He first appeared as a leopard; then he become a more clothed an a leopards

I CON HAIROL THE LADY OF HEAVIN

of the divine face: 2 when Horus opened his oyelids in the morning, he made the dawn and day; when he closed them in the evening, the dusk and night were at hand. Where the sky was looked upon as the meannation of a goddess, Rå was considered as her son,3 ? his father being the carth-god, and he was born again with every new dawn, wearing a sidelock, and with his finger to his hips as human children were conventionally represented. He was also that luminous egg, laid and hatched in the East by the celestral goose, from which the sun breaks forth to fill the world with its rays.4 Nevertheless, by an anomaly not uncommon in religions, the egg did not always contain the same kind of bird, a lapwing, or a heron, might come out of it,6 or perhaps, in nemory of Horus

1 The name of RA has been variously explained. The commonest etymology is that deriving the name from exceld RA, to give, to make to be a person or a thing, so that he would thus be the givest organized (Bit is, in Wilkinson, Viances and Castons 2nd clirk volume p. 214), the both rot of things (Bit esta, Religion and Vighel it pp 56-57). Lating the Lippins Logist pp 16-59 is a next referred, the work is simply the name of the plant placed to the god. It means the san, and nothing more

of Nûît," growing and strengthening from minute to minute, until at noon it had become a triumphant here whose splendour is shed abroad over all. But as night comes on his strength forsakes him and his glory is obscured; he is bent and broken down, and heavily drags himself along like an old man leaning upon his stick. At length he passes away beyond the horizon, plunging westward into the mouth of Nûît, and traversing her body by night to be born anew the next morning, again to follow the paths along which he had travelled on the preceding day.

A first bark, the saktit,3 awaited him at his birth, and carried him from the Eastern to the Southern extremity of the world. Mâzît,4 the second bark, received him at noon, and bore him into the land of Manû, which is at the entrance into Hades; other barks, with which we are less familiar, conveyed him by night, from his setting until his rising at morn.5 Sometimes he was supposed to enter the barks alone, and then they were magic and self-directed, having neither oars, nor sails, nor helm.6 Sometimes they were lequipped with a full crew, like that of an Egyptian boat—a pilot at the prow to take soundings in the channel and forecast the wind, a pilot astern to steer, a quartermaster in the midst to transmit the orders of the pilot at the prow to the pilot at the stern, and half a dozen sailors to handle poles or ears.7 Peacefully the bark glided along the celestial river amid the acclamations of the gods who dwelt upon its shores. But, occasionally, Apôpi a gigantic serpent, like that which hides within the earthly Nile and devours its banks, came forth from the depth of the waters and arose in the path of the god.8 As soon as they caught sight of it in the distance, the crew flew to

pl. 60, a, c, d), and in a more abridged ferm on the surcophagus of one of the rams of Mendes, now in the Gizch Museum (Makherte, Monuments divers, pl. 1xvi., and Texte, pp. 13, 14).

The growth and decadence of the forms of the sun are clearly marked in the scene first published by Brigsen (Dis Kapitel der Verwandlungen, in the Zeitschrift, 1867, pp. 21-26, and plate; Thesaurus Inscriptionum Ægyptiaeuru, pp. 55-59), taken from the coffin of Khūf in the Gizeh Museum; and from two scenes, of which the one is at Denderah (Description de l'Égypte, Aut., vol. iv. pls. 16-19), the other in the Hall — the New Y at all Edfü (Champollen, Monuments, pl. exxiii, et seq.; Rochemonters, Edfon, in the Memoires de le Mission du Crire, vol. ix. pl xxxiii, e).

<sup>&</sup>lt;sup>2</sup> Maspero, Liudes de Mythole de et d' trebé e gir Égyptiennes, vol. 11. p. 218, note 2.

<sup>&</sup>lt;sup>3</sup> Its most ancient name was complete Feta, 1, 222; P. pt I., 11, 570, 670, etc.). Brussen (Dectionnaire Hieroglyphique, pp. 1327, 1328) it est determined the precedence of the Saktit and Mazit boats.

<sup>4</sup> In the oldest texts it is Manza, with an interpolated n sal (T.ta, Il. 222, 223, 341, etc.).

In the formula of the Book of Know and which is in Hades, the dead sun remains in the bark Sakut during part of the night, and it is only to traverso the fourth and fifth hours that he changes into another (Massino, Lindes de Mythologie et d'Archeologie Egyptiennes, vol. ii. p. 69, et seq.).

Such is the bark of the sun in the other world. Although carrying a complete crew of gods, yet for the most part it progresses at its own will, and without their help. The bark containing the sun alone is represented in many vignettes of the Book of the Book of the Diad (Navilles's edition, pl. xxx, bu, Ag, pl. exil., Pe, exxxii., Pe, exxxii., Pa, exlv), and at the head of many stellar.

MASPERSO, Études de Mythologie et d'Archeologie Égyptiennes, vol. ii. pp. 38, 39.

In Upper Egypt there is a widespread belief in the existence of a monstrous screent, who dwells at the bottom of the river, and is the genius of the Nile. It is he who brings about those falls of earth (batabit) at the decline of the inundation which often destroy the banks and eat whole fields. At such times, offerings of durrah, fowls, and dates are made to him, that his hunger may be

arms, and entered upon the struggle against him with prayers and spear-thrusts. Men in their cities saw the sun faint and fail, and sought to succour him in his distress; they cried aloud, they were beside themselves with excitement. beating their breasts, sounding their instruments of music, and striking with all their strength upon every metal vase or utensil in their possession, that their clamour might rise to heaven and terrify the monster. After a time of anguish, Râ emerged from the darkness and again went on his way, while Apôpi sank back into the abyss,1 paralysed by the magic of the gods, and pierced with many a wound. Apart from these temporary eclipses, which no one could foretell, the Sun-King steadily followed his course round the world, according to laws which even his will could not change. Day after day he made his oblique ascent from east to south, thence to descend obliquely towards the west. During the summer months the obliquity of his course diminished, and he came closer to Egypt; during the winter it increased, and he went farther away. This double movement recurred with such regularity from equinox to solstice, and from solstice to equinox, that the day of the god's departure and the day of his return could be confidently predicted. The Egyptians explained this phenomenon according to their conceptions of the nature of the world. The solar bark always kept close to that bank of the celestial river which was nearest to men; and when the river overflowed at the annual inundation, the sun was carried along with it outside the regular bed of the stream, and brought yet closer to Egypt. As the inundation abated, the bark descended and receded, its greatest distance from earth corresponding with the lowest level of the waters. It was again brought back to us by the rising strength of the next flood; and, as this phenomenon was yearly repeated, the periodicity of the sun's oblique movements was regarded as the necessary consequence of the periodic movements of the celestial Nile.2

appeared, and it is not only the natives who give themselves up to these superstitious practices. Part of the grounds belonging to the Karnak hotel at Luxor having been carried away during the autumn of 1884, the manager, a Greek, modes the customary offerings to the screen of the Nate (Masseno, India & Mythologie et d'Archeologie Égyptunnes, vol. ii. pp. 412, 413).

The character of Apôpi and of his struggle with the sun was, from the first, excellently defined by Champollion as representing the conflict of darkness with light (Lattres certies d'Lyppte, 2nd edit., 1844, p. 231, et seq.). Occasionally, but very rarely, Apôpi seems to win, and his trumph over Ramanus one explanation of a solar celipse (Lephaure, Les Yeux d'Horus, p. 46, et seq.). Lephaure, Resour, The Eclipse in Egyptian Texts, in the Proceedings of the Society of Biblical Archaelogy, 1881-85, vol. viii, p. 163, et seq.). A similar explanation is common to many races (cf. E. Tylor, Irmitive Culture, vol. i. p. 297, e' seq.). In one very ancient form of the Egyptian legend, the sun is presented by a wild ass running round the world along the sides of the mountains that upheld the shound the serpent which attacks it is called Haiû (Unas, 11, 514, 545; Book of the Dead, ch. M., Mallel's edition, vol. i. pl. liv.).

This explanation of Egyptian beliefs concerning the oblique course of the sun was proposed by Maserro, Etudes de Mythologie et d'Archéologie Egyptiennes, vol. ii. pp. 208-210. It is no more strong nor yet more puerile than most of the explanations of the same phenomenon advanced by the cosmographers (Letronne, Opinions populaires et scientifiques des Grees sur la route oblique du sol d, in his (Fuvres choisies, 2nd series, vol. i. pp. 336-359).

The same stream also curied a whole crowd of gods, whose existence was revealed at night only to the inhibitints of cuth. At an interval of twelve hours, and in its own bank, the pale disk of the moon—I aûhû Auhu—followed the disk of the sun along the ramparts of the world. The moon, also, appeared in many various forms here, is a man born of Nuit; there, as a cynocephalus or an ibis, als where, it was the left eye of Horus, quarded by the ibis or expocephilus. Take Râ, it had its enemies incess untly upon the

them incarnations of the fertilizing and life-sustaining Nile. Wherever there is some important change in the river, there they are more especially installed and worshipped: Khnûmû at the place of its entering into Egypt, and again at the town of Haurit, near the point where a great arm branches off from the Eastern stream to flow towards the Libyan hills and form the Bahr-Yûsuf: Harshâtitû at the gorges of the Fayûm, where the Bahr-Yûsuf leaves the valley; and, finally, Osiris at Mendes and at Busiris, towards the mouth of the middle branch, which was held to be the true Nile by the people of the land.1 Isis of Bûto denoted the black vegetable mould of the valley, the distinctive soil of Egypt annually covered and fertilized by the inundation.<sup>2</sup> But the earth in general, as distinguished from the sky -the earth with its continents, its seas, its alternation of barren deserts and fertile lands—was represented as a man: Phtah at Memphis," Amon at Thebes, Minû at Coptos and at Panopolis. Amon seems rather to have symbolized the productive soil, while Minû reigned over the desert. But these were fine distinctions, not invariably insisted upon, and his worshippers often invested Amon with the most significant attributes of Mînû. The Skygods, like the Earth-gods, were separated into two groups, the one consisting of women: Hathor of Denderah, or Nit of Sais; the other composed of men identical with Horus,

Har-Saph, Horus the source of the zodiacal light, in the Wady Tumilat, "

or derived from him: Anhuri-Shu 6 of Sebennytos and

and finally Harhûdîti at Edfû. 1 Rû, the solar disk, was enthroned at Helionolis, and sun-gods were numerous among the

> connected with gods representing the sky, and resembled Horus quite as much as Râ. Whether under the name of Horus or of Anhûri, the sky was early identified with its most brilliant luminary, its solar eye, and its divinity was as it were fused into that of the Sun.2 Horus the Sun, and Rà, the Sun-God of Heliopolis, had so permeated each other that none could say where the one began and the other ended. One by one all the functions of Rå had been usurped by Horus, and all the designations of Horus had been appropriated by Râ. The sun was styled Harmakhuiti, the Horus of the two mountains-that is, the Horus who comes forth from the mountain of the east in the morning, and retires at evening into the mountain of the west; or Hartin a, Horus the Pikeman, that Horus whose lance spears the hippopotamus or the serpent of the celestial river; 1 or Harnûbi, the Golden Horus, the great golden spairow-hawk with mottled plumage, who puts

nome deities, but they were sun-gods closely

all other birds to flight; and those titles were indifferently applied to each of the feudal gods who represented the sun. The latter were numerous. Sometimes, as in the case of Harkhobi, Horus of Khobiû.

The reading Har-Behüditi was proposed by Mr. Lepnal-Renot (Proceedings of the Society of Biblical Archaology, 1885-86, pp. 113, 141), and has been adopted by most Egyptologists. I do not think it so well founded as to involve in alteration of the old reading of Hådil for the name of the city of Editi (Maspino, Études a Mytherogie e d'Archéologie Égyptiennes, vol. n. p. 313, note 2).

<sup>&</sup>lt;sup>2</sup> The confusion of Horns, the sly, with Ra, the sun, has a pplied M. Littim m, with the subject of one of the most interesting chapters in his Yenz d'Horns, p 91, et seq., to which I refer the readst for further details.

 $<sup>^3</sup>$  From the time of Champolhe . Unmakhaiti has been identified with the Harmachis of the Greeks, the great Sphinx

<sup>&#</sup>x27; Har-timâ has long been considered. If this making truth by the destruction of his adversarie-(Pirralet, Le Paulhém equption, pp. 18-21). I gave the true meaning of this word as carly as 1876, in the course of my lectures at the Collège de France (Mastriae, Études de Mythologie et d'Archeologie Égyptionnes, vol. 1, p. 411).

<sup>5</sup> Harnabi is the god of the Antacopolite nome (J. D. Roy et ., Testes géographiques du temple d' Ediou, in the Revue archéologique, 2nd serie 5, vol. NNI, pp. 6, 7; cf. Bri esch, Dictionnaire géographique, p. 507)

A bronze of the State period, from the Posno collection, and now in the Louvie; drawn by Faucher-Gudin. The god is represented as upholding a libation was with both hands, and pouring the life-giving water upon the king, standing, or prostrate, before hun. In performing this ceremony, he was always assisted by another god, generally by Sit, sometimes by Thot or Anubia.

<sup>&</sup>lt;sup>1</sup> Harkhobi, Harûnkhobiû is the Horus of the marshes (khobiû) of the Delta, the lesser Horus the son of Isis (Висим и, Dictionnaire geographique, p. 568, et seq.), who was also made into the sen of Osiris.

a geographical qualification was appended to the generic term of Horus, while specific names, almost invariably derived from the parts which they were sup-

posed to play, were borne by others. The sky-god worshipped at Thinis in Upper Egypt, at Zarît and at Sebennytos in Lower Egypt, was called Anhûri. When he assumed the attributes of Ra. and took upon himself the solar nature, his name was interpreted as denoting the conqueror of the sky. was essentially combative. Crowned with a group of upright plumes, his spear raised ir Lever ready to strike the toe, he advanced along the firmament and triumphantly traversed it day by day.1 The sun-god who at Medamôt Taud

THE HORES OF HIBONT, ON THE TACK OF HEE AZILLE

and Erment had preceded Amon as ruler of the Theban plain, was also a warrior, and his name of Montû had reference to his method of tighting. He was depoted as brandishing a curved sword and cutting off the heads of his adversaries?

Each of the foudal gods naturally cherished pretensions to universal dominion, and proclaimed himself the suzerain, the father of all the gods, as the local prince was the suzerain, the father of all men; but the effective suzerainty of god or prince really ended where that of his peers ruling over the adjacent nones began. The goddesses shared in the exercise of supreme power, and had the same right of inheritance and possession as regards sovereignty that women had in human law. Is is was entitled lady and mistress at Buto, as

<sup>1</sup> Here the oding of the name was given as far back is 1 i subset to 2 donerst not inpute here to the trues, point 1 no 3). The part played by the gol, and the nature of the link connecting here it Shu have been explained by Wasterso (Lindes de Mythologie et al treheet point pupitennes, vol. it. (2, 3.6, 3.7). The Greeks transcribed his name Onomas, and identified him with Arcs (1) is Papine Greek, vol. i. p. (24, 1-13, and p. 128).

Month preceded Amon is gold of the land between Kas in Look kin and he recovered lighton in the Greece-Roman period after the destruction of Thebes. Most Phyplodists in Lights out (Religion and Mythologie, p. 701), made him into voccon lay form of Amon, which is entered we know of the history of the province. Just as One of the south (I rineal) preceded is as the most important town in that district, so Month had been its most hen used gold this Wildiams (Die Religion die allen Englisher, p. 71) thinks the name related to that of Amon indirect from it, with the addition of the final ta.

In attempts at reconstituting Egyptum religious, no adequate weight has hitherto been given a eighthy of gods and goddessos, a fact to which attention was first called by Washko (Itales is althologie et d'Archéologie Egyptiennes, vol. ii p 253, et seq.).

Hathor was at Denderth, and as Nit at Sais, "the firstborn, when as yet there

THE CALIBRATED BASE

had been no bith." They enjoyed in their eities the same honours as the male gods in theirs, as the latter were kings, so were they queens, and all bowed down before them. The animal gods, whether entirely in the form of beasts, or having human bodies attached to animal heads, shared omnipotence with those in human form. Horus of Hibonû swooped down upon the back of a gizelle like a hunting hawk. Hathor of Denderah was a cow, Bastit of Bubastis was a cat or a tigress, while Nekhabit of El Kab was a great bald headed

vulture. Hermopolis worshipped the ibis and cynocephalus of Thot; Oxyrithynchus the mormyrus fish; and Ombos and the Fayum a crocodile, under the name of Sobku, sometimes with the epithet of Azu, the brigand We cannot always understand what led the inhabitants of each nome to affect one animal rather than another. Why,

towards Greco Roman times, should they have worshipped the jackal, or even

Fayûm or of Ombos. The crocodiles there multiplied so rapidly as to constitute a serious danger, there they had the mastery, and could be appeased only by means of prayers and sacrifices. When instinctive terror had been superseded by reflection, and some explanation was offered of the

NIL H SAI

origin of the various cults, the very nature of the animal seemed to justify the veneration with which it was regarded. The crocodile is amphibious; and Sobku was supposed to be a crocodile, because before the creation the sovereign god plunged recklessly into the dark waters and came forth to form the world, as the crocodile emerges from the river to by its eggs upon the bank.

Most of the feudal divinities began their lives in solitary grandom, spart from, and often hostile to, their neighbours. Pamilies were assigned to them later. Eich appropriated two companions and formed a timity, or as it is generally called, a time. But there were several kinds of times. In nomes subject to a god the local deity was frequently content with one wife and one son, but often he was united to two

goddesses, who were at once his sisters and his wives according to the national custom. Thus, Thot of Hermopolis possessed himself of a harem consisting of Seshaft-Sufkhitaban and Nahmauit. Tumu divided the homage of the inhabitants of Heliopolis with Nebthôtpit and with Iusasit. Khnumu seducid

and married the two fairies of the neighbouring cataract—Anûkît the constrainer, who compresses the Nile between its rocks at Phila and at Syene, and Satît the archeress, who shoots forth the current straight and swift as an arrow. Where a goddess reigned over a nome, the triad was completed by

two male deities, a divine consort and a divine son. Nit of Saïs had taken for her husband Osiris of Mendes, and borne him a lion's whelp, Ari-hos-nofir.2 Hathor of Denderah had completed her household with Haroêris and a younger Horus, with the epithet of Ahi-he who strikes the sistrum.8 A triad containing two goddesses produced no legitimate offspring, and was unsatisfactory to a people who regarded the lack of progeny as a curse from heaven; one in which the presence of a son promised to ensure the perpetuity of the race was more in keeping with the idea of a blessed and prosperous family, as that of gods should be. Triads of the forner kind were therefore almost everywhere broken up into two new triads, each containing a divine father, a divine mother, and a divine son. Two fruitful households arose from the barren union of Thot with Safkhitābiti and Nahmātit: one composed of Thot, Safkhîtâbûi, and Harnûbi, the golden sparrow-hawk; into the other Nahmâûît and her nursling Nofirhorû entered.5

4. î i foilm

The persons united with the old feudal divinities in order to form triads were not all of the same class. Goddesses, especially, were made to order, and might often be described as grammatical, so obvious is the linguistic device to which they owe their being. From Râ, Amon, Horus, Sobků, female Râs, Amons, Horuses, and Sobkůs were derived, by the addition of the regular

feminine affix to the primitive masculine names-Râît, Amouît, Horît, Sobkît.1

In the same way, detached cognomens of divine fathers were embodied in divine sons. Imhotpû, "he who comes in peace," was merely one of the epithets of Phtah before he became incarnate as the third member of the Memphite triad.2 In other cases, alliances were contracted between divinities of ancient stock, but natives of different nomes, as in the case of Isis of Bûto and the Mendesian Osiris; of Haroĉris of Edfû and Hâthor of Denderah. In the same manner Sokhit of Letopolis and Bastit of Bubastis were appropriated as wives to Phtah of Memphis, Nofirtumu being represented as his son by both unions.3 These improvised connections were generally determined by considerations of vicinity; the gods of conterminous principalities were married as the children of kings of two adjoining kingdoms are married, to form or to consolidate relations, and to establish bonds of kinship between rival powers whose unremitting hostility would mean the swift ruin of entire peoples.

The system of triads, begun in primitive times and continued unbrokenly up to the last days of Egyptian polytheism, far from in any way lowering the prestige of the feudal gods, was rather the means of enhancing it in the eyes of the multitude. Powerful lords as the new-comers might be at home, it was only in the strength of an auxiliary title that they could enter a strange city, and then only on condition of submitting to its religious law. Hathor, supreme at Denderah, shrank into insignificance before

by Imhotpu, the Imouthes of Art Creeks, and by them identified with Æsenlapius, was discovered by Sata (Losay on Dr. Young 8 and M. Champollion's Phon Are System of Hieroglyphies, pp. 19, 50 pl. in A), and his name was first a to lated as he also comes with offering (Art Shall-Bosoni-Bits), Gallery of Antiquities selected from the British Mu en up. 29). The translation, he who comes in proposed by E de Rougé, is now inversally adopted (Bardsen, Religion and Mythologie, p. 526, Prilod v, Le Panthéon Lagypteau, p. 77, Volumes, Die Religion der alten Ligypter, p. 77). Imhotpu did not take form until the time of the November of popularity at Memphis and throughout Egypt dates from the Saite and Greek periods.

Originally, Nofirtuma appears to have been the son of cat or honess-headed guidesses, Bastil and Sokhit, and from then he may have inherited the Ron's head with which he is often represented (cf. LANZONI, Distonario di Mitologia, p. 385, pl. exbr. 4, exbriii, 1, 2). His mane shows him to have been in the first place an mearnation of Atamu, but he was affiliated to the g. d. Pht of Memphis when that god became the husband of his mothers, and preceded Imhotpa as the third presonage in the oldest Memphite triad.

Denderah descended from the supreme rank, and was nothing more than the almost useless consort of the lady Hathor. His name came first in invocations of the triad because of his position therein as husband and father; but this

was simply a concession to the propriety of etiquette, and even though named in second place, Hathor was none the less the real hat f of Denderah and of its divine family. Thus, the principal nersonage in any triad was always the one who had been patron of the nome previous to the introduction of the triad; in some places the father-god, and in others the mother-goddess. The son in a divine triad had of himself but limited authority. When Isis and Osiris were his parents, he was generally an infant Horus, naked, on simply adorned with necklaces and bracelets; a thick lock of had depended from his temple, and his mother squatting on her heels, or else sitting, nursed him upon her knees, offering him her breist' Even in triads where the son was supposed to have attained to man's estate, he held the lowest place, and there was enjoined upon him the same respectful attitude towards his parents is is observed by children of human race in the presence of thens. He took the lowest place at all solemn receptions, spoke

only with his parents' permission, acted only by their command and as the excit of their will. Occasionally he was vouchsafed a character of us own, and filled a definite position, as at Memphis, where Imhotpu wis the pitron of science.4 But, generally, he was not considered as horng either office or marked individuality; his being was but a feeble reflection of his fathers, and possessed neither life nor power except as laved from him. Two such contiguous personalities must needs have

therefore, on the whole, were more ethereal, stronger, more powerful, better fitted to command, to enjoy, and to suffer than ordinary men, but they were still men. They had bones,1 muscles, flesh, blood; they were hungry and ate, they were thirsty and drank; our passions, griefs, joys, infirmities, were also theirs. The sa, a mysterious fluid, circulated throughout their members. and carried with it health, vigour, and life.3 They were not all equally charged with it; some had more, others less, their energy being in proportion to the amount which they contained. The better supplied willingly gave of their superfluity to those who lacked it, and all could readily transmit it to mankind, this transfusion being easily accomplished in the temples. The king, or any ordinary man who wished to be thus impregnated, presented himself before the statue of the god, and squatted at its feet with his back towards it. The statue then placed its right hand upon the nape of his neck. and by making passes, caused the fluid to flow from it, and to accumulate in him as in a receiver. This tite was of temporary efficacy only, and required frequent renewal in order that its benefit might be maintained. By using or transmitting it the gods themselves exhausted their sa of life; and the loss vigorous replenished themselves from the stronger, while the latter went to draw tresh fulness from a mysterious pond in the northern sky, called the "pond of the Sa." Divine bodies, continually recruited by the influx of this magic fluid, preserved their vigour far beyond the term allotted to the bodies of men and beasts. Age, instead of quickly destroying them, hardened and transformed them into precious metals. Their bones were changed to silver, their flesh to gold; their hair, piled up and painted blue, after the manner of great chiefs, was turned into lapis-lazuli.4 This transformation of each into an animated statue did not altogether do away with

<sup>&</sup>lt;sup>1</sup> For example, the text of the Distruction of Man (1, 2), and other documents, teach us that the firsh of the agod sun had become gold, and his bones silver (Li pun Re, Lo Tombeau de Seti P., 4th part, pl. xv. 1, 2, in vol. ii. of the Memoires de la Musion du Caire). The blood of Ra is mentioned in the Book of the Dand (chap Lyn. 1, 29, Ny mile's edition pl. xxiv.), as well as the blood of Isochap, clvi.; cf. Miriari, 1, 77., and of other arginities.

<sup>3</sup> It is thus that in the Tole of the above of the Prince of Bakhlan we find that one of the statues of the Theban Khonsû supplies itself with a from another statue representing one of the most powerful forms of the god (E. du Rot a., Ftude sur une stele, pp. 110, 111; Masic no, Les Coule-populaires, 2nd edit., p. 221). The poul of Sa, whither the gods go to draw the magic fluid, is mentioned in the Pyramid texts.

<sup>&</sup>lt;sup>4</sup> Cf the text of the Destruction of Men (II. 1, 2) referred to above, where age productions transformations in the body of the sun. This changing of the bodies of the gods into gold, silver, and precious stones, explains why the alchemists, who were disciples of the Egyptians, often compared the transmutation of metals to the metamorphosis of a genius or of a divinity: they thought by their art to hasten at will that which was the slow work of nature.

the lavages of time. Decrepitude was no less intemediable with them than

with men, although it came to them more slowly, when the sun had grown old "his mouth trembled, his dirvelling ian down to earth, his spittle dropped upon the ground."1

None of the feudal gods had escaped this destiny; for them as for mankind the day came when they must leave the city and go toth to the tomb.2 The merents long refused to believe that death was natural and mevitable They thought that life, once legun, might go on indeit no accident in tely stepped it short, why should it cease of itself? insinuated itself into the living man, or fell upon him with irresistible violence -illness being a struggle between the one possessed and the power which possessed him. As soon as the former succumbed he was carried away from his own people, and his place knew him no more. But had all ended for him with the moment in which he had ceased to breathe? As to the body, no one was ignorant of its natural fate. It quickly fell to decay, and a few years sufficed to reduce it to a skeleton. And as for the skeleton, in the lapse of centuries that too was disintegrated and became a mere train of dust, to be blown away by the first breath of wind. The soul might have a longer career and fuller fortunes, but these were believed to be dependent upon those of the body, and commensurate with them. Every advance made in the process of decomposition robbed the soul of some part of itself; its consciousness gradually faded until nothing was left but a vague and hollow form that vanished altogether when the corpse had entirely disappeared. From an early date the Egyptians had endeavoured to arrest this gradual destruction of the human organism, and their first effort to this end naturally was directed towards the preservation of the body, since without it the existence of the soul could not be ensured. It was imperative that during that last sleep, which for them was fraught with such terrors, the flesh should neither become decomposed nor turn to dust, that it should be free from offensive odour and secure from predatory worms.

They set to work, therefore, to discover how to preserve it. The oldest burials which have as yet been found prove that these early inhabitants were successful in securing the permanence of the body for a few decades only. When one of them died, his son, or his nearest relative, carefully washed the corpse in water impregnated with an astringent or aromatic substance, such as natron or some solution of fragrant gums, and then fumigated it with burning herbs and perfumes which were destined to overpower, at least temporarily, the odour of death. Having taken these precautions, they placed the body in the grave, sometimes entirely naked, sometimes partially covered with its ordinary garments, or sewn up in a closely fitting gazello skin. The dead

<sup>&</sup>lt;sup>1</sup> Ct., among other examples, the passage from the Pyramid of Peti, II, 347-354, in Massico, Les Pyramides de Sakkarah, p. 141.

<sup>-</sup> Book of the Dead, Leester's edition. It is expected by a similar horizon of the worm, and give various ways of preserving flesh and bones from its attacks. Thus in ch. cliv a hope is expressed that the body may not decay nor become a multitude of worms.

<sup>&</sup>lt;sup>3</sup> This is to be gathered from the various Pyramid texts relating to the purification by water and to furnigation; the panus taken to secure material cleanliness, described in these formulas, were primarily directed towards the preservation of the bodies subjected to these processes, and further to the perfecting of the souls to which these bodies had been united.

For the primitive mode of burial in hides, and the rites which originated in connection with it, cf. Laurburg, Lindes sur Abydos, ii., in the Proceedings of the Society of Biblical Archwology, 1892-93 vol. xv. pp. 433-435. De Morgan found some bodies wrapped in a gazelle skin (Ethnogr. prehist., p. 134)

man was placed on his left side, lying north and south with his face to the east, in some cases on the bare ground, in others on a mat, a strip of leather or a fleece, in the position of a child in the feetal state. The knees were sharply bent at an angle of 45° with the thighs, while the latter were either at right angles with the body, or drawn up so as almost to touch the clbows. The hands are sometimes extended in front of the face, sometimes the arms are folded and the hands joined on the breast or neck. In some instances the legs are bent upward in such a fashion that they almost lie parallel with the trunk. The deceased could only be made to assume this position by a violent effort, and in many cases the tendons and the flesh had to be cut to facilitate the operation. The dryness of the ground selected for these burial-places metarded the corruption of the flesh for a long time, it is true, but only retarded it, and so did not prevent the soul from being finally destroyed. Seeing decay could not be prevented, it was determined to accelerate the piecess, by taking the flesh from the bones before interment. The bodies thus treated are often incomplete; the head is missing, or is detached from the neck and laid in another part of the pit or, on the other hand, the body is not there, and the head only is found in the grave, generally placed apart on a brick a heap of stones, or a layer of cut flints. The forearms and the hands were subjected to the same treatment as the head. In many cases no trace of them appears, in others they are deposited by the side of the skull or scattered about haphazard. Other mutilations are frequently met with; the ribs are divided and piled up behind the body, the limbs are disjointed or the body is intirely dismembered, and the fragments arranged upon the ground or enclosed together in an earthenware cist.1

These precautions were satisfactory in so far as they ensured the better preservation of the more solid parts of the human frame, but the Egyptians telt this result was obtained at too great a sacrifice. The human organism thus deprived of all flesh was not only reduced to half its bulk, but what remained had neither unity, consistency, nor continuity. It was not even a perfect skeleton with its constituent parts in their relative places, but a mere mass of lones with no connecting links. This drawback, it is true, was remedied by the artificial reconstruction in the tomb of the individual thus completely dismembered in the course of the funeral coremonies. The bones were laid in their natural order; those of the feet at the bottom, then those of the leg, trunk, and arms, and finally the skull itself. But the superstitious test inspired by the dead man, particularly of one thus harshly handled, and

<sup>1 10</sup> Morgan, op. cit., pp. 137-139. For the traces of these primitive customs in the formulas 101 - of the times of the Phanolis, cf. the curious memoir by Wiedi ways, L s mortes d'enser less1 ne d'uns la Nécropole de Nagadah, etc., in J. de Morgan, op. cit., pp. 203-228.

particularly the apprehension that he might revenge himself on his relatives for the treatment to which they had subjected him, often induced them to make this restoration intentionally incomplete. When they had reconstructed the entire skeleton, they refrained from placing the head in position, or elso they suppressed one or all of the vertebræ of the spine, so that the deceased should be unable to rise and go forth to bite and harass the living. Having taken this precaution, they nevertheless felt a doubt whether the soul could really enjoy life so long as one half only of the body remained, and the other was lost for ever: they therefore sought to discover the means of preserving the fleshy parts in addition to the bony framework of the body. It had been observed that when a corpse had been buried in the desert, its skin, speedily desiccated and hardened, changed into a case of blackish parchment beneath which the flesh slowly wasted away,1 and the whole frame thus remained intact, at least in appearance, while its integrity ensured that of the soul. An attempt was made by artificial means to reproduce the conservative action of the sand, and, without mutilating the body, to secure at will that incorruptibility without which the persistence of the soul was but a useless prolongation of the death-It was the god Anubis-the jackal lord of sepulture who was supposed to have made this discovery. He cleansed the body of the viscera, those parts which most rapidly decay, saturated it with salts and aromatic substances, protected it first of all with the hide of a beast, and over this laid thick layers of linen. The victory the god had thus gained over corruption was, however, far from being a complete one. The bath in which the dead man was immersed could not entirely preserve the softer parts of the body: the chief portion of them was dissolved, and what remained after the period of saturation was so desiccated that its bulk was seriously diminished.

When any human being had been submitted to this process, he emerged from it a mere skeleton, over which the skin remained tightly drawn: 2 these shrivelled limbs, sunker chest, grinning features, yellow and blackened skin spotted by the efflorescence of the embalmer's sults, were not the man himself, but rather a caricature of what he had been. As nevertheless he was secure against immediate destruct. 4, the Egyptians described him as furnished with his slape; henceforth he had 1 a purged of all that was evil in him, 3 and he could face with tolerable security whatever awaited him in the future. The art of Anubis, transmitted to the embalmers and employed by them from gene-

<sup>&</sup>lt;sup>1</sup> Such was the appearance of the bodies of Coptic monks of the sixth, eighth, and math centuries which I found in the convent concternes of Contra-Syene, Tand, and Akhmîm, right in the midst of the desert.

<sup>-</sup> This is stated as early as 11 rodotus (ii. 85): Τας δε σόρκας το νίτρον κατατήκει καὶ δή λείπετοι του τεκροῦ το δέρμα μουνον καὶ τὰ ἀστεα.

<sup>5</sup> Ct. Pepi I., l. 14, in Masperso, Les Pyramides de Sakkarah, p. 150.

ration to generation, had, by almost climinating the corruptible part of the body without destroying its ontward appearance, arrested decay, if not for ever, at least for an unlimited period of time. If there were hills at hand, thither the mummied dead were still borne, partly from custom, partly because the dryness of the air and of the soil offered them a further chance of preservation. In districts of the Delta where the hills were so distant as no make it very costly to reach them, advantage was taken of the smallest sandy islet rising above the marshes, and there a cemetery was founded. Where this resource failed, the mummy was fearlessly entrusted to the soil itself, but only after being placed within a sarcophagus of hard stone, whose lid and trough, hermetically fastened together with cement, prevented the penetration of any moisture. Reassured on this point, the soul followed the body to the tomb, and there dwelt with it as in its eternal house, upon the confines of the visible and invisible worlds.

Here the soul kept the distinctive character and appearance which pertained to it "upon the earth:" as it had been a "double" before death, so it remained a comble after it, able to perform all functions of animal life after its own tashion. It moved, went, came, spoke, breathed, accepted pious homage, but authout pleasure, and as it were mechanically, rather from an instinctive horror annihilation than from any rational desire for immortality. Unceasing regret for the bright world which it had left disturbed its mournful and inert existence. "O my brother, withhold not thyself from drinking and from eating, from drunkenness, from love, from all enjoyment, from following thy desire by night and by day; put not sorrow within thy heart, for what are the years of a man upon earth? The West is a land of sleep and of heavy shadows a place wherein its inhabitants, when once installed, slumber on in their mummyforms, never more waking to see their brethren; never more to ree gnize their fathers or their mothers, with hearts for getful of their wives and children. The living fater, which earth giveth to all who dwell upon it, is for me but stagnant and dead; that water floweth to all who are on earth, while for me it is but liquid putrelaction, this water that is mine. Since I came to this funereal valley I know not where nor what I un. Give me to drink of running water! . . . Let me be placed by the edge of the water with my face to the Nortl, that the breeze may caress me and my heart be refreshed from its sorrow"3 By day the double remained

As in the case of the islets forming the cemetry of the greatesty of Terms in the midst of Menzaleh (Erriana Quarianian, Memoires groundphopus et historipus sur FF 1976, vol. 1, 5, 222)

concealed within the tomb. If it went forth by night, it was from no capricious or sentimental desire to revisit the spots where it had led a happier life. Its organs needed nourishment as formerly did those of its body, and of itself it possessed nothing "but hunger for food, thirst for drink."1 Want and misery drove it from its retreat, and flung it back among the living. It prowled like a marauder about fields and villages. picking up and greedily devouring whatever it might find on the groundbroken meats which had been left or forgotten, house and stable refuseand, should these meagre resources fail, even the most revolting dung and excrement.3 This ravenous spectre had not the dim and misty form, the long shroud or floating draperies of our modern phantoms, but a precise and definite shape, naked, or clothed in the garments which it had worn while yet upon earth, and emitting a pale light, to which it owed the name of Luminous-Khû, Khûû.3 The double did not allow its family to forget it, but used all the means at its disposal to remind them of its existence. It entered their houses and their bodies, terrified them waking and sleeping by its sudden apparitions, struck them down with disease or madness,4 and would even suck their blood like

Die Egyptische Graberacht, pp. 35, 40, and into French by Masille, Études Égyptionus, vol. i. pp. 187-190. As regards the persistence of this gloomy Egyptian conception of the other world, see Maspiro, Études de Mythologie et. d'Archeologie Égyptionus, vol. 11, pp. 179-181.

1. Teti, il. 71, 75. "Hateful unto Teti is hunger, and he cateth it not; hateful unto Teti is thirst, nor hath he drunk it." We see that the Egyptians made hunger and thirst into two substances or brings, to be swallowed as food is swallowed, but whose effects were poisonous unlecounteracted by the immediate absorption of more satisfying sustemmes (Maserno, Linds, de Mythologie et d'Archeologie L'apptiennes, vol. i. pp. 151-156).

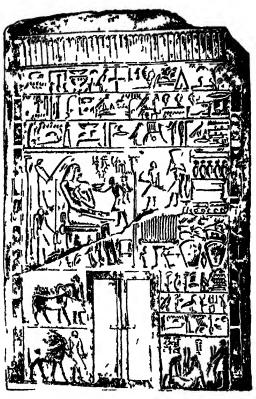

<sup>2</sup> King Teti, when distinguishing his fate from that of the common dead, stated that he had abundance of food, and hence was not reduced to so pitiful an extremity. "Abhorrent unto Tet. is excrement, Teti x jecteth urine, and Tetrabhorreth that which is abountable in him; abhorrent note him is faced matter and he extern it not, hateful mats Tetras liquid fifth?" (Teti, Il. 68, 63). The same doctrine is found in several places in the Book of the Dead.

The name of luminous was at first so explained as to make the light wherewith only were clothed, into a portion of the doing light (Mastrao, Études démotiques, in the Recueil, vol. i. p. 21, note 6, and the Recue critique 1872, vol. ii. p. 38; Dévéaus Lattre a M. Paul Pierret sur le chapita Pi du Todlenbuch, in the Zeo hoi?, 1870, pp. 62-61). In my opinion the idea is a less abstract of and shows that, as among many other nations so with the Egyptians the soul was supposed to appour as a kind of pale flame, or as emittee, a glow analogous to the phosphoreseem halo which is seen by might about a piece of rotten wood, or putrefying fish. This primitive conception may have not sequently faded, and habit the glorious of the of the mânes, may have become one of those flattener names by which it was thought necessary to prepitate the dead (Mastello, Lindes Phyptone vol. ii. p. 12, note 1); it then came to have that significance of resplendent with light which is ordinarily attributed to it.

4 The incantations of which the Leyden Papyrus published by Pleat is full (Études Lygol logiques, vol. i.) are directed against dead men or dead women who entered into one of the livenz i give him the migraine, and violent headaches. Another Leyden Papyrus (Leemans, Monerous Lygotiens du muse d'antiquetes des Pays-Bas à Leyde, 2nd part, pls. elexatii, elexativ), here dy analyzed by Chadas (Notices sommaires des Papyrus Egyptiens, p. 19), and translated by Masi's (Études Lygotienus, vol. i. pp. 115-159), contains the complaint, or rather the formal actorequisition of a husband whom the luminous of his wife returned to torment in his home, without any just cause for such conduct

the modern vampue. One effectual means there was, and one only, of escaping or preventing these visitations, and this lay in taking to the

The gods were spared none of the anguish and none of the perils which death so plentifully bestows upon men. Their bodies suffered change and gradually perished until nothing was left of them. Their souls, like human souls, were only the representatives of their bodies, and gradually became extinct if means of arresting the natural tendency to decay were not found in time. Thus, the same necessity that forced men to seek the kind of sepulture which gave the longest term of existence to their souls, compelled ithe gods to the same course. At first, they were buried in the hills, and one of their oldest titles describes them as those "who are upon their sand," 1 safe from putrefaction; afterwards, when the art of embalming had been discovered, the gods received the benefit of the new invention and were mummified. Each none possessed the mummy and the tomb of its dead of god: at Thinis there was the mummy and the tomb of Anhûri, the mummy of Osiris at Mendes, the munimy of Tunun at Heliopolis.2 In some of the nomes the gods did not change their names in altering the mode of their existence: the deceased Osiris remained Osiris: Nît and Hâthor when dead were still Nit and Hathor, at Sais and at Denderah. But Phtah of Memphis became Sokaris by dying; 3 Gaphaith, the jackal of Siht, was changed into Anubis; and when his disk had disappeared at evening, Anhûri, the sunlit sky of Thinis, was Khontamentit, Lord of the West, until the following day That bliss which we dream of enjoying in the world to come was not granted to the gods any more than to men. Their bodies were nothing but inert larva, "with unmoving heart," weak and shrivelled limbs, unable to stand

In the Book of Knowing that which is in Had's, for the fearth and fifth hours of the night, we have the description of the sandy realm of Sokaris and of the gods Hiriù Shàitu-senù, who are on their sand (Maserno, Itades de Mythologie et d'Archéologie L'gyptiennes, vol. 1i. pp. 61-73). Elsewhere in the same book we have a cynocephalus upon its road (Tarrathe, Tombeau de Seri I., 4th part, pl. xxxii.), and the g ds of the eighth hour are also mysterious gods who are on their sand (blid, pl. xlvii., et seq.). Wherever these personages are represented in the vignettes, the Egyptian artist has carefully drawn the elless pure of a neycliow and sprinkled with red, which is the conventional rendering of sand, and sody districts

MASPLEO, I tudes de Mythologie et d'Arche dogie Égyptiennes, vol. ii. pp. 21, 22.

<sup>\*</sup> To my mind, at least, this is an obvious conclusion from the monuments of Siût, in which the jackal god is called Uapautů, as the living god, lord of the city, and Anûpû, master of embalment or of the Oasis, lord of Ra-qrift, masmuch as he is god of the dead. Ra-qrift, the door of the stone, was the name which the people of Siût gave to their necropolis and to the infernal domain of their god.

MASPERO, Liudes de Mythologie et d'Archeologie Ligyptiennes, vol. ii. pp. 23, 24.

This is the characteristic epithet for the dead Osiris, Urdû-hit, he whose heart is unmoving, he whose heart no longer beats, and who has therefore ceased to live.

upright were it not that the bandages in which they were swathed stiffened them into one rigid block. Their hands and heads alone were free, and were of the green or black shades of putrid flesh. Their doubles, like those of men, both dreaded and regretted the light. All sentiment was extinguished

by the hunger from which they suffered, and gods who were noted for their compassionate kindness when alive, became pitiless and feroclous tyrants in the tomb. When once men were bidden to the presence of Sokaris, Khontamentit, or even of Osiris,1 " mortals come territying their hearts with fear of the god, and none dareth to look him in the face either among gods or men; for him the great are the small. He spareth not those who love him; he beareth away the child from its mother, and the old man who walketh on his viv, full of tear, all creatures make supplication before him, but he turneth not his tace towards them." 2 Only by the unfailing psyment of tribute, and by feeding him as though he were a simple human double could living or dead escape the consequences of his funous temper. The living paid him his dues m pomps and solemn sacrifices, repeated from

HIAH AS A MUNNY.

vear to year at regular intervals; but the dead bought more dearly the protection which he deigned to extend to them. He did not allow them to receive directly the prayers, sepulchral meals, or offerings of kindred on teast-days; all that was addressed to them must first pass through his hands. When their friends wished to send them wine, water, bread, meat, vegetables, and fruits, he insisted that these should first be offered and tormally presented to himself; then he was humbly prayed to transmit them to such or such a double, whose name and parentage were pointed out to him. He took possession of them, kept part for his own use, and of his

The most solumn of these secrifices were celebrated during the first days of the year, at the light of the solution of these secrifices were celebrated during the first days of the year, at the lagrat, as is evident from texts in the tomb of Nortichotpu and others (Besselli, Le Tombeau

d \ terhotpû, in the Memoires de la Mission française, vol. v p. 417, et seq ).

bounty gave the remainder to its destined recipient.<sup>1</sup> Thus death made no change in the relative positions of the feudal god and his worshippers. The worshipper who called himself the amakhù of the god during life was the subject and vassal of his mummied god even in the tomb; <sup>2</sup> and the god who, while living, reigned over the living, after his death continued to reign over the dead.

He dwelt in the city near the prince and in the midst of his subjects: Râ living in Heliopolis along with the prince of Heliopolis; Haroêris in Edfû together with the prince of Edfû; Nît in Sais with the prince of Sais. Although none of the primitive temples have come down to us, the name given to them in the language of the time, shows what they originally were. A temple was considered as the feudal mansion 3-hait,—the house-pira, pt, -of the god, better cared for, and more respected than the houses of men, but not otherwise differing from them. It was built on a site slightly raised above the level of the plain, so as to be safe from the inundation, and where there was no natural mound, the want was supplied by raising a rectangular platform of earth. A layer of sand spread uniformly on the sub-soil provided against settlements or infiltration, and formed a bed for the foundations of the building.4 This was first of all a single room, circum scribed, gloomy, covered in by a slightly vaulted roof, and having no opening but the doorway, which was framed by two tall masts, whence floated streamers to attract from afar the notice of worshippers; in from of its façade was a court, fenced in with palisading. Within the temple were pieces of matting, low tables of stone, wood, or metal, a few utensils for cooking the offerings, a few vessels for containing the blood, oil, wine, and

<sup>&</sup>lt;sup>1</sup> This function of the god of the dead was clearly defined for the first time by Mastino in 1878 (Études de Mythologie et d'Archéologie Égyptiennes, vol. 1, pp. 3-6).

The word analhâ is applied to an individual who has freely entered the service of king or baron, and taken him for his lord: analhâ khir nibû means casal of his lord. In the same way, each chose for himselt a god who be true his patron, and to whom he owed fealty, i.e. to whom he was analhâ—vassal. To the god we owed the rivide of a good vassal tribut, sacrifices, offerings; and to his vassal the god wed in return the service of a severain pretection, food, reception into his dominions and accessions person. A man might be absolutely nib analhâ, master of fealty, or, relatively to a god, analha khir O iri, the vassal of Osmis, analha khir Phiah-Sokari, the vassal of Phiah-Sokaris.

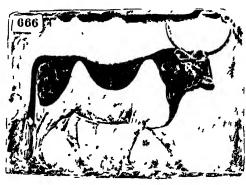

<sup>&</sup>lt;sup>2</sup> Mastino, Sur le sens des mots No. Hait, pp. 22, 23; cf. Proceedings of the Society of Biblical Archeology, 1889-90, vol. xii. pp. 256, 257. The further development of this idea may be found in M. Di Rochi Monthex's lecture on La Grande Salle hypostyle de Karnak, in his Enores diverses, p. 49, et seq.

<sup>\*</sup> This custom lasted into Graco-Roman times, and was part of the ritual for laying the foundations of a temple. After the king had dug out the soil on the ground where the temple was to stand, he spread over the spot sand mixed with pebbles and precious stones, and upon this he had the first course of stone (Dunichen, Baugeschichte des Benderatempels, pl. li.; and Brigsen, Thesaurus Inscriptionum Egyptiacarum, pp. 1272, 1273).

<sup>\*</sup> No Egyptian temples of the first period have come down to our time, but Herr Erman (Egyptia, p. 379) has very justly remarked that we have pictures of them in several of the signs denoting the word temple in texts of the Memphite period.

water with which the god was every day regaled. As provisions for sacrifice increased, the number of chambers increased with them, and rooms for flowers, perfumes, stuffs, precious vessels, and food were grouped around the primitive abode; until that which had once constituted the whole temple became

no more than its sanetuary. There the god dwelt, not only in spirit but in body, and the fact that it was incumbent upon him to live in several cities did not prevent his being present in all of them at once. He could divide his double, imputing it to as many separate bodies as he pleased, and these bodies might be human or animal, natural objects or truings manufactured—such as

THE SALE THE HALLS OF MAINES.

statues of stone, metal, or wood. Several of the gods were incurrate in rams: Osurs at Mendes, Harshafitû at Heraeleopolis, Khnûmû at Elephantinê Living rams were kept in their temples, and allowed to gratify any taney that came into their initial brains. Other gods entered into bulls: Rî at Heliopolis, and, subsequently, Phtah at Memphis, Minû at Thebes, and Montû at Hermonthis. They indicated beforehand by certain marks such beasts as they intended to minate by their doubles, and he who had learnt to recognize these signs was it no loss to find a living god when the time came for seeking one and presenting it to the adoration of worshippers in the temple. And if the statues

Witho, Etudes de Mythologie et d'Arche dogi. L'gyptamaes, vol. n. pp. 221-227. They were ded as animated by spirits concealed within them, but which could maintest themselves on the At such times the head or whole body of the spirit of a tree would emerge from its to did when at returned to its hiding-place the trunk reabsorbed it, or ate it ignin, according to the typiam expression (Myselbo, Études de Mythologie et d'Archéologie L'giptionies, vol. n. 19-101-105, 198, etc.), which I have already had occasion to quote above, see p. 85, note 4.

charitable people. Passers-by drank of the water, and requited the unexpected benefit with a short prayer. There were several such trees in the Memphite nome, and in the Letopolite nome from Dashûr to Gîzeh, inhabited, as every one knew, by detached doubles of Nûît and Hâthor. These combined districts were known as the "Land of the Sycamore," a name afterwards extended to the city of Memphis; and their sacred trees are worshipped at the present day both by Mussulman and Christian fellahîn.1 The most famous among them all, the Sycamore of the South-nullit risit-was regarded as the living body of Ilathor on earth.2 Side by side with its human gods and prophetic statues, each nome proudly advanced one or more sacred animals. one or more magic trees. Each family, and almost every individual, also possessed gods and fetishes, which had been pointed out for their worship by some fortuitous meeting with an animal or an object; by a dream, or by sudden intuition. They had a place in some corner of the house, or a niche in its walls; lamps were continually kept burning before them, and small daily offerings were made to them, over and above what fell to their share on solemn feast-days. In return, they became the protectors of the household, its guardians and its counsellors. Appeal was made to them in every exigency of daily life, and their decisions were no less scrupulously carried out by their little circle of worshippers, than was the will of the feudal god by the inhabitants of his principality.

The prince was the great high priest.<sup>3</sup> The whole religion of the nome rested upon him, and originally he himself performed its ceremonics. Of these, the chief was sacrifice,—that is to say, a banquet which it was his duty to prepare and lay before the god with his own hands. He went out into the fields to lasso the half-wild bull; bound it, cut its throat, skinned it, burnt part of the carcase in front of his idol and distributed the rest among his assistants, together with plenty of calles, fruits, vegetables, and wine.<sup>4</sup> On the occasion, the god was present bot! in body and double, suffering himself to be clothed and

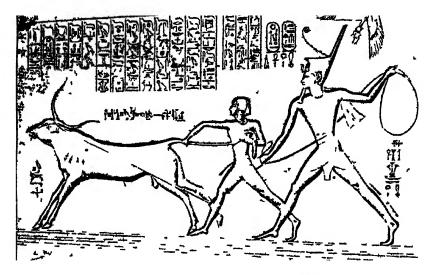

<sup>&</sup>lt;sup>1</sup> The tree at Matarich. In monty called: the Tree of the Virgin, seems to me to be the successor of a sacred tree of Heliopolis in which a goddess, perhaps Hather, was worshipped.

BRUSCH, Dictionnaire geographique, pp. 330-332, 1244, etc.; cf. Lanzont, Dizionario di Mdologia, p. 878. The Memphite Hainer was called the Lady of the Southern Sycamore.

See the examples of the prince Bent-Hasan and Ashmundin, under the XIIth dynasty (Martico, La grande Inscription de Bent Hisson, in the Recueil de Travaux, vol. i. pp. 179, 180), and of the princes of Elephantine under the VIIth and VIIth dynastics (Bournane, Las Tombeaux d'Assonan, in the Recueil de Travaux, vol. x. pp. 182-193). M. Li page-Renour has given a very cle is account of current ideas on this subject in his article On the Priestly Character of the Earliest Egyptian Civilization (Proceedings of the Society of Biblical Archeology, 1889-90, vol. vi. p. 366 et seq.).

<sup>&</sup>lt;sup>4</sup> This appears from the sacrificial ritual employed in the temples up to the last days of Egyptian paganism; cf., for instance, the illustration on p. 123 (Makiette, Abydos, vol. i. pl. lin where the king is represented as lassoing the bull. That which in historic times was but an ima, ... had originally been a reality (Maspelio, Lectures historiques, pp. 71-73).

perfumed, eating and drinking of the best that was set on the table before him and putting aside some of the provisions for future use. This was the time to prefer requests to him, while he was gladdened and disposed to benevolence by good cheer. He was not without suspicion as to the reason why he was so feasted, but he had laid down his conditions beforehand, and if they were tathfully observed he willingly yielded to the means of seduction brought

according to circumstances. During certain services, or at certain points in the sacrifices, it was incumbent upon him to wear sandals, the pantherskin over his shoulder, and the thick lock of hair falling over his light ear; 1 at other times he must gird himself with the loin-cloth having a jackal's tail, and take the shoes from off his feet before proceeding with his office, or attach a false beard to his chin.2 The species, hair, and age of the victim, the way in which it was to be brought and bound, the manner and details of its slaughter, the order to be followed in opening its body and cutting it up, were all minutely and unchangeably deereed.3 And these were but the least of the divine exactions, and those most easily satisfied. The formulas accompanying each act of the sacrificial priest contained a certain number of words whose due sequence and harmonies might not suffer the slightest modification whatever, even from the god himself, under penalty of losing their efficacy. They were always recited with the same rhythm, according to a system of chaunting in which every tone had its virtue, combined with movements which confirmed the sense and worked with irresistible effect: one fall e note, a single discord between the succession of gestures and the utterance of the sacramental words, any hesitation, any awkwardness in the accomplishment of a rite, and the sacrifice was vain.4

Worship as thus conceived became a legal transaction, in the course of which the god gave up his liberty in exchange for certain compensations whose kind and value were fixed by law. By a solemn deed of transfer the worshipper handed over to the legal representatives of the contracting divinity such personal or real property as seemed to him fitting payment for the favour which he asked, or suitable atonement for the wrong which he had done. It man scrupulously observed the innumerable conditions with which the transfer was surrounded, the god could not escape the obligation of fulfilling his petition; 5 but should he omit the least of them, the offering remained with the

<sup>&</sup>lt;sup>6</sup> The real value of formulis and of the na lopent in Egyptian rites was recognized by MASTP . I tude de Mythologie et d'Archeologie I applicances, vol. ii. pp. 302, 303, 373, et seq.

This obligation is evident from texts where, as in the poem of Penfamilt, a king who is a danger demands from his favourite god the equivalent in protection of the sterifies when he hoffered to that divinity, and the pitts wherewith he has enriched him. "Have I not made unto the many offerings?" says Ramses II to Amon. "I have filled thy temple with my prisoners, I have built there a mansion for millions of years. . . . Ah, if evil is the lot of them who moult thee, good are thy purposes towards those who honour thee, O Amon'" (II and J. D. Roufe. Le Poeme & Pentanon, in the Revue Egyptologique, vol. v. p. 15, et seq.)

temple and went to increase the endowments in mortin in, while the god was oledged to nothing in exchange. Hence the officiating priest assume la for midable responsibility as regarded his fellows a slip of memory, the lightest accidental impurity, made him a bad priest, injurious to himself and umful to those worshippers who had entrusted him with their interests fore the gods. Since it was vain to expect ritualistic perfections from a principle onstantly troubled with affairs of state, the custom was established of associating professional priests with him, personages who devoted all then lives to the rudy and practice of the thousand formalities whose sum constituted the local 101/1-101. Each temple had its service of priests, independent of those belongng to neighbouring temples, whose members, bound to keep their hands there's clean and then voices true, were ranked according to the degrees of a I used hierarchy. At their head was a sovereign postiff to direct them in th exercise of their functions. In some places he was called the first prophet, rather the first servant of the god-hon-nutir top; at Thebes he was the at prophet of Amon, it Thins he was the first prophet of Anhurr - But recally he bore a title appropriate to the nature of the god whose servint he was The chief pixest of Ri at Heliopolis, and in all the ones which adopted the Heliopolitin form of worship, was called Ocine men, to mister of visions, and he alone besides the sovereign of the nome, or of I vit, enjoyed the privilege of penetrating into the smetury, of "entering nto haven and there beholding the god" free to free 1 In the same way, the high priest of Anhuri it Schemytos was entitled the wise and pure warror thate an urbu-because his god wert aimed with a pike, and a soldier god a quired for his service a pontiff who should be a soldier like himself.

the limits of the religious domain. The gods accepted, and even sometimes solicited, from their worshippers, houses, fields, vineyards, orchards, slaves, and fishponds, the produce of which assured their livelihood and the support of their temples. There was no Egyptian who did not cherish the ambition of leaving some such logacy to the patron god of his city, "for a monument to himself," and as an endowment for the priests to institute prayers and perpetual sacrifices on his behalf.1 In course of time these accumulated gifts at length formed real sacred ficfs -hotpû-nûtir-analogous to the wakfs of Mussulman Egypt.2 They were administered by the high priest, who, if necessary, defended them by force against the greed of princes or kings. Two. three, or even four classes of prophets or hieroduli under his orders assisted him in performing the offices of worship, in giving religious instruction, and in the conduct of affairs. Women did not hold equal rank with men in the temples of male deities; they there formed a kind of harem whence the god took his mystic spouses, his concubines, his maidservants, the female musicians and dancing women whose duty it was to divert him and to enliven his feasts.3 But in temples of goddesses they held the chief rank, and were called hierodules, or priestesses, hierodules of Nit, hierodules of Hathor, hierodules of Pakhit. The lower offices in the households of the gods, as in princely households, were held by a troop of servants and artisans: butchers to cut the throats of the victims, cooks and pastrycooks, confectioners, weavers, shoemakers, florists, cellarers, water-carriers and milk-carriers. In fact, it was a state within a state.

As regards the Saïto period, we are beginning to accumulate many steles recording citis to a god of land or houses, made either by the king or by private individuals (Rivillout, Acto de fondation d'um chapelle a Hor-merti dans la ville de Pharbatus, et Acte de fondation d'une chapelle à Bast dans la ville de Bubastes, in the Recue Égyptologique, vol. ii. pp. 32-44; Mastero, Notes sur plusieurs point de grammaire et d'histoire, in the Zeitschrift, 1881, p. 117, and 1885, p. 10; also Sur deux stèles récemment découvertes, in the Recueil de Travaux, vol. 21, pp. 84-86).

We know from the Great Harris Pappins to what the fortune of Amon amounted at the end of the reign of Ramses III.; its detail may be found in Brausers, Die Egyptologie, pp 271-271. Cf. in Navilla, Bubastis, Lighth Memoir of the Egyptian Exploration Fund, p. 61, a calculation as to the quantities of precious metals belonging to one of the least of the temples of Bubastis; its gold and silver were counted by thousands of prounds.

The names of the prin epri picstesses of Egypt are collected in Breasen, Die Algyptologe, pp. 262, 263; for their office and functions, cf. Envin, Algypton, pp. 399-101, who seems to me to ascribe too modern an origin to the conception by which the prostesses of a god were considered as forming his earthly harem. Under the Old Kingdom we find prophetesses of Thot (Marn 191, 192 Mastabas de l'Ancien Empire, p. 183) at a findfurth (ibid., p. 162).

See Manierre, Deuderah, text, pp. 80, 87, on the phesiess of Hather at Deuderah. Man the remarks (ibid., pp. 83-86) that priests play but a subordinate part in the temple of Hather. The fact, which surprised him, is adequately explained by remembering that Hather being a goddess, women take precedence over men in a temple dedicated to her. At Sais, the chief priest was a man the harp-hatia (Bausson, Dictionnaire Geographique, p. 1368); but the persistence with when women of the highest rank, and even queens themselves, took the title of prophetess of Nit from the times of the Ancient Empire (Manierr, Les Mastabus, pp. 90, 162, 201, 262, 302, 303, 326, 377, etc., shows that in this city the priestess of the goddess was of equal, if not superior, rank to the priest.

<sup>&</sup>lt;sup>5</sup> A partial list of these may be found in the Hood Pappres (MASPERO, Etudes Egyptiennes, vol. 11 pp. 56-61), where half the second page is filled with their titles.

and the prince took care to keep its government in his own hands, either hy investing one of his children with the titles and functions of chief pointif, or by anogating them to himself. In that case, he provided against mistakes which would have annulled the sacrifice by associating with himself several

misters of the eccemonies, who directed him in the orthodox evolutions before the god and about the victim, indicated the due order of gestures and the accessing changes of costume, and prompted him with the words of each invocation from a book or tablet which they held in their hands?

In addition to its lites and special hierarchy, each the secondard colleges thus constituted had a theology in accordance with the nature and attributes at its god. Its fundamental dogma affirmed the unity of the nome god, his greatness, his supremacy over all the gods of Egypt and of foreign lands — while existence was nevertheless admitted, and none in med of denying them a altry or contesting their pover. The latter also boasted of their unity, then

SHE THE CHILLIANS

printices, then supremier, but whatever they were, the god of the nome was moster of them all then prince, then ruler, then king. It was he alone who governed the world, he also kept it in good order, he alone had excited it. Not that he had evoked it out of nothing, there was as yet no concept of nothingness, and even to the most subtle and refined of primitive theologisms creation was only a bringing of pre-existent elements into play the latent germs of things had always existed, but they had slept for ages and ages in the boson of the Nu, of the dark waters. In fulness of time the god of each nome drew them forth, classified them, marshalled them according to the bent of his parecular nature, and made his universe out of them by methods peccuarly his own. had made the world of warp and woof, as the mother of a family weaves her children's linen.1 Khnûmû, the Nile-god of the cataracts, had gathered up the mud of his waters and therewith moulded his creatures upon a potter's table.2 In the eastern cities of the Delta these procedures were not so simple.8 There it was admitted that in the beginning earth and sky were two lovers lost in the Nû, fast locked in each other's embrace, the god lying beneath the goddess. On the day of creation a new god. Shû, came forth from the primaval waters, slipped between the two, and seizing Núit with both hands, lifted her above his head with ontstretched arms.1 Though the starry body of the goddess extended in space her head being to the west and her loins to the east--her feet and hands hung down to the earth. These were the four pillars of the firmument under another form, and four gods of four adjacent principalities were in charge of them. Osiris, or Horus the sparrow-hawk, presided over the southern, and Sit over the northern pillar; That over that of the west, and Sapdi, the author of the zodiaeal light, over that of the east. They had divided the world among themselves into four regions, or rather into four "houses," bounded by those mountains which surround it, and by the diameters intersecting between the pillars. Each of thesa houses belonged to one, and to one only; none of the other three, nor even the sun himself, might enter it, dwell there, or even pass through it without having obtained its master's permission.6 Sibû had not been satisfied to meet the irruption of Shû by more passive resistance. He had tried to struggle, and he is drawn in the posture of a man who has just awakened out of sleep, and is half turning on his couch before getting up.7

<sup>1</sup> D. MALIAA, Le Culte de Neith a Sais, pp. 185, 186

At Philip he is called "Khnumü... the tather of the god, who is himself, who moulds (khnůmu mon and models (masů) the gods" (Bit ost ii Thesauris Inscriptionum Ægyptiacarum, p. 752, No. 11).

<sup>&</sup>lt;sup>2</sup> Sibu and Nuft, as belonging to the old fundamental conceptions common to Egyptian religions, especially in the Delta, must have been known at Sebennytos as in the neighbouring cities. In the present state of our knowledge <sup>4</sup> is difficult to decide whether their separation by Shu was a conception of the local theologic is or an invention of the prior s of Heliopoles at the time of the constitution of the Great Ennead (MA PERO, Lindes de Mythologie et d'Archéologie Egyptiennes, vol. ii pp. 356, 357, 370).

<sup>\*</sup> This was what the Egyptian celled the apliftings of Slai (Book of the Dead, NAVILLE's edition, pl. axiii, ch. axiii, parts 26-27; cf Marchen ed Mythologie et d'Archeologie Égyptiennes, vol.) pp. 537-340). The event first took place of Hermop his, and certain legends added that in order to get high enough the god had been obliged to make use of a staircase or mound situate in this city, and which was famous throughout Egypt (Book of the Dead, NAVILLE's edition, pl. axiii, ch. axii. Il. 4, 5).

Stris and Horus are in this connection the feudal gods of Mendes and the Osnian entres in the east of the Delta. Sit is lord of the districts about Tams; That belongs to Bakhlich, and Saphi to the Arabian name, to the Cady-Tümilât (cf. Mastero, Éludes de Mythologie et d'Archéologie Egyptiennes, vol. ii. p. 364, et seq.).

On the houses of the world, and the meaning to be attached to this expression, see Maspero, Interpretation Pyramide du roi Papi II., in the Recueil de Travaux, vol. xii, pp. 78, 79.

<sup>&</sup>lt;sup>7</sup> In LANZONE, Dizionario di Mitologia, pls. clv. clvdi., we have a considerable number of scene

One of his legs is stretched out, the other is bent and partly drawn up as in the act of rising. The lower part of the body is still unmoved, but he is raising himself with difficulty on his left elbow, while his head droops and his right arm is lifted towards the sky. His effort was suddenly arrested. Rendered powerless by a stroke of the creator, Sibû remained as if petrified in this position, the obvious irregularities of the earth's surface being due to the painful attitude in which he was stricken. His sides have since been

SHE TOREIBLY SUPARATING SIBÛ AND NÊÎT.

clothed with verdure, generations of men and animals have succeeded each other upon his back,<sup>3</sup> but without bringing any relief to his pain; he suffers evermore from the violent separation of which he was the victim when Nûit was torn from him, and his complaint continues to rise to heaven night and day.<sup>4</sup>

The aspect of the inundated plains of the Delta, of the river by which they are furrowed and fertilized, and of the desert sands by which they are threatened, had suggested to the theologians of Mendes and Buto and

in which Sibû and Nûît are represented, often along with Shû separating than and sustaining Yuit. Same place Sibû in exceptional pestures, on which it is unnecessary to dwell; generally have the subova in a similar attitude to that which I describe, and as in the illustration.

<sup>1</sup> Brogsen, Religion und Mythologie der alten Ægypter, p 221.

Drawn by Faucher-Gudin, from a painting on the muniny-case of Butchauon in the Turin Muss in (Lanzone, Dizionario di Mitologia, pl. 1xi. 1). "Shu, the great god, lord of heaven," here is the adoration of two ram-headed souls placed upon his right and left.

In several scenes plants are een growing on his body (LANZONE, Dizionario di Mitologia, pl. elv. 1). The expression upon the back of Sibû is frequent in the texts, especially in those belonging to the Ptel news period. Attention was drawn to its importance by Dumenus, Banachande der Tempel unter even Edfu, in the Zeitschrift, 1871, pp. 91-93

The Greeks knew that Kronos lamented and wept: the sea was made of his tears (De Isale et Cherist. \$ 32, Parthur's edition, p. 56): Δόξει δὲ καὶ τὸ ὑπὸ τῶν Πυθαγορικῶν λεγύμενον, ὡς ἡ θάλαττα Κρόι το ὑπὸροόν ἐστιν αἰνίττεσθαι τὸ μὸ καθαρὸν μηδὲ σύμφολον είναι. The Pythagorean belief was probably borrowed from Fgypt, and in Egyptian writings there are allusions to the grief of Sibū (Ball, et., Religion und Mythologie der alten Ægypter, p. 227).

the life-sustaining gods face to face: the history of the world is but the story of their rivalries and warfare.

None of these conceptions alone sufficed to explain the whole mechanism of creation, nor the part which the various gods took in it. The priests of Heliopolis appropriated them all, modified some of their details and eliminated others, added several new personages, and thus finally constructed.

HORUS, THE AVENGER OF HIS FATHER, AND ANUBIS CAPCAITC.1

a complete cosmogony, the elements of which were learnedly combined so as to correspond severally with the different operations by which the world had been evoked out of chaos and gradually brought to its present state. Heliopolis was never directly involved in the great revolutions of political history; but no city ever originated so many mystic ideas and consequently exercised so great an influence upon the development of civilization. It was a small town built on the plain not far from the Nile at the apex of the Delta, and surrounded

led the theologians to distinguish two periods, and as it were two beings in the existence of supreme deity: a pre-mundane sun lying inert within the bosom of the dark waters, and our living and life-giving sun 1

One division of the Heliopolitan school retained the use of traditional terms and images in reference to these Sun-gods. To the first it left the human form, and the title of RA<sub>4</sub> with the abstract sense of creator, deriving the name from the

verb rå, which means to give. For the second it kept the form of the sparrow hawk and the name of Harmakhuîti—Horus in the two horizons—which clearly denoted his function; and it summed up the idea of the sun as a whole in the single name of Rå-Harmakhuîti, and in a single image in which the hawk-head of Horus was gratted upon the human body of Rå. The other divisions of the school invented new names for new conceptions. The sun existing before the world they called Creator—Támû, Atâmû —and our earthly sun they called Khopri—He who is. Tûmû was a man crowned

<sup>\*</sup> L de Rouge, Linds sur le Riduit functario, p. 76 'His name may be coinceted with two radicals. Tem is a negation, it may be taken to mean the Inapproachable One, the Unknown (1 1) The bes, where Amin means mystery) Atûm is, in fact, described as 'existing alone in the allyst before the appearance of light. It was in this time of darkness that Atûm performed the flist at a creation, and this allows of our also connecting his name with the Coptic Tamio, creare. Atûm was also the prototype of man (in Coptic Tame, homo), and becomes a perfect thin' after his resurrection. Brucson (Religion and Hythologic, pp. 231, 232) would rather explain Tûmû as meaning the Perfect One the Complete. E die Rougel's philological derivations are no longer admissible, but his explanation of the name corresponds so well with the part played by the god that I fail to see how that can be challenge.

ATÔMÔ. 139

and clothed with the insignia of supreme power, a true king of gods, majestic and impassive as the Pharaohs who succeeded each other upon the throne of Egypt. The conception of Khopri as a disk enclosing a scarabæus, or a man with a scarabæus upon his head, or a scarabæus-

headed mummy, was suggested by the accidental alliteration of his name and that of Khopirra, the scarabous. The difference between the possible forms of the god was so slight as to be eventually lost altogether. His names were grouped by twos and threes m overy conceivable way, and the scarabicus Khopri took its place upon the head of Râ, while the hawk headpiece was transterred from the shoulders of Harmakhûîti to those of

KHOLIA, THE SCARABLELS GOD, IN HIS DALK.

Tuma. The complex beings resulting from these combinations, Ra-Tumu, Atumû-Râ, Râ-Tûmû-Khopri, Râ-Harmakhûîti-Tûmû, Tûm-Harmakhûîti-Khopri, never attained to any pronounced individuality. They were as a rule simple duplicates of the feudal god, names rather than persons, and though hardly taken for one another indiscriminately, the distinctions between them had reference to mere details of their functions and attributes. Hence arose the idea of making these gods into embodiments of the main phases in the life of the sun during the day and throughout the year. Râ symbolized the sun of springtime and before sunrise, Harmakhûîti the summer and the morning sun, Atûmû the sun of autumn and of afternoon, Khopri that of winter and of night.1 The people of Heliopolis accepted the new names and the new forms presented for their worship, but always subordinated them to their beloved Râ. For them Râ never ceased to be the god of the ome; while Atûmû remained the god of the theologians, and was invoked by them, the people preferred Râ. At Thinis and at Sebennytos Anhâri incurred he same fate as befoll Ra at Heliopolis. After he had been identified

An exhaustive study of these theological combinations has been made by Burgsen (Religica 11) Mythologie, pp. 231-280) with great care and suggesty, and with special reference to inscriptions on a imples of the Ptolemaic and Roman periods. Unfortunately Brugsch has attributed to these 11c speculations an importance which they never held in popular estimation.

with the sun, the similar identification of Shû inevitably followed. Of old, Anhûri and Shû were twin gods, incarnations of sky and earth. They were soon but one god in two persons-the god Anhûri-Shû, of which the one half under the title of Anhûri represented, like Atûmû, the primordial being; and Shû, the other half, became, as his name indicates, the creative sun-god who upholds (shû) the sky.1

Tûmû then, rather than Râ, was placed by the Heliopolitan priests at the head of their cosmogony as supreme creator and governor. Several versions were current as to how he had passed from inertia into action, from the personage of Tûmû into that of Râ. According to the version most widely received, he had suddenly cried across the waters, "Come unto me!" and immediately the mysterious lotus had unfolded its petals, and Râ had appeared at the edge of its open cup as a disk, a newborn child, or a disk-crownel sparrow-hawk; 3 this was probably a refined form of a ruder and earlier tradition, according to which it was upon Rà himself that the office had devolved of separating Sibû from Nûît, for the purpose of constructing the heavens and the earth. But it was doubtless felt that so unseemly an act of intervention was beneath the dignity even of an inferior form of the suzerain god; Shû was therefore borrowed for the purpose from the kindred cult of Anhûri, and at Heliopolis, as at Sebennytos, the office was entrusted to him of seizing the sky-goddess and raising her with outstretched arms. The violence suffered by Nûit at the hands of Shû led to a connexion of the Osirian dogma of Mendes with the solar dogma of Sebennytos, and thus the tradition describing the creation of the world was completed by another, explaining its division into deserts and fertile lands. Sibû, hitherto concealed beneath the body of his wife, was now exposed to the sun; Osiris and Sît, Isis and Nephthys, were born, and, falling from the sky, their mother, on to the earth, their father, they shared the surface of the latter among themselves. Thus the Heliopolitan doctrino recognized three principal events in the creation of the universe: the" dualization of the supreme god and the breaking forth of light, the raising of the sky and the laving bare of the earth, the birth of the Nile and the allotment of the soil of Egypt, all expressed as the manifestations of successive deities.4 Of these deities, the latter ones already constituted a family of

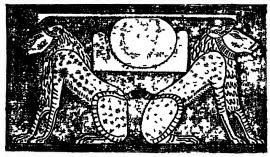

<sup>&</sup>lt;sup>1</sup> Marreno, Études de Mythologie et d'Archéologie Égyptiennes, vol. ii. pp. 282, 356, 357.
<sup>2</sup> It was on this account that the Egyptians named the first day of the year the Day of Come-union me! (E. DE ROLGI, L'tudes sur le Rituel funéraire des ancieux Egyptiens, pp. 51, 55). In ch. xvii. of the Book of the Dead, Osiris takes the place of Tumu as the creator-god.

<sup>3</sup> See the illustration on p. 136, which represents the infant sun-god springing from the opening lotus.

<sup>4</sup> On the formation of the Heliopolitan Ennead, see Maspero, Lindes de Mythologie et d'Archéologie Egyptiennes, vol. ii. pp. 214, et seq., 352, et seq. Brugs it's solution and version of the composition derivation, and history of this Ennead is entirely different from mine (Religion und Mythologie der alten Egypter, p. 183, et seq.).

tather, mother, and children, like human families. Learned theologians wailed themselves of this example to effect analogous relationships between the rest of the gods, combining them all into one line of descent. As Atumu-Rá could have no fellow, he stood apart in the first rank, and it was decided that Shû should be his son, whom he had formed out of himself alone, on the

inst day of creation, by the simple intensity of his own virile energy. Shû, reduced to the position of divine son, had in his turn begotten Sibû and Nûît, the two deities which he separated. Until then he had not been supposed to have any wife, and he also might have himself brought his own progeny into he mig, but lest a power of

THE TWO LIONS, SHU AND TAINLED !

spont meons generation equal to that of the deminrge should be ascribed to him, he was mirried, and the wife found for him was Tafnutt, his twin sister, boin in the same way as he was born. This goddess, invented for the occasion, wis never fully alive, and remained, like Nephthys, a theological entity rather thin a real person. The texts describe her as the pale reflex of her husband. Fogether with him she upholds the sky, and every morning receives the niwborn sun is it emerges from the mountain of the east; she is a honness when Shû is a hon, a woman when he is a man, a honess-headed woman if he is a lion-headed man; she is angry when he is angry, appeased when he is appeared; she has no sanctuary wherein he is not worshipped. In short, the pair made one being in two bodies, or, to use the Egyptian expression, "one soul in its two twin bodies."

Hence we see that the Heliopolitans proclaimed the creation to be the work of the sun-god, Atûmu-Râ, and of the four pairs of derives who were descended from him. It was really a learned variant of the old doctrine, that the

universe was composed of a sky-god, Horus, supported by his four children and their four pillars: in fact, the four sons of the Heliopolitan cosmogony, Shû and Sibû, Osiris and Sît, were occasionally substituted for the four older gods of the "houses" of the world. This being premised, attention must be given to the important differences between the two systems. At the outset, instead of appearing contemporaneously upon the scene, like the four children of Horus, the four Heliopolitan gods were deduced one from another, and succeeded each other in the order of their birth. They had not that uniform attribute of supporter, associating them always with one definite function, but each of them felt himself endowed with faculties and armed with special powers required by his condition. Ultimately they took to themselves goddesses, and thus the total number of beings working in different ways at the organization of the universe was brought up to nine. Hence they were called by the collective name of the Ennead, the Nine godspaint nútiru,1--and the god at their head was entitled Pauliti, the god of the Ennead. When creation was completed, its continued existence was ensured by countless agencies with whose operation the persons of the Ennead were not at leisure to concern themselves, but had ordained auxiliaries to preside over each of the functions essential to the regular and continued working of all things. The theologians of Heliopolis selected eighteen from among the innumerable divinities of the feudal cults of Egypt, and of these they formed two secondary Enneads, who were regarded as the offspring of the Ennead of the creation. The first of the two secondary Enneads, generally known as the Minor Ennead, recognized as chief Harsiesis, the son of Osiris. Harsiesis was originally an earth-god who had avenged the assassination of his father and the banishment of his mother by Sit; that is, he had restored fulness to the Nile and fertility to the Delta. When Harsiesis was incorporated into the solar religions of Heliopolis, his filiation was left undisturbed as being a natural link

The first Egyptologists contounded the sign used in writing paalt with the sign kh, and the word thet, other (CHAMPOLLIC . Grammaire Egyptienne, pp. 292, 320, 331, 404, etc.). E. de Ringe was the first to determine 1 + planetic value: "it should be read Paa, and designates a body of gods." (Letter from E. de Rouge, June, 1852, published by F. Layand, Recherches sur le Lypres Pyramidal, in the Memoires de l'Audemie des Inscriptions et Belles-Lettres, vol. xx. 2nd part, p. 176, Shortly afterwards Bruesen proventant "the group of gods invoked by E. de Ringe must have consisted of nane"- of an Ennead (Veber die II of none"- of an Ennead (Velier die 11 - Appl. des Neumondes und thre verschiedenen Bedeutungen, in the Leitschrift der Morg. G., vol. 3. p. 666, et seq.) This explanation was not at first admitted either by Larstos (Veber die Götter der Vier Elemente bei den Fappier) or by Maniteria, who had proposed a mystic interpretation of the word in his Memoire sur la mère d'Apis (pp. 25-36), or by E. di. Rotto (Etudes sur le Rituel funciaire, p. 43), or by Chabas (Une Inscription historique du règne de Sete I. p. 37, and Un Hymne a Oberis in the Revue Archeologique, 1st series, vol. xiv. pp. 198-200). The interpretation a Nine, an Ennead, was not frankly adopted until later (MA-17.100, Memoires sur quelque Papyrus du Louire, pp. 91, 95), and more especially after the discovery of the Pyramid texts (Baugson, Thesaurus Inscriptionum Lypptiacarum, p. 707, et seq.); to-day, it is the only meaning admitted. Of course the Egyptian Ennead has no other connection than that of name with the Immeads of the Neo-Platonists.

between the two Enneads, but his personality was brought into conformity with the new surroundings into which he was transplanted. He was identified with the through the intervention of the older Horus, Haroêris-Harmakhis, and the Minor Ennead, like the Great Ennead, began with a sun-god. This assimilation was not pushed so far as to invest the younger Horus with the same powers as his fletitious ancestor: he was the sun of earth, the everyday sun, while Atûmû-liû was still the sun pre-mundane and eternal. Our knowledge

of the eight other deities of the Minor Ennead is very imperfect. We see only that these were the gods who chiefly protected the sun-god against its enemies and helped it to follow its regular course. Thus Harhûditi, the Horus of Edfû, spear in hand, pursués the hippopotami or serpents

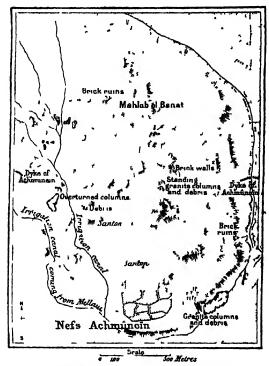

THE TOUR BUNLRARY GINH, KHARWRIF, THEMALIF, HAPI,
AND AMBÎT,<sup>1</sup>

which haunt the celestial waters and menace the god. The progress of the Sun-bark is controlled by the incantations of Thot, while Uapûaîtû, the dual jackal-god of Siût, guides, and occasionally tows it along the sky from south to north. The third Ennead would seem to have included among its members Anubis the jackal, and the four funerary genii, the children of Horus-Hapi, Amsît, Tiûmaûtf, Kabhsonûf; it further appears as though its office was the care and defence of the dead sun, the sun by night, as the second Ennead had charge of the living sun. Its functions were so obscure and apparently so insignificant as compared with those exercised by the other Enneads, that the theologians did not take the trouble either to represent it or to enumerate its persons. They invoked it as a whole, after the two others, in those formulas in which they called into play all the creative and preservative forces of the universe; but this was rather as a matter of conscience and from love of precision than out of any true deference. At the initial impulse of the lord of Heliopolis, the three combined Enneads started the world and kept it going, and gods whom they had not incorporated were either enemies to be fought with, or mere attendants.2

<sup>1</sup> Drawn by Faucher-Gudin, from Wilkinson's Manuers and Customs, 2nd edit., vol iii. p 221, p vlvn.

The little which we know of the two secondary Euncade of Heliopolis has been put to either Manners, Etudes de Mythologie et d'Archéologie Egyptiennes, vol. ii. pp. 289, et seq., 353, 354, 372.

The doctrine of the Heliopolitan Ennead acquired an immediate and a lasting popularity. It presented such a clear scheme of creation, and one whose organization was so thoroughly in accordance with the spirit of tradition, that the

11 AN OF THE RUPS OF HEIN POLIS MACKA 1

various saccidotal colleges adopted it one after another, accommodating it to the exigencies of local patriotism. Each placed its own nome-god at the head of the Ennead as "god of the Nine." "god of the first time," creator of heaven and earth, sovereign rule; of men, and lord of all action. As there was the Ennead of Atûmû at Heliopolis, so there was that of Anhûri at Thinis and at Sebennytos; that of Minu at Coptos and at Punopolis, that of Harofris at Edu, that of Sobkhû at Ombos, and, later, that of Phrib at Memphis and of Amon at Thebes.2 Nomes which

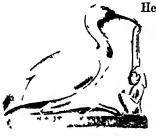

worshipped a goddess had no scraples whatever in ascribing to her the put played by Atûmû, and in crediting her with the spontaneous materiaty of Shu and Tafuûît. Nît was the source and ruler of the Ennead of Sars, Isis of that of Bûto, and Hâthor of that of Denderah.<sup>3</sup> Few of the saccidetal college went beyond the substitution of their own feudal gods for Atûmû. Provided that the god of each a one held the rank of supreme lord, the rest matter doubtle, and the local theologians made no change in the order of the other accuts of enation, their vanity being unburt even by the lower offices assigned by the Heliopolitan tradition to such powers as Osin's, Sibû, and Sît, who were

Hermopolis alone declined to borrow the new system just as it stood, and in all its parts. Hermopolis had always been one of the ruling cities of Middle Egypt. Standing alone in the midst of the lind lying between the Eastern and Western Niles, it had established upon each of the two great arms of the river a port and a custom-house, where all boats travelling either up or down stream paid toll on passing. Not only the coin and natural

products of the valley and of the Delta, but also goods from distant parts

Africa brought to Stut by Soudancse caravans, helped to fill the treasury of Hermopolis. That, the of of the city, represented as ibis or baboon, was securelly a moon god, who measured time, counted the days, numbered the months, and recorded the out. Lumin divinities, as we know, are everywhere supposed to exercise the most varied powers they command the mysterious forces of the universe; the whom the sounds, words and gestures by hield these forces are put in motion, and not out in vith using them for their own benefit, they dispersed to their worshippers the art of impleying them. That formed no exception to this rule. He was ford of the voice, master of

and of books, possessor or reventor of those magic writings which acthing in beaven, on earth, or in Hades can withst ind. He had discovered to meintations which cooke and control the gods, he had transcribed the

texts and noted the melodies of these incantations; he recited them with that true intonation-ma khrôù-which renders them all-powerful, and every one. whether god or man, to whom he imparted them, and whose voice he made true -små khrôû-became like himself master of the universe. I He had accomplished the creation not by muscular effort to which the rest of the cosmogonical gods primarily owed their birth, but by means of formulas, or even of the voice alone, "the first time" when he awoke in the Nû. In fact, the articulate word and the voice were believed to be the most potent of creative forces, not remaining immaterial on issuing from the lips, but condensing, so to speak, into tangible substances; into bodies which were themselves animated by creative life and energy; into gods and goddesses who lived or who created in their turn. By a very short phrase Tûmû had called forth the gods who order all things; for his "Come unto me!" uttered with a loud voice upon the day of creation, had evoked the sun from within the lotus.2 That had opened his lips, and the voice which proceeded from him had become an entity; sound had solidified into matter, and by a simple emission of voice the four gods who preside over the four houses of the world had come forth alive from his mouth without bodily effort on his part, and without spoken evocation. Creation by the voice is almost as great a refinement of thought as the substitution of creation by the word for creation by muscular effort. In fact, sound bears the same relation to words that the whistle of a quartermaster bears to orders for the navigation of a ship transmitted by a speaking trumpet; it simplifies speech, reducing it as it were to a pure abstraction. At first it was believed that the creator had made the world with a word, then that he had made it by sound; but the further conception of his having made it by thought does not seem to have occurred to the theologians.3 It was narrated at Hermopolis, and the legend was ultimately universally accepted, even by the Heliopolitans, that the separation of Nûît and Sibû had taken place at a certain spot on the site of the city where Sibû had ascended the mound on which the feudal temple was afterwards built, in order that he might better sustain the goddess and uphold the sky at the proper height.

earth; thou shalt even see the sun of ing in heaven, and his cycle of gods, and the moon in the fortwherein it appeareth."

<sup>&</sup>lt;sup>1</sup> For the interpretation of these expressions, see Maspero, Etudes de Mythologie et d'Archeol για Egyptiennes, vol. i. pp. 93-114.

<sup>&</sup>lt;sup>2</sup> See the account of this mythological episode on p. 140, and also the illustration on p. 147, which represents the Sun-god as a child emerging from the opened lotus.

<sup>&</sup>lt;sup>3</sup> The theory of creation by voice was first set forth by MASPERO, Creation by the Voice and the Ennead of Hermopolis (in the Oriental Quarterly Review, 2nd series, vol. iii, p. 365, et seq.), and Etudes de Mythologie et d'Archéologie Egyptiennes, vol. ii p. 372, et seq.

<sup>\*</sup> Book of the Dead (NAVILLE's edition, pl. xxiii.), ch. xvii. 1. 3, et seq. Other texts also state to it was in the Hermopolite nome that " light began when thy father Ra rose from the totus;" DUMICIEN, Geographische Inschriften, vol. i. (iii. of the Recueil de Monuments), pl. iv. il. 2, 3; cf. pl. xevi. 1. 21.

The conception of a Creative Council of five gods had so far prevailed at Hermopolis that from this fact the city had received in remote antiquity the name of the "House of the Five;" its temple was called the "Abode of the Pive" down to a late period in Egyptian history, and its prince, who was the hereditary high priest of Thot, reckoned as the first of his official titles that if "Great One of the House of the Five." 1

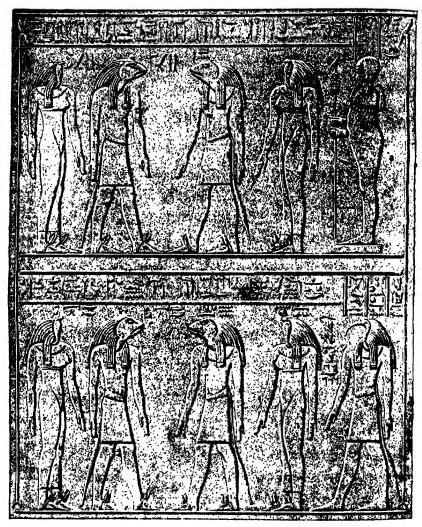

The four couples who had helped Atûmû were identified with the four unvillary gods of Thot, and changed the council of Five into a Great Hermopolitan Ennead, but at the cost of strange metamorphoses.2 However rtificially they had been grouped about Atûmû, they had all preserved such distinctive characteristics as prevented their being confounded one with another. When the universe which they had helped to build up was finally seen to be the result of various operations demanding a considerable manifestation of physical energy, each god was required to preserve the individuality necessary for the production of such effects as were expected of him. They could not have existed and carried, on their work without conforming to the admary conditions of humanity; being born one of another, they were bound to have paired with living goddesses as capable of bringing forth their children as they were of begetting them. On the other hand, the four auxiliary gods of Hermopolis exercised but one means of action—the voice. Having themselves come forth from the master's mouth, it was by voice that they created and perpetuated the world. Apparently they could have done without goddesses had marriage not been imposed upon them by their identification with the corresponding gods of the Heliopolitan Ennead; at my rate, their wives had but a show of life, almost destitute of reality. As these four gods worked after the manner of their master, Thot, so they also i bore his form and reigned along with him as so many baboons. When associated with the lord of Hermopolis, the eight divinities of Heliopolis assumed the character and the appearance of the four Hermopolitan gods in whom they were merged. They were often represented as eight baboons surrounding the supreme baboon,3 or as four pairs of gods and goddesses

<sup>&</sup>lt;sup>4</sup> E. de Rouge, Recherches and les monuments qu'on peut attribuer au sex premières dynasties de Manethon, p. 62; Brugsen, Dutennaire Geographique, p. 362. In the Harms Magic Pappins (pl. 10. II. 5, 6, Charas' edition, p. 53) they are called "these five gods... who are neither in haven nor upon earth, and who are not lighted by the sun." hymns wherewith they salute the rising and the setting sun ensure the continuity of his course. Their names did not survive their metamorphoses:

each pair had no longer more than a single name, the termination of each name varying according as a god or a goddess was intended:-Nû and Nûît, Hehû and Hehît, Kakû and Kakît. Ninû and Ninît. As far as we are able to judge, the couple Nû-Nûît answers to Shû-Tafnûît; Hahû-Hehît to Sibû and Nûît; Kakû-Kakît to Osiris and Isis; Ninû-Ninît to Sît and Nephthys. There was seldom any occasion to invoke them separately; they were addressed collectively as the Eight -Khmûnû 1-and it was on their account that Hermopolis was named Khmunu, the City of the Eight.2 Ultimately they were deprived of the little individual life still left to them, and were fused into a single being to whom the texts refer as Khomnino, the god Eight. By degrees the Ennead of Thot was thus reduced to two terms; the god One and the god Eight, the Monad and the Ogdoad. latter had scarcely more than a theoretical existence, and was generally absorbed into the person of the former. Thus the theologians of Hermopolis gradually disengaged the unity of their feudal god from the multiplicity of the cosmogonic detties.3

As the sacerdotal colleges had adopted the Heliopolitan doctrine, so they now generally adopted that of Hermopolis: Amon, for instance, being made to preside indifterently over the eight baboons and over the four independent couples of the primitive Ennead." In both cases the process of

"Typptoppl. cxxx. Their individual value has been and still is a subject of discussion. Tirsus first fixed to show in a special memoir (Velor die Götter der vier Elemente bee den Aquiptern, 1856) that they were the gods of the four elements: Demicrien looks upon the four couples as being severally Pumitive Matter, Primitive Space, Pum tive Time, Primitive Force (Geschichte Agyptus, p. 210, et seq.); Eugasen (Religion and Mathologie, p. 123, et seq.) prefers to consider them as representing

<sup>1</sup> Drawn by Faucher-Gudin from a bronze statuette found at Thebes, and now in my possession. ' In a bas-relief at Philes, Amon presides over the Hermopolitan Ennead (Lersus, Denkin., iv. (b) it is to him that the eight beloons address their hymns in the Harris Magic Papyrus (pl 11i. 1 to at seq.; Charas' edition, pp. 60, 69), beseeching him to come to the help of the magicians.

difficulty whatever, had the divinities to whom it was applied only been without family; in that case, the one needful change for each city would have been that of a single name in the Heliopolitan list, thus leaving the number of the Ennead unaltered. But since these deities had been turned into triads they could no longer be primarily regarded as simple units, to be combined with the elements of some one or other of the Enneads without preliminary arrangement. The two companions whom each had chosen had to be adopted also, and the single Thot, or single Atûmû, replaced by the three patrons of the nome, thus changing the traditional nine into cleven. Happily, the constitution of the triad lent itself to all these adaptations. We have seen that the father and the son became one and the same personage, whenever it was thought desirable. We also know that one of the two parents always so far predominated as almost to efface the other.

THE PHEBAN ENNEAD.

Sometimes it was the goddess who disappeared behind her husband; sometimes it was the god whose existence merely served to account for the offspring of the goddess, and whose only title to his position consisted in the fact that he was her husband.2 Two personages thus closely connected were not long in blending into one, and were soon defined as being two faces, the masculine and feminine aspects of a single being. On the one hand, the father was one with the son, and on the other he was one with the mother. Hence the mother was one with the son a with the father, and the three gods of the trial were resolved into one god in three persons. Thanks to this subterfuge, to put a triad at the head of an Ennead was nothing more than a roundabout way of placing a single god there; the three persons only counted as one, and the eleven names only amounted to the nine canonical divinities. Thu-, the Theban Ennead of Amon-Maut-Khonsu, Shu, Tafnuit, Sibu, Nuit, Osiri, lsis, Sît, and Nephthys, is, in spito of its apparent irregularity, as correct as the typical Ennead itself. In such Enneads Isis is duplicated by goddesses of

¹ This Ennead consists of fourteen members—Montû, duplicating Atûmû; the four usual couplest then Horus, the son of Isis and Oshia, together with his associate deities, Hather, Tanu, and Anît.
² See the explanation of this fact on pp. 101-107.

like nature, such as Håthor, Selkît, Taninît, and yet remains but one, while Osiris brings in his son Horus, who guthers about himself all such gods as play the part of divine son in other triads. The theologians had various methods of procedure for keeping the number of persons in an Ennead at nine, no matter how many they might choose to embrace in it. Supernumeraries were thrown in like the "shadows" at Roman suppers, whom guests would bring without warning to their host, and whose presence made not the slightest difference either in the provision for the feast, or in the arrangements for those who had been formally invited.

Thus remodelled at all points, the Ennead of Heliopolis was readily adjustable to sacerdotal caprices, and even profited by the facilities which the triad afforded for its natural expansion. In time the Heliopolitan version of the origin of Shû-Tafnûît must have appeared too primitively barbarous. Allowing for the licence of the Egyptians during Pharaonic times, the concept of the spontaneous emission whereby Atûmû had produced his twin children was characterized by a superfluity of coarseness which it was at least unnecessary to employ, since by placing the god in a triad, this double birth could be duly explained in conformity with the ordinary laws of life. The solitary Atûmû of the more ancient dogma gave place to Atûmû the . husband and father. He had, indeed, two wives, lûsâsît and Nebthotpît, but their individualities were so feebly marked that no one took the trouble to choose between them; each passed as the mother of Shû and Tafnûît.1 This system of combination, so puerile in its ingenuity, was fraught with the gravest consequences to the history of Egyptian religions. Sha having been transformed into the divine son of the Heliopolitan triad, could henceforth be assimilated with the divine sons of all those triads which took the place of Tumu at the heads of provincial Enneads. Thus we find that Horus the son of Isis at Bûto, Arihosnofir the son of Nît at Sais. Khnûmû the son of Hâthor at Esneh, were each in turn identified with Shu the son of Atumu, and lost their individualities in his. Sooner or later this was bound to result in bringing all the triads closer together, and in their absorption into one another. Through constant reiteration of the statement that the divine sons of the triads were identical with Shû, as being in the second rank of the Ennead, the idea arose hat this was also the case in triads unconnected with Enneads; in other terms, at the third person in any family of gods was everywhere and always Shu

Many examples of these irregular Enneads were first collected by Levius (Veber den ersten 'election Gotterkreis, pls. i.-iv.), and later by Bri escu (Thesaurus Inscriptionum Lyppiacaeum, 1 -21 730), and they were explained as they are here explained by Mastine (Etades de Mythologic de l'acheologie Egyptionnes, vol. ii. pp. 245, 246). The best translation which could then be given est was cycle, the cycle of the gods; but this did not specify the number.

under a different name. It having been finally admitted in the sacerdotal colleges that Tûmû and Shû, father and son, were one, all the divine sons were, therefore, identical with Tûmû, the father of Shû, and as each divine son was one with his parents, it inevitably followed that these parents themselves were identical with Tûmû. Reasoning in this way, the Egyptians naturally tended towards that conception of the divine oneness to which the theory of the Hermopolitan Ogdond was already leading them. In fact, they reached it, and the monuments show us that in comparatively early times the theologians were busy uniting in a single person the prerogatives which their ancestors had ascribed to many different beings. But this conception of deity towards , which their ideas were converging has nothing in common with the conception of the God of our modern religions and philosophies. No god of the Egyptians was ever spoken of simply as God. Tumu was the "one and only god"-natir nau ûaiti-at Heliopolis; Anhari-Sha was also the "one and only god" at Sebennytos and at Thinis. The unity of Atûmû did not interfere with that of Anhûri-Shû, but each of these gods, although the "sole" deity in his own domain, ceased to be so in the domain of the other. The foudal spirit, always alert and jealous, prevented the higher dogma which was dimly apprehended in the temples from triumphing over local religions and extending over the whole land. Egypt had as many "sole" deities as she had large cities, or even important temples; she never accepted the idea of the sole God, "beside whom there is none other."

## CHAPTER III.

## THE LEGENDARY HISTORY OF EGYPT.

The divine dynastics Ra, Sha, Osinia, Sit, Horns—Thot, and the invention of sciences and writing.
—Mones, and the three first human dynastics

THE building up and diffusion of the doctume of the Ennead, like the formation of the land of Egypt, demanded centuries of sustained effort, centuries of which the inhabitants themselves knew neither the number nor the authentic history. When questioned as to the remote past of their race, they proclaimed themselves the most ancient of mankind, in comparison with whom all other races were but a mob of young children; and they looked upon nations which denied their pretensions with such indulgence and pity as we feel for those who doubt a well-known truth. Their forefathers had appeared upon the banks of the Nilo even before the creator had completed his work, so easer were the gods to

behold their birth. No Egyptian disputed the reality of this right of the

Bes-rolled at Philes: drawn by Faucher-Gudin, from a photograph by Beato (Rosfilla, Vanumule del Culto, pl. xix 2) The vignette, also drawn by Faucher-Gudin, represents an ichneument Philach's rat, sitting up on its haunches, with paws uplitted in adoration. It has been variously impreted. I take it to be the image of an animal spontaneously generated out of the initial, and mightianks to Ra at the very moment of its creation. The original is of bronze, and in the Grzeb in cum (Marilter, Album photographique, pl. 5)

firstborn, which ennobled the whole race; but if they were asked the name of their divine father, then the harmony was broken, and each advanced the claims of a different personage.1 Phtah had modelled man with his own hands; 2 Khnûmû had formed him on a potter's table.3 Râ at his first rising, seeing the earth desert and bare, had flooded it with his rays as with a flood of tears; all living things, vegetable and animal, and man himself, had sprung pell-mell from his eyes, and were scattered abroad with the light over the surface of the world.4 Sometimes the facts were presented under a less poetic aspect. The mud of the Nile, heated to excess by the burning sun, fermented and brought forth the various races of men and animals by spontaneous generation,5 having moulded itself into a thousand living Then its procreative power became weakened to the verge of exhaus? tion. Yet on the banks of the river, in the height of summer, smaller animals might still be found whose condition showed what had once taken place in the case of the larger kinds. Some appeared as already fully formed, and struggling to free themselves from the oppressive mud; others, as yet imperfect, feebly stirred their heads and fore feet, while their hind quarters were completing their articulation and taking shape within the matrix of earth.6 It was not Ra

1 Hippys of Rheghum, frag. 1, in Muller-Didot, Fragm. Hist. Gr., vol. ii. p. 13; Amstotle, Politics, vol. 9, and Meteorology, i. 14; Diodores Sieulus, i. 10, 22, 50, etc. We know the words which Plate puts into the mouth of an Egyptian priest: "O Solon, Solon, you Greeks are always children, and there is no old man who is a Greek! You are all young in mind; there is no opinion or tradition of knowledge among you which is white with ago" (Timzus, 22 B; Jowett's translation, vol. ii. pp 319, 350). Other nations disputed their priority—the Phrygians (Hiddonottis, ii. 11), the Medes, or rather the tribe of the Magi among the Medes (Aristople in Diogenes Lalethus, pr. 6), the Ethopians (Diodorus, iii. 2), the Seythans (Justinus, ii. 1; Ammanus Marchalus, xxxi. 15, 2). A cycle of legends had gathered about this subject, giving an account of the experiments instituted by Psantik, or other sovereigns, to find out which were right, Egyptians or foreigners (Wildelan Herodots Zweites Buch, pp. 43-46).

<sup>2</sup> At Philip (ROSLLLINI, Monumenti del Culto, pl. XVI. 1) and at Denderah, Philah is represented as piling upon his potter's table the plastic clay from which he is about to make a human body (LANZONE, Di. ionar to di Mitologia, pl. cceviu.), and which is somewhat wrongly called the egg of the world. It is really the lump of earth from which man came forth at his creation.

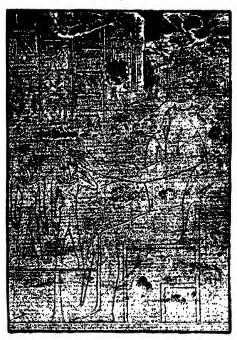

- <sup>3</sup> At Phile, Khnûmû calls huns if "the potter who fashions men, the modeller of the gods" (Chaupoli ion, Monuments de \$\mathcal{P}\_2\$ gate et de la Nuble, pl. laniii, 1; Rosellini, Monumenti del Cultupl. and 1; Brigger, Thesaurus Invertationum Fygyptiacarum, p. 752, No. 11). He there models the members of Osius, the husburd of the local Ists (Rosellini, Monumenti del Culto, pl. anii, 1), as at Erment he forms the body of Harsamtati (Rosellini, Monumenti del Culto, pl. alviii, 3), or rather that of Ptolemy Crestion, the son of Julius Crest and the celebrated (Coopatra, identified with Harsamtani).
- With reference to the substances was proceeded from the eye of Râ, see the remarks of Birch. Sur un propyrus magique du Musée Britannique (cf. Revue Archéologique, 2nd series, 1863, vol vn) and Masplro, Mémoire sur quelques papprus du Louvre, pp. 91, 92. By his tears (romitû) Horus, on his eye as identified with the sun, had given birth to all men, Egyptians (romitû, rotû). Libyans, and Asiatics, excepting only the negroes. The latter were born from another part of his body by the same means as those employed by Atûmû in the creation of Shû and Tafnûit (Lepfaure, Les Quali Races humaines au jugement dernier, in the Transactions of the Society of Biblical Archeology, vol. 11 p. 44, et seq., and Le Cham et l'Adam égyptien, in the same publication, vol. iv., 1887, p. 167, et seq.)

5 Dioporus Siccaus, book I. i. 10.

\* POMPONIUS MELA, De Situ orbis, i. 9. "Nilus glebis etiam infundit animas; ipsaque humo vitalia effingit: hoc eo manifestum est, quod, ubi sedavit diluvia, ac se sibi reddidit, per humente

alone whose tears were endowed with vitalizing power. All divinities whether beneficent or malevolent, Sît as well as Osiris or Isis, could give life by weeping; 1 and the work of their eyes, when once it had fallen upon earth, flourished

and multiplied as vigorously as that which came from the eyes of Ra. The individual character of the creator was not without bearing upon the nature of his creatures good was the necessary outcome of the good gods, evil of the evil ones; and herein lay the explanation of the mingling of things excellent and things execrable, which is found everywhere throughout the world. Voluntarily or involuntarily, Sit and his partisans were the cause and origin of all that is harmful. Daily their eyes shed upon the world those juices by which plants are made poisonous, as well as malign influences, crime, and madness. Their saliva, the foam which fell from their mouths during their attacks of rage, their sweat, their

KHNCHO MODELLING MAN UPON A POTTER'S TABLE.2

blood itself, were all no less to be feared. When any drop of it touched the

campos quadam nondum perfecta animalia, sed tum primum accipientia spiritum, et ex parte jam formata, ex parte adhue terra visuntur." The same story is told, but with reference to rats only, by PLINY (H. N., x. 58), by Diodorus (I. i. 15), by Elianus (H. Anim., ii. 56; vi. 40), by Machobus (Saturn., vii. 17, etc.), and by other Greek or Latin writers. Even in later times, and in Europe, this protended phenomenon met with a certain degree of belief, as may be seen from the curious work of Marcus Friedericus Wendelinus, Archi-palatinus, Admiranda Nili, Francofurti, mdexxiil, cap. xxi. pp 157-183. In Egypt all the fellahin believe in the spontaneous generation of rats as in an article of their creed. They have spoken to me of it at Thebes, at Denderah, and on the plain of Abydos; and Major Brown has lately noted the same thing in the Fayum (B. H. Brown, The Fayum and Lake Maris, p. 26). The variant which he heard from the lips of the notables is curious, for it professes to explain why the rats who infest the fields in countless bands during the dry season, suddenly disappear at the return of the inundation: born of the mud and putrid water of the preceding year, to and they return, and as it were dissolve at the touch of the new waters.

The tears of Shu and Tainuit are changed into inconse-bearing trees (Birch, Sur un papyrus magique du Musée Britannique, p. 3). It was more especially on the day of the death of Osiris that the gods had shed their fertilizing tears. On the effects produced by the sweat and blood of the ed. see Birch, ibid., pp. 3, 6; and Maspero, Mem are sur quelques papyrus du Louvre, p. 93.

Drawn by Boudier, from a photograph by Gayet. The scene is taken from bas-reliefs in the imple of Luxor, where the god Khuumu is seen completing his modelling of the future King Abscubthes III, and his double, represented as two children wearing the side-lock and large neckhave. The first holds his finger to his lips, while the arms of the second swing at his sides.

earth, straightway it germinated, and produced something strange and baleful—a serpent, a scorpion, a plant of deadly nightshade or of henbain. But, on the other hand, the sun was all goodness, and persons or things which it cast forth into life infallibly partook of its benignity. that maketh man glad, the bee who works for him in the flowers secreting wax and honey,1 the meat and herbs which are his food, the stuffs that clothe him, all useful things which he makes for himself, not only emanated from the Solar Eye of Horus, but were indeed nothing more than the Eye of Horus under different aspects, and in his name they were presented in sacrifice.2 The devout generally were of opinion that the first Egyptians. the sons and flock of Ra, came into the world happy and perfect; by degrees their descendants had fallen from that native felicity into their present state. Some, on the contrary, affirmed that their ancestors were born as so many brutes, unprovided with the most essential arts of gentle life. They knew nothing of articulate speech, and expressed themselves by cries only, like other animals, until the day when Thot taught them both speech and writing.

These tales sufficed for popular edification; they provided but meagre fare for the intelligence of the learned. The latter did not confine their ambition to the possession of a few incomplete and contradictory details concerning the beginnings of humanity. They wished to know the history of its consecutive development from the very first; what manner of life had been ied by their fathers; what chiefs they had obeyed and the names or adventures of those chiefs; why part of the nations had left the blessed banks of the Nile and gone to settle in foreign lands; by what stages and in what length of time those who had not emigrated rose out of native barbarism into that degree of culture to which the most ancient monuments bore testimony. No efforts of imagination were needful for the satisfaction of their curresity: the old substratum of indigenous traditions was rich enough, did they

Burn, Sur un parties majque an Musée Britannique, p. 3: "When the Sun god weepsecond time, and lets we'd falt from his eyes, it is changed into working bees; they work in all kinds of flowers, and there honey and was are made instead of water." Elsewhere the bees a uppressed, and the honey or wax flows directly from the Eye of Rå (Maspino, Mémoire sur quelque pappins du Louve, pp 21, 22, 41,

BRUGSON was, I believe, the first to recognize different kinds of wine and stuffs in expressions into which "the Kye of Horus" enters (Dictionnaire Hieroglyphique, p. 10.3 cf. Supplement, 11 106-114). The Pyramid texts have since amply confirmed his discovery, and shown it to be a general application.

In the tomb of Seti I, the words flock of the Sun, flock of Itâ, are those by which the god Hears refers to men (Shari r-Bonovi, The Alabaster Surcephagus of Oimenephah I, King of Typpi, pl. vi. i) il 1, 2, 4). Certain expressions used by Egyptian writers are in themselves sufficient to show that the first generations of men were supposed to have lived in a state of happiness and perfection. To the Egyptians the times of Râ, the times of the god—that is to say, the conturies immediately following on the creation—were the ideal age, and no good thing had appeared upon earth since it in

but take the trouble to work it out systematically, and to eliminate its most meongruous elements. The priests of Heliopolis took this work in hand. as they had already taken in hand the same task with regard to the myths referring to the creation; and the Enneads provided them with a ready-made framework. They changed the gods of the Ennead into so many kings, determined with minute accuracy the lengths of their reigns, and compiled their biographies from popular tales.1 The duality of the feudal god supplied an admirable expedient for connecting the history of the world with that of chaos. Tûmû was identified with Nû, and relegated to the primordial Ocean: Rû was retained, and proclaimed the first king of the world. He had not established his rule without difficulty. The "Children of Defeat," beings hostile to order and light, engaged him in fierce battles; nor did he succeed in organizing his kingdom until he had conquered them in nocturnal combat at Hermopolis, and even at Heliopolis itself.2 Pierced with wounds, Apôpi the serpent sank into the depths of Ocean at the very moment when the new year began.8 The secondary members of the Great Ennead, together with the Sun, formed the first dynasty, which began with the dawn on the first day, and ended at the coming of Horus, the son of Isis. The local schools of theology welcomed this method of writing history as readily as they had welcomed the principle of the Ennead itself. Some of them retained the Heliopolitan deminrge, and hastened to associate him with their own; others completely eliminated him in favour of the feudal divinity, -Amon at Thebes, Thot at Hermopolis, Phtah at Memphis, keeping the rest of the dynasty absolutely unchanged.4 The gods in no

The identity of the first divine dynastics with the Heliopolitan Enneads has been exhaustively domonstrated by Massino, Litudes de Mythologie et d'incheologie Egyptiennes, vol. 11 pp. 279-296.

<sup>&</sup>lt;sup>2</sup> The Children of Defeat, in Egyptian Mosû batashû, or Mosû batashû, ire often confounded with the followers of Sit, the enomies of Osiris. From the first they were distinct, and represented beings and torces hostile to the sun, with the diagon Apôpi at their head. Their defeat at Hermophis corresponded to the moment when Shû, raising the sky above the sacred mound in that city (cf. p. 116), substituted order and half for chaos and darkness. This defeat is mentioned in chap void the Book of the Dead (Naville's edition, vol. 1. pl. axin. 1. 3, ct seq.), in which connexion E or Rougé first explained its measuring (Études sur le Rougé first explained its measuring (Études sur le Rougé des Ancions Émpliens, pp. 11, 42). In the same chapter of the Book of the Dead (Naville's edition, vol. i. pls. vol., vov., 11 54 55, of E. de Rougé, Études ser le Rouge functure, pp. 50, 57), relatione is des much to the battle by night, in Heliopolis, at t'er close of which Rå appeared in the form of a cat or lion, and beheaded the great serpent.

<sup>&#</sup>x27;S o Bim II, Inscriptions in the Hieratic and Demotic Character, pl xxix. Il 8, 9, and Sur un-Sele hieratique in Chabas, Manges Egyptotogiques, 2nd series, p. 334

On Amon-Ra, and on Month, first king of Egypt according to the Thebin tradition, see Litsits, I his den ersten Agyptischen Götterkreis, pp. 173, 174, 180-181, 186. That is the chief of the Hermalistus Ennead (see chap ii. p. 145, et seq.), and the titles ascribed to him by inscriptions maintaining its supremacy (Baussen, Religion und Mythologie, p. 115, et seq.) show that he also we considered to him be that the titles as the Majesty of Thot, because, he was the equal of Atûmû, honce the equal of Khopri, hence the equal of Ra." Atumû-Khopri-Râ being the first earthly king, it follows that the Majesty of Thot, with whom

way compromised their prestige by becoming incarnate and descending to earth. Since they were men of finer nature, and their qualities, including that of miracle-working, were human qualities raised to the highest pitch of intensity, it was not considered derogatory to them personally to have watched over the infancy and childhood of primeval man. The raillery in which the Egyptians occasionally indulged with regard to them, the good-humoured and even ridiculous rôles ascribed to them in certain legends, do not prove that they were despised, or that zeal for them had cooled. The greater the respect of believers for the objects of their worship, the more easily do they tolerate the taking of such liberties, and the condescension of the members of the Ennead, far from lowering them in the eyes of generations who came too late to live with them upon familiar terms, only enhanced the love and reverence in which they were held.

Nothing shows this better than the history of Râ. His world was ours in the rough; for since Shû was yet non-existent, and Nûît still reposed in the arms of Sibû, earth and sky were but one.¹ Nevertheless in this first attempt at a world there was vegetable, animal, and human life. Egypt was there, all complete, with her two chains of mountains, her Nile, her cities, the people of her nomes, and the nomes themselves. Then the soil was more generous; the harvests, without the labourer's toil, were higher and more abundant;² and when the Egyptians of Pharaonic times wished to mark their admiration of any person or thing, they said that the like had never been known since the time of Râ. It is an illusion common to all peoples; as their in-atiable thirst for happiness is never assuaged by the present, they fall back upon the remotest past in search of an age when that supreme felicity which is only known to them as an ideal was actually enjoyed by their ancestors. Râ dwelt in Heliopolis, and the most

Ptolemy identifies himself, comparing himself to the three forms of the god Ra, is also the first earthly king. Finally on the placing of Phtah at the head of the Memphite dynasties, see remarks by Lipsius, Ueber den cisten I guptistien Götterkrei pp. 168-173, 181, 186, 188-190; and by Missimo Études de Mythologic et l'Archeologic Égyptiennes, vol. ii. p. 283, et seq.

This conception of the primitive Experim world is clearly implied in the very terms employed by the author of The Destruction of Men. North does not rise to form the sky until such time as Rothinks of bringing his reign to an end; that is to say, after Egypt had already been in existence to many centuries (Lilpérran, Lombera de Seti L., part iv. pl. xvi. l. 28, et seq.). In chap, xvii of the Book of the Dead (Naville edition, vol. i. pl. xxiii. ll. 3-5) it is stated that the reign of Rabegan in the times when the upliftings had not yet taken place; that is to say, before Shu had separated Natt from Siba, and foreibly uplifted her above the body of her hasband (Naville, Dec. lignes du Livre des Morts, in the Zeitschrift, 1871, p. 59; and La Destruction des hommes par les Dieux, in the Transactions of the Society of Biblical Archeology, vol. iv. p. 3).

This is an ideal in accordance with the picture drawn of the fields of falt in chap. ex. of the Book of the Dead (Navilla's edition, vol. 7. pls. exxi.-exxiii.). As with the Paradise of most race, so the place of the Osirian dead still possessed privileges which the earth had enjoyed dum the first years succeeding the creation; that is to say, under the direct rule of Ra.

ancient portion of the temple of the city, that known as the "Mansion of the Prince"—Håit Sarå,—passed for having been his palace.¹ His court was mainly composed of gods and goddesses, and they as well as he were visible to men. It contained also men who filled minor offices about his person, prepared his food, received the offerings of his subjects, attended to his linen and household affairs. It was said that the ofrå-maå—the high priest of Rå, the

province in turn, and in each he tarried for an hour, to settle all disputed matters, as the final judge of appeal. He gave audience to both small and great, he decided their quarrels and adjudged their lawsuits, he granted investiture of fiefs from the royal domains to those who had deserved them, and allotted or confirmed to every family the income needful for their maintenance. He pitied the sufferings of his people, and did his utmost to alleviate them; he taught to all comers potent formulas against reptiles and beasts of prey, charms to cast out evil spirits, and the best recipes for preventing illness. His incessant bounties left him at length with only one of his talismans: the name given to him by his father and mother at his birth, which they had revealed to him alone, and which he kept concealed within his bosom lest some sorcerer should get possession of it to use for the furtherance of his evil spell.

But old age came on, and infirmities followed; the body of Rå grew bent, "his mouth trembled, his slaver trickled down to earth and his saliva dropped upon the ground." Isis, who had hitherto been a mere woman-servant in the household of the Pharaoh, conceived the project of stealing his secret from him, "that she might possess the world and make herself a godders by the name of the august god." Force would have been unavailing; all enfeebled as he was by reason of his years, none was strong enough to contend successfully against him. But Isis "was a woman more knowing in her makee than millions of men, clever among millions of the gods, equal to millions of spirits, to whom as unto Rå nothing was unknown either in heaven or upon earth." She contrived a most ingenious stratagem. When man or god was struck down by illness, the only chance of curing him lay in knowing his real name, and thereby adjuring the evil being that tormented him. Isis determined to cas' a terrible malady upon Rå, concealing its cause from him; then to offer her services as his nurse, and by means of his sufferings to extract from him

<sup>&</sup>lt;sup>1</sup> The dead S in god pursued the same course in the world of night, and employed his time in the same way as a Price of (Marrice, Littles de Mythologie et d'Archéologie Egyptiennes, vol. 11. [P 44, 45]. So it was with the Sun-god King of Egypt when "he goeth forth to see that which he has created, and to travelse the two kingdoms which he has made" (Pharre-Rossi, Les Papyro de Tarin, pl. exxxi. 1, 12).

The legend of the Sum oil robbed of his heart by Isis was published in three fiagnosis by MM. PLIYIE and Rossi (Les Papyus hieraliques de Turin, planker, laxvii., carallerarium), but they had no suspicion of its importance. Its meaning was first accognized by Lifferer (leshapitre de la Chronique solaire, in the Zeilschrift, 1883, pp. 27-33), who made a complete translet in of the text.

the mysterious word indispensable to the success of the exorcism. Sho gathered up mud impregnated with the divine saliva, and moulded of it A sacred serpent which she hid in the dust of the road. Suddenly bitten as he was setting out upon his daily round, the god cried out aloud, "his voiceseconded into heaven and his Nine called: 'What is it?' what is it?' and 1018 gods: 'What is the matter? what is the matter?' but he could make them no answer so much did his lips tremble, his limbs shake, and the venom take hold upon his flesh as the Nile seizeth upon the land which it invadeth."1 Pusently he came to himself, and succeeded in describing his sensations, "Something painful hath stung me; my heart perceiveth it, yet my two eyes e it not; my hand hath not wrought it, nothing that I have made knoweth If what it is, yet have I never tasted suffering like unto it, and there is no pain that may overpass it. . . . Fire it is not, water it is not, yet is my heart in flames, my flesh trembleth, all my members are full of shiverings born of breaths of magic. Behold! let there be brought unto me children of the gods of beneficent words, who know the power of their mouths, and whose science reacheth unto heaven." They came, these children of the gods, all with their books of magic. There came Isis with her soreery, her mouth full of life-giving breaths, her recipe for the destruction of pain, her words which pour the into breathless throats, and she said: "What is it? what is it, O tather of the gods? May it not be that a serpent hath wrought this suffering in thee; that one of thy children hath lifted up his head against thee? Surely he shall be overthrown by beneficent incantations, and I will make him to retreat at the sight of thy rays."4 On learning the cause of his torment, the Sun-god is terrified, and begins to lament anew: "I, then, as I went along the ways, travelling through my double land of Egypt and over my mountains, that I might look upon that which I have made, I was bitten by a serpent that I saw not. Fire it is not, water it is not, yet am I colder than water, I burr more than fire, all my members stream-with sweat, I tremble, mine eye is not steady, no longer can I discern the sky, drops roll from my face as in the season of summer." 8 Isi, proposes her remedy, and cautiously asks him us meffable name. But he divines her trick, and tries to evade it by an chumeration of his titles. He takes the universe to witness that he is called "Khopri in the morning, Ra at noon, Tunnu in the evening." The porson did not recede, but steadily advanced, and the great god was not eased. Then Isis said to Ra: "Thy name was not spoken in that which thou hast sale. Iell it to me and the poison will depart; for he liveth upon whom

a charm is pronounced in his own name." The porson glowed like fire, it was strong as the bunning of flame, and the Majesty of Ra said, "I grant thee leave that thou shouldest search within me, () mother Isis! and that my name pass from my bosom into thy bosom." In truth, the all-powerful name was hidden within the body of the god, and could only be extracted thence by means of a suigical operation similar to that practised upon a corpse which is about to be mummified Isis undertook it, carried it through successfully, drove out the poison, and made herself a goldess by virtue of the name. The cunning of a mere woman had deprived Râ of his list talısman.

In course of time men perceived his decreptude.2 They took counsel against him: "Lo! his Mijesty waveth old, his bones are of silver, his flesh is of gold, his han of lapis-lazuli". As soon as his Majesty perceived that which they were saying to each other, his Majesty said to those who were of his train, "Call together for me my Divine Eye, Shû Tafnuît, Sibu, and Nûît, the father and the mother gods who were with me when I was in the Nu, with the god Nû Let cuch bring his cycle dong with him, then, when thou shalt have brought them in secret, thou shalt take them to the great mansion that they may lend me their counsel and their consent, comin. hither from the Nû into this place where I have manifested myself." 4 So the family council comes together: the ancestors of Ra, and his posterity still awaiting amid the primordial waters the time of their maintestation -hi children Shû and Tainûît, his grandchildien Sibu and Nûît. They pl themselves, according to ctiquette, on either side his throne, prostrite, with their foreheads to the ground, and thus then conference begins "O Na, thou the eldest of the gods, from whom I took my being, and ye the ancestor gods, behold! men who are the emanation of mine eye have taken couns l

work again on the morrow. "He said: 'Call on my behalf messengers agile and swift, who go like the wind.' When these messengers were straightway brought to him, the Majesty of the god said: 'Let them run to Elephantine and bring me mandragora in plenty.'1 When they had brought him the mandragora, the Majesty of this great god summoned the miller which is in Heliopolis that he might bray it; and the women-servants having crushed grain for the beer, the mandragora, and also human blood, were mingled with the liquor, and thereof was made in all seven thousand jars of beer." Rå himself examined this delectable drink, and finding it to possess the wishedfor properties: "'It is well, said he; 'therewith shall I save men from the goddess;' then, addressing those of his train: 'Take these jars in your arms, and carry them to the place where she has slaughtered men.' Râ, the king. caused dawn to break at midnight, so that this philtre might be poured down upon the earth; and the fields were flooded with it to the depth of four palms, according as it pleased the souls of his Majesty." In the morning the goddess came, "that she might return to her carnage, but she found that all was flooded, and her countenance softened; when she had drunken, it was her heart that softened; she went away drunk, without further thought of men." There was some fear lest her fury might return when the fumes of drunkenness were past, and to obviate this danger Ra instituted a rite, partly with the object of instructing future generations as to the chastisement which he had inflicted upon the impious, partly to console Sokhit for her discomfiture. He decreed that "on New Year's Day there should be brewed for her as many jars of philtre as there were priestesses of the sun. That was the origin of all those jars of philtre, in number equal to that of the priestesses, which, at the feast of Hathor, all men make from that day forth."2

Peace was re-established, but could it last long? Would not men; as soon as they had recovered from their terror, betake themselves again to plotting against the god? Besides, Râ now felt nothing but disgust for our race. The ingratitude of his children had wounded him deeply; he foresaw ever-renewed rebellions as his feebleness became more marked, and he shrank from having to order new massacres in which mankind would perish altogether. "By my life says he to the gods who accompanied him, "my heart is too weary for me to remain with mankind, and slay them until

The mandragora of Elephantine was used in the manufacture of an intexicating and narcetic drink employed either in medicine (Eners, Papprus Ebers, pl. xxxix. l. 10) or in magic. In a special article, Bausson has collected particulars preserved by the texts as to the uses of this plant (Die Abraune als altägyptische Zauberpflanze, in the Zeitschrift, vol. xxix. pp. 31-33). It was not as yeared to with the human form and the peculiar kind of life ascribed to it by western screeners.

NAVILLE, La Destruction des hommes par les Dieux, vol. iv. pls. i., ii., H. 1-27; vol. vid. pls. i., ii., ll. 1-34.

they are no more: annihilation is not of the gifts that I love to make." And the gods exclaim in surprise: "Breathe not a word of thy weariness it a time when thou dost triumph at thy pleasure." But Rå does not vield to their representations; he will leave a kingdom wherein they murmur against him, and turning towards Nû he says: "My limbs are decrepit for the first time; I will not go to any place where I can be reached." It was no easy matter to find him an inacce-sible retreat owing to the imperfect state in which the universe had been left by the first effort of the demininge. Nû saw no other way out of the difficulty than that of setting to work to complete the creation. Ancient tradition had imagined the separation of cath and sky as an act of violence exercised by Shû upon Sibû and Nûit.2 Ilistory presented facts after a less brutal tashion, and Shu became a virtuous son who devoted his time and strength to upholding Nuit, that he might thereby do his father a service. Nûit, for her part, showed herself to be a devoted daughter whom there was no need to treat roughly in order to teach her her duty; of herself she consented to leave her husband, and place her beloved ancestor beyond reach "The Majesty of Nû said: 'Son Shû, do as thy father Ra shall say; and thou, daughter Nuit, place him upon thy back and hold him suspended above the earth!' Nûît said: 'And how then, my father Nû?' Thus spake Nûît, and she did that which Nû commanded her, she changed herself into a cow, and placed the Majesty of Rå upon her back. When those men who had not been slain came to give thanks to Râ, behold! they found him no longer in his palace; but a cow stood there, and they pencived him upon the back of the cow." They found him so resolved to depart that they did not try to turn him from his purpose, but only desired to give him such a proof of their repentance as should assure them of the complete pardon of their crime. "They said unto him: 'Wait until the morning, O Ra! our lord, and we will strike down thme enemies who have taken counsel against thee' So his Majesty returned to his mansion, descended from the cow, went in along with them, and earth was plunged into darkness. But when there was light upon earth the next morning, the men went forth with their bows and their arrows, and beg a to shoot at the enemy. Whereupon the Majesty of this god said unto them: 'Your sins are remitted unto you, for sacrifice precludes the execution of the guilty.' And this was the origin upon earth of sacrifices in which blood was shed."3

<sup>1</sup> NW 111, La Destruction des hommes par les Dieux, vol. W. 11 u il 27-20 van pl. 16.

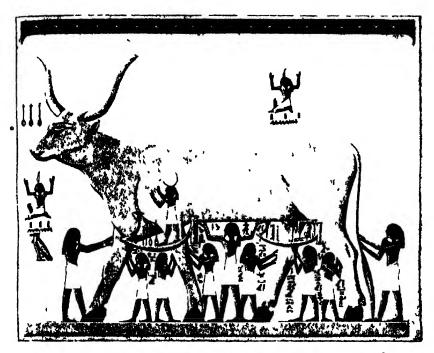

what is said in chap, ii. pp. 128, 129, as to the wresting of Null from the aims of Silm in Null La Destruction des hommes par les Dieux, vol. iv pl. n. ll 27.76. Many licums occur in this past of the text and make its reading difficult in both copies. The general sense is that from some comparatively ununportant shades of meaning.

Thus it was that when on the point of separating for ever, the god and men came to an understanding as to the terms of their future relationship. Men offered to the god the life of those who had offended him. Human sacrifice was in their eyes the obligatory sacrifice, the only one which could completely atone for the wrongs committed against the godhead; man alone was worthy to wash away with his blood the sins of men.1 For this one time the god accepted the expiation just as it was offered to him; then the repugnance which he felt to killing his children overcame him, he substituted beast for man, and decided that oxen, gazelles, birds, should henceforth furnish the material for sacrifice.2 This point settled, he again mounted the cow, who rose. supported on her four legs as on so many pillars; and her belly, stretched out above the earth like a coiling, formed the sky. He busied himself with organizing the new world which he found on her back; he peopled it with many beings, chose two districts in which to establish his abode, the Field of Reeds-Solhit Ialu-and the Field of Rest-Sokhit Hotpit-and suspended the stars which were to give light by night. All this is related with many plays upon words, intended, according to Oriental custom, as explanations of the names which the legend assigned to the different regions of heaven. At sight of a plain whose situation pleased him, he cried: "The Field rests m the distance!"-and that was the origin of the Field of Rest. He added: "There will I gather plants!"-and from this the Field of Reeds took its name. While he gave himself up to this philological pastime, Nûit, suddenly transported to unaccustomed heights, grew frightened, and cried for help: "For pity's sake give me supports to sustain me!" This was the origin of the support-gods. They came and stationed themselves by each of her four legs, steadying these with their hands, and keeping constant watch over

and the other gods, had taken refuge in the bodies of certain animals. Hence, it was really hum or divine victims which were offered when beasts were slaughtered in sacrifice before the altars

<sup>1</sup> This legend, which so ks to explain the discontinuance of human sacrifices among the Egyp tians, affords direct proof of their existence in primitive times (NAVILLE, La Destruction des homes par les Dieux, in the Iran action of the Society of Biblical Archaology, vol iv. pp. 17, 18) This is confirmed by many facts. We shall see that whill laid in graves were in place of the mal or female slaves who was originally staughtered at the tombs of the rich and noble that they might go to serve their marters in the next world (cf. p. 193). Even in Thebes, under the XIX1 dynasty, certain rock out tembs contain scenes which might lead as to believe that occasionally at least hum in victims were sent to doubles of distinction (MASI PRO, Le Tombeau de Montûlikhlopshout, in the Memoires de la Mission ('ant, vol v p 452, ct seq) During this same period, moreover, the most destinguished hostile chiefs taken in war were still put to death before the gods. In several towns, as at Eththyia (De Iside et Ostride, § 73, PARTHEY's chiton, pp. 129, 130) and at Heliopolis (Portuyrus, De Abstinentia, 11. 55, cf. Elbilius, Praper. Elang, iv. 16), er before certair gods, such as Osiris (Diodorus, i. 88) or Krones-Sibû (Sparus Empiricus, iii. 24, 221), human sacrifice lasted until near Roman times. But generally speaking it was very race. Almost every where cakes of a particular shape, and called πέμματα (Seleucus of Alexandria, in Athlineus, iv p. 172), or else animals, had been substituted for man. It was asserted that the partisans of Apôpi and of Sit, who were the enemies of Ra, Osiri-

them. As this was not enough to reassure the good beast, "Rå said, 'My son Shû, place thyself beneath my daughter Nûît, and keep watch on both sides over the supports, who live in the twilight; hold thou her up above thy head, and be her guardian!'" Shû obeyed; Nûît composed herself, and

the world, now furnished with the sky which it had hitherto lacked, assumed its present symmetrical form?

Shû and Sibû succeeded Rû, but did not acquire so lasting a popularity as their great ancestor. Nevertheless they had their annals, tragments of which have come down to us.<sup>3</sup> Their power also extended over the whole universe: "The Majesty of Shû was the excellent king of the sky, of the

earth, of Hades, of the water, of the winds, of the inundation, of the two chains of mountains, of the sea, governing with a true voice according to the precepts of his father Râ-Harmakhis." 1 Only "the children of the serpent Apôpi, the impious ones who haunt the solitary places and the deserts," disavowed his authority. Like the Bedawin of later times, they suddenly streamed in by the isthmus routes, went up into Egypt under cover of night, slew and pillaged, and then hastily returned to their fastnesses with the booty which they had carried off.2 From sea to sea Rû had fortified the eastern frontier against them. He. had surrounded the principal cities with walls, embellished them with temples. and placed within them those mysterious talismans more powerful for defence than a garrison of men. Thus Ait nobsû, near the mouth of the Wady-Tûmilât, possessed one of the rods of the Sun-god, also the living uneus of his crown whose breath consumes all that it touches, and, finally, a lock of his hair, which, being cast into the waters of a lake, was changed into a hawk-headed crocodile to tear the invader in pieces.3 The employment of these talismans was dangerous to those unaccustomed to use them, even to the gods themselves. Scarcely was Sibû enthroned as the successor of Shu, who, tired of reigning, had reascended into heaven in a nine days' tempest, before he began his inspection of the eastern marches, and caused the box in which was kept the uracus of Ra to be opened. "As soon as the living viper had breathed its breath against the Majesty of Sibù there was a great disaster -great indeed, for those who were in the train of the god perished, and his Majesty himself was burned in that day. When his Majesty had fled to the north of Aît-nobsû, pursued by the fire of this magic urans, behold! when he came to the fields of henna, the pain of his burn was not yet assuaged, and the gods who were behind him said unto him: 'O Sire! let them take the lock of Rà which is there, when thy Majesty shall go to see it and its mystery, and his Majesty shall be healed as soon as it shall be placed upon thee.' So the Majesty of Sila caused the magic lock to be brought to Piarit—the lock for which was made that great reliquary of hard stone which is hidden in the secret place of Parit, in the district of the divine lock of the Lord Râ,- and behold! this fire departed from the members of the Majosty of Sibû. And many

<sup>\*</sup> Egyptians of all periods never shrank from such marvels. One of the tales of the Thebatempire tells us of a piece of wax which, on being thrown into the water, changed into a living crocodile capable of devouring a man (Erman, Dis Marchen des Papyrus Westear, pls. iti., iv., p. 8 ct. Marchen, Les Contes populaires, 2nd edit., pp. 60-63, and Pittale, Egyptian Tales, vol. i. pp. 11-15. The talismans which protected Egypt against investon are mentioned by the Pseudo-Callistheo (§ 1, Melick's edition, in the Arrianus of the Didot collection), who attributes their invention. Nectanebo Arab historians often refer to them (L'Égypte de Martadi, Vattren's tannlation, pp. 57, etc.; Majoud, Les Prairies d'Or, translated by Barrier de Meynard, vol. ii. pp. 414-417).

years afterwards, when this lock, which had thus belonged to Sibû, was brought back to Piarît in Aît-nobsû, and cast into the great lake of Piarît whose name is Ait-tostesû, the dwelling of waves, that it might be purified, behold! this lock became a crocodile: it flew to the water and became Sobkû, the divine crocodile of Aît-nobsû." In this way the gods of the solar dynasty from generation to generation multiplied talismans and enriched the sanctuaries of Egypt with relics.

THREE OF THE DIVINE AMULETS PRESERVED IN THE TEMPLE OF AÎT-NOBSÛ AT THE ROMAN PERIOD.

Were there ever duller legends and a more senile phantasy! They did not spring spontaneously from the lips of the people, but were composed at leisure by priests desirous of enhancing the antiquity of their cult, and augmenting the veneration of its adherents in order to increase its importance. Each city wished it to be understood that its feudal sanctuary was founded upon the very day of creation, that its privileges had been extended or confirmed during the course of the first divine dynasty, and that these pretensions were supported by the presence of objects in its treasury which had belonged to the oldest of the king-gods. Such was the origin of tales in which the personage of the beneficent Pharaoh is often depicted in ridiculous fashion. Did we possess all the sacred archives, we should frequently find them quoting as authentic history more than one document as artificial as the chronicle of Ait-nobsû. When we come to the later members of the Ennead, there is a change in the character and in the form of these tales. Doubtless Osiris

Denderals for example, had been founded under the divine dynastics, in the time of the Servants of Horus (Dünicum, Bauurkunde der Tempelanlagen von Dendera, pp. 18, 19, and pl. xv. ll. 37, 38).

and Sit did not escape unscathed out of the hands of the theologians; but even if sacerdotal interference spoiled the legend concerning them, it did not altogether disfigure it. Here and there in it is still noticeable a sincerity of feeling and liveliness of imagination such as are never found in those of Shû and of Sibû. This arises from the fact that the functions of these gods left them strangers, or all but strangers, to the current affairs of the world. Shû was the stay, Sibû the material foundation of the world; and so long as the one bore the weight of the firmament without bending, and the other continued to suffer the tread of human generations upon his back, the devout took no more thought of them than they themselves took thought of the devout. The life of Osiris, on the other hand, was intimately mingled with that of the Egyptians, and his most trivial actions immediately reacted upon their fortunes. They followed the movements of his waters; they noted the turning-points in his struggles against drought; they registered his yearly decline, yearly compensated by his aggressive returns and his intermittent victories over Typhon; his proceedings and his character were the subject of their minute study. If his waters almost invariably rose upon the appointed day and extended over the black earth of the valley, this was no mechanical function of a being to whom the consequences of his conduct are indifferent; he acted upon reflection, and in full consciousness of the service that he rendered. He knew that by spreading the inundation he prevented the triumph of the desert; he was life, he was goodness-Onnofriu-- and Isis, as the partner of his labours, became like him the type of perfect goodness. But while Osiris developed for the better, Sit was transformed for the worse, and increased in wickedness as his brother gained in purity and moral elevation. In proportion as the person of Sit grew more defined, and stood out more clearly, the evil within him contrasted more markedly with the innate goodness of Osiris, and what had been at first an instinctive struggle between two beings somewhat vaguel defined- the desert and the Nile, water and drought-was changed into conscious and deadly enmity. No longer the conflict of two elements, it was war between two gods; one labouring to produce abundance, while the other strove to do away with it; one being all goodness and life. while the other was evua death incarnate.

A very ancient legend narrates that the birth of Osnis and his brothers took place during the five additional days at the end of the year; 1 a subsequent

These five days were of peculiar importance in Egyptian eyes; they were so many festived consecrated to the worship of the dead. In a hieratic papyrus of Ramesado date (L. 316 of Leyden) we still have a Book of the Tive Days over and above the Year, which has been translated and buchle commented upon by Chabas (Le Calendrier des joins fastes et infactes de l'année Gyptienne, p. 101-107). Osiris was born the first day, Haroéris the second, Sit the third, Isis the fourth, Nophthy the fifth; and the order indicated by the papyrus is confirmed by scattered references on the

legend explained how Nûît and Sibû had contracted marriage against the coress wish of Ra, and without his knowledge. When he became aware of it he fell into a violent tage, and cast a spell over the goddess to prevent her iving birth to her children in any month of any year whatever. But Thot took tity upon her, and playing at draughts with the moon won from it in several mes one seventy-second part of its fires, out of which he made five whole live; and as these were not included in the ordinary calendar, Nuit could then ring forth her five children, one after another Osiris, Harocris, Sit, Isis, and whithys. 1 Osiris was beautiful of face, but with a dull and black complexion; 11 height exceeded five and a half yards. He was born at Thebes,3 in the and of the additional days, and straightway a mysterious voice announced that for lord of all-mbu-r and -had appeared. The good news was haled with uts of joy, followed by tears and lamentations when it became known with an at coils he was menaced.4 The echo reached Ra in his far-off dwelling, and ors heart rejoiced, notwithstanding the curse which he had laid upon Nûrt He commanded the presence of his great-grandchild in Xois, and unhesitatingly all nowledged him as the hen to its throne." Osiris had married his sister I is, even, so it was said, while both of them were still within their mother's omb; and when he became king he mide hir queen regnant and

the partner of all his undertakings. The Egyptians were as yet but half civilized; they were cannibals, and though occasionally they lived upon the fruits of the earth, they did not know how to cultivate them. Osiris taught them the art of making agricultural implements-the plough and the hoe .field labour, the rotation of crops, the harvesting of wheat and barley,1 and vine culture.2 Isis weaned them from cannibalism,3 healed their diseases by means of medicine or of magic, united women to men in legitimate marriage,1 and showed them how to grind grain between two flat stones and to prepare bread for the household.<sup>5</sup> She invented the loom with the help of her sister Nephthys, and was the first to weave and bleach linen.6 There was no worship of the gods before Osiris established it, appointed the offerings, regulated the order of ceremonies, and composed the texts and melodies of the liturgues, He built cities, among them Thebes itself, according to some; though others declared that he was born there. As he had been the model of a just and pacific king, so did he desire to be that of a victorious conqueror of nations; and, placing the regency in the hands of Isis, he went forth to war against Asia, accompanied by Thot the ibis and the jackal Anubis. He made little or no use of force and arms, but he attacked men by gentleness and persuasion, softened them with songs in which voices were accompanied by instruments, and taught them also the arts which he had made known to the Egyptians. No country escaped his beneficent action, and he did not return to the banks of the Nile until he had traversed and civilized the world from one horizon to the other

secluded place where no one ever came, and then took refuge in Bûto, her own domain and her native city, whose marshes protected her from the designs of Typhon even as in historic times they protected more than one Pharaoh from the attacks of his enemies. There she gave birth to the young Horus. nursed and reared him in secret among the reeds, far from the machinations of the wicked one.1 But it happened that Sit, when hunting by moonlight. caught sight of the chest, opened it, and recognizing the corpse, cut it up into fourteen pieces, which he scattered abroad at random. Once more Isis set forth on her woeful pilgrimage. She recovered all the parts of the body excepting one only, which the oxyrhynchus had greedily devoured; 2 and with the help of her sister Nephthys, her son Horus, Anubis, and Thot, she joined together and embalmed them, and made of this collection of his remains an imperishable mummy, capable of sustaining for ever the soul of a god. On his coming of age, Horus called together all that were left of the loyal Egyptians and formed them into an army.8 His "Followers"—Shosun Horù-deleated the "Accomplices of Sit"-Samiù Sit-who were now driven in their turn to transform themselves into gazelles, crocodiles and serpents, animals which were henceforth regarded as unclean and Typhonian. For three days the two chiefs had fought together under the forms of men and of hippopotama, when Isis, apprehensive as to the issue of the duel, determined to bring it to an end "Lo! she caused chains to descend upon them, and made them to drop upon Horus. Thereupon Horus prayed aloud, saying: 'I am thy son Hore!' This Isis spake unto the fetters, saying: 'Break, and unloose yourselves from my son Horus!' She made other fetters to descend, and let them fall upon har brother Sit. Forthwith he lifted up his voice and cried out in pain, and she spake unto the fetters and said unto them: 'Break!' Yea, when Sit prayed unto her many times, saying: 'Wilt thou not have pity upon the brother of thy son's mother?' then her heart was filled with compassion, and she cried to the fetters: 'Break, for he is my cldest brother!' and the fetters unbosed

<sup>&</sup>lt;sup>1</sup> The opening mustration of this chapter (p. 155) is taken from a monument at Philo, and legalists among the red. The regarder separation of the goddess as squatting upon a mat probably gausse to the legen; of he floating isled. Khemmis, which Hecathers of Milleus (fragm. 254). Melleus-Didol, Fragm. Hist. <sup>&</sup>lt;sup>2</sup> This part of the lege. — is so thoroughly well known, that by the time of the XIXth dyes it suggested medents in popular literature. When Bitin, the here of The Tale of the Two Birdissism mutilated himself to avoid the suspicion of adultery, he cast his bleeding member into the water of the Oxyrhynchus devoured it (Maspiro, Les Contes populaires de l'antique L'yppe, 2nd (dit., p. 15)

Towards the Gracian period there was here interpolated an account of how Osiris had refut from the world of the dead to arm his son and train him to fight. According to this take he asked Horus which of all animals seemed to him most useful in time of war, and Horus chose horse rather than the lion, because the lion avails for the weak or cowardly in need of help, who the horse is used for the pursuit and destruction of the enemy. Judging from this roply that it was ready to done all, Osiris allowed him to enter upon the war (De Iside et Oriride, Little edition, § 19, pp. 30-31). The mention of the horse affords sufficient proof that this episode comparatively late origin (cf. p. 32, note 2, for the date at which the horse was acclimatized in E

recognized Horus, the son of Isis, as its patron deity; and the other, that of the South, placed itself under the protection of Sit Nübîti, the god of Ombos.¹ The moiety of Horus, added to that of Sit, formed the kingdom which Sibû had inherited; but his children failed to keep it together, though it was afterwards reunited under Pharaohs of human race.²

The three gods who preceded Osiris upon the throne had ceased to reign. but not to live. Râ had taken refuge in heaven, disgusted with his own ereatures; Shû had disappeared in the midst of a tempest; 8 and Sibû had quietly retired within his palace when the time of his sojourning upon carth had been fulfilled. Not that there was no death, for death, too, together with all other things and beings, had come into existence in the beginning. but while cruelly persecuting both man and beast, had for a while respected the gods. Osiris was the first among them to be struck down, and hence to require funcial rites. He also was the first for whom family picty sought to provide a happy life beyond the tomb. Though he was king of the living and the dead at Mendes by virtue of the rights of all the feudal gods in their own principalities, his sovereignty after death exempted him no more than the meanest of his subjects from that painful torpor into which all mortals tell on breathing their last. But popular imagination could not resign itself to his remaining in that miserable state for ever. What would it have profited him to have Isis the great Sorceress for his wife, the wise !lous for his son, two master-magicians-Thot the Ibis and the jackal Anubis for his servants, if their skill had not availed to ensure him a less gloomy and less lamentable after-life than that of men. Anubis had long before invented the art of mummifying,' and his mysterious science had secured the everlasting existence of the flesh; but at what a price! For the breathing, warm, fresh-coloured body, spontaneous in movement and function, was solstituted an immobile, cold and blackish mass, a sufficient basis for the mechanical continuity of the double, but which that double could neither raise nor gui le; whose weight paralysed and whose inertness condemned it

Another torn of the legend gives the 27th Athyr as the date of the judgment, assiming I vpi to Horus, and to Sit Nabia, or Doshirit, the red land (Sallier Papprus IV., pl ix I 4, ct = 1). It must have an entowall the age of the XVIII<sup>th</sup> dynasty, at a time when their picty no 1 m/1 allowed the devout to admit that the murderer of Osiris could be the legitimate putton of hill the country. So the half belonging to Sit was then placed either in Nubia or in the western death, which had, indeed, been reckould as his domain from earliest times

<sup>2</sup> Sft and Horns, as gods of South and North, are sometimes called the two Hornses, and it is kingdoms the two halves of the two Hornses. Examples of these phrases have been collected by Ed. Mexce, in Set-Typhon, pp. 31-40, where their meaning is not sufficiently clearly explained.

<sup>\*</sup> GEIFFIH, The Antiquities of Tell-(1-Yahûdiyeh, in the Seventh Memoir of the Egypt Explication). Fund, pl. xxv. Il 6-8. We may here note the most ancient known reference to the tempest when tumult hid from men the disappearance or apothessis of kings who had ascended alive into hearth. Cf. e.g. the story of Romulus.

<sup>\*</sup> See chap. ii. p. 112, et seq., on embalmment by Anubis.

we vegetate in darkness, without pleasure and almost without consciousness of vistence. That, Isis, and Horus applied themselves in the case of Osius to imeliorating the discomfort and constraint entailed by the more primitive inhalmment. They did not dispense with the manipulations instituted! Anulus, but endued them with new power by means of magic. They

times alone, and fighting his way stop by step, sometimes escorted by beneficent divinities. Halfway up the slope was the good cow Hâthor, the ludy of the West, in meadows of tall plants where every evening she received the sun at his setting.1

If the dead man knew how to ask it according to the prescribed rite, she would take him upon her shoulders 2 and carry him across the accursed countries at full speed. Having reached the North, he paused at the edge of an immense

lake, the lake of Kha, and saw in the far distance the outline of the Islands of the Blest. One tradition, so old as to have been almost forgotten in Ramesside times, told how Thot the ibis there awaited him, and bore him away on his wings; 4 another, no less ancient but of more lasting popularity, declared that a ferry-boat plied regularly between the solid earth and the shores of paradise. The god who directed it questioned the dead, and the bark itself proceeded to examine them before they were admitted on board; for it was a magic bark. "Tell me my name," cried the mast; and the travellers replied: " He who guides

See the different vignettes of chap, claravi, of the Book of the Dead, as collected by Naville in his edition (Das E.j.phis he Tadlenbuch, vol. i. pl. cexii.). Sometimes the whole cow is drawn: sometimes it is shown only as half emerging from the arid slopes of the Libyan range.

<sup>&</sup>lt;sup>2</sup> Coffins of the XX and XXI dynastics, with a yellow ground, often display this scene, of which there is a good example in ' ANZONE'S Dizionario di Mitologia, pl. ecexxii. 2, taken from a coffia in Leyden (cf. p. 187). Generally the scene is found beneath the feet of the dead, at the lower end of the cartonage, and the cow is represented as carrying off at a gallop the mummy who is lying on

<sup>&</sup>lt;sup>2</sup> Drawn by Faucher-Gudin, from a sketch by NAVILLE (Das Ægyptische Tadicabuch, vol. i. pl iii. Pb). The commonest enemies of the dead were various kinds of serpents.

It is often mentioned in the Pyramid texts, and inspired one of the most obscure chapters amouthem (Teti, II. 185-200; cf. Recueil de Travaux, vol. v. pp. 22, 23). It seems that the ibis had to fight with Sit for right of passage.

This tradition, like the former, is often found in the Pyramids, s.g. in three formulas, where the god who guides the boat is invoked, and informed why it is incumbent upon him to give a goo: reception to the deceased (Papi I., 11. 396-411; of. Recueil de Travaux, vol. vii. pp. 161-163).

the great goddess on her way is thy name." "Tell me my name," repeated the braces. "The Spine of the Jackal Capuattu is thy name." "Tell me my name," proceeded the mast-head. "The Neck of Amsit is thy name." "Tell me my name," asked the sail. "Nut is thy name." Each part of the hull and of the rigging spoke in turn and questioned the applicant regarding its name, this being generally a mystic phrase by which it was identified either with some

divinity as a whole, or else with some part of his body. When the double had established his right of passage by the correctness of his answers, the bark consented to receive him and to carry him to the further shore.

There he was met by the gods and goddesses of the court of Osiris: by Anubis, by Hather the lady of the cemetery, by Nit, by the we Maîts who preside over justice and truth, and by

IIII GOOD OOW HATHOR CARRAIN - LIIL DEAD MAN AND HIN BOLL -

the tour children of Horus stiff-sheathed in their minimy wrappings. They formed as it were a guard of honour to introduce him and his winged guide. Into an immense hall, the ceiling of which rested on light graceful columns of painted wood. At the further end of the hall Osiris was seated in mysterious twilight within a shrine through whose open doors he might be seen wearing a red neckbace over his close-fitting case of white bandaging, his given face surmounted by the tall white diadem flanked by two plumes, his slender hands

This forms chap. exxv. of the Book of the Dead (NAVILLE's edition, vol. i. pls. exxxiii.-exxxix), a chapter which Champolilon pointed out to the notice of scholars, and interpreted (Explication de la principale scène peinte des Papyrus Funéraires Égyptiens, in the Bulletin Universel des Sciences et de l'Industrie, sect. viii. vol. iv. pp. 347-356). A special edition of this chapter, accompanied by a translation and philological commentary, was published by W. Pleyte, Kluds sur le chapter 125 du Rituel Funéraire, Loydon, 1866,

voice. Thy name which is thine is 'the god whose two twins are the ladies of the two Truths;' and I, I know you, ye lords of the two Truths, I bring unto you Truth, I have destroyed sins for you. I have not committed iniquity against men! I have not oppressed the poor! I have not made defalcations in the necropolis! I have not laid labour upon any free man beyond that which he wrought for himself! I have not transgressed, I have not been weak. I have not defaulted, I have not committed that which is an abomination to

THE LEGISSED IN BROUGHT BELORE THE SHRENT OF OSIRIS THE PURGE BY HOLDS, THE SON OF ISIS.

the gods. I have not caused the slave to be ill-treated of his master! I have not starved any man, I have not made any to weep, I have not assassinated any man, I have not caused any man to be treacherously assassinated, and I have not committed treason against any! I have not in aught diminished the supplies of temples! I have not spoiled the shewbread of the gods! I have not taken away the larves and the wrappings of the dead! I have not blasphoned! I have in nought curtailed the sacred revenues! I have not pull d down the scale of the balance! I have not falsified the beam of the balance! I have not taken away the milk from the mouths of sucklings! I have not lassoed cattle on their pastures! I have not taken with nets the buck of the gods! I have not fished in their ponds! I have not turned back the water in its season! I have not cut off a water-channel in its course! I

have not put out the fire in its time! I have not defrauded the Nine Gods of the choice part of victims! I have not ejected the oxen of the gods! I have not turned back the god at his coming forth! I am pure! I am pure! I am pure! I am pure! Pure as this Great Bonû of Heracleopolis is pure! . . . There is no crime against me in this land of the Double Truth! Since I know the names of the gods who are with thee in the Hall of the Double Truth, save thou me from them!" He then turned towards the jury and pleaded his cause before them. They had been severally appointed for the cognizance of particular sins, and the dead man took each of them by name to witness that he was innocent of the sin which that one recorded. His plea ended, he returned to the supreme judge, and repeated. under what is sometimes a highly mystic form, the ideas which he had already advanced in the first part of his address. "Hail unto you, ye gods who are in the Great Hall of the Double Truth, who have no falsehood in your bosons, but who live on Truth in Aûnû, and feed your hearts upon it before the Lord God who dwelleth in his solar disc! Deliver me from the Typhon who feedeth on entrails, O chiefs! in this hour of supreme judgment; -grant that the deceased may come unto you, he who hath not sinned, who hath neither lied, nor done evil, nor committed any crime, who bath not borne false witness, who hath done nought against himself, but who liveth on truth, who feedeth on truth. He hath spread joy on all sides; men speak of that which he hath done, and the gods rejoice in it. He hath reconciled the god to him by his love; he hath given bread to the hungry, water to the thirsty, clothing to the naked; he hath given a boat to the shipwrecked; he hath offered sacrifices to the gods, sepulchral meals unto the manes. Deliver him from himself, speak not against him before the Lord of the Dead, for his mouth is pure, and his two hands are pure!" In the middle of the Hall, however, his acts were being weighed by the assessors. Like all objects belonging to the gods, the balance is magic, and the genius which animates it sometimes shows its fine and delicate little haman head on the top of the upright stand which forms its body 1 Everything about the balance recalls its superhuman origin: a cynocephalus, emblomatic of Thot, sits perched on the upright and watches the beam; the cords which suspend the scales are made of alternate cruces ansates and tale?

The souls of objects thus anuncled are not unfrequently mentioned and depicted in the Earl of knowing that which is in Hades. Their heads emerge from the material bodies to which the belong while the Sun-god is passing by, to draw in when he has disappeared, and their both reabsorb, or eat them (cf. p. 83, note 4), according to the energotic expression of the Egyptotext (Marpero, Études de Mythologie et d'Archéologie Égyptienus, vol. ii. pp. 101, 105, 104, 124, etc.).

<sup>&</sup>lt;sup>2</sup> See the amulet called Tat or Didú, as represented on p. 130 (cf. p. 81, note 3).

Truth squats upon one of the scales; Thot, ibis-headed, places the heart on the other, and always merciful, bears upon the side of Truth that judgment may be favourably inclined. He affirms that the heart is light of offence, inscribes the result of the proceeding upon a wooden tablet, and pronounces the verdict aloud. "Thus saith Thot, lord of divine discourse, scribe of the Great Ennead, to his father Osiris, lord of eternity, Behold the deceased in this Hall of the Double Truth, his heart hath been weighed in the balance in the presence of the great genii, the lords of Hades, and been found true. No trace of earthly impurity hath been found in his heart. Now that he leaveth the tribunal true of voice, his heart is restored to him, as well as his eyes and the material cover of his heart, to be put back in their places such in its own time, his soul in heaven, his heart in the other world, as is the custom of the 'Followers of Horus.' Henceforth let his body lie in the hands of Anubis, who presideth over the tombs; let him receive offerings at the cemetery in the presence of Onnophris; let him be as one of those favourites who follow thee; let his soul abide where it will in the necropolis of his city, he whose voice is true before the Great Ennead."1

In this "Negative Confession," which the worshippers of Osiris taught to their dead, all is not equally admirable. The material interests of the temple were too prominent, and the crime of killing a sacred goose or stealing a loaf from the bread offerings was considered as abomiuable as calumny or murder. But although it contains traces of priestly cupidity, yet how many of its precepts are untarnished in their purity by any selfish ulterior motive! In it is all our morality in germ, and with refinements of delicacy often lacking among peoples of later and more advanced civilizations. The god does not confine his tayour to the prosperous and the powerful of this world; he bestows it also upon the poor. His will is that they be fed and clothed, and exempted from tasks beyond their strength; that they be not oppressed, and that unnecessary tears be spared them. If this does not amount to the love of our neighbour as our religious preach it, at least it represents the careful solicitude due from a good lord to his vassals. His pity extends to slaves; not only does he command that no one should ill-treat them himself, but he forbids that their masters should be led to ill-treat them. This profession of faith, one of the anblest bequeathed us by the old world, is of very ancient origin. It may be read in scattered fragments upon the monuments of the first dynastics. and the way in which its ideas are treated by the compilers of these inscriptions proves that it was not then regarded as new, but as a text so old and

so well known that its formulas were current in all mouths, and had their prescribed places in epitaphs.<sup>1</sup> Was it composed in Mendes, the god's own home, or in Heliopolis, when the theologians of that city appropriated the god of Mendes and incorporated him in their Ennead? In conception it certainly belongs to the Osirian priesthood, but it can only have been diffused over the whole of Egypt after the general adoption of the Heliopolitan Ennead

THE MANES TILLING THE GROUND AND REAPING IN THE FIELDS OF IALO.2

throughout the cities.

As soon as he was judged, the dead man entered into the possession of his rights as a pure soul. On high he received from the Universal Lord all that kings and princes here

below bestowed upon their followers—rations of food,<sup>8</sup> and a house, gardens, and fields to be held subject to the usual conditions of tenure in Egypt, i.e. taxation, military service, and the corvée.<sup>1</sup> If the island was attacked by the partisans of Sit, the Osirian doubles hastened in a body to repulse them, and fought bravely in its defence. Of the revenues sent to him by his kindred on certain days and by means of sacrifices, each gave tithes to the heavenly storehouses. Yet this was but the least part of the burdens laid upon him by the laws of the country, which did not suffer him to become enervated by idleness, but obliged him to labour as in the days when he still dwelt in Egypt.<sup>5</sup> He looked after the maintenance of carals

<sup>\*</sup> For instance, one of the formulas found in Momphite tombs states that the deceased had been the friend of his father, the beloved of his mother, sweet to those who lived with him, gracious to his brethren, loved of his realits, and that he had never sought wrongful quarrel with any man briefly, that he speke and did that which is right here below (Lersus, Reukm, ii. 43 c, d; cf. PLL) if Elude sur to chapter 1.5 du littuel functaire, pp. 11, 12; Marreno, Notes sur differents print de Grammaire et d'Histoire, § 21, in the Mel ages d'Archéologie Égyptienne et Asspienne, vol. in pp. 215, 216)

<sup>&</sup>lt;sup>2</sup> Drawn by Fancher-Gudia, none a vignette in the lunerary papyrus of Nebhopit in Tunn (Lanzone, Dizionarie di Mitologia Egizia, pl. v.).

The formula of the provid times is: "Thy thousand of oxen, thy thousand of geese, of root and boiled joints from the brof the gods, of bread, and plenty of the good things presented rethe hall of Osiris" (Papi II., I. 1318, at the Recueil de Travaux, vol. xiv p. 150).

<sup>\*</sup> On the assimilation of the condition of the dead enrolled in the service of a god and of the vassals of a Pharaoli, of Maspero, Études de Mythologie et d'Anhadogie L'gyptiennes, vol. 11 pp. 41-46.

<sup>&</sup>lt;sup>6</sup> Book of the Dead, chap. ex. (Naville's edition, vol. i. pls. exxi. exxiii.). The vignette to this chapter shows us the dead attending to their various occupations in the archipelage of Iald. The are numerous variants of the same, of which the most curious are perhaps those of the tuncinity papyrus of Nebhopit in Turin, published by Lanzone, Dizionario di Mitologia, pl. v., and partly reproduced on this page and on p. 191.

and dykes, he tilled the ground, he sowed, he reaped, he garnered the grain for his lord and for himself. Yet to those upon whom they were incumbent, these posthumous obligations, the sequel and continuation of feudal service.

at length seemed too heavy, and theologians exercised their ingenuity to find means of lightening the burden. authorized the manes to look to their servants for the discharge of all manual labour which they ought to have performed themselves. Rarely did a dead man, no matter how poor, arrive unaccompanied at the eternal cities; he brought with him a following proportionate to his rank and fortune upon earth. At first they were real doubles, those of slaves or vassals killed at the tomb, and who had departed along with the double of the master to serve him beyond the grave as they had served him here.1 A number of statues and images, magically endued with activity and intelligence, was afterwards substituted for this retinue of victims. Originally of so large a size that only the rich or noble could afford them,2 they were reduced little by little to the height of a few inches. Some were carved out of alabaster, granite. dicrite, fine limestone, or moulded out of fine clay and delicately modelled; others had scarcely any human re-

fA-HBiTL3

semblance. They were endowed with life by means of a formula recited over them at the time of their manufacture, and afterwards traced upon their legs. All were possessed of the same faculties. When the god who called the Osirians to the covée pronounced the name of the dead man to whom the figures belonged, they arose and answered for him; hence their designation of "Respondents"— $\hat{L}ashbiti.$  Equipped for agricultural labour, each grasping a hoo and carrying a seed-bag on his shoulder, they set out to

<sup>&</sup>lt;sup>1</sup> On the occasional persistence of human sacrifice, real or simulated, even into the times of the second Theban Empire, see Maspano, Le Tombeau de Montouhikhapshouf, rathe Me noires delle Mission français du Caire, vol. v. p. 452, et seq.—Cf. p. 168, note 1.—Against this opinion of Renout. Bishop the Ivad, e. 112, note 7.

<sup>&</sup>lt;sup>2</sup> Such are the women grinding corp, the bread-kneaders and the cell arrs sometimes found in the arre-claimate tombs of the Ancient Empire (Mayero, Guide d.) sour an muse de Bulaq, pp 215, 218, 219, 220). Perhaps even the statues of the double (Ku-statues) should be included in the enterpry.

Drawn by Faucher-Gudin from a sainted limestone statuette from the temb of Source,  $m\hat{u}$  at Thebes, daining from the end of the XX<sup>m</sup> dynasty.

The origin and signification of the Tashbiti, or Respondents, have been several times pointed out by Missiano (Guide du Visiteur au muse. Boulaq, pp. 131-133, and Lindes de Mythologie et d'Arbertogie L'gyptiennes, vol. i. pp. 355, 356).

The original formula which was to endow the Respondents with life, and order their tisk of the next world, forms the sixth chapter of the Book of the Dead (Navilla's edition, vol. i pl. vii.) It has been studied by Chabas, Observations sur le Chapitre VI du Rituel functaire experien, a population state of the Memoires de la Societe historique et an extract from the Memoires de la Societe historique et

work in their appointed places, contributing the required number of days of forced labour. Up to a certain point they thus compensated for those in-

THE DEAD MAY AND HIS WIFE PLAYING AT DRAUGHTS IN THE PAYLLON.

equalities of condition which death itself did not efface among the vassals of Osiris: for the figures were sold so cheaply that even the poorest could always afford some for themselves, or bestow a few upon their relations; and m the Islands of the Blest, fellah, artisan, and slave were indebted to the Washbiti to release from their old routine of labour and unending toil While the little peasants of stone or glazed ware dutitully toiled and tilled and sowed their masters were enjoying all the delights of the Egyl

tian paradise in perfect idleness. They sat at ease by the water side, in

morning, he ages as the day declines, and gently passes away at evening. From the time of his entering the sky to that of his leaving it, he reigns above as he reigned here below in the beginning; but when he has lett the sky and sinks into Hades, he becomes as one of the dead, and is, as they are, subjected to Osirian embalument. The same dangers that menace

their human souls threaten his soul also; and when he has vanquished them, not in his own strength, but by the power of amulets and magneal formulas, he enters into the fields of Ialû, and ought to dwell there for ever under the rule of Onnophris. He did nothing of the kind, however, for daily the sur was to be seen reappearing in

the east twelve hours after it had

IIII SOLAR BALK INTO WHERE THE DEAD MAN IS APOUT TO LIVER,

Was it a new orb each time, or sunk into the darkness of the west did the same sun shine every day? In either case the result was precisely the same; the god came forth from death and re-entered into life. Having identified the course of the sun-god with that of man, and Ra with Ositis for a first day and a first night, it was hard not to push the matter further, and identify them for all succeeding days and nights, affirming that man and Osiris might, if they so wished, be born again in the morning, as Ra was, and together with him.2 If the Egyptians had found the prospect of quitting the darkness of the tomb for the bright meadows of Ialû a sensible alleviation of their lot, with what joy must they have been filled by the conception which allowed them to substitute the whole realm of the sun for a little archipelago in an out-of-the-way corner of the universe. Their first consideration was to obtain entrance into the divine bark, and this was the object of all the various practices and prayers, whose test together with that which already contained the Osirian formulas, ensued the unfailing protection of Ra to their possessor.9 The soul desirous of making use of them . at straight from his tomb to the very spot where the god left earth to descend into Hades. This was somewhere in the

<sup>&</sup>lt;sup>1</sup> Drawn by Faucher-Gudin, from a vignette in the Papyrus of Nebaj du, in Paris 
<sup>2</sup> Maspleo, Études de Mythologie et d'Archéologie Égyptiennes, vol. n. pp. 21-27.

The formulas enabling the soul to enter the solar bark form the chief part of chaps c in (Naville's edition, vol. i. pls. exiii., exiv.), exxxiv—exxxiv (Naville's edition, vol. i. pls. exic.) of the Book of the Dead But in this work the mingling of solar and Osirian concepts is already complete, and several chapters intended for other purposes contain many allusions, the embarkation of souls in the boat of Ru

immediate neighbourhood of Abydos, and was reached through a narrow gorge

or "cleft" in the Libyan lange, whose "mouth" opened m front of the temple of ()siris Khontamentît, a little to the north-west of the city.1 The soul was supposed to be carried thither by a small flotilla of boats, manned by figures representing friends or priests, and laden with food, furniture, and statues. This flotilla was placed within the vault on the day of the funeral,2 and was set in motion by means of incantations recited over it during

THE SOLAR PARK PASSING INTO THE MOUNTAIN OF THE WEST 4

one of the first nights of the year, at the annual feast of the dead.¹ The bind or insect which had previously served as guide to the soul upon its journey new took the helm to show the fleet the right way,⁵ and under this command the boats left Abydos and mysteriously passed through the "cleft" into that we stern sea which is maccessible to the living,⁶ there to await the daily coming of the dying sun-god. As soon as his bark appeared at the last bend of the

Down by Faucher-Gudin, from a photograph by Lmil Brugsch-Bey, reproducing the miniature sweet was of the scribe R1 (Maspage, Guide du Vesteur, pp. 130, 131, No. 1621)

This is the title, Pirû-m-krû of the first section of the Book of the Deat and of several chapters in oth it ections (Massers). I tudes de Mythologie et d'Archeologie I piptionus, vol 1 pp 352.50). It has been translated going out from day, being manifest to day, geing torthe li'e the day. The time translation, going forth by day, was suggested by Reinsen (Die Appliechen Penimuler in Mirin r. p. 11) and demonstrated by Lerriu in (Is Per-m-kru, I tude sur la au tuture chez les I nations, 12 (Baley, Melanges Layptologiques, 31d series, vol. in. pp. 215-241, et E. von Brighens, Die Buch vom Duchwandeln der Eurgheit, pp. 8, 31).

This pacture of the life of the soul going forth by day is borrowed from the frequent formula upon stell of the XYIII to the XX<sup>th</sup> dynastics, of which the best known example is C 55 in the Louvic (Pillinks, Requeil d'inscriptions inedites, vol. ii. pp. 90-93, cf. F. A. W. Buddi, Notes on

conception, which was developed somewhat late, brought the Egyptians back to the point from which they had started when first they began to speculate on the life to come. The soul, after having left the place of its incarnation to which in the beginning it clung, after having ascended into heaven and there sought congenial asylum in vain, forsook all havens which it had found above, and unhesitatingly fell back upon earth, there to lead a peaceful, free, and happy the full light of day, and with the whole valley of Egypt for a paradise.

The connection, always increasingly intimate between Osiris and Râ, gradually brought about a blending of the previously separate myths and beliefs concerning each. The friends and enemies of the one became the friends and enemies of the other, and from a mixture of the original conceptions of the two deities, arose new personalities, in which contradictory elements were blent together, often without true fusion. The celestial Horuses one by one were identified with Horus, son of Isis, and their attributes were given to him, as his in the same way became theirs. Apopi and the monsters - the hippopotamus, the crocodile, the wild boar-who lay in wait for Ra as he sailed the heavenly ocean, became one with Sit and his accomplices. Sit still possessed his half of Egypt, and his primitive brotherly relation to the celestial Horus remained unbroken, either on account of their sharing one temple, as at Nûbît, or because they were worshipped as one in two neighbouring nomes, as, for example, at Oxyrrhynchos and at Heraeleopolis Magna. The repulsion with which the slaver of Osiris was regarded did not everywhere dissociate these two cults; certain small districts persisted in this double worship down to the latest times of paganism. It was, after all, a mark of fidelity to the oldest traditions of the race, but the bulk of the Egyptians, who had forgotten these, invented reasons taken from the history of the divine dynastics to explain the fact. The judgment of Thot or of Sibû had not put an end to the machinations of Sit: as soon as Hornhad left the out, Sit resumed them, and pursued them, with varying fortune, under the divine kings of the second Ennead.1 Now, in the year 363 of Harmakhis, the Typhonians reopened the campaign. Beaten at first near Edfû, they retreated precipitately northwards, stopping to give battle wherever

Egyptian Stelx, principally ., the AVIIIth Dynasty, in the Transactions of the Society of Bubberl Archwology, vol. vin. pp. 306-312).

The war of Haimakhis and Sit is chronicled and depicted at length on the inner walls of the sanctuary in the timple of Edfa. The inscriptions and pictures relating to it were copied, trinslated, and published for the first time by E. Naville, Textes relatifs an Mythe d'Hoins remelle dans le temple d'Liffà, pla xil-xxxi, and pp. 16-25; Brugsch, soon after, brought out in his mean in Die Sage von der geflugellen Sonnenscheibe nach altägyptischen Quellen (Aus den XIV Bande de Abhandlungen der K. Ges. der Wissenschaften zu Göttingen, 1870), a German translation of them with a commentary, several points of which he has corrected in various articles of his Dictionnam Geographique. The interpretation of the text here adopted was proposed by Maskeno (Études de Mythologie et d'Archéologie Égyptiennes, vol ii. p. 321, et seq.).

their partisans predominated,—at Zatmît in the Theban nome, at Khait-nûtrît to the north-east of Denderah, and at Hibonû in the principality of

the Gazello.3 Several bloody combats, which took place between Oxyrrhynchos and Heraeleopolis Magna, were the means of driving them finally out of the Valley; they rallied for the last time in the eastern provinces of the Delta, were beaten at Zulû,4 and giving up all hope of success on land. they embarked at the head of the Gulf of Suez, in order to return to the Nubian Desert, their habitual refuge in times of distress. ser was the special element of Typhon, and upon it they

THE SOUL GOING FORTH INTO ITS GARDEN BY DAY."

believed themselves secure. Horus, however, followed them, overtook them near Share-hirit, routed them, and on his return to Edfü, celebrated his victory by a solemn festival. By degrees, as he made himself master of those localities which owed allegiance to Sit, he took energetic measures to establish in them the authority of Osiris and of the solar cycle. In all of them he built, side by side with the sanctuary of the Typhonian divinities, a temple to himself, in which he was enthroned under the particular form he was obliged to assume in order to vanquish his enemies. Metamorphosed into a hawk at the buttle of

<sup>&</sup>lt;sup>1</sup> Zaimit (Butasen, Piet. Geographique, p. 1006) appears to have been situate at some distance from Bry aliyeh, on the spot where the map published by the Egyptim Commission marks the ruins of a modern village. There was a necropolis of considerable extent there, which furnishes the I used delers with antiquities, many of which belong to the first Theban empire.

<sup>-</sup> knort, or Khaîti nûtrît (Breusen, Diet. Geographique, pp. 2002), appears to me to be now represented by Nutah, one of the divisions of the township of Denderth. The name Khait may have been dropped, or confused with the administrative term nakket, which is still applied to a part of the village, Nakhići Nutah (Macreno, Études de Mythologie et d'Ircheologie Egyptiennes, vol. 11. p. 26).

topied by Faucher-Gudin from the survey-drawings of the temb of Anni by Boussie, member of the Mission française in Egypt (1891). The inscription over the arboning we the list of the various trees in the garden of Anni during his lifetime.

Shas-hist is the Egyptian name of one of the towns of Berenice which the Ptelemics built on the Rel Sea (Bauescu, Dict. Geographique, pp. 792-794, 1335, 1336; and Leitschrift, 1884, p. 96).

Hibonû, we next see him springing on to the back of Sit under the guise of a hippopotamus; in his shrine at Hibonû he is represented as a hawk perching on the back of a gazelle, emblem of the nome where the struggle Near to Zalû he became incarnate as a human-headed lion. crowned with the triple diadem, and having feet armed with claws which cut like a kuife; it was under the form, too, of a liou that he was worshipped in the temple at Zalû.2 The correlation of Sit and the celestial Horus was not, therefore, for these Egyptians of more recent times a primitive religious fact; it was the consequence, and so to speak the sanction, of the old hostility between the two gods. Horus had treated his enemy in the same fashion that a victorious Pharaoh treated the barbarians conquered by his arms: he had constructed a fortress to keep his foe in cheek, and his priests formed a sort of garrison as a precaution against the revolt of the rival priesthood and the followers of the rival doity.3 In this manner the battles of the gods were changed into human struggles, in which, more than once, Egypt was deluged with blood. The hatred of the followers of Osiris to those of Typhon was perpetuated with such implacability, that the nomes which had persisted in adhering to the worship of Sit, became odious to the rest of the population: the image of their master on the monuments was mutilated,4 their names were effaced from the geographical lists, they were assailed with insulting epithets, and to pursue and slay their sacred animals was reckoned a pious act. Thus originated those skirmishes which developed into actual civil wars, and were continued down to Roman times.<sup>5</sup> The adherents of Typhon only became

<sup>&</sup>lt;sup>1</sup> NAVILLE, Textes relatifs an Mythe d'Horus recueillis dans le temple d'Edfû, pl. xiv. ll 11-13; cf. Brugsen, Die Sage von der geflugelten Sonnenscheibe, pp. 17, 18.

NAVILLI, Textes relatifs an Myche d'Horus recueillis dans le temple d'Edfü, pl. xvin. il. 1-3; Bra Gech, Die Sage von der geflogelten Sonnenscheibe, pp. 31-36

These foundations, the "Marches of Horus" into Typhonian territory, are what the texts of Edita (Naville, Textes relatifs an Mythe d Horne, pl. and 1. 10, etseq) call "Masnit." The warrier-priests of Horus, according to an ancient tradition, called themselves "Masnitin"—blue ksmiths (Masplao, Lindes de Religion et d'Archéologie Lypptiennes, vol. in. p. 313, et seq). "Masnitin at first meant the place where the black smiths worked, the torge; it then became the sancturry of their master at Ediu, and by extension, the sanctuary of the celestial Horus in all those towns of Egypt where that god received worship analogous to that of Edifa. Brugsch has shown that these "Masnit," or "divine forges," were four in number in Egypt (Dictionnaire Geographique, 14, 298-306, 371-378, 1211, 1212)

<sup>\*</sup> Seti I., in his tomb, according replaced the increglyph of the god Sit, which forms his name, by that of Osiris \$\frac{1}{2}\$; it \$w\$ is an order, as Champellion remarked, not to offend the god of the dead by the sight of his enemy, and more particularly-perhaps to avoid the contradiction of a kin-named Sit being styled Osiris, and of calling him "the Osiris Seti." The mutilation of the name of Sit upon the monuments does not appear to me to be anterior to the Persian period; at that time the masters of the country being strangers and of a different religion, the faulal divinities caused to aspire to the political supremacy, and the only common religion that Egypt possessed was that of Osiris, the god of the dead.

AN INCLUENT IN THE /WARS OF HARMAKHIS AND SIT.

more confirmed in their veneration for the accursed god; Christianity alone overcame their obstinate fidelity to him.<sup>1</sup>

The history of the world for Egypt was therefore only the history of the struggle between the adherents of Osiris and the followers of Sit; an inter-, minable warfare in which sometimes one and sometimes the other of the rival parties obtained a passing advantage, without ever gaining a decisive victory till the end of time. The divine kings of the second and third Ennead devoted most of the years of their earthly reign to this end; they were portrayed under the form of the great warrior Pharaohs, who, from the eighteenth to the twelfth century before our era, extended their rule from the plains of the Euphrates to the marshes of Ethiopia. A few peaceful sovereigns are met with here and there in this line of conquerors-a few sages or legislators, of whom the most famous was styled Thot, the doubly great, ruler of Hermopolis and of the Hermopolitan Ennead. A legend of recent origin made him the prime minister of Horus, son of Isis; 2 a still more ancient tradition would identify him with the second king of the second dynasty, the immediate successor of the divine Horuses, and attributes to him a reign of 3226 years.3 He brought to the throne that inventive spirit and that creative power which had characterized him from the time when he was only a feudal deity. Astronomy, divination, magic, medicine, writing, drawing-in tine, all the arts and sciences emanated from him as from their first source.4 He had taught mankind the methodical observation of the heavens and of the changes that took place in them, the slow revolutions of the sun, the rapid phases of the moon, the intersecting movements of the five planets, and the shapes and limits of the constellations which each night were lit up in the sky. Most

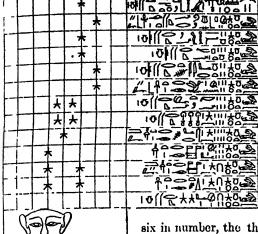

This incident in the wars of Horus and Sit is drawn by Faucher-Gudin from a bas-relief of the temple of Edia (Navidee, Textes relatifs an Mythe d'Horus, pl. xv). On the right, Har Hucht, standing up in the solar batk, picroes with his lance the head of a crocodile, a partisan of Sit, lying in the water below; Harmakhis, standing behind him, is present at the execution. Facing this divine pair, is the young Horus, who kills a man, another partisan of Sit, while Isis and Harmakhit hold his chare the hard Horus, Isis and Thot are leading four other captives bound and ready to be sacrificed. For Harmakhis.

This is the part be proven the texts of Edfa published by Naville, and which is confirmed by several passages, where it is called Zaiti, the "count" of Horus (cf. Birdmann, Hieroglyphiste Inschriften, pl. lxxx. It 73-74); according to another tradition, known to the Greeks, he is the mister, or "count" of verus (cf. p. 174, and Denteuen, Historische Inschriften, vol. ii. pl. xxx.), or, according to Plato, of The is (Phadrus, Diror's edition, vol. i. p. 733), according to Alban (Varia Historia, xfl. 4; xiv. 34) a "cooptri

<sup>&</sup>lt;sup>2</sup> Royal Papyrus of Turin, in LLINUS, Auswahl der wichtigsten Urhunde, pl. iii. col. ii. 11, l. 5. Thot, the king, mentioned on the coffer of a queen of the XI<sup>th</sup> dynasty, now preserved in the Berlin Museum (No. 1175), is not, according to M. Erman (Historische Nuchlese, in the Zeitschrift, vol. xxx. pp. 46, 47), the god Thot, king of the divine dynasties, but a prince of the Theban of Heracleopolitan dynastics (cf. Pilitschmann, Hermes Trisnugistos, p. 26, Ed. Mexer, Geschichte des Alterthums, vol. i. p. 65).

<sup>&</sup>lt;sup>4</sup> The testimony of Greek and Roman writers on this subject is found in Jandonski, Pantheon Mypptiorum, vol. iii. p. 159, et seq., and in Pierschmann, Hermes Trismegistos nuch Agyptischen, Griechischen und Orientalischen Urberlieferungen, p. 28, et seq. That is the Hermes Trismegistos of the Greeks

of the latter either remained, or appeared to remain immovable, and seemed never to pass out of the regions accessible to the human eye. Those which

INFOLUME ASSESSMENT TABLES

of it, tour of himses iv.2

were situate on the extreme margin of the firmament accomplished movements there analogous to those of the planets. Every year at fixed times they were seen to sink one after another below the horizon, to disappear, and rising again after an eclipse of greater or less duration, to regain insensibly their original positions. The constellations were reckoned to be thirty-

six in number, the thirty-six decani\* to whom were attributed mysterious powers, and of whom Sothis was queen-Sothis transformed into the star of Isis, when Orion (Sahu) became the star of Osiris.1 The nights are so clear and the atmosphere so transparent in Egypt, that the eye can readily penetrate the aepths of space, and distinctly see points of light which would be invisible in our toggy climate. The Egyptians did not therefore need special instruments to ascertain the existence of a considerable number of stars which we could not see without the help of

on telescopes; they could perceive with the naked eye stars of the fifth

magnitude, and note them upon their catalogues.' It entailed, it is true, a long training and uninterrupted practice to bring their sight up to its maximum keenness; but from , ery early times it was a function of the priestly colleges

<sup>&</sup>lt;sup>2</sup> Deran by Faucher-Gudin, from a copy by Laysus, Dealine in, 227, 3

<sup>1 1. 1,</sup> however (Sur un calendrier astronomique et astrologique treure a Phebes ex Parete, 1-15), states that stars of the third and fourth magnitude "are the smallest which can be seen with the nthedere" I believe I am right in affirming that several of the fellahin and Bed win attached to the "service des Intiquités" can see stars which are usually classed with those of the nith magnitude

to found and maintain schools of astronomy. The first observatories established on the banks of the Nile seem to have belonged to the temples of the sun: the high priests of Râ-who, to judge from their title, were alone worthy to behold the sun face to face-were actively employed from the earliest times in studying the configuration and preparing maps of the heavens.1 The priests of other gods were quick to follow their example; at the opening of the historic period, there was not a single temple, from one end of the valley to the other, that did not possess its official astronomers, or, as they were called, "watchers of the night." In the evening they went up on to the high terraces above the shrine, or on to the narrow platforms which terminated the pylons, and fixing their eyes continuously on the celestial vault above them, followed the movements of the constellations and carefully noted down the slightest phenomena which they observed. A portion of the chart of the heavens, as known to Theban Egypt between the eighteenth and twelfth centuries before our era, has survived to the present time; parts of it were carved by the decorators on the ceilings of temples, and especially on royal tombs.3 The deceased Pharaohs were identified with Osiris in a more intimate fashion than their subjects. They represented the god even in the most trivial details; on earth-where, after having played the part of the beneficent Onnophris of primitive ages, they underwent the most complete and elaborate embalming, like Osiris of the lower world; in Hades -where they embarked side by side with the Sun-Osiris to cross the night and to

I I would recall the fact that the high priests of Rå styled themselves Oirâ-maûû, "the great of sight," the chief of those who see the Sun, those alone who behold him face to face. One of them describes himself on his statue (Maseino, Rapportsur nue mission en Italie, in the Recail de Trainie vol. iii. p. 126, § xh.; cf. Brussen, Die Ægypologie, p. 320): "the reader who knows the face at the heaven, the great of sight in the minimo of the Prince of Hermonthius" (cf. pp. 136, 160 of this Hassian). Hermonthis, the Aunû (On) of the north; it therefore possessed its minimo of the prince where Montû, the meridional sun, h. I of old resided during his sojourn upon earth.

<sup>&</sup>lt;sup>2</sup> Urshû: this word is also used for the soldiers on watch during the day upon the wails of a fortress (Maspliko, Le Pappers de Berlin, No. 1, II. 18, 19, in the Melanges d'Archéologie Égyptierm at Assyriance, vol. in 4. 72). Birch believed he had discovered in the British Museum (Inscriptions at the Hieratic and Demote Characters, pl. xix., No. 5635, and p. 8) a catalogue of observations made at Thebes by several as non-mers upon a constellation which answered to the Hyades or the Platte. (Birch, Varia, in the Zeitschrift, 1868, pp. 11, 12); it was marely a question in this text of the quantity of water suppned regularly to the astronomers of a Theban temple for their domestic purpose.

The principal repressions of the map of the heavens which are at present known to us, are those of the Rameseum on the left bank of the Nile at Thobes, which have been studied by the (Sur Fannée vague des Egyptiens, 1831, 118, et seq.), by G. Tomlinson (On the Astronomical Celament the Memonium at Thebes, in the Transactions of the R. Soc. of Literature, vol. i.i., pl. ii. pp. 481-195, by Lepsius (Einleitung zur Chronologie, pp. 20, 21), and lastly by Brugsch (Theraurus Inscription and Egyptiacarum, p. 87, et seq.); those of Denderah, which have been reproduced in the Description of Egypts (Ant., vol. iv. pls. 20, 21), and have had further light thrown on them by Brugsch (Theraurus Inscriptionum Egyptiacarum, p. 1, et seq.); those of the tomb of Seti I, which have been cultical by Belzoni (A Narrative of the Operations, Suppl., iii.), by Rosellini (Monumenti del Culto, pl. 69), by Lepsius (Denkmäler, iii. 137), by Lefébure (Le Tombeau de Seti Is, part iv. pl. xxxvi., in the Memonic dela Mission Française du Caire, vol. ii.), and finally studied by Brugsch in his Thesagurus (p. 61, et seq.)

be born again at daybreak; in heaven—where they shone with Orion-Sahu under the guardianship of Sothis, and, year by year, led the procession of the stars. The maps of the firmament recalled to them, or if necessary taught them, this part of their duties: they there saw the planets and the decani ail past in their boats, and the constellations follow one another in continuous succession. The lists annexed to the charts indicated the positions occupied each month by the principal heavenly bodies—their risings, their collinations, and their settings. Unfortunately, the workmen employed to execute these pictures either did not understand much about the subject in hand, or did not trouble themselves to copy the originals exactly: they omitted many passages, transposed others, and made endless mistakes, which make it impossible for us to transfer accurately to a modern map the information possessed by the ancients.

In directing their eyes to the celestial sphere, Thot had at the same time revealed to men the art of measuring time, and the knowledge of the future. As he was the moon-god par excellence, he watched with jealous care over the divine eye which had been entrusted to him by Horus, and the thirty days during which he was engaged in conducting 2 it through all the phases of its nocturnal life, were reckoned as a month. Twelve of these months formed the year, a year of three hundred and sixty days, during which the earth witnessed the gradual beginning and ending of the circle of the sensons. The Nile rose, spread over the fields, sank again into its channel; to the versitudes of the inundation succeeded the work of cultivation; the harvest followed the seedtime: these formed three distinct divisions of the year, each of nearly equal duration. That made of them the three seasons,—that of the waters, Shaft; that of vegetation, Pirûft; that of the harvest, Shômû-each comprising four months, numbered one to four; the 1st, 2nd, 3rd, and 4th months of Shaft; the 1st, 2nd, 3rd, and 4th months of Pirûit; the 1st, 2nd, 3rd, and 4th monds of Shômû. The twelve months completed, a new year began, whose birth was heralded by the rising of Sothis in the early days of August. The

These tables, preserved in the tombs of Ramses IV, and Russes IV, had attention most drawn to there by Champollion (Lettre) cerites d'Ezyple, 2nd edit., pp. 239-241) and were published by him blowne ats de l'Egyple et de la Nulue, pl. coland, bis-coland, f at, voi ii, pp. 447-569), and sub-coland by Depsius (Leukim iii, 2-7, 228 bis). II, 1894).

One of the most common titles of the moon-god Thot is Answall, "He who carries, who he are the puried Eyo of the Sun" (E. Dr. Betanana, Historiache Inschriften, pl. 111.

The order and the nature of the seasons, importeetly described by Champollon in his Me wire

first month of the Egyptian year thus coincided with the eighth of ours. That became its patron, and gave it his name, relegating each of the others to a special protecting divinity; in this manner the third month of Shaft fell to Hathor, and was called after her; the fourth of Pirûît belonged to Ranûît or Ramuit, the lady of harvests, and derived from her its appellation of Pharmuti.1 Official documents always designated the months by the ordinal number attached to them in each season, but the people gave them by preference the names of their tutelary deities, and these names, transcribed into Greek. and then into Arabic, are still used by the Christian inhabitants of Egypt, side by side with the Mussulman appellations. One patron for each month was, however, not deemed sufficient: each month was subdivided into three decades, over which presided as many decani, and the days themselves were assigned to geni appointed to protect them. A number of festivals were set apart at irregular intervals during the course of the year; festivals for the new year, festivals for the beginning of the seasons, months and decades, festivals for the dead, for the supreme gods, and for local divinities, Every act of civil life was so closely allied to the religious life, that it could not be performed without a sacrifice or a festival. A festival celebrated the cutting of the dykes, another the opening of the canals, a third the reaping of the first sheaf, or the carrying of the grain; a crop gathered or stored without a festival to implore the blessing of the gods, would have been an act of sacrilege and fraught with disaster. The first year of three hundred and sixty days, regulated by the revolutions of the moon, did not long men the needs of the Egyptian people; it did not correspond with the length of the solar year, for it fell short of it by five and a quarter days, and this deficit, accumulating from twelvemonth to twelvemonth, caused such a serious difference between the calendar reckening and the natural seasons, that it soon had to be corrected. They intercalated, therefore, after the twelfth month of each year and before the first day of the ensuing year, five epagement days, which they termed the "five days over and above the year." 2 The legent of Osiris 10% is that Thot created them in order to permit Núit to over

sur les signes employes par les anciens I gyptiens a la notation du temps, have been correctle en l'aby Brugsch (Nouvelles II — the sur la division de Fanné chez les anciens I gyptiens, pp. 1-10, 61, 6 ).

For the popular names of the nonths and their Coptic and Arabic transcriptions, see like a Thesaurus Inscriptionum Ægyptiacarum, p. 472, et seq., and Die Agyptiologie, pp. 359-561. (6) Egyptian festivals are enumerated and described in this latter work, p. 502, et seq.

There appears to be a tendency among Egyptologists now to doubt the existence, under American Empire, of the five epagemenal days, and as a fact they are nowhere to be found expected mentioned; but we know that the five gods of the Osirian eyele were hore, during the epacted days (cf. p. 172 of this History), and the allusions to the Osirian legend which are met with the Pyramid texts, prove that the days were added long before the time when those inscription and cut. As the wording of the texts often comes down from prehistoric times, it is most that the invention of the epagomenal days is anterior to the first Thunte and McRephite dyna.

hirth to all her children. These days constituted, at the end of the "great vear." a "little month," which considerably lessened the difference between the solar and lunar computation, but did not entirely do away with it, and the six hours and a few minutes of which the Egyptians had not taken count gradually became the source of fresh perplexities. They at length amounted to a whole day, which needed to be added every four years to the agular three hundred and sixty days, a fact which was unfortunately overlooked. The difficulty, at first only slight, which this caused in public life, increased with time, and ended by disturbing the harmony between the order the calendar and that of natural phenomena; at the end of a hundred and twenty years, the legal year had gained a whole month on the actual year, and the 1st of Thot anticipated the heliacal rising of Sothis by thirty days, instead of coinciding with it as it ought. The astronomers of the Graeco-Roman period, after a retrospective examination of all the past history of their country, decovered a very ingenious theory for obviating this unfortunate discrepancy.2 It the omission of six hours annually entailed the loss of one day every ton years, the time would come, after three hundred and sixty-tive times tom years, when the deficit would amount to an entire year, and when, on consequence, fourteen hundred and sixty whole years would exactly catal fourteen hundred and sixty-one incomplete years. The agreement of the two years, which had been disturbed by the force of circumstances, was re-established of itself after rather more than fourteen and a half centumes: the opening of the civil year became identical with the beginning of the astronomical year, and this again coincided with the heliacal rising of Sinus, and therefore with the official date of the inundation. To the Egypt ans of Pharaonic times, this simple and eminently practical method was unknown: by means of it hundreds of generations, who suffered endless troubles from the recurring difference between an uncertain and a fixed year, might have consoled themselves with the satisfaction of knowing that a day would come when one of their descendants would, for once in his life, see both years coincide with mathematical accuracy, and the seasons appear at th a normal times. The Egyptian year might be compared to a watch which loses definite number of minutes daily. The owner does not take the trouble to calculate a cycle in which the total of minutes lost will bring the watch 10 mol to the correct time: he bears with the irregularity as long as his affairs

Ki q has shown that the Sothic cycle was devised and adapted to the in lent 1 star of 1 vi ander the Antonines (Keale, Studien zur Geschichte des Allen 1 appears, 1 p. 76, (t. q.)

<sup>1</sup> That is the name still given by the Copts to the five epigemenal days (Sides, K 10 h Gram at 1 p. 137; Balassa, Thesaurus Inscriptionum Layptiacarum, p. 179, et seq.)

do not suffer by it; but when it causes him inconvenience, he alters the hands to the right hour, and repeats this operation each time he finds it necessary, without being guided by a fixed rule. In like manner the Egyptian year fell into hopoless confusion with regard to the seasons, the discrepancy continually increasing, until the difference became so great, that the king or the priests had to adjust the two by a process similar to that employed in the case of the watch.

The days, moreover, had each their special virtues, which it was necessary for man to know if he wished to profit by the advantages, or to escape the perils which they possessed for him. There was not one among them that did not recall some incident of the divine wars, and had not witnessed a battle between the partisans of Sit and those of Osiris or Ra; the victories or the disasters which they had chronicled had as it were stamped them with good or bad luck, and for that reason they remained for ever either auspicious or the reverse. It was on the 17th of Athyr that Typhon had enticed his brother to come to him, and had murdered him in the middle of a banquet.2 Even year, on this day, the tragedy that had taken place in the earthly abode of the god seemed to be repeated afresh in the heights of heaven. at the moment of the death of Osiris, the powers of good were at then weakest, and the sovereignty of evil everywhere prevailed, so the whole of Nature, abandoned to the powers of darkness, became inimical to man Whatever he undertook on that day issued in failure.3 If he went out to walk by the river-side, a crocodile would attack him, as the crocodile sent by Sit had attacked Osiris.4 If he set out on a journey, it was a last farewell which he bade to his family and friends: death would meet have by the way.<sup>5</sup> To escape this fatality, he must shut himself up at home, and

The questions relating to the divisions and defects of the Egyptian year have given to the considerable number of works, in which much science and ingenuity have been expended, of the purpose. I have limited anysolf, in my temarks on the subject, to what scenned to me most provided in conformat, with what we know of Egyptian belief. The Anastasi Papprus IV. (pl. x. ii) thas preserved the complaint of an Egyptian of the time of Minephtch or of Seti II., with region the troubles a signal by the people owing to the defects of the year (Marprio, Nets an pour lossy), in the Proceedings of the Biblical Archaelogical Society, vol. xiii, pp. 303-410).

The date of the 17th of Athyr, given by the Greeks (Pr Iside et Osiride, § 13, edit Pr (m)
 pp 21-23), is confirmed several Pharaonic texts, such as the Sallier Papyrus IV., pi vin H (a)

For the magic power of Thot, the "correct voice" which he prescribes, and his books of at thation, see pp. 145, 116 of this History.

In heaven, on earth, or in the nether world. The magicians instructed in his chool had, like the god, control of the words and sounds which, emitted at the favourable moment with the "correct voice," would evoke the most formidable critics from beyond the confines of the universe: they could bind and loose t will Osiris, Sît, Anubis, even Thot himself; they could send them forth, and recall them, or constrain them to work and fight for them. The extent their power exposed the magicians to terrible temptations; they were often the to use it to the detriment of others, to satisfy their spite, or to gratify their grosser appetites. Many, moreover, made a gain of their knowledge, putting it at the service of the ignorant who would pay for it.

THE GODS LIGHTING LOW THE MAGICIAN WHO HAS INVOKED THEM.

were asked to plague or get rid of an enemy, they had a hundred different as of suddenly surrounding him without his suspecting it: they tormented him with deceptive or terrifying dreams; they harassed him with apportions and mysterious voices; they gave him as a prey to sicknesses, to wandering spectres, who entered into him and slowly consumed him. They constrained, even at a distance, the wills of men; they caused women to be the victims of infatuations, to forsake those they had loved, and to love those they had previously detested. In order to compose an irresistible charm, they merely required a little blood from a person, a few nail-prings, some him, or a scrap of linen which he had worn, and which, from contact with his skin, had become impregnated with his personality. Portions of these were incorporated with the wax of a doll which they modelled, and clothed to resemble then victim; thenceforward all the inflictions to which the image was subjected were experienced by the oriental he was consumed

with fever when his effigy was exposed to the fire, he was wounded when the figure was pierced by a knife. The Pharaohs themselves had no immunity from these spells.1 These machinations were wont to be met by others of the same kind, and magic, if invoked at the right moment, was often able to annul the ills which magic had begun. It was not indeed all-powerful against fate: the man born on the 27th of Paophi would die of a snake-bite. whatever charm he might use to protect himself. But if the day of his death were forcordained, at all events the year in which it would occur was uncertain, and it was easy for the magician to arrange that it should not take place prematurely. A formula recited opportunely, a sentence of prayer traced on a papyrus, a little statuette worn about the person, the smallest amulet blessed and consecrated, put to flight the serpents who were the instruments of fate. Those curious stelle on which we see Horus half naked, standing on two crocodiles and brandishing in his fists creatures which had reputed powers of fascination, were so many protecting talismans; set up at the entrance to a room or a house, they kept off the animals represented and brought the evil fate to nought. Somer or later destiny would doubtless prevail, and the moment would come when the fated serpent, cluding all precautions, would succeed in carrying out the sentence of death. At all events the man would have lived, perhaps to the verge of old age, perhaps to the years of a hundred and ten, to which the wisest of the Egyptians hoped to attain, and which period no man born of mortal mother might exceed.2 If the arts of magic could thus suspend the law of destiny, how much more efficacious were they when combating the influences of secondary deities, the evil eye, and the spells of man? That, who was the patron of sortilege, presided also over exorcisms, and the criminal acts which some committed in his name could have reparation made for them by others in his name. To malicious gemi, genii still 'tronger were opposed; to harmful amulets, those which were protective; 1 destructive measures, vitalizing remedies; and this was not even the most tomblesome part of the magicians' task. Nobody, in fact, among those delivered by their intervention escaped unburt from the trials to which he had been subjected. The possessing spirits when they quitted their victim generally left behathem traces of their occupation, in the brain, heut. lungs, intestines-in fact, in the whole body. The illnesses to which the

of illness only. Every place possessed several doctors; some for diseases of the eyes, others for the head, or the teeth, or the stomach, or for internal diseases." 1 But the subdivision was not carried to the extent that Herodotus would make us believe. It was the custom to make a distinction only between the physician trained in the priestly schools, and further instructed by daily practice and the study of books,-the bone-setter attached to the worship of Sokhit who treated fractures by the intercession of the goddess,-and the exorcist who professed to cure by the sole virtue of amulets and magic phrases.2 The professional doctor treated all kinds of maladies, but, as with us, there were specialists for certain affections, who were consulted in preference to general practitioners. If the number of these specialists was so considerable as to attract the attention of strangers, it was because the climatic character of the country necessitated it. Where ophthalmia and affections of the intestines raged violently, we necessarily find many oculists; as well as doctors for internal maladies. The best instructed, however, knew but little of anatomy. As with the Christian physicians of the Middle Ages. religious scruples prevented the Egyptians from cutting open or dissecting, in the cause of pure science, the dead body which was identified with that of Osiris. The processes of embalming, which would have instructed them in anatomy, were not intrusted to doctors; the horror was so great with which any one was regarded who mutilated the human form, that the "paraschite." on whom devolved the duty of making the necessary incisions in the dead, became the object of universal execration: as soon as he had finished his task, the assistants assaulted him, throwing stones at him with such violence that he had to take to his heels to escape with his life.4 The knowledge of what went on within the body was therefore but vague. Life seemed to be a little air, a breath which was conveyed by the veins from member to member "The head contains twenty-two vessels, which draw the spirits into it and send them the nee to all parts of the body. There are two vessels for the breasts, which communicate heat to the lower parts. There are two vessels for the thighs, two for the neck, two for the arms, two for the back of the

<sup>&</sup>lt;sup>2</sup> This division into three categories, indicated by the Ebers Papyras, pl. xeix. It 2, 3, has be confirmed by a curious passage in a Graco-Egyptum treatise on alchemy (Massi w. Notes on projour, § 13, in the Proceedings of the Biblioid Archwological Society, vol. xiii. pp. 501-503).

<sup>&</sup>lt;sup>3</sup> Affections of the eyes occupy one-fourth of the Ebers Papyrus (Enrus, Das Kapitel über Augenkrauhla iten, in the Abh. der phil-hist. Classe der Königl. Suchs. head, two for the forehead, two for the eyes, two for the eyelids, two for the right ear by which enter the breaths of life, and two for the left car which in like manner admit the breaths of death." The "breaths" ntering by the right ear, are "the good airs, the delicious airs of the

north;" the sea-breeze which tempers the burning of summer and renews the strength of man, continually weakened by the heat and threatened with exhaustion. These vital spirits, entering the veins and arteries by the ear or nose, mingled with the blood, which curried them to all parts of the body; they sustained the animal and were, so to speak, the cause of its movement. The heart, the perpetual mover-haiti -collected them and redistributed them throughout the body: it was regarded as "the beginning of all the members," and whatever part of the living Inly the physician touched, "whether the head, the nape of the neck, the

A DEAD MAN SHOPKING THE TELEVIER

hands, the breast, the arms, the legs, his hand lit upon the heart," and he felt it beating under his fingers. Under the influence of the good treaths, the vessels were inflated and worked regularly; under that of the evil, they became inflamed, were obstructed, were hardened, or gave way, and the physician had to remove the obstruction, allay the inflammation, and re-establish their vigour and elasticity. At the moment of death, the vital spirits "withdrew with the soul; the blood," deprived of air, "become congulated, the veins and arteries emptied themselves, and the custure perished" for want of breaths.

The majority of the diseases from which the ancient Egyptians suffered, me those which still attack their successors; ophthalmia, affections of the

stomach. abdomen, and bladder, intestinal worms, varicose veins, ulcers in the leg, the Nile pimple,4 and finally the "divine mortal malady," the divinus morbus of the Latins, epilepsy.5 Anamia, from which at least onefourth of the present population suffers,6 was not less prevalent than at present. if we may judge from the number of remedies which were used against harmaturia, the principal cause of it. The fertility of the women entailed a number of infirmities or local affections which the doctors attempted to relieve. not always with success.7 The science of those days treated externals only. and occupied itself merely with symptoms easily determined by sight or touch; it never suspected that troubles which showed themselves in two widely remote parts of the body might only be different effects of the same illness. and they classed as distinct maladies those indications which we now know to be the symptoms of one disease.8 They were able, however, to determine fairly well the specific characteristics of ordinary affections, and sometimes described them in a precise and graphic fashion. "The abdomen is heavy, the pit of the stomach painful, the heart burns and palpitates violently. clothing oppresses the sick man and he can barely support it. Noctumal thirsts. His heart is sick, as that of a man who has eaten of the sycamore gum. The flesh loses its sensitiveness as that of a man seized with illness. If he seek to satisfy a want of nature he finds no relief. Say to this, 'There is an accumulation of humours in the abdomen, which makes the heart sick. I will act." This is the beginning of gastric fever so common in Egypt,

A whole series of diagnoses, worled with much clearness, will be found, in the treatise on discusses of the stomach in the Ebers Pap

and a modern physician could not better diagnose such a case; the phra-cology would be less flowery, but the analysis of the symptoms would not differ from that given us by the ancient practitioner. The medicaments recommended comprise nearly everything which can in some way or other be swallowed. whether in solid, mucilaginous, or liquid form. Vegetable remedies are neckoned by the score, from the most modest herb to the largest tree, such as the sycamore, palm, acacia, and cedar, of which the sawdust and shavings were supposed to possess both antiseptic and emollient properties. Among the mineral substances are to be noted sea-salt, alum,2 nitre, sulphate of copper, and a score of different kinds of stones—among the latter the "memphite stone" was distinguished for its virtues; if applied to parts of the body which were lacerated or unhealthy, it acted as an anæsthetic and facilitated the success of surgical operations. Flesh taken from the living subject, the heart, the liver, the gall, the blood-either dried or liquid-of animals, the hair and horn of stags, were all customarily used in many cases where the motive determining their preference above other materia medica is unknown to us. Many recipes puzzle us by their originality and by the barbaric character of the ingredients recommended: "the milk of a woman who has given birth to a boy," the dung of a lion, a tortoise's brains, an old book boiled in oil.8 The medicaments compounded of these incongruous substances were often very complicated. It was thought that the healing power was increased by multiplying the cutative elements; each ingredient acted upon a specific region of the body, and after absorption, separated itself from the rest to bung its influence to bear upon that region. The physician made use of all the means which we employ to-day to introduce remedies into the human system, whether pills or potions, poultices or ointments, draughts or clysters. Not only did he give the prescriptions, but he made them up, thus

<sup>\*\*</sup> I ners Pappyrus, pl ixxviii. 1. 22 Ixxix. 1. 1: "To relieve a child who is constituted — An hear Boil it in oil, and apply half to the stomach, to provoke evacuation." It must not be 1.1. to that, the writings being on papyrus, the old book in question, once beiled, would nave a contract that of our linseed-meal positions. If the physician recommended taking one is two contract reasons merely; the Egyptians of the middle classes would dways have a the process of the number of letters, copy-books, and other worthless waste papers, of which the world glaif and themselves in such a profitable manner.

combining the art of the physician with that of the dispenser. He prescribed the ingredients, pounded them either separately or together, he macerated them in the proper way, boiled them, reduced them by heating, and filtered them through linen.<sup>1</sup> Fat served him as the ordinary vehicle for ointments, and pure water for potions; but he did not despise other liquids, such as wine, beer (fermented or unfermented), vinegar, milk, olive oil, "ben" oil either crude or refined,<sup>2</sup> even the urine of men and animals: the whole, sweetened with honey, was taken hot, night and morning.<sup>3</sup> The use of more than one of these remedies became world-wide; the Greeks borrowed them from the Egyptians; we have piously accepted them from the Greeks; and our contemporaries still swallow with resignation many of the abominable mixtures invented on the banks of the Nile, long before the building of the Pyramids.

It was Thot who had taught men arithmetic; Thot had revealed to them the mysteries of geometry and mensuration; That had constructed instruments and promulgated the laws of music; That had instituted the art of drawing. and had codified its unchanging rules.4 He had been the inventor or patron of all that was useful or beautiful in the Nile valley, and the climax of hi beneficence was reached by his invention of the principles of writing, without which humanity would have been liable to forget his teaching, and to lose the advantage of his discoveries.<sup>5</sup> It has been sometimes questioned whether writing, instead of having been a benefit to the Egyptians, did not rather injure them. An old legend relates that when the god unfolded his discovery to King Thamos, whose minister he was, the monarch mamediately raised an objection to it. Children and young people, who had hitherto been forced to apply themselves diligently to learn and retain whatever was taught them, now that they possessed a means of storing up knowledge without trouble, would cease to apply themselves, and would neglect to exercise them memories.6 Whether Thamos was right or not, the criticism came too late

I know of no description of the inchools or making up pharmaceutical preparations; but idea can be found of the initiations and care with which the Egyptians performed these operation the receipts preserved, as at Edin, for the preparation of the perfumes used in the tem, of Dividials, Parally about dest Patuamenemapt, vol. ii. pp. 13-32; Lorder, Le Kypha, par function destances of gyptians, taken from the Journal Asiatique, 5th series, vol. x. pp. 76-132.

justice; the sign in these cases had only a conventional connection with the concept assigned to it. At times two or three of these symbols were associated in order to express conjointly an idea which would have been inadequately rendered by one of them alone: a five-pointed star placed under an inverted crescent moon - denoted a mouth, a calf running before the sign for water indicated thirst. All these artifices combined furnished, however, but a very incomplete means of seizing and transmitting thought. When the writer had written out twenty or thirty of these signs and the ideas which they were supposed to embody, he had before him only the skeleton of a sentence. from which the flesh and sinews had disappeared; the tone and rhythm of the words were wanting, as were also the indications of gender, number. person, and inflection, which distinguish the different parts of speech and determine the varying relations between them. Besides this, in order to understand for himself and to guess the meaning of the author, the reader was obliged to translate the symbols which he deciphered, by means of words which represented in the spoken language the pronunciation of each symbol Whenever he looked at them, they suggested to him both the idea and the word for the idea, and consequently a sound or group of sounds; what each of them had thus acquired three or four invariable associations of sound he forgot their purely ideographic value and accustomed himself to consider them merely as notations of sound.

The first experiment in phonetics was a species of rebus, where each of the signs, divorced from its original sense, served to represent several words, similar in sound, but differing in meaning in the spoken language. The sur group of articulations, Naufir, Nofir, conveyed in Egyptian the concrete idea of a lute and the abstract idea of beauty; the sign I expressed at once the lute and beauty. The beetle was called Khopirrie, and the verb "to be" was pronounced khop ru: the figure of the beetle gronsequently signified but the insect and the verb, and by further combining with it other signs, il articulation or each corresponding syllable was given in detail. The steve C thaû, the mit • pû, pi, the mouth • ra, rù, gave the formula khan ju which was equivalent to the sound of khopiru, the verb "to be:" group together Qs, they 1 noted in writing the concept of "to be" by means a 'a triple rebus. In this system, each syllable of a word could be represent by one of several signs, all sounding alike. One-half of these "syllabi stood for open, the other half for closed syllables, and the use of the ferr soon brought about the formation of a true alphabet. The final vow! them became detached, and left only the remaining consonant-for exam $n_{\ell}$ . r in rû, h in ha, n in ni, b in bû—so that - rû, 1 ha,

ventually stood for r, h, n, and b only. This process in the course of ime having been applied to a certain number of syllables, furnished a fairly alphabet, in which several letters represented each of the twenty-two hief articulations, which the scribes considered sufficient for their purposes. The signs corresponding to one and the same letter were homophones or equivalents in sound "- , -, \( \), are homophones, just as - and \( \). Lecause each of them, in the group to which it belongs, may be indifferently used to translate to the eye the articulations m or n. One would have thought that when the Egyptians had arrived thus far, they would have been led, as a matter of course, to reject the various characters which they had used each in its turn, in order to retain an alphabet only. But the true spirit of invention, of which they had given proof, abandoned them here as elsewhere: if the merit of a discovery was often their due, they were rarely able to bring their invention to perfection. They kept the ideographic and syllabic signs which they had used at the outset, and, with the residue of their successive notations, made for themselves a most complicated system, in which syllables and ideograms were mingled with letters properly so called. There is a little of everything in an Egyptian phrase, sometimes even in a word; as, for instance, in M ? maszira, the car, or 2 | sa h sheroù, the voice; there are the syllabies | mas. s zir, ru, kher, the ordinary letters  $\int s$ ,  $\int u$ , r, which complete the phonetic promunciation, and finally the ideograms, namely, , which gives the picture of the ear by the side of the written word for it, and 🐧 which proves that the letters represent a term designating an action of the mouth. This medley had its advantages; it enabled the Egyptians to make clear, by the picture of the object, the sense of words which letters alone might sometimes insufficiently explain. The system demanded a serious effort of memory and long years of study; indeed, many people never completely mastered it. The picturesque appearance of the sentences, in which we see representations of men, animals, furniture, weapons, and tools grouped together in successive little pictures addered hieroglyphic writing specially suitable for the decoration of the temples of the gods or the palaces of kings. Wingled with scenes of worship, sacrifice, battle, or private life, the inscriptions frame or separate groups of personages, and occupy the vacant spaces which the sculptor or painter was at a loss to fill; hieroglyphic writing is pre-eminently a monumental script. For the ordinary purposes of life it was traced in black or ted ink on fragments of limestone or pottery, or on wooden tablets covered with stucco, and specially on the fibres of papyrus. The exigencies of haste and the unskilfulness of scribes soon changed both its appearance and its

elements; the characters when contracted, superimposed and united to one another with connecting strokes, preserved only the most distant resemblance to the persons or things which they had originally represented. This cursive writing, which was somewhat incorrectly termed hieratic, was used only for public or private documents, for administrative correspondence, or for the propagation of literary, scientific, and religious works.

It was thus that tradition was pleased to ascribe to the gods, and among them to Thot-the doubly great-the invention of all the arts and sciences which gave to Egypt its glory and prosperity. It was clear, not only to the vulgar, but to the wisest of the nation, that, had their ancestors been left merely to their own resources, they would never have succeeded in raising themselves much above the level of the brutes. The idea that I discovery of importance to the country could have risen in a human brain, and, once made known, could have been spread and developed by the efforts of successive generations, appeared to them impossible to accept. They believed that every art, every trade, had remained unaltered from the outsit. and if some novelty in its aspect tended to show them their error, they preferred to imagine a divine intervention, rather than be undeceived The mystic writing, inserted as chapter sixty-four in the Book of the Dead, and which subsequently was supposed to be of decisive moment to the future life of man, was, as they knew, posterior in date to the other formulas of which this book was composed; they did not, however, regard it any the less as being of divine origin. It had been found one day, without any one knowing whence it came, traced in blue characters on a plaque of alabaster, at the foot of the statue of Thot, in the sanctuary of Hermopolis. A prince, flardiduf, had discovered it in his travels, and regarding it is a miraculous object, had brought it to his severeign.1 This king, according to some, was Hasaphaîti of the first dynasty, but by others was believed to be the pious Mykerinos. In the same way, the book on medicine, death, with the diseases of women, was I dd not to be the work of a practite or. it had reveiled itself to a priest watching at night before the Holy of Holi, in the temple of Isis at Coptos. "Although the earth was plunged unto

With regard to this double origin of chap. INV., see Gen year, Reduct Francisc Egyption of the College of the comparatively modern recension of this chapter, though this is contrary to the general proof of the comparatively modern recension of this chapter, though this is contrary to the general received opinion, which would recognize in that indication of the great antiquity which Egyptians attributed to the work (Lindes de Mythologie et d'Archeologie Lyppianus, vol. 1-11) 367-369). A tablet of hard stone, the "Perofisky plinth," which bears the text of this chapter is the Collection Egyptianus, vol. 1-11 in the temple of Thot.

darkness, the moon shone upon it and enveloped it with light. It was sent a great wonder to the holiness of King Kheops, the just of speech." The ods had thus exercised a direct influence upon men until they became ntirely civilized, and this work of culture was apportioned among the three divine dynasties according to the strength of each. The first, which comprised the most vigorous divinities, had accomplished the more difficult tisk of establishing the world on a solid basis; the second had carried on the education of the Egyptians; and the third had regulated, in all its minutiæ, the religious constitution of the country. When there was nothing more demanding supernatural strength or intelligence to establish it, the gods returned to heaven, and were succeeded on the throne by mortal men. One tiadition maintained dogmatically that the first human king whose memory it preserved, followed immediately after the last of the gods, who, in quitting the palace, had made over the crown to man as his heir, and that the change of nature had not entailed any interruption in the line of sovereigns.2 Another tudition would not allow that the contact between the human and divine some, had been so close. Between the Ennead and Menes, it interculated one or more lines of Theban or Thinite kings; but these were of so formless, shadowy, and undefined an aspect, that they were called Manes, and there was attributed to them at most only a passive existence, as of persons who had always been in the condition of the dead, and had never been subjected to the trouble of passing through life. Menes was the first in order of those who were actually living.4 From his time, the Egyptians claimed to possess an uninterrupted list of the Pharaohs who had ruled over the Nile valley. As far back as the XVIIIth dynasty this list was written upon papyrus, and furnished the number of years that each prince occupied the throne for the length of his life. Extracts from it were inscribed in the

BIBLE, Medical Pappy us with the name of Cheops, in the Zitschrift, 1871, pp. 61-74

this tradition is related in the Chronicle of Scaliger (Lauth, Month) and das Turou i Konagtul pp. 8-11; of p. 71, et seq \(\), and in most of the ancient authors who have used Manetha's \(\) (is (Matture-Dido), Fragmento Historicorum Graeorum, vol. 11, pp. 539, 540)

This tradition occurs in the A meman version of Eusebius, and, like the preceding one, comes from Mancho (MELLER-Dipot, Fragm. Hist. Gree., vol. ii pp. 526-528). Or conly of these kings. It is known to us, who perhaps may be identified with the Bittu of in Experimental.

<sup>&</sup>lt;sup>1</sup> Mani ino (m Mi Ller-Ditor, Fragm. Hest trice, vol if p 5.9) Met creads to a nucleous τρωτη δασίλεια ε αταριθμέτται βασιλέων διτώ, ών πρώτος Μήνης Θεωτης έβασιλευνεν έτη ξβ. Most classed author has confirm the tradition which Manotho had found in the irchives of the temples of Memphis (II) p ii 99; Diodonos Sieurus, i. 43, 45, 91; Jostenis, Ant Jud., viii 6, 2, Ekarosenias, in Metric Dirot, Fragm. Hist. Grac., vol. ii. p 510)

The only one of these lists which we possess the "Turm Royal Paperus," was bounkt, rearly track, it Thebes, by Drovetti, about 1818, but was accidentally injured by him in breating to no. The possession of it were acquired, together with the rest of the collection, by the Predmontest one of it in 1820, and placed in the Turin Museum, where Champolhou saw and drew afterston both on 1821 (Papprus Lypptiens historiques du Musee royal Lapptun, p. 7, taken from the Balletin (Ochth section, 1821, No. 292). Seyffarth carefully collected and arranged them in the

temples, or even in the tombs of private persons; and three of these abridged catalogues are still extant, two coming from the temples of Seti I. and Ramses II. at Abydos, while the other was discovered in the tomb of a person of rank named Tunari, at Saqqâra. They divided this interminable succession of often problematical personages into dynasties, following in this division, rules of which we are ignorant, and which varied in the course of ages. In the time of the Ramessides, names in the list which subsequently under the Lagides formed five groups were made to constitute one single dynasty. Manetho of Sebennytos, who wrote a history of Europe for the use of Alexandrine Greeks, had adopted, on some unknown authority, a division of thirty-one dynasties from Menes to the Macedonian Conquest, and his system has prevailed—not, indeed, on account of its excellence, but because it is the only complete one which has come down to us. All the families inscribed in his lists ruled in succession. The country was no doubt

order in which they now are; subsequently Lepsius gave a facsimile of them in 1840, in his Anon the der wichtigsten Urhunden, pls. i.-vi, but this did not include the verse; Champellion-Figenc edite in 1847, in the Revie Archeologique, 1st series, vol. vi., the tracings taken by the younger Champellion before Seyffarth's arrangement; lastly, Wilkinson published the whole in detail in 1851 (The Fraquents of the Hieratic Papprus at Turin). Since then, the document has been the subject of continuous investigation: E. de Rougé has reconstructed, in an almost conclusive manner, the proves continuous the first six dynastics (Recherches sur les monuments qu'on peut attribuer aux six premieres dynastics (Manethon, pl. iii.), and Lauth, with less certainty, those which deal with the eight following dynastic (Manetho und der Turiner Königspapprus, pls. iv.-x.).

¹ The first table of Ahydos, unfortunately incomplete, was discovered in the temple of Ramses II by Banks, in 1818; the copy published by Callaud (Voyage à Merce, vol. iii. pp. 300-307, and plaxid, No. 2) and by Salt (Essay on Dr. Young's and M. Champollion's Phonetic System of Horody, phics, p. 1, et seq., and frontispiece) served as a foundation for Champollion's first investments on the history of Egypt (Lettres à M. de Blacas, 2° Lettre, p. 12, et seq., and pl. vi.). The out and brought to France by Mimaut (Dubois, Description des antiquités Égyptiennes, etc., pp. 19-28) was acquired by England, and is now in the British Museum. The second table, which is complete, do but a few signs, was brought to light by Mariette in 1864, in the excavations at Abydos, and was immediately noticed and published by Domenes, Die Sethos Tafet von Abydos, in the Zeitscheit. 1864, pp. 81-83. The text of it is to be found in Mariette, La Nouvelle Table d' thydos (Rec. Archéologique, 2nd series, vol. xiii.), and Abydos, vol. i. pl. 43.

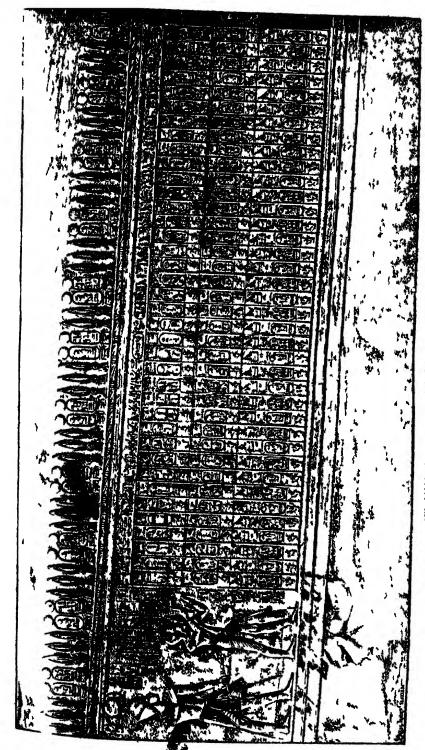

<sup>2</sup> The table of Sv<sub>1</sub>qura, discovered in 1863, has been published by Marittere, La Table de Saque (Revue Archéologique, 2nd series, vol. x. p. 169, et seq.), and reproduced in the Monuments Divers. where

same group of sovereign.

1 five dynastics has been preserved to us by Manetho (in Matthe Direct
Fragmenta Historicorum Graecorum, vol. ii. pp. 539-551).

The best restoration of the system of Mauetho is that by Letius, Das Könegsbuch der Egypter, which should be completed and corrected from the memoirs of Lauth, Lieblein, Kirl' | Unger. A common fault attaches to all those memoirs, so remarkable in many respectively and the work of Manetho, not as representing a more or loss ingenious system applied to I' history, but as furnishing an authentic scheme of this history, in which it is necessary to all the royal names which the monuments have revealed, and are still daily revealing to Mapperso, Notes sur quelques points dans le Recueil de Transacz, t. xvii., p. 56 sqq., 121 sqq.

5 E. de Rougé triumphantly demonstrated, in opposition to Bunsen, now nearly fifty year that all Manetho's dynasties are successive (Examen de l'ouvrage de M. le Chevalier de Bunse

IN IAILE I HE KIN SIN THE TIVILE OF STREET AT APPEAS

frequently broken up into a dozen or more independent states, each possessing its own kings during several generations; but the annalists had from the outset discarded these collateral lines, and recognized only one legitimate dynasty, of which the rest were but vassals. Their theory of legitimacy does not always agree with actual history, and the particular line of princes which they rejected as usurpers represented at times the only family possessing true rights to the crown. In Egypt, as elsewhere, the official chroniclers were often obliged to accommodate the past to the exigencies of the present, and to manipulate the annals to suit the reigning party; while obeying their orders the chroniclers deceived posterity, and it is only by a rare chance that we can succeed in detecting them in the act of falsification, and can re-establish the truth.

The system of Manetho, in the state in which it has been handed down to us by epitomizers, has rendered, and continues to render, service to science: if it is not the actual history of Egypt, it is a sufficiently faithful substitute to warrant our not neglecting it when we wish to understand and reconstruct the sequence of events. His dynasties furnish the necessary framework to most of the events and revolutions, of which the monuments have preserved us a record. At the outset, the centre to which the affairs of the count y gravitated was in the extreme north of the valley. The principality who h extended from the entrance of the Fayûm to the apex of the Delta, and subsequently the town of Memphis itself, imposed their sovereigns upon th remaining nomes, served as an emporium for commerce and national industries, and received homage and tribute from neighbouring peoples. About the time of the VIth dynasty this centre of gravity was displaced, and tended towards the interior; it was arrested for a short time at Herackopolis (IN \$ and Xth dynasties), and ended by fixing itself at Thebes (XII dynasty E. From hencefor'h Thebes became the capital, and furnished Egypt with her rulers. With the exception of the XIVth Xoite dynasty, all in families occupying the throne ...om the XIth to the XXth dynasty were Theban. When the burbarian shepherds invaded Africa from Asia, the Thebaid became the last refuge and bulwark of Egyptian nationality; to

Annales de Philosophic fierne, 18 16-47, vol. xiii.-xvi), and the monuments discovered from to year in Egypt have continued his demonstration in every detail.

It is enough to give two striking examples of this. The royal lists of the time of the Rame of suppress, at the end of the XVIII<sup>11</sup> dynasty, Amenôthes IV, and several of his successors, at least the following sequence—Amenôthes III, Harmhabît, Ramses I., without any apparent hiatus, Marris on the contrary, replaces the kings who were omitted, and keeps approximately to the real effective Horos (Amenôthes III) and Armus (Harmhabît). Again, the official tradition of XX<sup>th</sup> dynasty gives, between Ramses II. and Ramses III, the sequence—Minephtah, Sent II Nakht-Seti; Manetho, on the other hand, gives Amenemes followed by Thûôris, who appear to also spond to the Amenemess and Siphtah of contemporary monuments, but, after Minephtah, he are settled.

chiefs struggled for many centuries against the conquerors before they were able to deliver the rest of the valley. It was a Theban dynasty, the XVIII<sup>th</sup>, which inaugurated the ora of foreign conquest; but after the XIX<sup>th</sup>, a movement, the reverse of that which had taken place towards the end of the first period, brought back the centre of gravity, little by little, towards the north of the country. From the time of the XXI<sup>th</sup> dynasty, Thebes censed to hold the position of capital: Tanis, Bubastis, Mendes, Sebennytos, and above all, Sais, disputed the supremacy with each other, and political life was concentrated in the maritime provinces. Those of the interior, ruined by Ethiopian and Assyrian invasions, lost their influence and gradually dwindled away. Thebes became impoverished and depopulated; it fell into ruins, and soon was nothing more than a resort for devotees or travellers. The history of Egypt is, therefore, divided into three periods, each corresponding to the suzerainty of a town or a principality:—

- 1.—MEMPHITE PERIOD, usually called the "Ancient Empire," from the I' to the X<sup>th</sup> dynasty: kings of Memphite origin ruled over the whole of Egypt during the greater part of this epoch.
- II.- Theban Period, from the XI<sup>th</sup> to the XX<sup>th</sup> dynasty. It is divided into two parts by the invasion of the Shepherds (XVI<sup>th</sup> dynasty):
  - a. The first Theban Empire (Middle Empire), from the XIth to the XIVth dynasty.
  - b. The new Theban Empire, from the XVIII to the XXII dynasty.
- II.—SAITE PERIOD, from the XXI<sup>st</sup> to the XXX<sup>th</sup> dynasty, divided into two unequal parts by the Persian Conquest:
  - "a. The first Saite period, from the XXII to the XXVIII dynasty.

The second Saite period, from the XXVIIIth to the XXXII dynasty.

The emphites had created the monarchy. The Thebans extended the rule of Egypt far and wide, and made of her a conquering state; for nearly six contains she ruled over the Upper Nile and over Western Asia. Under the Saftes she retired gradually within her natural frontiers, and from having been aggressive became assailed, and suffered herself to be crushed in turn by all the nations she had once oppressed.

The monuments have as yet yielded no account of the events which tended to unite the country under the rule of one man; we can only surmise that the tendal principalities had gradually been drawn together into two groups, each

<sup>&</sup>lt;sup>1</sup> To division into Ancient, Middle, and New Empire, proposed by Lepsius, has the desadvantige of net taking into account the influence which the removal of the seat of the dynastics excremed on the instery of the country. The arrangement which I have here adopted was trist put forward in the Review critique, 1873, vol. i. pp. 82, 83.

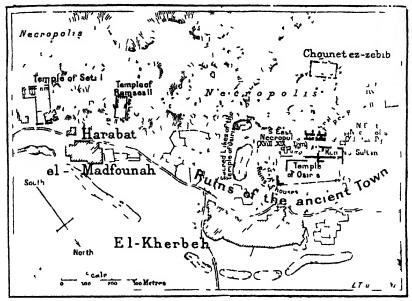

of which formed a separate kingdom. Heliopolis became the chief focus in the north, from which civilization radiated over the rich plains and the marshes of the Delta. Its colleges of priests had collected, condensed, and arranged the principal myths of the local religions; the Ennead to which it gave conception would never have obtained the popularity which we must acknowledge it had, if its princes had not exercised, for at least some period, an actual suzerainty over the neighbouring plains. It was around Heliopolis that the kingdom of Lower Egypt was organized; everything there bore traces of Heliopolitan theories—the protocol of the kings, their supposed descent from Râ, and the enthusiastic worship which they offered to the sun. The Delta. owing to its compact and restricted area, was aptly suited for government from one centre; the Nile valley proper, narrow, tortuous, and stretching like a thin strip on either bank of the river, did not lend itself to so complete a unity. It, too, represented a single kingdom, having the reed 2 and the lotus I for its emblems; but its component parts were more loosely united, its religion was less systematized, and it lacked a well-placed city to serve as a political and sacerdotal centre. Hermopolis contained schools of theologians who certainly played an important part in the development of myths and dogmas; but the influence of its rulers was never widely felt. In the soutl, Siùt disputed their supremacy, and Heraeleopolis stopped their road to the north. These three cities thwarted and neutralized one another, and not one of them ever succeeded in obtaining a lasting authority over Upper Egypt. Each of the two kingdoms had its own natural advantages and its system of government, which gave to it a particular character, and stamped it, as it were, with a distinct personality down to its latest days.2 The kingdom of Upper Egypt was more powerful, richer, better populated, and was governed apparently by more active and enterprising rulers. It is to one of the latter Mini or Mones of Thinis that tradition ascribes the honour of having fused the two Egypts into a single empire, and of having inaugurated the reign of the human dynastics. Thiris figured in the historic period as one of the least of Egyptien satiss. It barely maintained an existence on the left bank or the Nile, if not on the exact spot now occupied by Girgeh, at least only a short distance from it.3 The principality of the Osirian Reliquary, of which

<sup>&</sup>lt;sup>2</sup> Cf. what is said of Heliopolis, its position and its ruins, on pp. 1.35, 136, of this volume.

<sup>2</sup> Sec, on this head, the points which M. Erman has worked out very ably in his Agmit p. 32, et seq.; in spite, however, of the opinion which he expresses (p. 128), I believe that it northern kingdom received, in very early times, a political organization as strong and as come is as that of the southern kingdom (Masters, Études Egyptiennes, vol. ii. p. 244, et seq.).

<sup>&</sup>lt;sup>2</sup> The site of Thins is not yet satisfactorily identified. It is nother at Kom-es-Sult in Maniette thought (Notice des principaux Monuments, 1861, p. 285), nor, according to the hypothet A. Schmidt, at El-Kherbeh (Die Griechischen Papyrus-Urkunden der Königlichen Bibliother Birlin, pp. 69-79). Brugsch has proposed to fix the site at the village of Tinch (Geogr. Inschi-

it was the metropolis, occupied the valley from one mountain range to the other, and gradually extended across the desert as far as the Great Theban ()asis.¹ Its inhabitants worshipped a sky-god, Anhûri, or rather two twin gods, \nhûri-Shû, who were speedily amalgamated with the solar derties and became a warlike personification of Râ. necropolis was at some distance to the east, near the sacred town of Abydos. It would appear that, at the outset, Abydos was the capital of the country. for the cutire nome bore the same name as the city, and had adopted for its symbol the representation of the reliquary in which the god reposed. In very early times Abydos fell into decay, and resigned its political rank to Thinis. but its religious importance remained unimpaired. The city occupied a long and narrow strip of land between the canal and the first slopes of the Libvan mountains. A brick fortress defended it from the incursions of the Bedouin,1 and beside it the temple of the god of the dead reared its naked walls. Here Anhûri, having passed from life to death, was worshipped under the name of Khontamentit, the chief of that western region whither souls repair on quitting this earth.2 It is impossible to say by what blending of doctrines or by what political combinations this Sun of the Night came to be identified with Osiris of Mendes, since the fusion dates back to a very remote antiquity; it had become an established fact long before the most ancient sacred books were compiled. Osiris Khontamentît grew rapidly in popular favour, and his temple attracted annually an increasing number of pilgrims. The Great Oast had been considered at first as a sort of mysterious paradise, whither the dead went in search of peace and happiness. It was called Uit, the Sepulchre this name clung to it after it had become an actual Egyptian province,3 and the remembrance of its ancient purpose survived in the minds of the people so that the "cleft," or gorge in the mountain through which the doublejourneyed towards it, never ceased to be regarded as one of the gates of the other world. At the time of the New Year festivals, spirits flocked thither from all parts of the valley; they there awaited the coming of the dying sun, in order to embark with him and enter safely the dominions of Khontamentît.4 Abydos, even before the historic period, was the only town and its god the only god, whose worship, practised by all Egyptians, inspired them all with an equal devotion.

The excautions of the last few years have brought to light some, at if events, of the oldest Pharaohs known to the Egyptian annalists, namely, those whom they placed in their first human dynastics; and the locality where the monuments of these princes were discovered, shows us that those writers were xni. pp. 71-72) and by Sayee (Gleanings from the Land of Egypt, in the Remail de Transack, vol. x1 pp. 62-65).

<sup>1</sup> It is the present Kom-es-Sultan, where Mariette hoped to find the tomb of Osice.

MASPINO, Études de Mythologie et d'Archeologie Egyptiennes, vol. i., pp. 23, 21.

As late as the Persian epoch, the ancient tradition found its echo in the name "Islesset" (Hi rod., iii. 26) which was given to the Great Oasis. A passage in the inscription describes souls repairing to the Oasis of Zozes (Brigson, Reise nach der Grossen Oase, p. 41, and 'Geogr., p. 1002), which is a part of the Great Oasis, and is generally considered as a dwelling-plate dead (Marrino, Études de Mythologie et d'Archeologie Égyptionnes, vol. ii. pp. 421–427).

<sup>\*</sup> See what is said upon this subject on pp. 196-198 of this work.

correct in representing Thinis as playing an important part in the history of the early ages of their country. If the tomb of Menes-that sovereign whom we are inclined to look upon as the first king of the official lists-lies near the village of Nagadeh, not far from Thebes, those of his immediate successors are close to Thinis, in the cemeteries of Abydos.2 They stand at the very foot of the Libyan hills, near the entrance to the ravine—the "Cleft"—through which the mysterious easis was reached, and thither the souls flocked in order that they might enter by a safe way the land beyond the grave.3. The mass of pottery, whole and broken, which has accumulated on this site from the offerings of centuries has obtained for it among the Fellahin the name of ()mm-el-Gaâb-"the mother of pots."4 The tombs there lie in serried tanks. They present for the most part a rough model of the pyramids of the Memphite period-rectangular structures of bricks without mortar rising slightly above the level of the plain. The funeral chamber occupies the centre of each, and is partly hollowed out of the soil, like a shallow well, the sides being bricked. It had a flat timber roof, covered by a layer of about three feet of sand; the floor also was of wood, and in several cases the remains of the beams of both ceiling and pavement have been brought to light. The body of the royal inmate was laid in the middle of the chamber, surrounded by its tuneral furniture and by a part of the offerings. The remainder was placed in the little rooms which opened out of the principal vault, sometimes on the struclevel, sometimes on one higher than itself; after their contents had been laid within them, the entrance to these rooms was generally walled up. Humin bodies have been found inside them, probably those of slaves killed at the

The account of the discovery and its results was published by J. D. Morgan, Recherches sur les Office de l'Egypte: Ethnographic prehistorique et tombeau royal de Negadah, pp. 147-202. The of each four during these excivations are now in the Gizeh Museum.

The radii of having discovered this important necropolis, and of having brought to high the cathest, nown monuments of the first dynasties, is entirely due to Amelineau. He carried or important work there during four years, from 1895 to 1899; unfortunately its success was imparted by the theories which he claborated with regard to the new monuments, and by the delay in publishing an acount of the objects which remained in his possession. As rygood and buet account of the discovery and of the controver resto which it gave rise, has been unserted by Jass Caralla, at the Origines de l'Egypte, diaprès les foulles récentes, in the Revie de l'Université de Brazelles, od, is, 1898-1899, November No), to which I must refer my reade a for the details. M. Amelineau heaptimentel a short account of his excavations, and of the deductions he has drawn from them, in have pumphiets which appeared between 1896 and 1898, under the title of Les nouvelles jouilles d'Abydos, in 890; the also published some of the monuments he discovered in two volumes, the median of the result of les nouvelles jouilles d'Abydos, 1896-1897; and the second Le tom can d'Orris, 1899. Professor Petrie has continued M. Amélineau's exervations (1890-1900), and he given us the result of his researches in The Royal Tombs of the First Dynasty, 1900, part is

illus ingenious simile was made by Professor Petrie, op. cit. p 4

funeral that they might wait upon the dead in his life beyond the grave.1 The objects placed in these chambers were mostly offerings, but besides these were coarse stelle bearing the name of a person, and dedicated to "the double of his luminary."2 Some of them mention a dwarf 3 or a favourite dog of the sovereign,4 who accompanied his master into the tomb. Tablets of ivory or bone skilfully incised furnish us with scenes representing some of the ceremonies of the deification of the king in his lifetime and the sacrifices offered at the time of his burial; 5 in rarer instances they record his exploits.6 themselves were such as we meet with in burials of a subsequent age-bread, cakes, meat, and poultry of various sorts 7-indeed, everything we find mentioned in the lists inscribed in the tombs of the later dynasties, particularly the jars of wine and liquors, on the clay bungs of which are still legible the impression of the signet bearing the name of the sovereign for whose use they were sealed <sup>8</sup> Resides stuffs and mats, the furniture comprised chairs, beds, stools, an enormous number of vases, some in coarse pottery for common use, others in choice stone such as diorite, granite, or rock crystal very finely worked, on the fragments of all of which may be read cut in outline the names and preamble of the Pharaoh to whom the object belonged.9 The ceremonial of the funerary offering and its significance was already fully developed at this early period. this can be gathered by the very nature of the objects buried with the deceased.

1 FL. PETRIE, The Royal Tombs of the First Dynasty, part i. p. 14.

<sup>&</sup>lt;sup>2</sup> AMÉLINEAU, Les nouvelles fouilles, etc., pls. xxxv.-xxxvii.; J. DE MOBGAN, Recherches sur les Origines de l'Egypte, vol. ii. pp. 239, 240; Fl. Petrie, op. cit., part i., pls. xxxiv.-xxxvi. The formula is the same as that found on some of the Theban stelse of the XX-XXI<sup>4</sup> dynasties; like many of the Theban formulas, this particular one is merely a revival of a very ancient one, which dates back to the primitive ages of Egyptian history. The "luminous double" or the "double of his luminary" is doubtless that luminous spectre which haunted the tombs and even the houses of the living during the night, and which I have mentioned, supra, p. 114.

<sup>&</sup>lt;sup>2</sup> AMELINEAT, Les nouvelles fouilles, etc., p<sup>1</sup>s. xxxv.-xxxviii.; J. de Morgan, Rechaptes sur le Origines de l'Egypte, vol. ii. p. 240, No. 893; Fl. Petrie, op. cit., part i., pl. xxxv., Nos. 36, 37. Petrie found the skeletons o. two dwarfs, probably the very two to whom the two stelle (Nos. 36, 37) in the tomb of Semempses were raised (The Royal Tombs, vol. i. pp. 13, 27). Was one of these dwarfs one of the Danga of "uanit who were sought after by the Pharmohs of the Memphite dynastics?

by their number, quantity, and by the manner in which they were arranged Like their successors in the Egypt of later times, these ancient kings expected continue their material existence within the tomb, and they took precautions that life there should be as comfortable as circumstances should permit Access to the tomb was sometimes gained by a sloping passage or staircase this made it possible to see if everything within was in a satisfactory condition. After the dead had been enclosed in his chamber, and five or six feet of sand had been pread over the beams which formed its roof, the position of the tomb was shown merely by a scarcely perceptible rise in the soil of the necropolis. and its site would soon have been forgotten, if its easternmost limits had not been marked by two large stelse on which were carefully engraved one of the appellations of the king-that of his double, or his Horus name.1 It was on this spot, upon an altar placed between the two stelæ, that the commemorative ceremonies were celebrated, and the provisions renewed on certain days fixed by the religious law. Groups of private tombs were scattered around, -- the resting-places of the chief officers of the sovereign, the departed Pharaoh being thus surrounded in death by the same courtiers as those who had attended him during his earthly existence.3

The princes, whose names and titles have been revealed to us by the inscriptions on these tombs, have not by any means been all classified as yet, the prevailing custom at that period having been to designate them by their Horus names, but rarely by their proper names, which latter is the only one which figures in the official lists which we possess of the Egyptian kings. A few texts, more explicit than the rest, enable us to identify three of them with the Usaphais, the Miebis, and the Semempses of Manetho—the fifth, sixth, and seventh kings of the It dynasty. The fact that they are buried in the necropolis of Abydos apparently justifies the opinion of the Egyptian chroniclers that they were natives of Thinis. Is the Menes who usually figures at their head also a Thinite prince? Several scholars believe that his

<sup>1</sup> For the Horus name of the Pharaohs, see infra, pp. 260, 261

PIPRIE, op. ait., part i. pp. 3-7, where the author has made a restoration of the aspect presented by these royal tombs on that site in ancient times.

The cridit is due to Spring (Die altesto geschichtliche Denkmaler der "Fgypter, in the Zerschrift. 1897, pp. 1-6) of having attributed their ordinary names to several of the kings of the Ist dynasty with Hommunes only which were found by Amelineau, and those identifications have been accepted by all 1, c ptologists. Petric discovered quite recently on some fragments of vases the Horus names of the same princes, together with their ordinary names (The Royal Tombs, etc., pp. 4-6). The Laphus, the Miebis, and the Semempses of Manetho are now satisfactorily identified with the Pharaohs discovered by Amelineau and by Petric. For the readings proposed for these hards are Masselbo, Revue critique, 1900, vol. ii. p. 1.

<sup>&#</sup>x27; le the time of Seti I, and Ramses II he heads the list of the Table of Abydos. Under

ordinary name, Mînî, is to be read on an ivory tablet engraved for a sovereign whose Horus name-Ahauîti, the warlike-is known to us from several documents, and whose tomb also has been discovered, but at Nagadeh. It is a great rectangular structure of bricks 165 feet long and 81 broad, the external walls of which were originally ornamented by deep polygonal grooves, resembling those which score the façade of Chaldwan buildings, but the Nagadeh tomb has a second brick wall which fills up all the hollows left in the first one, and thus hides the primitive decoration of the monument. The building contains twenty-one chambers, five of which in the centre apparently constituted the dwelling of the deceased, while the others, grouped around these, serve as storehouses from whence he could draw his provisions at will.2 Did the king buried within indeed bear the name of Mones,3 and if such was the case, how are we to reconcile the tradition of his Thinite origin with the existence of his far-off tomb in the neighbourhood of Thobes? Objects bearing his Horus name have been found at Omm-el-Gaâb, and it is evident that he belonged to the same age as the sovereigns interred in this necropolis. If, indeed, Menes was really his personal name, there is no reason against his being the Menes of tradition, he whom the Pharaohs of the glorious Theban dynastics regarded as the earliest of their purely human ancestors. Whether he was really the first king who reigned over the whole of Egypt, or whether he had been preceded by other sovereigns whose monuments we may find in some site still unexplored, is a matter for conjecture. That princes had exercise! authority in various parts of the country is still uncertain, but that the Egyptian historians did not know them, seems to prove that they had left no written records of their names. At any rate, a Mones lived who reigned at the outset of history, and doubtless before long the Nile valley, when more carefully explored, will yield us monuments recording his actions and

Ramses II, his of the was carried in procession, preceding all the other royal statues (Chambettos Monuments de ... gypt et de la Nuble, pl. calix; Leraus, Denkm., iii. 163). Finally, the "R vol Papyrus" of Turin, written in the time of Ramses I., begins the entire series of the human Philippe with his nam.

<sup>&</sup>lt;sup>3</sup> The sign Mann, who is appears on the ivery tablet found in this temb (J. de Mangan, Rechert sur les Origines, vol. ii. p. 167, No. 549), has been interpreted as a long's name, and consequent inferred to be Menes, simultaneously by Borchardt (Ein never Königsname der Ersten Dynaster) the Sitzungsterichte of the Academy of Sciences of Berlin, 1897, source at the 25th Novem pp. 1054, 1058) and Maspero (Reche Critique, 1897, vol. ii. p. 440). This reading has been despit on various sides, and latest by Naville (Las plus anciens Monuments Egyptiens, in the Reche travaux, 1899, vol. axi, p. 107, et seq.). The point remains, therefore, a contested one until turb. I discovery.

determining his date. The civilization of the Egypt of his time was ruder than that with which we have hitherto been familiar on its soil, but even at that early period it was almost as complete. It had its industries and its arts, of which the cometeries furnish us daily with the most varied examples: weaving, modelling in clay, wood-carving, the incising of ivory, gold, and the hardest stone were all carried on; the ground was cultivated with hoe and plough; tombs were built showing us the model of what the houses and palaces must have been; the country had its army, its administrators, its priests, its nobles, its writing, and its system of epigraphy differs so little from that to which we are accustomed in later ages, that we can decipher it with no great difficulty. Frankly speaking, all that we know at present of the first of the Pharaohs beyond the mere fact of his existence is practically nil, and the stories related of him by the writers of classical times are mere legends arranged to suit the fancy of the compiler. "This Menes, according to the priests, surrounded Memphis with dykes. For the river formerly followed the saudhills for some distance on the Libyan side. Menes, having dammed up the reach about a hundred stadia to the south of Memphis, caused the old bed to dry up, and conveyed the river through an artificial channel dug midway between the two mountain ranges. Then Menes, the first who was king, having enclosed a firm space of ground with dykes, there founded that town which is still called Memphis; he then made a lake round it, to the north and west, fed 1. the river, the city being bounded on the east by the Nile." 1 The history of Memphis, such as it can be gathered from the monuments, differs considerbly from the tradition current in Egypt at the time of Herodotus.2 It appears, indeed, that at the outset, the site on which it subsequently arose was occupied by a small fortress, Anbû-hazû-the white wall-which was dependent on Heliopolis, and in which Phtah possessed a sanctuary. After the "white wall" was separated from the Heliopolitan principality to form a nome by itself, it assumed a certain importance, and furnished, so it was said, the dynasties which succeeded the Thinite. Its prosperity dates only, however, from the time when the sovereigns of the Vth and VIth dynastics fixed on it for their residence; one of them, Papi I., there founded for himself and for his "double" after him, a new town, which he called Minnoffrû, from his tomb. Minnotiru, which is the correct pronunciation and the origin of Memphis, probably signified "the good refuge," the haven of the good.

thram, ii. 99. The dyke supposed to have been made by Mones is evidently that of Q statish, which now protects the province of Gizeh, and regulates the mundation in its normalization and

It has been most eleverly disentangled by ERMAN, Liggiture, pp. 240-244

the burying-place where the blessed dead came to rest beside Osiris.1 The people soon forgot the true interpretation, or probably it did not fall in with their taste for romantic tales. They were rather disposed, as a rule, to discover in the beginnings of history individuals from whom the countries or cities with which they were familiar took their names: if no tradition supplied them with this, they did not experience any scruple in inventing The Egyptians of the time of the Ptolemies, who were guided in their philological speculations by the pronunciation in vogue around them. attributed the patronship of their city to a Princess Memphis, a daughter of its founder, the fabulous Uchoreus; 2 those of preceding ages before the name had become altered, thought to find in Minnostrû a "Mîni Nosir," or "Menes the Good," the reputed founder of the capital of the Delta. Menes the Good, divested of his epithet, is none other than Menes, the first king, and he owes this episode in his life to a popular attempt at etymology. The legend which identifies the establishment of the kingdom with the construction of the city, must have originated at a time when Memphis was still the residence of the kings and the seat of government, at latest about the end of the Memphite period. It must have ten an old tradition in the time of the Theban dynasties, since they admitted unhesitatingly the authenticity of the statements which ascribed to the northern city so marked a superiority over their own country.

When once this half-mythical Menes was firmly established in his position, there was little difficulty in inventing a story which would portray him as an ideal sovereign. He was represented as architect, warrior, and statesman; he had begun the temple of Phtah, written laws and regulated the worship of the gods, particularly that of Hâpis, and he had conducted expeditions against the Libyans. When he lost his only som in the flower of his age, the people improvised a hymn of mourning to console him—the "Maneros"—both the words and the tune of which were handed down from generation to generation. He did not, moreover, disclain

<sup>1</sup> The tran de from made by the Greeks, δρμος ἀγαθῶν, exactly corresponds to the ancient orthographs Min-nofirû, which has become Min-noir, Minnûfi, the "Haven of the Good," by dropping the plur determination and then 'me final τ (Dr Iside et Osiride, § 20, Partier's edition, p. 35). The other translation, τ dφος 'Oσίριδος, given by a Greek author, would derive Momphis from Ma-omphis, M-omphis, in which the name Unnofir, given — Osiris, takes the common form 'Ομφις: τὸ δ'ἔτερον δνομα τοῦ θεοῦ τὸν 'Ομφις εὐεργέτην ὁ Έρμαϊὸς φησιν δηλοῦν ἐρμηνενόμενον (De Iside et Osiride, § 12, Partier's edition, pp. 74, 10).

<sup>&</sup>lt;sup>2</sup> Diodorus Siguiles, i. 50, 51; the legend preserved by this historian was of Thoban on, and Uchoreus, the father of the oponymous goldess of Memphis, being the founder of Thebes.

Nevertheless, in the memory that Egypt preserved of its first Pharaoh, the good outweighed the evil. He was worshipped in Memphis side by side with Phtah and Ramses II.; his name figured at the head of the royal lists, and his cult continued till the time of the Ptolemies.

His immediate successors had an actual existence, and their tombs are there in proof of it. We know where Usaphais, Miobis, and Semempses 1 were laid to rest, besides more than a dozen other princes whose real names and whose position in the official lists are still uncertain. The order of their succession was often a matter of doubt to the Egyptians themselves, but perhaps the discoveries of the next few years will enable us to clear up and settle definitely matters which were shrouded in mystery in the time of the Theban Pharaohs. As a fact, the forms of such of their names as have been handed down to us by later tradition, are curt and rugged, indicative of an early state of society, and harmonizing with the more primitive civilization to which they belong: Ati the Wrestler, Teti the Runner, Qenqoni the Crusher, are suitable rulers for a people, the first duty of whose chief was to lead his followers into battle, and to strike harder than any other man in the thickest of the fight,2 Some of the monuments they have left us, seem to show that their reigns were as much devoted to war as those of the later Pharaohs. The king whose Horus name was Nârumîr, is seen on a contemporary object which has come down to us, standing before a heap of beheaded foes; the bodies are all stretched out on the ground, each with his head placed neatly between h legs: the king had overcome, apparently in some important engagement. several thousands of his enemies, and was inspecting the execution of their leaders.3 That the focs with whom these early kings contended were or most cases Egyptian princes of the nomes, is proved by the list of city names which are inscribed on the fragments of another document of the save nature, and we gather from them that Dobu (Edfu), Hasutonu (Cynopoles). Habonu (Hipponon), Hakau (Memphis) and others were successively taken and disman. led.1 On this fragment King Den is represented standing over a

prostrate chief of the Bedouin, striking him with his mace. Sondi, who is 115Sed in the IInd dynasty, acceived a continuous worship towards the end of the III<sup>16</sup> dynasty.2 But did all those whose names preceded or followed his on tue lists, really exist as he did? and if they existed, to what extent do the order and the relation assigned to them agree with the actual truth? The different lists do not contain the same names in the same positions, certain Pharaohs at added or suppressed without appreciable reason. Where Manctho inscribes hakenes and Ouenephes, the tables of the time of Seti I. give us Ati and Manetho reckons nine kings to the IInt dynasty, while they register ofly five? The monuments, indeed, show us that Egypt in the past obeyed princes whom her annalists were unable to classify for instance, they issociate with Sondi a Pirsenu, who is not mentioned in the annals. We must, therefore, take the record of all this opening period of history for and it is namely, a system invented at a much later dute, by mems of various artifices and combinations—to be partially accepted in default t a better, but without according to it that excessive confidence which this hitherto received. The two Thinite dynasties, in direct descent from the first human king Menes, furnish, like this hero himself, only i tissue of romantic tales and miraculous legends in the place of his-A double-headed stock, which had appeared in the first year

of Teti, son of Menes, had foreshadowed to Egypt a long prosperity, 1 but . famine under Quenephes,2 and a terrible plague under Semempses, had depopte lated the country: 3 the laws had been relaxed, great crimes had been committed, and revolts had broken out. During the reign of Boêthos, a gulf had opened near Bubastis, and swallowed up many people,4 then the Nile had flowed with honey for fifteen days in the time of Nephercheres,5 and Sesochris was supposed to have been a giant in stature.6 A few details about royal edifices were mixed up with these prodigies. Teti had laid the foundation of the great palace of Memphis,7 Quenephes had built the pyramids of Ko-kon t Several of the ancient Pharaohs had published books on theology, or had written treatises on anatomy and medicine; 9 several had made laws which lasted down to the beginning of the Christian era. One of them was called Kakôû, the male of males, or the bull of bulls. They explained has name by the statement that he had concerned himself about the sacred animals he had proclaimed as gods, Hâpis of Memphis, Mnevis of Heliopolis, and the goat of Mendes.10 After him, Binôthris had conferred the right of succession upon all the women of the blood-royal.11 The accession of the III<sup>r1</sup> dynasty. a Memphite one according to Manetho, did not at first change the miraculous character of this history. The Libyans had revolted against Necherophes, and the two armies were encamped before each other, when one night the discol the moon became immeasurably enlarged, to the great alarm of the rebes who recognized in this phenomenon a sign of the anger of heaven, and yielded without fighting.13 Tosorthros, the successor of Necherophes, brought the hieroglyphs and the art of stone-cutting to perfection. He composed as Teti did, books of medicine, a fact which caused him to be identified with the

period which had hitherto sufficed for the worship of Isis, constructed at great cost the temple which still remains almost intact, and assigned to it considerable possessions in Nubia, which, in addition to gifts from private individuals, made the goddess the richest landowner in Southern Egypt. Khuûmû and his to

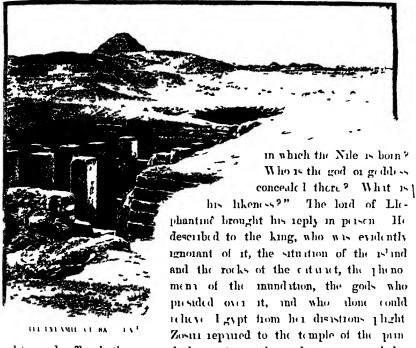

wives, Anûkit and Satît, who, before Isis, had been the undisputed suzerains of the cataract, perceived with jealousy their neighbour's prosperity: the civil wars and invasions of the centuries immediately preceding had ruined their temples, and their poverty contrasted painfully with the riches of the new-comer. The priests resolved to lay this sad state of affairs before King Ptolemy, to represent to him the services which they had rendered and still continued to render to Egypt, and above all to remind him of the generosity of the ancient Pharaohs, whose example, owing to the poverty of the times, the recent Pharaohs had been unable to follow Doubtless authentic documents were wanting in their archives to support their pretensions: they therefore inscribed upon a rock in the island of Schel, a long inscription which they attributed to Zesiri of the III<sup>rd</sup> dynasty. This sovereign had left behind lim a vague reputation for greatness. As early as the XII<sup>rd</sup> dynasty

Usirtasen III. had claimed him as "his father"—his ancest and had erected a statue to him; the priests knew that, be invoking him, they had a chance of obtaining a hearing.

inscription which they fabricated, set forth that in the eighteenth ven of Zosiri's reign he had sent to Madir, lord of Elephantini, a messue couched in these terms: "I am overcome with sorrow for the throne and for those who reside in the palace, and my heart is afflicted end suffers greatly because the Nile has not risen in my time, for the special eight years. Corn is scarce, there is a lack of herbage, and nothing is left to ear: when any one calls upon his neighbours for help, they take pains not to go. The child weeps, the young man is uneasy, the hats of the of a men are in de-pair, their limbs are bent, they crouch on the earth, they fold their hands; the courtiers have no further resources the nished with rich wares are now filled only with anshops formerly all that was in them has disappeared. My spirit also, mindful of the beginning of things, seeks to call upon the Saviour who was here where I am, during the centuries of the gods, upon Thot-Ibis, that wise one, upon Imhotpû, son of Phtah of Memphis. Where is the place

<sup>&</sup>lt;sup>1</sup> The mutilated base of the statue is now preserved in the Egyptian Museum at Berlin (f 110), Verseichniss der Ægyptischen Altertümer und Gipsabgusse, p. 31, No. 91<sup>4</sup>)

of dity and offered the prescribed sterrices, the god arose, opened his eyes, panted and cried aloud, 'I am Khnumu who created, thee!' and promised him a speedy return of a high Nile and the cessation of the lamins. Pharaoh was touched by the benevolence which his divine father had shown him, he forthwith made a decree by which he ceded to the taple all his rights of suzeranty over the neighbouring nomes within a radius of twenty miles. Henceforward the entire population tillers and vinedressers fishermen and hunters, had to yield the tithe of their many comes to the priests—the quarries could not be worked without the court of Khnūmū, and the payment of a suitable indemnity into his country and finally, ill metals and precious wood—hipped theme—to I gapt his to submit to a toll on behalf of the temple—Did the Ptolemis with it the claims which too local priests attempted to deduce fi in this

romantic tale? and did the god regain possession of the domains and dues which they declared had been his right? The stele shows us with what ease the scribes could forge official documents, when the exigencies of daily life forced the necessity upon them; it teaches us at the same time how that fabulous chronicle was elaborated, whose remains have been preserved for us by classical writers. Every prodigy, every fact related by Manetho, was taken from some document analogous to the supposed inscription of Zosiri.

The real history of the early centuries, therefore, cludes our researches. and no contemporary record traces for us those vicissitudes which Egypt passed through before being consolidated into a single kingdom, under the rule of one man. Many names, apparently of powerful and illustrious princes, had survived in the memory of the people; these were collected, classified, and grouped in a regular manner into dynastics, but the people were ignorant of any exact facts connected with the names, and the historians, on their own account, were reduced to collect apocryphal traditions for their sacrel archives. The monuments of these remote ages, however, cannot have entirely disappeared: they exist in places where we have not as yet thought of applying the pick, and chance excavations will some day most certainly bring them to light. The few which we do possess barely go back beyond the III<sup>rd</sup> dynasty: namely, the hypogeum of Shiri, priest of Sondi and Pirsenû; 2 possibly the tomb of Khûîthotpû at Saqqâra; 3 the Great Sphinx of Gizeh; a short inscription on the rocks of the Wady Maghâra, which represents Zosiri (the same king of whom the priests of Khnûmû in the Greek period made a precedent) working the turquoise or copper mines of Sind; 4 and finally the Step-Pyramid where this same Pharaoh rests.<sup>5</sup> It forms a

The legend of the yawning gulf at Bubastis must be connected with the gifts supposed to have been offered by King Boëthos to the temple of that town, to repair the losses sustained by the goddess on that occasion; the legend of the postilence and famine is traceable to some relative to by a local god and for which Semempses and Uemphes might have shown their gratitude in the same way as word. The todition of the successive restorations of Denderah (Denderah, Bannahude der Imprimilagen von Dendera, pl. xvi. a-b, and pp. 15, 18, 19) accounts for the construction attributed to I let I and to Tosorthros; flusly, the pretended discoveries of sacred books, dealt with elsewhere (1 p. 221, 225), show how Manetho was enabled to attribute to his Pharaolis the authorship of works on medicine or theology.

tacing, each facing being carefully dressed. The body of the pyramid is solid, the chambers being cut in the rock beneath. These chambers have been often enlarged, restored, and reworked in the course of centuries. and the passages which connect them form a perfect labyrinth into which it is dangerous to venture without a guide. The columned porch, the galleries and halls, all lead to a sort of enormous shaft, at the bottom of which the architect had contrived a hiding-place, destined, no doubt, to contain the more precious objects of the funerary furniture. Until the beginning of this century, the vault had preserved its original lining of glazed pottery. Three quarters of the wall surface were covered with green tiles, oblong and slightly convex on the outer side, but flat on the inner: a square projection pierced with a hole, served to fix them at the back in a horizontal line by means of flexible wooden rods. The three bands which frame one of the doors are inscribed with the titles of the Pharaoh: the hiero glyphs are raised in either blue, red, green, or yellow, on a fawn-coloured ground. Other kings had built temples, palaces, and towns, -as, for instance, King Khásakhimu, of whose constructions some traces exist at Hieracônpoles. opposite to El-Kab, or King Khâsakhmui, who preceded by a few years the Pharaohs of the IVth dynasty -but the monuments which they raised to be witnesses of their power or piety to future generations, have, in the course of ages, disappeared under the tramplings and before the triumphal blasts of many invading hosts: the pyramid alone has survived, and the mot ancient of the historic monuments of Egypt is a tomb.

## CHAPTER IV.

## THE POLITICAL CONSTITUTION OF EGYPT

The king, the queen and the royal princes -Administration under the Phartons-I end dismorth the East ten priesthood, the military-The citizens and country people

Lybian range expands and forms a vast and slightly undulating table-land, which runs parallel to the Mile for nearly thirty leagues. The Great Sphinx Raimakhis has mounted guard over its northern extremity ever since the time of the Pollowers of Horus. Hewn out of the solid rock at the extreme margin of the mountain-plateau, he seems to raise his head in order that he may be the first to behold across the valley the rising of his father the Sun. Only the general out, line of the hone can now be traced in his weatherworn body. The lower portion of the head dress has fallen, so that the neck appears too slender to support the weight of the head. The cannon shot of the fanatical Mannelukes has injuried both the neck

and heard, and the red colouring which gave animation to his features has now almost entirely disappeared. But in spite of this, even in its

decay, it still bears a commanding expression of strength and dignity. The eyes look into the far-off distance with an intensity of deep thought, the hips still smile, the whole face is pervaded with calmness and power. The art that could conceive and how this gigantic statue out of the mountain side, was an art in its maturity, master of itself and sure of its effects. How many centuries were needed to bring it to this degree of development and perfection! In later times, a chapel of alabaster and rose granite was erected alongside the god; temples were built here and there in the more accessible places, and round these were grouped the tombs of the whole

THE MANIABA OF KHOMINI IN THE NECROSOLIS OF ( 1/1) I

country. The bodies of the common people, usually naked and uncofficed, were thrust under the said, at a depth of barely three feet from the suit. Those of a better class rested in mean rectangular chambers, histely bailt a yellow bricks, and roofed with pointed vaulting. No ornaments of treisms gladdened the deceased in his miscrable resting-place; a few vessels, however of course pottery contained the provisions left to nourish him during the period of his second existence.

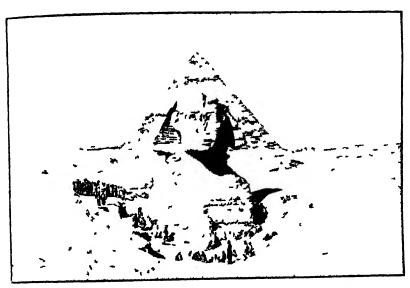

Some of the wealthy class had then tombs cut out of the mounter side, but the responty preferred an isolated tomb, a "mastaba, " compile a chapel at we ground, a shaft, and some subterranean vaults. From a

The rule is not as invited I as Muit to be, and I have pointed out a few examples of stella freing north or south

at the top to receive the gifts mentioned in the inscription on the exterior of the tomb. The general appearance is that of a rather low, narrow doorway, too small to be a practicable entrance.1 The recess thus formed is almost always left empty: sometimes, however, the piety of relatives placed within it a statue of the deceased. Standing there, with shoulders thrown back, head erect and smiling face, the statue seems to step forth to lead the double from its dark lodging where it lies embalmed, to those glowing plains when he dwelt in freedom during his earthly life: another moment, crossing the threshold, he must descend the few steps leading into the public hall. On festivals and days of offering, when the priest and family presented the banquet with the customary rites, this great painted figure, in the act of advancing, and seen by the light of flickering torches or smoking lamps, might well appear endued with life. It was as if the dead ancestor himself stepped out of the wall and mysteriously stood before his descendants to claim their homage. The inscription on the lintel repeats once more the name and rank of the dead. Faithful portraits of him and of other members of his family figure in the bas-reliefs on the door-posts. The little scene at the far end represents him scated tranquilly at table, with the details of the feast carefully recorded at his side, from the first moment when water is brought to him for ablution, to that when, all culinary skill being exhausted, he has but to return to his dwelling, in a state of beatst d satisfaction. The stele represented to the visitor the door leading to the private apartments of the deceased; the fact of its being walled up for ever showing that no living mortal might cross its threshold. The mscription which covered its surface was not a mere epitaph informing future ( generations who it was that reposed beneath. It perpetuated the name and \$ genealogy of the deceased, and gave him a civil status, without which he could not have preserved his personality in the world beyond; the nameless dead, like a living man without a name, was reckoned as non-example Nor was onis the only use of the stele; the pictures and prayers installed upon it ected as so many talismans for ensuring the continuous existence of the ancestor, whose memory they recalled. They compelled the god therein invoked whether Osiris or the jackal Anubis, to act as mediator between the living and the departed; they granted to the god the engly ment of sacrifices and those good things abundantly offered to the deries, and by which they live, on condition that a share of them might first be

sides of the chamber and passage were not left bare. When time or the wealth of the owner permitted, they were covered with scenes and writing, expressing at greater length the ideas summarized by the figures and inscriptions of the stele. Neither pictorial effect nor the capacitof the moment was permitted to guide the artist in the choice of his subjects, all that he drew, pictures or words, had a magical purpose. Every individual who built not himself an "eternal house," either attached to it a staff of priests of the suble, of inspectors, scribes, and slaves, or else made an agreement with the priests of a neighbouring temple to serve the chapel in perpetuity. Lands taken from his patrimony, which thus became the

<sup>1</sup> MARPERO, Liudes de Mythologie et d'Archeologie Ligyptiennes, vol i. pp. 1-31; Guide du l'ur au Musée de Boulaq, p. 31, et soq.; and Archeologie Ligyptienne, p. 155, et seq.

Drawn by Faucher-Gudin, from a "squeeze" taken from the tomb of Ti. The dometrepresented as women. The name is written before each figure, with the designation of the owner—"the nebbek [locust tree?] of Ti," "the two sycamores of Ti," "the wine of Ti;" of this volume.

"Domains of the Eternal House," rewarded them for their trouble, and supplied them with meats, vegetables, fruits, liquors, linen and vessels for sacrifice. In theory, these "liturgies" were perpetuated from year to year, until the end of time; but in practice, after three or four generations, the

Drawn by Faucher-Gudin, from a photograph by Dümenen, Resultate, vol. i. pl. 13.

The mutilated text of the tomb of Sondionkhů offers an example of these menaces in the period with which we are dealing (Maniette, Les Mastabas, p. 313; cf. E. and J. de Rouge, Inscriptions hieroglyphiques, vol. i. pl. 1). Shorter formulas are found in the tombs of Hotpühikhüüt (Mariette, Les Mastabas, p. 342), of Khonû (id., p. 185), and of Niuki (Pinne, Inscriptions proteined d'un Mastaba de la VP Dynastie, in the Proceedings of the Society of Biblical Archwology, vol. mil. pp. 121-126).

burial, should be maintained throughout the centuries, the relatives no only depicted them upon the chapel walls, but represented in addition the lands which produced them, and the labour which contributed to the production. On one side we see ploughing, sowing, reaping, the carrying of the corn, the storing of the grain, the fattening of the poultry, and the driving of the cattle. A little further on, workmen of all description are engaged in their several trades: shoemakers ply the awl, glassmakers blow through their tubes, metal founders watch over their smelting-notcarpenters hew down trees and build a ship; groups of women weave or spin under the eye of a frowning taskmaster, who seems impatient of them chatter. Did the double in his hunger desire meat? He might choose from the pictures on the wall the animal that pleased him best, whether had ox, or gazelle; he might follow the course of its life, from its birth in the meadows to the slaughter-house and the kitchen, and might satisfy his hunger with its flesh. The double saw himself represented in the paintings as hunting, and to the hunt he went; he was painted cating and drinking with his wife, and he ate and drank with her; the pictural ploughing, harvesting, and gathering into barns, thus became to him actual realities. In fine, this painted world of men and things represented up a the wall was quickened by the same life which animated the double, u an whom it all depended: the picture of a meal or of a slave was perhaps the which best suited the shade of guest or of master.1

Even to-day, when we enter one of these decorated chapels, the idea of death scarcely presents itself: we have rather the impression of being in some old-world house, to which the master may at any moment neturn. We see him portrayed everywhere upon the walls, followed by his servants and surrounded by everything which made his earthly life enjoyable. One of two statues of him stand at the end of the room, in constant readmess to undergo the "Opening of the Mouth" and to receive offerings. Should these be accidentally removed, others, secreted in a little chamber hide in the thickness of the masonry, are there to replace them. These in the chambers have rarely any external outlet, though occasionally they are connected with the chart by a small opening, so narrow that it will hardly admit of a hand being passed through it. Those who came to repeat prayers the burn incense at this aperture were received by the dead in person.

<sup>&</sup>lt;sup>2</sup> This is the "serdab," or "passage" of Arab diggers; of Marierre, Notice des primonuments, 1864, pp. 23, 24; Sur les tombes de l'Anoien Empire, pp. 8, 9; Les Mastabas, pp. 11,

of a god could be linked to an idol in the temple sanctuary in order to transform it into a prophetic being, capable of speech and movement, 1 so when the double of a man was attached to the effigy of his earthly body. whether in stone, metal, or wood, a real living person was created and was introduced into the tomb. So strong was this conviction that the belief has lived on through two changes of religion until the present day. The double still haunts the statues with which he was associated in the past. As in former times, he yet strikes with madness or death any who dare to disturb his repose; and one can only be protected from him by breaking, at the moment of discovery, the perfect statues which the vault contains. The double is weakened or killed by the mutilation of these his sustainers.2 The statues furnish in their modelling a more correct idea of the deceased than his mummy, disfigured as it was by the work of the embalmers; they were also less easily destroyed, and any number could be made at will. Hence arose the really incredible number of statues sometimes hidden away in the same tomb.8 These sustainers or imperishable bodies of the double were multiplied so as to insure for him a practical immortality; and the care with which they were shut into a secure hiding-place, increased their chances of preservation.4 All the same, no precaution was neglected that could save a munimy from destruction. The shaft leading to it descended to a mean depth of forty to fifty feet, but sometimes it reached, and even exceeded, a hundred feet. Running horizontally from it is a passage so low as to prevent a man standing upright in it, which leads to the sepulchral chamber properly so called, hewn out of the solid rock and devoid of all ornament; the sarcophagus, whether of fine limestone, rose-granite, or black basalt, does not always bear the name and titles of the deceased. The servants who deposited the body in it placed beside it on the dusty floor the quarters of the ox, projously slaughtered in the chapel, as well as phials of perfume, and large vases of red pottery containing muddy water; after which they walled up the entrance to the passage and filled the shaft with chips of stone intermingled with earth and gravel. The whole, being well watered, soon

See what has been said on the subject of prophetic statues on pp. 119, 120 of this History. The legends still current about the pyramids of Gizeh turnsh some good examples of this limit of superstition. "The guardian of the Eastern pyramid was an idel . . . who had both eyes open, and was seated on a throne, having a sort of halberd near it, on which if any one fixed his by, he heard a fearful noise, which struck terror to his heart, and caused the death of the light. There was a spirit appointed to wait on each guardian, who departed not from before him. The keeping of the other two pyramids was in like manner entrusted to a statue, assisted by a spirit (L'Lyapto de Mourtadi, fils du Gaphinhe, from the translation of M. Pierre Variers, Paris, 1000, pp. 16-61). I have collected a cortain number of tales resembling that of Mourtadi in the Linder de Mythologie et d'Archéologie Egyptiennes, vol. i. p. 77, et seq.

Eighteen or nineteen were found in the serial of Rahotpa only at Saqqlia (Mahii III. Notice des principaus Monuments, 1864, pp. 62, 182, 202; Les Mastabas de l'Ancien Empire, p. 157)

Maspero, Études de Mythologie et d'Archéologie Égyptiennes, vol. i. pp. 7-9, 47 49, etc

hardened into a compact mass, which protected the vault and its master from desecration.<sup>1</sup>

During the course of centuries, the ever-increasing number of tomb, at length formed an almost uninterrupted chain of burying-places on the table-land. At Gizeh they follow a symmetrical plan, and line the sides of regular roads: 2 at Saggâra they are scattered about on the surface of the ground, in some places sparsely, in others huddled confusedly together? Everywhere the tombs are rich in inscriptions, statues, and painted or sculptured scenes, each revealing some characteristic custom, or some detail of contemporary civilization. From the womb, as it were, of these cometeries, the Egypt of the Memphite dynasties gradually takes now life, and reappears in the full daylight of history. Nobles and fellahs, soldiers and priests, scribes and craftsmen,-the whole nation lives anew before us; each with his manners, his dress, his daily round of occupation and pleasures. It is a perfect picture, and although in places the drawing is defaced and the colour dimmed, yet these may be restored with no great difficulty, and with almost absolute certainty. The king stands out boldly in the foreground, and his tall figure towers ever all else. He so completely transcends his surroundings, that at first such one may well ask if he does not represent a god rather than a min; and, is a matter of fact, he is a god to his subjects. They call him "the good god," "the great god," and connect him with Ra through the intervening kings, to successors of the gods who ruled the two worlds. His father I fore him to s "Son of Ra," as was also his grandfather, and his great-grandfather, and so through all his ancestors, until from "son of Ra" to "son of Ra" they at list reached Râ himself. Sometimes an adventurer of unknown antecedents is abruptly inserted in the series, and we might imagine that he would interrupt the succession of the solar line; but on closer examination we always find that either the intruder is connected with the god by a genealogy hitherto unsuspected, or that he is even more closely related to him than his predecessors. inasmuch as Ra, having secretly lescended upon the earth, had begotten him by a mortal mother in order to rejuvenate the race. If things came to the worst, a marriage with some princess would soon legitimise, if not the usurper himself,

Suggara is in reality composed of a score of cometeries, grouped around, or between the pyramids, each having its clientile and particular regulations.

A legend, preserved for us in the Westear Pappens (Erman's edition, pl. ix. II. 5-11, pl. ... be et seq.), maintains that the first three kings of the V<sup>th</sup> dynasty, Üsirkaf, Sahūri, and Kakan. ... the children born to Ra, lord of Sakhībā, by Rūdlītdīdīt, wife of a priest attached to the term.

at least his descendants, and thus firmly re-establish the succession.1 The

Pharaohs, therefore, are blood-relations of the Sun-god, some through their father, others through their mother, directly begotten by the God, and their souls as well as their bodies have a supernatural origin; each soul being a double detached from Horus, the successor of Osiris, and the first to reign alone over Egypt. This divine double is infused into the royal infant at birth, in the same manner as the ordinary double is incarnate in common mortals. It always remained concealed, and seemed to lie dormant in those princes whom destiny did not call upon to reign, but it awoke to full self-consciousness in those who ascended the throne at the moment of their accession. From that time to the hour of their death. and beyond it, all that they possessed of ordinary humanity was completely effaced; they were from henceforth only "the sons of Râ," the Horus, dwelling upon earth, who, during his sojourn here below, renews the blessings of Horus, son of Isis.2 Their complex nature was revealed at the outset in the form and trrangement of their names. Among

THE BIRTH OF A KING AND HIS DOUBLE.4

the Egyptians the choice of a name was not a matter of indifference; not only did men and beasts, but even inanimate objects, require one or more names, and it may be said that no person or thing in the world could attain to complete

According to the law attributed to Binothris of the 11<sup>rd</sup> dynasty; cf. p. 238 of this volume.

The expressions designating kingly power in the time of the Ancient Empire were first analy od by E. DE ROUGE, Reclerches sur les monuments qu'on peut attribuer aux six premières dynasties de Manthon, pp. 32, 33; and subsequently by Erman, Agypten and Agyptisches Leben, pp. 89-91. The explanation which I have given above has already been put forward in a small memoir entitled Sur les quatre noms officiels des rois d'Égypte (Etades Egyptiennes, vol. ii. pp. 273-288; and in the Lectures Histori ju. s, pp. 42-45).

Drawn by Faucher-Gudin, from a photograph by Gayet. The king is Amenothes III., whose conception and birth are represented in the temple of Luxor, with the same wealth of details that we should have expected, had he been a son of the god Amon and the goddess Mut: cf. Chan-Poli inx. Monumente de l'Egypte et de la Nubie, pl. cecxxix., 2-cecxli.; Rosellini, Monumenti Storici, pl. 58-11; Lersrus, Denkm., 111-14, 75.

existence until the name had been conferred. The most ancient names were often only a short word, which denoted some moral or physical quality, as Titi the runner, Mini the lasting, Qonqeni the crusher, Sondi the formidable. Uznasit the flowery-tongued. They consisted also of short sentences, by which the royal child confessed his faith in the power of the gods, and his particupation in the acts of the Sun's life-"Khafrt," his rising is Ra; "Menkaûhorû," the doubles of Horus last for ever; "Ûsirkerî," the double of Ri is omnipotent. Sometimes the sentence is shortened, and the name of the god is understood: as for instance, "Usirkaf," HIS double is omnipotent: "Snofrûi," HE has made me good; "Khûfûi," HE has protected me, are put for the names "Ûsirkerî," "Ptahsnofrûi," "Khnûmkhûfûi," with the suppression of Râ, Phiah, and Khnûmû.2 The name having once, as it were, taken possession of a man on his entrance into life, never leaves him either in this world or the next; the prince who had been called Unas or Assi at the moment of his birth, retained this name even after death, so long as his mummy existed, and his double was not annihilated.

When the Egyptians wished to denote that a person or thing was it is certain place, they inserted their names within the picture of the place i question. Thus the name of Teti is written inside a picture of Teti's card the result being the compound hieroglyph [31]. Again, when the son et a king became king in his turn, they enclose his ordinary name in the mare flat-bottomed frame which we call a cartouche; the elliptical part cowhich is a kind of plan of the world, a representation of those regions pass d over by Râ in his journey, and over which Pharaoh, because he is a son it Râ, exercises his rule. When the names of Teti or Snofrûi, following the group 2. "son of the Sun," are placed in a cartouche, (2. ) they are preceded by the words - which respectively express sover (200) over the two lalves of Egypt, the South and the North, the whole expression describing exactly the visible person of Pharaoh during his abode and & mortals. But this first name chosen for the child did not include the whole man; it but w thout appropriate designation the double of Horus, which are revealed in the prince at the moment of accession. The double that ' ie received a special the, which is always constructed on a uniform plan: inst the picture of the hawk-god, who desired to leave to his descendants a perion of his soul, then a simple or compound epithet, specifying that virta of Horus which the Pharaoh wished particularly to possessing Iforû nîb n

The name Phtahsnofrûi is frequently met with on the stelle of Abydos (Litherty, Phase of the name Rhibroglyphiques, Nos. 132 and 726, pp. 40 and 241; Mariette, Abydos, vol. 11 pl. <sup>&</sup>lt;sup>2</sup> For the restitution of the omitted elements in these and some other royal names of the period, cf. W. Max Müller, Bemerkung über einige Königenamen, in the Recueil de Trataux (ix. pp. 176, 177.

llorus master of Truth; "Horû miri-toûi," Horus friend of both lands;

nîbkhâùû," Horus " Horû master of the risings; "Horu mazîti," Horus who crushes his enemics. The variable part of these terms is usually written in an oblong rectangle, terminated at the lower end by a number of lines portraying in a summary way the façade of a monument, in the centre of which a bolted door may sometimes be distinguished: this is the representation of the chapel where the double will one day rest, and the closed door is the portal of the tomb.1 The stereotyped part of the names and titles, which is represented by the figure of the god, is placed outside the rectangle, sometimes by the side of it, sometimes upon its top: the hawk is, in fact, free by nature, and could nowhere remain imprisoned against his will.

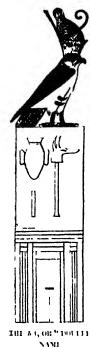

THE ADULT KING ADVANCING, FOLLOWED BY HIS

This artless preamble was not enough to satisfy the love of precision which is the essential characteristic of the Egyptians. When they wished to represent the double in his sepulchral chamber, they left out of consideration the period in his existence during which he had presided over the earthly destinies of the sovereign, in order to reader them similar to those of Horus, from whom the

This is what is usually known as the "Banner Name;" indeed, it was for some time believed that this sign represented a piece of stuff, ornamented at the bottom by embroidery or fringe, and learing on the upper part the title of a king. Wilkinson thought that this "square title," as healfulf, represented a house (Extract from secred Hieroglyphical Subjects, p. 7, note 14). The real meaning of the expression was determined by Professor Flinders Petric (Tanis, 1st part, p. 5, note, and A Season in Egypt, 1887, pp. 21, 22, and pl. xx.) and by myself (Revue Critique, 1888, vel. ii. pp. 118-120; Etudes Egyptiennes, vol. ii. pp. 274, 275).

<sup>&</sup>lt;sup>a</sup> Drawn by Faucher-Gudin, from an illustration in Arundale-Bonom-Buch's tidlery of Antiquities from the British Museum, pl. 31. The king thus represented is Thutmosis II. of the XVIII<sup>th</sup> dynasty; the spear, surmounted by a man's head, which the double holds in his hand, prehably recalls the human victims formerly sacrificed at the burial of a chief (Lereburg, Rites Legyptiens, np. 5, 6)

double proceeded. They, therefore, withdrew him from the tomb which should have been his lot, and there was substituted for the ordinary sparrow-hawk one

of those groups which symbolize sovereignty over the two countries of the Nile-the coiled uracus of the North, and the vulture of the South, La; there was then finally added a second sparrow-hawk, the golden sparrow-hawk, , the triumphant sparrow-hawk which had delivered Egypt from Typhon.1 The soul of Snofrûi, which is called, as a surviving double, , "Horus master of Truth," is, as a living double, entitled , "the Lord of the Vulture and of the I neus," master of Truth, and Horus triumphant.2 On the other hand, the royal prince, when he put on the diadem. received, from the moment of his advancement to the highest rank, such an increase of dignity, that his birth-name- even when framed in a cartouche and enhanced with brilliant epithets -was no longer able to fully represent him. This evaluation of his person was therefore marked by a new designation. he was the living flesh of the sun, so his surname always makeallusion to some point in his relations with his father, and proclaims the love which he felt for the latter, "Mirin," or that the latter experienced for him, "Mirnirî," or else it indi aces the stability of the doubles of Ra, "Tatken," their goodhes,

"Notirkeri," or some other of their sovereign virtues. Several Pharaohs of the IV<sup>th</sup> dynasty had already dignified themselves by these surnames; those of the VI<sup>th</sup> were the first to incorporate them regularly into the royal preamble. There was some hesitation at first as to the position the surname ought to occupy, and it was sometimes placed after the birth-name, as in Colin (Notickeri Paper). "Notirkeri Paper"

The name of this group, which has long been rendered as "the gold speriow-hawk." The glittering parrow-hawk," was determined with certainty for the flist time by Brugsch, from the control of a demons to scription at Philm (Brugsch, Udbereinstemming einer heroglephinden Institute Philo mit dem prochischen und demotischen Anfangs-Texte des Dekretes con Rosette, pp. 13, 11) subsequently adopted by E. de Rouge (Étude sur une stele Lypptenne appartenant a la Britisch qui Imperiale, pp. 21, 22) Brugsch's interpretation has since been accepted by all Egyptologists (B. 1). Die Lypptologie, p. 1, though from force of custom, the literal translation of these step golden Horus," is often given.

The reading of the group is not yet determined with certainty (cf. Elevan, the Kongstilet in the Zeitschrift, vol. and. pp. 57, 58; and Pielle, Notes de Philologie Egyptienre, § 1).

Proceedings of the Biblical Archnological Society, vol. anii, 1840-91, p. 569. The little scription would be "Master of the Vulture and of the Uracus;" the case is "Master of the and consequently "Master of the Countries of North and South" (Brigson, Uebereinstein hieroglyphischen Inschift von Phila, pp. 10, 11)

The Ka, or double name, represented in this illustration is that of the Pharach Khephi builder of the second of the great pyramids at Gizeh; it reads "Horu usir-Hâîti," Horus powerfut of the

<sup>\*</sup> Some good examples of this indecision may be found in the texts of the pyramid of 1' . II. where the cartouche of the prenomen is placed once before the cartouche of the name the Travanz, vol. xii. p. 56), and almost everywhere else after it (ib., pp. 56, 58, 59, 60, etc.).

It was finally decided to place it at the beginning, preceded by the group it. "King of Upper and Lower Egypt," which expresses in its fullest extent the power granted by the gods to the Pharaoh alone; the other, or birth-name, came after it, accompanied by the words 2 "Son of the Sun." There were inscribed, either before or above these two solar names—which are

exclusively applied to the visible and living body of the master—the two names of the sparrow-hawk, which belonged especially to the soul; first, that of the double in the tomb, and then that of the double while still incarnate. Four terms seemed thus necessary to the Egyptians in order to define accurately the Pharaoh, both in time and in eternity.

Long centuries were needed before this subtle analysis of the royal person, and the learned graduation of the formulas which corresponded to it, could transform the Nome chief, become by conquest suzerain over all other chiefs and king of all Egypt, into a living god here below, the all-powerful son and successor of the gods; but the divine concept of royalty, once implanted in the mind, quickly produced its inevitable consequences. From the moment that the l'haraoh became god upon earth, the gods of heaven, his fathers or his brothers, and the goddesses recognized him as their son, and, according to the ceremonial imposed by custom in such cases, consecrated his adoption by offering him the breast to suck, as they would have done to their own child.

THE GODDESS ADOPTS THE KING BY SUCKLING HIM,2

Ordinary mortals spoke of him only in symbolic words, designating him by some periphrasis: Pharaoh, "Pirûi-Âûi," the Double Palace, "Prûiti," the Sublime Forte, His Majesty, the Sun of the two lands, Horus master of the

<sup>1</sup> The formula "his fathers the gods" or "his brethren the gods" is constantly applied to the Pharachs in texts of all periods.

<sup>&</sup>lt;sup>2</sup> Drawn by Boudier, from a photograph by Insinger. The original is in the great speed of Silsilis. The king here represented is Harmhabit of the XVIII<sup>th</sup> dynasty; cf. Champoliton, Monuments dell'Egypt et de la Nubie, pl. cix., No. 3; Rosellini, Monumenti Storici, pl. xliv. 5; Lepsius, Denkin., iii. 121 b.

The explanation of the scene, frequently met with, in which we see a goddess of gigantic stature offering her breast to a crowned or helmeted king, who stands before her, was first given by Masperso, Notes an jour le jour, § 23, in the Proceedings of the Biblical Archaeological Society, vol. xiv. 1891-92, pp. 308-312. Characteristic examples of this method of adoption by actual or fletitions suching of the person adopted, are found among other ancient and modern peoples.

The meaning and etymology of the word Pharaoh were discovered by E. D. Rotge, Note sur be and Pharaon, in the Bulletin Archéologique de l'Athénœum Français, 1856, pp. 66-68; Mr. Lepage-Renouf has proposed an explanation of it, derived from the Hebrew (The Name of Pharaoh, in the Precedings of the Biblical Archeological Society, vol. xv., 1892-93, pp. 421, 422). The value of the title Rûîti, 17-11ti, was determined, to the best of my recollection, by Chauss, Le Voyage d'un Egyptien, p. 305.

The title "Houlf" is translated by the same authors, sometimes as "His Majesty," sometimes

THE CLULINA-III ALED

palace,1 or, less ceremoniously, by the indeterminate pronoun "One."2 The greater number of these terms is always accompanied by a wish addressed to the sovereign for his "life," "health," and "strength," the initial signs of which are written after all his titles.8 He accepts all this graciously, in ! even on his own initiative, swears by his own life, or by the favor

animated by one of his doubles, received worship, prophesied, and fulfilled all the functions of a Divine Being, both during his life, and after he had rejoined in the tomb his ancestors the gods, who existed before him and who now reposed impassively within the depths of their pyramids 1

Man, as far as his body was concerned, and god in virtue of his soul and its attributes, the Pharaoh, in right of this double nature, acted as constant mediator between heaven and earth. He alone was fit to transmit the prayers of men to his fathers and his brethren the gods. Just as the head of a tamily was in his household the priest par excellence of the gods of that tamily,-just as the chief of a nome was in his nome the priest par excellence in regard to the gods of the nome, -so was Pharaoh the pinst par creellene of the gods of all Egypt, who were his special deities. He accompanied their images in solemn processions; he poured out before them the wine and mystic milk, recited the formulas in their hearing, seized the bull who was the victim with a lasso and slaughtered it according to the lift consecrated by ancient tradition. Private individuals had recourse to his intercession, when they asked some favour from on high; as, however, it was impossible for every sacrifice to pass actually through his hands, the celebrating priest proclaimed at the beginning of each ecremony th was the king who made the offering -Sûtni di hotpû -he and none offering to Osuis, Phtah, and Ra-Harmakhis, so that they might grant to the fut 'z' who implored them the object of their desires, and, the de laration but accepted in licu of the act, the king was thus regarded as really officiating on every occasion for his subjects. He thus maintained daily intercourse with the gods, and they, on their part, did not neglect any occasion of communiting with him. They appeared to him in dicams to foretell his future, to comman & him to restore a monument which was threatened with ruin, to advis hi to set out to war, to forbid him risking his life in the thick of the hill

This m thid (\* distinguishing deceased kings is met with as far back as the "S need that he are supplied to the founder of the XI 1 to (Masiliko, I tall's Egyptime of the Ramesside period attributed to the founder of the XI 1 to (Masiliko, I tall's Egyptime vol., p. 1.5, ct. seq.) Cil that it had been introduced into Nubia before its adoption on I splits some cases during his mestal's affectine, in others shortly after his death, "Prophet of Hives in the palace "Masin iir, Les Mastabas, p. 228, tomb of Kaip, or "Prophet of Khoop (p. 88, 89, tomb of Tinti), "Prophet of Sinda" (chid., pp. 92, 93, tomb of Sairi), "Prophet of his of Mykernos, of Usirk at (chid., pp. 198, 200, tomb of Tapim unkla), or of other soveres.

<sup>2</sup> Among other examples, the texts mention the dram in which Phatmosis IV, while royal prince, received from Phi t-Hamakhis orders to unearth the Great Sphinx (Vivi, O, carried on at the Pyramids of Gizele, vol. ni, pl. facing p 114; In raise, Denkin, in 63), the drawhich Phitah forbids Minephitah to take part in the battle against the peoples of the see in Rouge, Extrait dum memoire sur les altaques, p 9), that by which Tonastamon, King of persuaded to undertake the conquest of Egypt (Marilter, Mon. divers, pl. vii.; Marries, la stele du Songe, in the Revue Archeologique, 2nd series, vol. xviii. pp 321-332; cf. Reco

communication by prophetic dreams was not, however, the method usually rected by the gods: they employed as interpreters of their wishes the nests and the statues in the temples. The king entered the chapel where statue was kept, and performed in its presence the invocatory lites. and questioned it upon the subject which occupied his mind. The priest milied under direct inspiration from on high, and the dialogue thus entered mion might last a long time. Interminable discourses, whose records cover the walls of the Theban temples, inform us what the Pharach said on such occusions, and in what emphatic tones the gods replied. Sometimes the animated statues raised their voices in the darkness of the sanctuary and th inselves announced their will; more frequently they were content to indicate it by a gesture. When they were consulted on some particular subject and naturned no sign, it was their way of signifying their disapprobation. If, on the other hand, they significantly bowed their head, once or twice, the subject was an acceptable one, and they approved it 2 No state affair was settled without asking their advice, and without their giving it in one way or another.

The monuments, which throw full light on the supernatural character of the Pharaohs in general, tell us but little of the individual disposition of any king in particular, or of their everyday life. When by chance we come n to closer intimacy for a moment with the sovereign, he is revealed to us is being less divine and majestic than we might have been led to believe, had ve judged him only by his impassive expression and by the pomp with which he was surrounded in public Not that he ever quite laid aside his grandeur. even in his home life, in his chamber or his garden, during those hours when he felt himself withdrawn from public gaze, those highest in rank might never forget when they approached him that he was a god. He showed himself to be a kind father, a good-natured husband," ready to dally with his wive and caress them on the cheek as they offered him a flower, or moved'a piece upon the draught-bonid. He took an interest in those who warted on him, all wed them certain breaches of etiquette when he was pleased with them, and was indulgent to their little failings. If they had just P(d, 1) Ser, vol. iv. p. 8.3) Herodotus had already made us familiar with the dreams of Sibaco (n. 1-0, a. (o) the high priest Sethos (n. 412).

returned from foreign lands, a little countrified after a lengthy exile from the court, he would break out into pleasantries over their embarrassment and their unfashionable costume,-kingly pleasantries which excited the forced mitth of the bystanders, but which soon fell flat and had no meaning for those outside the palace.1 The Pharaoh was fond of laughing and drinking; indeed if we may believe evil tongues, he took so much at times as to incapacitate him for business.2 The chase was not always a pleasure to him, huntur. in the desert, at least, where the lions evinced a provoking tendency to show as little respect for the divinity of the prince as for his mortal subjects. but, like the chiefs of old, he felt it a duty to his people to destroy wild beasts, and he ended by counting the slain in hundreds, however short his reign might be.3 A considerable part of his time was taken up in war in the east, against the Libyans in the regions of the Oasis; in the Nile Valley to the south of Aswan against the Nubians; on the Isthmus of Suez and in the Sinaitic Peninsula against the Bedouin; frequently also in a and war against some ambitious noble or some turbulent member of his own family. He travelled frequently from south to north, and from north to south, leaving in every possible place marked traces of his visits -on the rocks of Elephantino and of the first cataract, on those of Silsulis 1 c. El-Kab, and he appeared to his vassals as Tûmû himself arisen amon, then to repress injustice and disorder.5 He restored or enlarged the monuments. regulated equitably the assessment of taxes and charges, settled or district the lawsuits between one town and another concerning the appropartion of the water, or the possession of certain territories, distributed tiets which had fallen vacant, among his faithful servants, and granted pensions to be pa out of the royal revenues.6 At length he re-entered Memphis, or one or ons usual residences, where fresh labours awaited him. He gave audience dans him (E. DE ROUGL, Richerches our les monuments qu'on peut attribuer auc ser premier s' de Manethon, p 18; MARTETIF, Les Mastabas, pp. 112, 113), and Papi I. grants to Um the pr. 1.

a ister against the injustice of his servant. If he quitted the palace when the cause had been heard, to take boat or to go to the temple, he was not left on listurbed, but petitions and supplications assailed him by the way.2 In e'dition to this, there were the daily sacrifices, the despatch of current aff'urs, the cremonies which demanded the presence of the Pharaoh, and the reception of nobles or foreign envoys. One would think that in the midst of so many cupations he would never feel time hang heavy or, his hands. He was, howwe a prey to that protound canne which most Oriental monarchs feel so keenly, and which neither the cares nor the pleasures of ordinary life could dispel. Lake the Sultans of the "Arabian Nights," the Pharaohs were accustomed to have musclions tales related to them, or they assembled their councillors to ask them **g** suggest some fresh amusement, a happy thought would sometimes strike one of them, as in the case of him who aroused the interest of Snofrui by recommending him to have his boat manned by young girls barely clad in luge meshed network All his pistimes were not so playful. The Egyptians by nature were not cruel and we have very few records either in history 141 dition of bloodthusty Pharaolis; but the life of an ordinary individual in a so little value in their eyes, that they never hesitated to sacrifice or n for a coprice. A sorecrer had no sooner borsted before Kheops circuity able to ruse the dead, than the king proposed that he should try

the experiment on a prisoner whose head was to be forthwith cut off.  $T_1$  anger of Pharaoh was quickly excited, and once aroused, became an almonormuming fire; the Egyptians were wont to say, in describing its intensity, "His Majesty became as furious as a panther." The wild beast oft n revealed itself in the half-civilized man.

The royal family was very numerous. The women were principally chosen from the relatives of court officials of high rank, or from the daughters of the great feudal lords;3 there were, however, many strangers among them, daughters or sisters of petty Libyan, Nubian, or Asiatic kings; they were brought into Pharaoh's house as hostages for the submission of their respective peoples They did not all enjoy the same treatment or consideration, and their original position decided their status in the harem, unless the amorous caprice of their master should otherwise decide. Most of them remained merely concubinfor life, others were raised to the rank of "royal spouses," and at least one received the title and privileges of "great spouse," or queen.4 This was rarely accorded to a stranger, but almost always to a princess born in the purple, a daughter of Ra, if possible a sister of the Phanach, and who inheriting in the same degree and in equal proportion the flesh and blood the Sun-god, had, more than others, the right to share the bed and the acc her brother 5. She had her own house, and a train of servants and followers a large as those of the king; while the women of inferior rank were more or shut up in the parts of the palace assigned to them, she came and well it pleasure, and appeared in public with or without her husband. The previable of official documents in which she is mentioned, solemnly recognizes her is the living follower of Horus, the associate of the Lord of the Vulture and the Urgeus, the very gentle, the very praiseworthy, she who sees her limits, of Horus and Sit, face to face." Her union with the god-king rendered her

<sup>(</sup>P. and J. de Rouge, Inscriptions hieroglyphiques copies en Egyple, pl. lxii.), of Queen Mirisonkhu (Mangerr, Les Mastabas, p. 183; Lærsus, Denkm., ii. 14), of Queen Khült (Mangerre, Les Mostabas, pp. 207, 208), of a queen whose name is still uncertain (Mangerre, Les Mostabas, pp. 225), and of Queen Mirirfonkhas (E. and J. de Rouge, Inscriptions hieroglyphiques copies en Egyple, pl. cliii.).

by nature mistress of the art of summoning or banishing invisible being. While Pharaoh was engaged in sacrificing, the quoen, by her incantations protected him from malignant deities, whose interest it was to divert the attention of the celebrant from holy things: she put them to flight by 1]. sound of prayer and sistrum, she poured libations and offered perfumes and flowers. In processions she walked behind her husband, gave audience with him, governed for him while he was engaged in foreign wars, or during his progresses through his kingdom: such was the work of Isis while her brother Osiris was conquering the world.2 Widowhood did not always entirely disqualify her. If she belonged to the solar race, and the new sovereign was a minor, she acted as regent by hereditary right, and retained the authority for some years longer. It occasionally happened that she had no posterity, or that the child of another woman inherited the crown. In that case there was no law or custom to prevent a young and beautiful widow from wedding the son, and thus regaining her rank as Queen by a marriage with the successor of her deceased husband. It was in this manner that, during the earlier part of the IVth dynasty, the Princess Mirtîttefsi ingratiated herselt ne cessively in the favour of Snofrûi and Kheops. Such a case did not often misc and a queen who had once quitted the throne had but little chance of take ascending it. Her titles, her duties, her supremacy over the rest of the tarmy passed to a younger rival: formerly she had been the active companion or king, she now became only the nominal spouse of the god, and her office on to an end when the god, of whom she had been the goddess, quitting his born departed heavenward to rejoin his father the Sun on the far-distant horizon"

Children swarmed in the palace, as in the houses of private individuals

<sup>&</sup>lt;sup>1</sup> The magical virtues of the sistium are celebrated by the author of De Isale et O are Sh (Partin y's obtion, pp. 111, 112), frequent mention is made of them in the Dende remisering

The part placed by the queen in regard to the king has been clearly defined by the Egyptologists. A statement of the views of the younger Champollion on this subject will be in the Fyypte ancience of Champollion-Figeac (p. 56, et so j.); as to the part played by Isis, it of Egypt, of app. 175-175 of the present work.

The best I nown of caese queen a general is that which occurred during the min. We Thatmosis III — bout the middle of the XVIII<sup>th</sup> dynasty. Queen Taau also uppens to be acted as resent to her son Ramses II, during his first Syman campaigns (Liveus, Notice see to statues applie mer representant Pune to mire during Ramses-Resortes, Pantre le roi Innise, e. V. 18 of the Annales de PI stitut de Correspondence archéologique, p. 5, et seq.).

<sup>4</sup> M. de Rouge w. — e first to bring this fact to light in his Recherches sur les mont her peut attribuer aux sie premières lynasties de Manchon, pp. 30-38. Mutiticist also liv de 1 de harem of Khephien, but the title which connects her with this sing -Amalhit, the vissal de with the harmon was then morely a nominal wife; she was probably by that time, as M. de Reit too advanced an ago to remain the favourito of a third Pharach.

The title of "divine spouse" is not, so far as we know at present, met with pine XVIII'h dynasty. It was given to the wife of a living monarch, and was retained by not death; the divinity to whom it referred was no other than the king himself. Cf Englay, in forther's memoir, Alte Baureste und Hieroglyphische Inschriften im Undi Gasús, p. 17, et al. Academy of Sciences, Philol.-Hist. Abhandlungen nicht zur Academis gehör. Gelehrter, 1883, vo.

in their households titles which they transmitted to their children, with such rights to the crown as belonged to them.1 The most favoured of the prints married an heiress rich in fiefs, settled on her domain, and founded a race of feudal lords. Most of the royal sons remained at court, at first in their father's service and subsequently in that of their brothers' or nephews': the most difficult and best remunerated functions of the administration were assigned to them. the superintendence of public works, the important offices of the priesthood,2 the command of the army.3 It could have been no easy matter to manage without friction this multitude of relations and connections, past and present queens, sisters, concubines, uncles, brothers, cousins, nephews, sons and grandsons of kings who crowded the harem and the palace. The women contended among themselves for the affection of the master, on behalf of themselves or then children. The children were jealous of one another, and had often no bond of union except a common hatred for the son whom the chances of both hal destined to be their ruler. As long as he was full of vigour and energy, Phat wh maintained order in his family; but when his advancing years and tuling strength betokened an approaching change in the succession, competition showed itself more openly, and intrigue thickened around him or around like nearest heirs. Sometimes, indeed, he took precautions to prevent an outland and its disastrous consequences, by solemnly associating with himself in the royal power the son he had chosen to succeed him: Egypt in this case has to obey two masters, the younger of whom attended to the more active duties of 3 loyalty, such as progresses through the country, the conducting of military expeditions, the hunting of wild beasts, and the administration of justice, while the other preferred to confine himself to the rôle of adviser or benevol at a Even this precaution, however, was insufficient to prevent counsellor.4 The women of the seraglio, encouraged from without by the relations or t iends, plotted secretly for the removal of the irksome sovercent

<sup>&</sup>lt;sup>1</sup> Nibît marred to Khu, transmitted her rights to her daughter Memorahhus; the lattr would have been the rightful heir to the brone at the beginning of the VI aynasty (Front, etc.), Recherches, 1 - 1 - 2, note 1).

<sup>\*</sup>This feet was known from the time of Lepsins (Binner, Applied Stelle in der Welt, vol. in. p. 228, et sig, ef E de Rouge, Examen de Pouvrage de W le chevalur de lou art, p. 45, et sig.), in regard to the first four Pharaches of the All' dynasty. A pro- discounter de Sinouhit (Marrino, Les Contes populaires, 2nd edit, pp. 101-101) gives a ver description of the respective parts played by the two kings

The passage of the Uni inscription, in which mention is made of a lawsuit carried on ag in Amitta (Erman, Commentar zur Inschrift des Una, in the Zeitschrift, 1882, pp. 10-12), protessome hairem conspiracy. The celebrated lawsuit, some details of which are preserved in

those princes who had been deprived by their father's decision of any gitimate hope of reigning, concealed their discontent to no purpose; they were arrested on the first suspicion of disloyalty, and were massacred wholesale; their only chance of escaping summary execution was either by rebellion of or by taking refuge with some independent tribe of Libya or of the lesert of Sinai. Did we but know the details of the internal history of Egypt, it would appear to us as stormy and as bloody as that of other Oriental empires: outrigues of the harem, conspiracies in the palace, murders of heirs-apparent, divisions and rebellions in the royal family, were the almost inevitable accompaniment of every accession to the Egyptian throne.

The earliest dynasties had their origin in the "White Wall," but the Pharaohs hardly ever made this town their residence, and it would be incorrect to say that they considered it as their capital; each king chose for himself in the Memphite or Letopolite nome, between the entrance to the Favûm and the apex of the Delta, a special residence, where he dwelt with his court. and from whence he governed Egypt.3 Such a multitude as formed his court needed not an ordinary palace, but an entire city. A brick wall, surmounted by battlements, formed a square or rectangular enclosure around it, and was of sufficient thickness and height not only to defy a popular insurrection or the surprises of marauding Bedouin, but to resist for a long time-a regular siege. At the extreme end of one of its façades, was a single tall and narrow opening, closed by a wooden door supported on bronze hinges, and surmounted with a row of pointed metal ornaments; this opened into a long narrow passage between the external wall and a partition wall of equal strength; at the end of the passage in the angle was a second door, sometimes leading into a second passage, but more often opening into a large courtyard, where the dwelling-houses were somewhat crowded together: assailants ran the of being annihilated in the passage before reaching the centre of the place.4 The royal residence could be immediately distinguished by the

paperus of Turin (Tu. Div) and, Le Papprus judiciaire de Turin vide Journal Isiatique, 1866-68), gives us some information in 10 gard to a conspiracy which was hatened in the hairm against R unses III

A passage in the "Inst. ctions of Amenembalt" (Sallier Lap. II., pl.), 1.9, et seq.) describes in somewhat obscure terms on attack on the palace by conspirators, and the wars which tellowed their rade (Along

<sup>·</sup> The case of Sunthit, when he fied from Libya into Iduna 1, on the death of Amenembait 1. (Mastrao, Les Premières Lignes des Ménoires de Sinouhit, pp. 17, 18, and Les Contes populaires. 2 deatt, p. 97, et sec.), is av instance of this.

Erman was the first to bring this important point in early Egyptian history to light (Funas, Paperten and Fypplisches Leben im Altertum, pp. 243, 241; cf. Ed. Mayra, Geschichte des Alter Augel as pp. 56, 57, and the objections of Wifdemann, The Age of Memphis, in the Proceedins of the Surety of Biblical Archwology, vol. in., 1886-87, pp. 181, 190).

No plan or exact drawing of any of the palaces of the Ancient Empire has come down to us, but a Eman has very justly pointed out, the signs found in contemporary inscriptions give as eveneral idea of them (Erman, Egypten, pp. 106, 107). The doors which had from one of the hours of the night to another, in the "Book of the Other World," show us the double

projecting balconies on its façade, from which, as from a tribune, Pharaol could watch the evolutions of his guard, the stately approach of foreign envoys, Egyptian nobles seeking audience, or such officials as he desired to reward for their services. They advanced from the far end of the coult stopped before the balcony, and after prostrating themselves stood up, bower their heads, wrung and twisted their hands, now quickly, now slowly in a rhythmical manner, and rendered worship to their master, chanting his praises, before receiving the necklaces and jewels of gold which he presented to them by his chamberlains, or which he himself deigned to fluor to them. It is difficult for us to catch a glimpse of the detail of the internal arrangements: we find, however, mention made of large halls "resembling the hall of Atûmû in the heavens," whither the king repaired to deal with state affairs in council, to dispense justice and sometimes also to preside at state banquets. Long rows of tall columns, carved out of rare woods and Dainted with bright colours, supported the roofs of these chambers, which with entered by doors inlaid with gold and silver, and incrusted with malachite or lapis lazuli. The private apartments, the "akhonûîti," were ent wh separate, but they communicated with the queen's dwelling and with the harem of the wives of inferior rank.8 The "royal children" occup die quarter to themselves, under the care of their tutors; they had then our houses and a train of servants proportionate to their rank, age, and be fortune of their mother's family.4 The nobles who had appointments at a

passage leading to the countraid (Mastiro, Itudes de Mythologie et d'Arche l'ie l'illivol, ii pp 106-168). The 1st edescript in of the place of Amon built by Ramses III (Harris Pappins, No. 111, 12) and sill we sented mone of these halls, on a throne of gold, when he did not concellors in a gard to the construction of a cist on in the desert for the miners who were the gold-rame of Akita (Press., Monuments, place 1, 8). The room in which the kear step leaving his aparts for the purpose of putting on his ecromonal dress and receiving the lines ministers, appears for the purpose of putting on his ecromonal dress and receiving the lines ministers, appears for the purpose of putting on his ecromonal dress and receiving the lines ministers, appears for the purpose of putting on his ecromonal dress and receiving the last ministers, appears for the purpose of putting on his ecromonal dress in which the worshipped, as in temples of the Ptolemaic epoch, was that in which the statue of the gal, the sanctuary, was dressed and worshipped by the faithful. Simblift, under the XII<sup>nt</sup> day granted an audience in the "Hall of Electrum" (Maspero, Lee Contes populaires, 2nd odd).

The "subit" or pavisons formed part of the apartments belonging to the harm of Rakhmuri shows us one of these "women's knosques" belonging to the XVIII<sup>th</sup> dyna the Tombeau de Rekhmard, pl. xxxv, in the Memoires de la mission française, vol. ). of of different cpochs represent the dead as playing at draughts in them (Mastero, litules 1) vol. ii. p. 220, et seq.).

Shposiskafankha (Lepsius, Denkm., ii. 50) was "Governor of the houses of the Royal (under Nofirinker) of the V<sup>th</sup> dynasty (E. Dr Rolgi, Recherches sur les monuments, p. 73) Stud'i

... I the royal domestics lived in the palace itself, but the offices of the lifferent functionaries, the storehouses for their provisions, the dwellings their employés, formed distinct quarters outside the palace, grouped around PHITOW courts, and communicating with each other by a labyrinth of lanes covered passages. The entire building was constructed of wood or bricks. trequently of roughly dressed stone, badly built, and wanting in solidity. the ancient Pharaohs were no more inclined than the Sultans of later days to occupy palaces in which their predecessors had lived and died. king desired to possess a habitation after his own heart, one which would not be haunted by the memory, or perchance the double, of another sovereign.1 These royal mansions, hastily erected, hastily filled with occupants, were vacated and fell into ruin with no less rapidity: they grew old with their master, or even more rapidly than he, and his disappearance almost always entailed their ruin. In the neighbourhood of Memphis many of these palaces might be seen, which their short-lived masters had built for eternity, an ternity which did not last longer than the lives of their builders.2

Nothing could present a greater variety than the population of these openeral cities in the climax of their splendour. We have first the people who immediately surrounded the Pharach, the retainers of the palace and of the harem, whose highly complex degrees of rank are revealed to us on the monuments. His person was, as it were, minutely subdivided into departments, each requiring its attendants and their appointed chiefs. His toilet alone gave employment to a score of different trades. There were royal barbers, who had the privilege of shaving his head and chin; hair-

<sup>)</sup> of a son of the king," in which there were all manner of riches, a tent in which to take the air, comments worthy of a god, and orders on the treasury, money, gainients made from royal stuffs, guins and royal perfunces such as the children of the king delight to have in every house, and lastly, "whole troops of attached all kinds" (Maspiro, Les Contes populaires, 2nd edit., p. 127). In regard to other "Covernors of the houses of the Royal Children," see Mariella, Les Mastabas de l'Ancien I mpire, pp. 250, 200

<sup>1</sup> Linax, A gypten und Egyptisches Leben im Altertum, pp 212-241.

The ong of the harp-player on the tomb of Kinz Antif contains an allusion to these runned pilaces "The gods [kings] he were of yore, and who repose in their tombs, minimize and manes, all functiable in their pyramids, when eastles are built they no longer have a place in them, see thus it is done with them! I have heard the poems in praise of Imhotpu and of Haidalif which are suited in the engage and yet, see, where are their places to-day? their walls are destroyed, their places no more a though they had heree existed!" (Maspere, I index I in the energy of a 179, 180)

They medesignated 'vithe general terms of Shomiun, the "prople of the circle," and Qonbitin, the "prople of the corner." These words are found in religious inscriptions reterring to the staff of the temple, and denote the aftendants or court of each god; they are used to distinguish the notables of a town or hoper by the shock's, who encount the right to superintend local administration and dispense justice.

be on h, the sheak's, who enjoyed the right to superintend local administration and dispense just to 4 H. Experian scribes he biadcayouted to draw up an hierarchical list of the so offices. At present the Property of the British Museum, has been published and translated by Maspero, in Itudes I gyptumes, via 199, 1 65 (cf. Brussen, Dis Egyptologie, pp. 211-227); another and more complete copy, discover 1 in 1899, con the possession of M. Golfenischeff. The other list, also in the British Museum, we specified by Prof. Potric in a memoir of The Egypt Exploration Fund (Two Hureglyphic, Paque nom Funs, p. 21, et seq.); in this latter the names and titles are internuiseled with various other matter. To the two works may be added the lists of professions and trades to be found passim on the monuterness, and which have been commented on by Baugscu (Die Typptologie, p. 225, et seq.).

dressers who made, curled, and put on his black or blue wigs and adjusted the diadems to them, 1 there were manicurists who pared and polished his nails,2 perfumers who prepared the scented oils and pomades for the anointing of his body, the kohl for blackening his eyelids, the rouge tor spreading on his lips and cheeks.3 His wardrobe required a whole troop of shoemakers,4 belt-makers, and tailors, some of whom had the care of stuffs in the piece, others presided over the body-linen, while others took charge of his garments, comprising long or short, transparent or thick petticoats. fitting tightly to the hips or cut with ample fulness, draped mantles and flowing pelisses. Side by side with these officials, the laundresses phed their trade, which was an important one among a people devoted to white. and in whose estimation want of cleanliness in dress entailed religious impurity. Like the fellahin of the present time, they took their linen daily to wash in the river; they rinsed, starched, smoothed, and pleated it without intermission to supply the incessant demands of Pharaoh and his family.6 The task of those set over the jewels was no easy one, when we consider the enormous variety of necklaces, bracelets, rings, carrings, and sceptres of rich workmanship which ceremonial costume required for particular times and occasions. The guardianship of the crowns almost approached to the dignity of the priesthood; for was not the urans, which ornamented each one, a living goddess? The queen required numerous waiting-women, and the same ample number of attendants were to be encountered in the establishments of the other ladies of the harem. Troops of musicians, singers, dancers, and almehs whiled away the tedious hours, supplemented by buffoons and dwarfs.7 The great Egyptian lords evinced

<sup>1</sup> Manofir was "unspector of the king's wig-makers" under Tatherî of the V helynasty (Mentrit L. Mastabas, pp. 446, 447), and Phtahumatt discharged the duties of the same effice under Neutrical (id., ibid., p. 250). Khafrionkhu was "director of the king's wig makers" under one of the Phirinks of the IVth dyn. sty (E. and J. de Roter, Inscriptions hidroglyphiques recuedles en 1 4991. p. 180

<sup>&</sup>lt;sup>2</sup> Raankhumat was "director of those who dress the king's nails" under a Pharach of the \(\) detector (MARILIII Les Martalius, pp. 283, 284); Khabiaphtah combined this office with that of "a in let of the wig-markers' under Schari and under Nofirirkers of the V<sup>th</sup> dynasty (id., bid., j. 290)

Mi' thesh was in spector for Pharaol, and "director of the perfume doils of the king a count" (Mariana, A. & Mastabas, p. 20%), as also was Phiahnofinrità (id., thid., p. 322), these two perfume also excressed important functions in connection with the royal linen.

<sup>\*</sup> The "royal bootmakers" are mentioned in the Hood Papyrus (Mastino, Lindes I in the vol. ii. p. 11); the the of Abydos mention several others in the time of the Ramesides

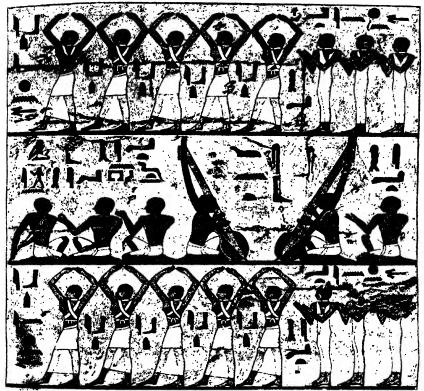

<sup>\*</sup> Khont was "a rector of the king's stuffs" (Markett, Les Mastabas, p. 185), t. w. ds. Ankhaitaka (id., ibid., pp. 307, 308, cf. E. and J. de Rougé, Inscriptions hieroglyphiques, pt. (1). Sakhemphtah was "director of the white linen" (Markette, I es Mastabas, p. 202), ts. i. t. up. monkin (id., ibid., p. 198), and the two personages Militinofr and Phitahnofistitu, mentione to see in note 3. At the beginning of the XII<sup>th</sup> dynasty, we find Hapizaufi of S. it installed as "pt. t. all the dresses of the king" (E. and J. de Rouge, Inscriptions hieroglyphiques, pt. classing).

Internation of the princes of Herman (1).

The "royal laundrymen" and their chiefs are mentioned in the Conte des deux fiction XIXth dynasty, as well as their laundries on the banks of the Nile (Masreno, Les Contes 1 2nd edit, p. 2).

Rahonem was "directress of the female players on the tabour and of the female (MARIETE, Les Mastabus, p. 138, et seq.); Snofrainofir (E and J. DE Rougé, Inscriptions

a curious liking for these unfortunate beings, and amused themselves by cetting together the ugliest and most deformed creatures. They are often represented on the tombs beside their masters in company with his pet dog, or a gazelle, or with a monkey which they sometimes hold in leash, or some-

We Rover believes this to have been so in the case of It whose tomb is still f (Re herches sur les monuments, p 96), and in the case of Snozmahit, surnamed Milin (id, pp 10 Drawn by Faucher-Gudin, from a photograph by Emil Biugsch-Bey, the original is at (a)

Li was the former who, I believe, formed the class of rokhû sûton so often mentione! menuments This title is generally supposed to have been a mark of relationship with th family (Li wan, Azgypten, p 118) M de Rouge proved long ago that this was not so (Re ) p '00) and that functionaries might bear this title even though they were not blood relation

rown up with them and had kept them about his person as his "sole friends" and counsellors.1 He lavished titles and offices upon them by the dozen, according to the confidence he felt in their capacity or to the amount of faithfulness with which he credited them. A few of the most favoured were called "Masters of the Secret of the Royal House;" they know all the innermost recesses of the palace, all the passwords needed in going from one part of it to another, the place where the royal treasures were kept, and the modes of access to it.2 Several of them were "Masters of the Secret of all the Royal Words," and had authority over the high courtiers of the palace, which gave them the power of bunishing whom they pleased from the person of the sovereign.8 Upon others devolved the task of arranging his amusements; they rejoiced the heart of his Majesty by pleasant songs, while the chiefs of the sailors and soldiers kept watch over his safety.5 To these active services were attached honorary privileges which were highly esteemed, such as the right to retain their sandals in the palace,6 while the general crowd of courtiers could only enter unshed; that of kissing the knees and not the feet of the "good god," and that of wearing the panther's skin.8 Among those who enjoyed these distinctions were the physicians of the king, chaplains, and men of the roll-"khri-habi." The latter did not contine themselves to the task of guiding Pharaoh through the intricacies of nitual, nor to that of prompting him with the necessary formulæ needed to make the sacrifice efficacious; they were styled "Masters of the Secrets of Heaven," those who see what is in the firmament, on the earth and in Hades, those who know all the charms of the soothsayers, prophets, or magicians, 10 The laws that ohs. It seems to me to have been used to indicate a class of courtiers whom the king or becomed to "know" (rokhû) directly, without the intermediary of a chamberlain, the "persons known by the king;" the others were only his "friends" (samirů).

This was so in the case of Shopsisuphtah (E. de Rouge, Recherches sur les monuments, p. 66) and of schouteracte (Erman, Agypten, p. 118). Under a king of the Xth dynasty, Khiti, Prince of Siút, recalled with pit of the fact that he had been brought up in the palace, and had learnt to swim with the children of the aggalarithm, Monuments divers, pl. lxix. d; E. and J. de Rougé, Inscriptions hieroglyphomes, pl. charite, Generiu, The Inscriptions of Siút and Dêr Rifeh, pl. xv. 1, 23). Cl. Liebeth, Sur differ als the noise Egyptiens, in the Proceedings of the Society of Biblical Archwology, 1890-91, pp. 105-165-159. Api (Mariette, Les Maslabas, p. 96), and many others. To translate the title as "Royal Secretary" is to literal and too marrow a rendering, as shown by E. de Rouge (techerches sur les monuments, p. 69).

For example, Usirnutir (Mariette, Les Maslabas de l'Ancien Empire, pp. 173, 174). Aukhumaka
 17, 14, 217, 218); Kai combined this title with that of "Director of the Aisenal" (id., pp. 228, 229).
 Ramuriphtah (Mariette, Les Mastabas, pp. 154, 155), Rânikaû (id., p. 313), Suchumoti (id., 19, 398), whom I have already had occasion to mention in connection with the I dy Rabonem.

11 1.278, note 7.

Prince Assiônkhû held a command in the infantry and in the flottila of the Nile (MARILIII), I Mustabas de l'Aucien Empire, p. 191); so did Ji (id., p. 162) and Kamtunini (i.l., p. 188)

This was the favour obtained by Uni from Pharaoh Miriri-Papi I., according to E. de Rou et a cickes sur les monuments, p. 128), whose explanation seems to me an excellent one.

hopsisuphtah received this favour (E. DE Rouge, Recherches, p. 68)

This is the meaning which I assign to the somewhat rare title of Onu busit, "Grande of the busis Skin," borne, among others, by Zaufia (Mariette, Les Mastabas, pp. 202-251) and h. A (id., pp. 275, 278). See also p. 33, note 8, of this volume.

Ani (MARIETTE, Les Mastabus, p. 96) and Sokhîtnioukhû (id., pp. 202-205) were Phuach's

uns.

The most complete form of their title which, up to the present, I have been able to find under

relating to the government of the seasons and the stars presented no mysteries to them, neither were they ignorant of the months, days, or hours propitious to the undertakings of everyday life or the starting out on an expedition. nor of those times during which any action was dangerous. They drew their inspirations from the books of magic written by Thot, which taught them the art of interpreting dreams or of curing the sick, or of invoking and obliging the gods to assist them, and of arresting or hastening the progress of the sun on the celestial ocean.1 Some are mentioned as being able to divide the waters at their will, and to cause them to return to their natural place, merely by means of a short formula.2 An image of a man or animal made by them out of enchanted wax, was imbued with life at their command, and becume an irresistible instrument of their wrath.3 Popular stories reveal them to us at work. "Is it true," said Kheops to one of them, "that thou canst replace a head which has been cut off?" On his admitting that he could do so, Pharaoh immediately desired to test his power. "Bring me a prisoner from prison and let him be slain." The magician, at this proposal, exclaimed: "Nay, nay, not a man, sire my master; do not command that this sin should be committed; tine animal will suffice!" A goose was brought, "its head was cut off and the body was placed on the right side, and the head of the goose on the left side of the hall: he recited what he recited from his book of magic, the goose began to hop forward, the head moved on to it, and, when both were united, the goose began to cackle. A pelican was produced, and underwent the same process. His Majesty then caused a bull to be brought forward, and ithead was smitten to the ground: the magician recited what he recited from his book of magic, the bull at once arose, and he replaced on it what had fallen to the earth."4 The great lords themselves deigned to become initiated into the occult sciences, and were invested with these formidable powers. A prince who practised magic would enjoy amongst us nowadays but small esteem: in Egypt sorcery was not considered incompatible with royalty, and the magicians of Pharaoh elten took Pharaoh himself as their pupil.5

the Ancient Emerge, is on the Tomb of Tenti (MARIETTE, Les Mastabas, p. 149): this personale was "a chief man of the roll . . . superior of the secrets of heaven, who sees the secret of heaven." It p. 127 of the present work.

<sup>&</sup>lt;sup>1</sup> See the story of Satri-Khanots (Mastero, Les Contes populaires de l'Égypte Ancienne, 2nd edit p. 175) for a descriptio. \*he virtues attributed to one of the books of Thot.

<sup>&</sup>lt;sup>2</sup> The "man of the roll" Zazamonkh, in the story of Khūfui (Maspero, Les Contes populaire at PEgypte Ancienne, 2nd edit., p 67), performs this miracle in order to enable a lady who was in royal barge to recover a jewel which she had accidentally dropped into the waters of the lake.

The "man of the roll" Übaü Anir, in the story of Khūfūi (Maspero, Les Contes populaires de l'Égypte Ancienne, 2nd edit., pp. 60-63), models and calls into life a crocodile who carries off his wife's lover the bottom of the river. In the story of Satni Khūmots (id., pp. 180, 181), Satni constructs a visual its crew, imbues the latter with life, and sends them off in search of the magic book of Thot.

ERMAN, Die Märchen des Papyrus Westcar, pl. viii. ll. 12-26; of. Maspero, Contes populaires, p.

<sup>\*</sup> We know the reputation, extending even to the classical writers of antiquity, of the Phar-Nechepso and Nectanebo for their skill in magic. Arab writers have, moreover, collected a number traditions concerning the marvels which the sorcerers of Egypt were in the habit of performing:

Such were the king's household, the people about his person, and those attached to the service of his family. His capital sheltered a still greater num-111 of officials and functionaries who were charged with the administration of his fortune—that is to say, what he possessed in Egypt. In theory it was always. supposed that the whole of the soil belonged to him, but that he and his predecesors had diverted and parcelled off such an amount of it for the benefit of their favourites, or for the hereditary lords, that only half of the actual territoly remained under his immediate control. He governed most of the nomes of the Delta in person: 2 beyond the Fayûm, he merely retained isolated lands. enclosed in the middle of feudal principalities and often at considerable distance nom each other. The extent of the royal domain varied with different dynastics, and even from reign to reign: if it sometimes decreased, owing to too frequently repeated concessions, its losses were generally amply compensited by the confiscation of certain fiels, or by their lapsing to the crown. The domain was always of sufficient extent to oblige the Pharaoh to confide the larger portion of it to officials of various kinds, and to farm merely a small remainder by means of the "royal slaves:" in the latter case he reserved for himself all the profits, but at the expense of all the annoyance and ill the outlay, in the former case, he obtained without any risk the annual dues, the amount of which was fixed on the spot, according to the resources of h nome. In order to understand the manner in which the government of Laypt was conducted, we should never forget that the world was still ignorant a the use of money, and that gold, silver, and copper, however abundant we may suppose them to have been, were mere articles of exchange, like the most common products of Egyptian soil. Pharach was not then, as the State is with us, a treasurer who calculates the total of his receipts and expenses in ready money, banks his revenue in specie occupying but little space, and settles

ustance, I may quote the description given by Makrizi of one of their meetings, which is probably taken from some earlier writer (Maran, A Short Story of the Copts and of their Church, pp. 13, 11)

with the cris attached to the tomb of Khûnas, prince of the Gazelle nome, under the get the VI

They were trequently distinguished from their provincial or manorial collectures by the addition the word khond to their titles, a term which indicates, in a general manner the royal residence. They termed whet we should nowadays call the departmental state of the public officers, in I might be departed to act, at least temporarily, in the provinces, or in the service of one of the feud diprimes, withen all reby losing their status as functionaries of the khond or central administration.

I as so as, at any rate, an obvious inference from the almost total absence of feud il titles—a the internal monuments of the Delta. Erman, who was struck by this fact, attributed it to editine it derived evaluation in the two halves of Egypt (Agypten and Agyptes hes Tehen im Altertum p. 128—130 Mixers, G-schicke Agyptens, p. 16), I attribute it to a difference in Lovernace then—I ticles naturally predominate in the South, royal administrative titles in the North

We find, at different periods, persons who call the miscless masters of near domains or strongholds are, under the HIP dynasty (Meserico, Fludes Lypphenius, vol. ir. p. 201), several precess them is housed the VIII and VIII (Liesies, Denhius, ii. 112 by c). Edinumbot part the beginning of the control of t

his accounts from the same source. His fiscal receipts were in kind, and it was in kind that he remuncrated his servants for their labour: cattle, coreals, for mented drinks, oils, stuffs, common or precious metals,-" all that the heaven give, all that the earth produces, all that the Nile brings from its mysterion sources," 1-constituted the comage in which his subjects paid him their contubutions, and which he passed on to his vassals by way of salary. One room a few feet square, and, if need be, one safe, would easily contain the entir revenue of one of our modern empires the largest of our emporiums would not always have sufficed to hold the mass of incongruous objects which represented the returns of a single Egyptian province. As the products in which the tix was paid took various forms, it was necessary to have an infinite variety or special igents and suitable places to receive it; herdsmen and sheds for the oven, meisurers and grimaries for the grain, butlers and cellarers for the win , beer, and oils. The product of the tax, while awaiting redistribution, could only be kept from deteriorating in value by incessant labour, in which a senof different classes of clerks and workmen in the service of the treasury ill took part, recording to their trades. If the tax were received in oven, it was led to 1 isturage, or at times, when a murrain threatened to destroy it, to 1 slaughter-house and the currier, if it were in coin, it was bolted, ground to flor and mide into bread and pistry; if it were in stuffs, it was washed, moned tolded, to be actuled as gaments or in the piece. The royal treasury par & of the character of the farm, the warehouse, and the manufactery.

Each of the departments which helped to swell its contents, occupied with the pilace enclosure a building, or group of buildings, which was called its "house," or, is we should say, its storchouse. There was the "White Storchouse," where the stuffs and jewels were kept, and at times the wine, "I "Storchouse of the Oven," the "Gold Storchouse," the "Storchouse for Liquo Preserved Fruits," the "Storchouse for Grun," the "Storchouse for Liquo

peculators were punished by imprisonment, mutilation, or death, according to the gravity of the offence. Those whom illness or old age rendered unfit for work, were pensioned for the remainder of their life.<sup>2</sup>

The writer, or, as we call him, the scribe, was the mainspring of all this Champollion, Monuments de l'Égypte et de la Nubie, pl. exli.; Rosellini, Monumenti Civili, pl. ex. 1. 13; Lusius, Deulem., iii 11 a).

Drawn by Faucher-Gudin, from Lersius, Denkm., iii. 95. The illustration is taken from one of the tombs at Tel el-Amarna. The storehouse consists of four blocks, isolated by two avenues phanted with trees, which intersect each other in the form of a cross. Behind the entrance gate, in a small courtyard, is a kiosque, in which the master sat for the purpose of receiving the stores or emperintending their distribution; two of the arms of the cross are lined by porticees, under which are the entrances to the "chambers" (āit) for the stores, which are filled with jars of wine, linearies, dried fish, and other articles.

For an instance of an employe pensioned off on account of infirmities, see the Arastosi Papyrus, No. iv., under the XIX<sup>th</sup> dynasty (Maspero, Notes an jour le jour, § 8, in the Proceedings, 1890-91, 179-175, 426).

"Sashai was the common title of the ordinary scribe; and seems to have been used only of scribe of high rank, at any rate under the Memphite empire, if we are to credit E. DE ROUSE

machinery. We come across him in all grades of the staff: an insignificant registrar of oxen, a clerk of the Double White Storehouse, ragged, humble, and badly paid, was a scribe just as much as the noble, the priest, or the king's son.1 Thus the title of scribe was of no value in itself, and did not designate, as one might naturally think, a savant educated in a school of high culture, or a man of the world, versed in the sciences and the literature of his time; 2 every one was a scribe who knew how to read, write, and cipher, was fairly proficient in wording the administrative formulas, and could easily apply the elementary rules of book-keeping. There was no public school in which the scribe could be prepared for his future career; but as soon as a child had acquired the first rudiments of letters with some old pedagogue, his father took him with him to his office, or entrusted him to some friend who agreed to undertake his education. The apprentice observed what went on around him, imitated the mode of procedure of the employés, copied in his spare time old papers, letters, bills flowerily-worded petitions, reports, complimentary addresses to his superiors or to the Pharaoh, all of which his patron examined and corrected, noting on the margin letters or words imperfectly written, improving the style, and recasting or completing the incorrect expressions.9 As soon as he could put together a certain number of sentences or figures without a mistake, he was allowed to draw up bills, or to have the sole superintendence of some department of the treasury, his work being gradually increased in amount and difficulty; whee he was considered to be sufficiently au conrant with the ordinary business, h. education was declared to be finished, and a situation was found for him either in the place where he had begun his probation, or in some neighbouring office. (Cours du Collège de France, 1969); later on this distinction was less observed, and the word "in disappeared before sakhû (sakh di rived from sashai).

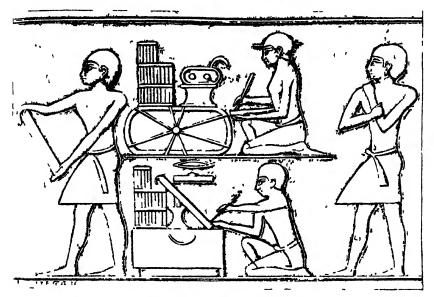

The three sons of Kainônahû, grandchildren of the king, are represented exercising in a lunctions as seriles in the presence of their father, their tablets in the left hand, the real behind the ear (Litsus, IbnIm., ii. 11): similarly the eldest son of Ankhainûka, "friend, commandin, ii palace" under the first kings of the V<sup>th</sup> dynasty (Maritti, Les Mastabas, pp. 305-509); to be brother of Topian ankhu (id., p. 193), and several of the sons of Sakhemphtah (id., p. 253), about the same period

This is the time which we find most frequently represented in modern works on Eg. pt, in a romance of G. Et. is, for instance, e.g. the Pontaur and the Neferschhet of Uardantis also the transcrabily realized from a study of the literary paper of the XIX<sup>th</sup> and XX<sup>th</sup> dynastics, in we the profession of study is exalted at the expense of other professions (cf. the panegyris of the scribe in the Anastasi Pennius, No. 1, pls. 1.-xiii.; Charas, Le Voyage d'un Egyptien, pp. 31-17).

and the Anastasi Papyrus no V, in which we find a whole string of pieces of every possible style description—business letters, requests for leave of absence, complimentary verses addressed or superior, all probably a collection of exercises compiled by some professor, and copied by his piglan order to complete their education as scribes; the master's corrections are made at the top and bottom of the pages in a bold and skilful hand, very different from that at the pupil, though the writing of the latter is generally more legible to our modern eyes (Select Papyri, vol. i. pls. 1888) exxis.).

Evidence of this state of things seems to be furnished by all the biographies of scribes with wind are acquainted, e.g. that of Amten; it is, moreover, what took place regularly throughout the whom of Egypt, down to the latest times, and what probably still occurs in those parts of the country where European ideas have not yet made any deep impression (Maspero, Études Égyptiones, vol. ii. pp. 123-1

Thus equipped, the young man ended usually by succeeding his father or his patron: in most of the government administrations, we find whole dynastics of cribes on a small scale, whose members inherited the same post for several centuries. The position was an insignificant one, and the salary poor, but the means of existence were assured, the occupant was exempted from forced laboured from military service, and he exercised a certain authority in the narrow

THE STAFF OF A GOVERNMENT OFFICER IN THE TIME OF THE MEMBRITE DYNASIES,2

and in which he lived: it sufficed to make him think himself happy, and in fact to be so. "One has only to be a scribe," said the wise man, "for the stable takes the lead of all." Sometimes, however, one of these contented officials, more intelligent or ambitious than his fellows, succeeded in rising above the common mediocrity: his fine handwriting, the happy choice of his statences, his activity, his obliging manner, his honesty—perhaps also his discret choices the cause of his promotion. The son of a peasant or of some poor wretch, who had begun

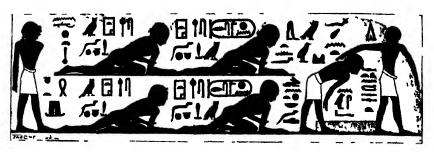

the statement may be easily verified by a reference to Maritan's Catalogue general his Manufacter thingles. The aumber of instances would be still larger, but not Mariette, in order to keep the book within limits, suppressed the titles and functions of the majority of the persons the inentioned by the dozen on the votice stello in the Gizch Museum

<sup>1</sup> can by Faucher-Gud.a, from a wall-painting on the temb of Krunes (cf. Reservity, Memmerica) and particles of the upper part of the picture we see a palette, with two sincers, on a vessel which is as in a bottle, and a packet of tablets tied together, the whole supported by a bundle of training in the lower part rests his tablet against an ink-bottle, a box for archives being placed in. Behind them a nakht-khrôù announces the delivery of a tablet covered with figures which a third scribe is presenting to the master.

<sup>1</sup> Sis the refrain which occurs constantly in all the exercises for style given to scholars under

life by keeping a register of the bread and vegetables in some provincial government office, had been often known to crown his long and successful career by exercising a kind of vice-regency over the half of Egypt. His granumes overflowed with corn, his storchouses were always full of gold, fine stuffs, and precious vases, his stalls "multiplied the backs" of his oxen; the sons of his early patrons, having now become in turn his protégés, did not venture to approach him except with bowed head and bended knee

No doubt the Amten whose tomb was removed to Berlin by Lepsius, and

THE CREEK ANNOUNCES THE ARRIVAL OF T

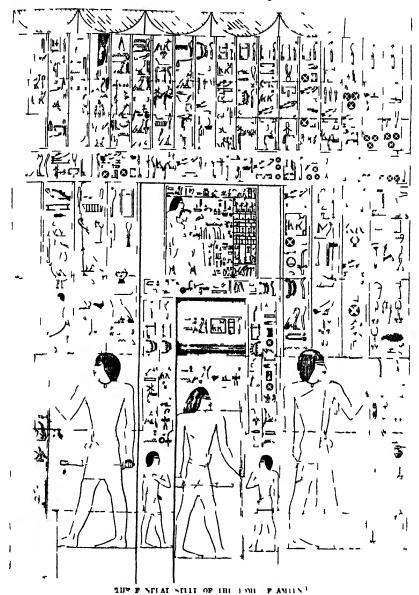

put together piece by piece in the museum, was a parvenu of this kind. He was born rather more than four thousand years before our era, under one of the last kings of the III<sup>11</sup> dynasty, and he lived until the reign of the first king of the IV<sup>th</sup> dynasty, Snofrûi. He probably came from the Nome of the Bull, if not from Xors itself, in the heart of the Delta His father, the scribe Anûpûmonkhû, held, in addition to his office, several landed estates, producing large returns; but his mother, Nibsorat, who appears to have been merely a concubine, had no personal fortune, in a would have been unable even to give her child an education. Anupûmonki u made himself entirely responsible for the necessary expenses, "giving him all the necessities of life, at a time when he had not as yet either contabally, income, house, men or women servants, or troops of asses, persor oxen." A soon as he was in a condition to provide for himself, to

<sup>1</sup> The expression is borrowed from one of the letters in the Anastasi Pappins, No. 18, pl. 18, 11, 2 Drawn by I cocher-tendin, from a picture in the tember 1 Shopensuri (1 Electes, Ihn' n. 1). the meat, cakes, fruits, and fresh vegetables which constituted the taxes, all on his own responsibility, except that he had to give an account of them to the "Director of the Storehouse" who was nearest to him. We are not told how long he remained in this occupation; we see merely that he was raised successively to posts of an analogous kind, but of increasing importance. The provincial offices comprised a small staff of employés, consisting always of the same officials:-a chief, whose ordinary function was "Director of the Storehouse;" a few scribes to keep the accounts, one or two of whom added to his ordinary calling that of keeper of the archives; paid ushers to introduce clients, and, if need be, to bastinado them summarily at the order of the "director;" lastly, the "strong of voice," the criors, who superintended the incomings and outgoings, and proclaimed the account of them to the scribes to be noted down forthwith.1 A vigilant and honest crier was a man of great value. He obliged the taxpayer not only to deliver the exact number of measures prescribed as his quota, but also compelled him to deliver good measure in each case; a dishonest crier, on the contrary, could easily favour cheating, provided that he shared in the spoil. Amten we at once "crier" and "taxer of the colonists" to the civil administrator of the Xorte nome: he announced the names of the peasants and the payments they made, then estimated the amount of the local tax which each, according to his income, had to pay. He distinguished himself pre-eminently in these delicate duties, that the civil administrator of Nor made him one of his subordinates. He became "Chief of the Ushers" afterwards "Master Crier," then "Director of all the King's flax " in the Note nome-an office which entailed on him the supervision of the culture, cutting, and general preparation of flax for the manufacture which w It was one of the highest offices carried on in Pharaoh's own domain. in the Provincial Administration, and Amten must have congratulated him on his appointment

From that moment his career became a great one, and he advanced quietary. Up to that time he had been confined in offices; he now left them to perform more active service. The Pharaohs, extremely jeulous of their own authority, usually avoided the pursue in the head of the nomes in their domain, a single animals which he was wont to pursue in the Libyan desert in his capacity of Grand Buntanna had the upper part of the picture he is scated, and once more partakes of the functal repast. The ion the unscription in short columns, which occupies the upper part of the wall, enumerates has principle, his estates in the Delta, and mentions some of the honours conferred on him by his son in the course of his long career.

With regard to these criers—called in Egyptian nakht-khróû—see Marpiro, Études Égyptia , vol ii. pp. 135, 139. Representations of Offices will be found in the tomb of Shopsisûrû, at Si (1214) (Lepsius, Denkm., 11., 62, 63, 64), in the tomb of Phtahhotpû (id., pl. 103 a), and in several of 11.44 (id., pl. 71 a, 74, etc.); cf. an administrative office in the nome of the Gazelle, under the VIth dy' '., p. 289 of the present work.

aler, who would have appeared too much like a prince; they preferred having each centre of civil administration, governors of the town or province, well as military commanders who were jealous of one another, supervised no another, counterbalanced one another, and did not remain long enough office to become dangerous. Amten held all these posts successively most of the nomes situated in the centre or to the west of the Delta.

His first appointment was to the government of the village of Pidosů, an unimportant post in itself, but one which entitled him to a staff of office, and in consequence procuted for him one of the greatest indulgences of vanity that an Egyptian could enjoy.1 The staff was, in fact, a symbol of command which only the nobles, and the officials associated with the nobility, could carry without transgressing custom; the assumption of it, 15 that of the sword with us, showed every one that the bearer was a member of a privileged class. In ten was no sooner ennobled, than his functions began to extend; villages were rapidly added to villages, then towns to towns, including uch an important one as Bûto, and finally the nomes of the Harpoon, of the Bull, of Silurus, the western half of the Saite nome, the nome of the Haunch, and a part of the Fayûm came within his jurisdiction the western half of the Saite nome, where he long resided, corresponded with what we called later the Libyan nome.

on the sea, and was bounded on one side by the Canopic branch of the Nile. In the other by the Libyan range; a part of the desert as well as the Oases iell under its rule. It included among its population, as did many of the Provess of Upper Egypt, regiments composed of nomad hunters, who were campaled to pay their tribute in living or dead game. Amten was metamorphosed into Chief Huntsman, secured the mountains with his met, and thereupon became one of the most important personages in the determinant of the country. The Pharaohs had built fortified stations, and had from one to time constructed walls at certain points where the roads entered the lley—at Syene, at Coptos, and at the entrance to the Wady Tumilat.

n by Fauchor-Gudin, from Lersius, Denkm, n 120 a, the original is in the Berlin Museum.

Amten having been proclaimed "Primate of the Western Gate," that is, governor of the Libyan marches, undertook to protect the frontier against the wandering Bedouin from the other side of Lake Marcotis. His duties as Chief Huntsman had been the best preparation he could have had for this They had forced him to make incessant expeditions among the mountains, to explore the gorges and ravines, to be acquainted with the routes marked out by wells which the marauders were obliged to follow in their incursions, and the pathways and passes by which they could descend into the plain of the Delta; in running the game to earth, he had gained all the knowledge needful for repulsing the enemy.1 Such a combination of capabilities made Amten the most important noble in this part of Egypt. When old age at last prevented him from leading an active life, he accepted, by way of a pension, the governorship of the nome of the Haunch: with civil authority, military command, local priestly functions, and honorary distinctions, he lacked only one thing to make him the equal of the nobles of ancient family, and that was permission to bequeath without restriction his towns and offices to his children.

His private fortune was not as great as we might be led to think. He inherited from his father only one estate, but had acquired twelve others in the nomes of the Delta whither his successive appointments had led him -namely, in the Saite, Xoïte, and Letopolite nomes.8 He received subse quently, as a reward for his services, two hundred portions of cultivated land, with numerous peasants, both male and female, and an income of one hundred loaves daily, a first charge upon the funeral provision of Queen Hâpûnimâit.4 He took advantage of this windfall to endow his family suitably. His only son was already provided for, thanks to the munificence of Pharaoh; he had begun his administrative career by holding the same post of scribe, in addition to the office of provision registral, which his father had held, and over and above these he received by royal grant, four portions of cornland with their population and stock.5 Ander gave twelve partions to his other children and fifty to his mother Nabsourt, by means of which she lived comfortably in her old age, and left an amuity for maint ing worship at her tomb.6 He built upon the remainder of the land a magnificent villa, of which he has considerately left us the

here and there from out of the sand: that in which the mummy of Amton was to be enclosed was situated not far from the modern village of Abûsion on the confines of the nome of the Haunch, and almost in sight of the mansion in which his declining years were spent.

The number of persons of obscure origin, who in this manner had risen in a few years to the highest honours, and died governors of provinces or ministers of Pharaol, must have been considerable. Their descendants followed in their fathers' footsteps, until the day came when royal favour or an advantageous marriage secured them the possession of an hereditury fief, and transformed the son or grandson of a prosperous scribe into a feudal lord. It was from people of this class, and from the children of the Pharaoh, that the nobility was mostly recruited. In the Delta, where the authority of the Pharaoh was almost everywhere directly felt, the power of the nobility was weakened and much curtailed; in Middle Egypt it gained ground, and became stronger and stronger in proportion as one advanced southward. The nobles held the principalities of the Gazelle,2 of the Hare,3 of the Serpent Mountain,4 of Akhmin,5 of Thinis,6 of Qase es-Savad, of El-Kab, of Aswan, and doubtless others of which we shall some day discover the monuments. They accepted without difficulty the fiction according to which Pharaoh claimed to be absolute master of the soil, and ceded to his subjects only the usufruct of their fiefs; but apart from the admission of the principle, each lord proclaimed himself sovereign in his own

All the fether of which it was composed, are to be found singly on monuments of the Memphra eq. ch.

by letter or in person.1 The duties enforced by the feudal state do not appear to have been onerous. In the first place, there was the regular payment of a tribute, proportionate to the extent and resources of the fief. In the next place, there was military service: the vassal agreed to supply, when calle' upon, a fixed number of armed mon, whom he himself commanded, unless he , could offer a reasonable excuse such as illness or senile incapacity.3 Attendance at court was not obligatory: we notice, however, many nobles about the person of Pharaoh, and there are numerous examples of princes, with whose lives we are familiar, filling offices which appear to have demanded at least a temporary residence in the palace, as, for instance, the charge of the royal wardrobe. When the king travelled, the great vassals were compelled to entertain him and his suite, and to escort him to the frontier of their domain.4 On the occasion of such visits, the king would often take away with him one of their sons to be brought up with his own children: an act which they on their part considered a great honour, while the king on his had a guarantee of their fidelity in the person of these hostages.<sup>5</sup> Such of these young people as returned to then fathers' roof when their education was finished, were usually most loyal to the reigning dynasty. They often brought back with them some maiden born in the purple, who consented to share their little provincial sovereignty,6 while in exchange one or more of their sisters entered the harem of the Pharob Marriages made and marred in their turn the fortunes of the great few ! houses,7 Whether she were a princess or not, each woman received as 1 1 dowry a portion of territory, and enlarged by that amount her husband's little state; but the property she brought might, in a few years, be taken by her daughters as portions and enrich other houses. The fiel seldom could bear up against such dispended ment; it fell away piecemeal, and by the third or four 1/4

1 For instance, this was so in the case of the princes of the Gazelle none, as is shown by the total passages in the Great Inscription of Beni-Husan, 11 13-21, 21 36, 51-62, 71-7

The Uni asscription turnishes us with an instance of a general how of the feudal contingenes in the time of the VIth dynasty (L 11, et seq.)

generation had disappeared. Sometimes, however, it gained more than it lost in this matrimonial game, and extended its borders till they encroached on neighbouring nomes or else completely absorbed them. There were always in the course of each reign several great principalities formed, or in the process of formation, whose chiefs might be said to hold in their hands the destinies of the country. Pharaoh himself was obliged to treat them with deference, and he purchased their allegiance by renewed and ever-increasing concessions. Their ambition was never satisfied; when they were loaded with favours, and lid not venture to ask for more for themselves, they impudently demanded them for such of their children as they thought were poorly provided for. Their eldest son "knew not the high favours which came from the king. Other princes were his privy counsellers, his chosen friends, or foremost among his niends!" he had no share in all this.1 Pharaoh took good care not to reject a petition presented so humbly: he proceeded to lavish appointments, titles, and estates on the son in question; if necessity required it, he would even seek out wife for him, who might give him, together with her hand, a property equal to that of his father. The majority of these great vassals secretly aspired to the crown: they frequently had reason to believe that they had some right to it, other through their mother or one of their ancestors. Had they combined a most the reigning house, they could easily have gained the upper hand, but their mutual jealousies prevented this, and the overthrow of a dynasty to which they owed so much would, for the most part, have profited them but little: as soon as one of them revolted, the remainder took arms in Pharaoh's defence, led his armies and fought his battles.2 If at times their ambition and greed toussed their suzerain, at least their power was at his service, and their selfinterested allegiance was often the means of delaying the downfall of his house.

Twithings were specially needful both for them and for Pharaoh in order to maintain or increase their authority—the protection of the gods, and a maintary organization which enabled them to mobilize the whole of their forces at the first signal. The celestial world was the faithful image of our war; it had its empires and its feudal organization, the arrangement of which corresponded to that of the terrestrial world. The gods who inhabited it are dependent upon the gifts of morfals, and the resources of each

for Grande Inscription de Beni-Hassan, Il. 148-160. These are the identical words us d by har mootph, load of the Gazelle nome, when trying to obtain an office or a grant of land on behalf or son Nakhti. We learn from the context that Usirtasen II, at once granted his request

<sup>1)</sup> tabi, Prince of Sut, and his immediate successors, did so on behalf of the Pharachs of the N° 11 redeopolitan dynasty, against the first Theban Pharachs of the Autul tecniv (Mestrice, in the Lew Critique, 1889, vol. ii. pp. 445-419). On the other hand, it appears that the neighbouring tents of Khuumhotpu, in the nome of the Gerelle, took the part of the Thebans, and owned their subspaces to them.

p 98 of the present work, for what has been said on the nature and on in of the fe dal byter of the Egyntian gods.

individual deity, and consequently his power, depended on the wealth and number of his worshippers; anything influencing one had an immediate effect on the other. The gods dispensed happiness, health, and vigour; 1 to those who made them large offerings and instituted pious foundations, they lent their own weapons, and inspired them with needful strength to overcome their enemies.2 They even came down to assist in battle, and every great encounter of armies involved an invisible struggle among the immortals,3 The gods of the side which was victorious shared with it in the triumph, and received a tithe of the spoil as the price of their help; the gods of the vanguished were so much the poorer, their priests and their statues were reduced to slavery, and the destruction of their people entailed their own downfall. It was, therefore, to the special interest of every one in Egypt, from the Pharaoh to the humblest of his vassals, to maintain the good will and power of the gods, so that their protection might be effectively ensured in the hour of danger. Pains were taken to embellish their temples with obelisks, colossi, altars, and bas-reliefs; new buildings were added to the oll: the parts threatened with ruin were restored or entirely rebuilt; daily gifts were brought of every kind-animals which were sacrificed on the spot, but if flowers, fruit, drinks, as well as perfumes, stuffs, vases, jewels, bricks or but of gold, silver, lapis-lazuli, which were all heaped up in the treasury within the recesses of the crypts.4 It a dignitary of high rank wished to perpetuate the remembrance of his honours or his services, and at the same time to produce to his double the benefit of endless prayers and sacrifices, he placed "by special permission" 5 a statue of himself on a votive stele in the part of the temple reserved for this purpose,-in a courtyard, chamber, encircling passage, as it Karnak, or on the staircase of Osiris as in that leading up to the terrace in the

I I may here remind my readers of the numberless baser liets and stelle on which the Lie represented as making an oftening to a god, who replies in some such formula as the follows: give thee health and strength "or, "I give thee poy and hie for millions of yours". See, for stance, at Med at Habu. Amon and other gods handing to Banner III. the

In the P cm of Pentagrift," Amon comes from Hermonthis in the Thebaid to Qodshu it to heart of Syr a, in o der to help Ramses II, in battle, and rescue him from the peril into which ' had been plunger by the descrition of his supporters (E and J DE Rotge, Le Poene de Peuteri in the Rome Egyptolouique, vol. v. pp. 158, 159).

See the "Poem and affift" (E. and J. Dr. Rouge, in the Revue Egyptologique, vol v 1 ct seq.) for the grounds on which Ramses II bases his imperative appeal to Amon for help 'II I not made thee numerous offerings? I have filled thy temple with my prisoners. I have built to an everlasting temple, and have not spired my weilth in endowing it for thee; I lay the whole w under contribution in order to stock thy domain . . I have built thee whole pylons in ston , in have myself reared the flagstaffs which adorn them; I have brought thee chelisks from Elephan (

The majority of the votive statues were lodged in a temple "by special favour of a hir -EM HOSÎTÛ NII KHÎR SÛ FON--AS A recompense for beavices rendered (MARIETTE, Catalogue des cipaux monuments du Musée de Boulaq, 1861, p. 65; and Karnak, text, p. 42, et seq.). Som o the stelse bear an inscription to the above effect (MARIFFEE, Catalogue des principaux monn 1864, p. 65); no authorization from the king was required for the consceration of a stole in a to 1 • It was in the encircling passage of the limestone temple built by the kings of the

canctuary of Abydos; 1 he then sealed a formal agreement with the priests, by which the latter engaged to perform a service in his name, in front of this commemorative monument, a stated number of times in the year, on the days fixed y universal observance or by local custom.2 For this purpose he assigned to them annuities in kind, charges on his patrimonial estates, or in some cases, the were a great lord, on the revenues of his fief,3-such as a fixed quantity of loaves and drinks for each of the celebrants, a fourth part of the sacrificial victim, a garment, frequently also lands with their cattle, serfs, existing buildings, farming implements and produce, along with the conditions of service with which the lands were burdened. These gifts to the god-"nutir hotpûû"-were, it appears, effected by agreements analogous to those dealing with property in mortmain in modern Egypt; in each nome they constituted, in addition to the original temporalities of the temple, a considerable domain, constantly enlarged by fresh endowments. The gods had no daughters for whom to provide, nor sons among whom to divide their inheritance; all that fell to them remained theirs for ever, and in the contracts were inserted imprecations threatening with terrible alls, in this world and the next, those who should abstract the smallest portion from them.4 Such menaces did not always prevent the king or the lords from laying hands on the temple revenues; had this not been the case, Egypt would soon have become a sacerdotal country from one end to the other. Even when reduced by periodic usurpations, the domain of the gods formed, at all periods, about one-third of the whole country.5

Its administration was not vested in a single body of Priests, representing divisty, and now completely destroyed, that all the Karnak votive statues were discovered (Mani IIE, Karnak, text, p. 42, et eq.). Some of them still rest on the stone ledge on which they were placed by the priests of the god at the moment of consecration.

The majority of the stelss collected in the temple of Osiris at Abydos were supposed to have come from "the staircase of the great god." In reference to this staircase, the temb of Osiris to which it led, and the fruitless efforts made by Mariette to discover it, see Maspeno's remarks in the Revus Graque, 1881, vol. i. p. 83, and Études L'gypticanes, vol. i. pp. 128, 129. See p. 508 of this vol.

The great Siût inscription, translated by Maspeno (L'tudes de Mythologie et d'Archéologie

Bypphennes, vol. i. pp. 53-75) and by Erman (Zehn Vertrage and dem mattleren Reich, in the Lutschrift, 1882, pp. 159-184), has preserved for us in its entirety one of these contracts between a prince and the priest of Unpunitu.

This is proved by the passages in the Siût inscription (II. 23, 28, 41, 13, 53), in which Hâpizaûff draws a distinction between the revenues which he assigns to the priests "on the house of his matric," in on his patrimental estates, and those revenues which he grants "on the house of the (III.)" or on his princely flef.

The foundation stells of the temple at Defr el-Medinch is half filled with imprecations of this hand (S. Birch, Sur une Stèle Hieratique, in Character, pl. axix.). We possess two fragmats of similar i scriptions in the Hieratic and Demotic Character, pl. axix.). We possess two fragmats of similar i scriptions belonging to the time of the Aucient Empire, but in such a mutilated stream to defy translation (Mariette, Les Mastabas de l'Aucien Empire, p. 318; E. and J. de Rosent Empire, p. 318; E.

The tradition handed down by Diodorus (i. § 21) tells us that the goddess Isis assigned a third if it country to the priests; the whole of Egypt is said to have been divided into three equal lart, the first of which belonged to the priests, the second to the kings, and the third to the wall, r class (ib., § 73). When we read, in the great Harris Papyrus, the list of the property of by the temple of the Theban Amon alone, all over Egypt, under Ramses III., we can be only believe that the tradition of the Greek epoch in no way exaggerated matters.

the whole of Egypt and recruited or ruled everywhere in the same fashion There were as many bodies of priests as there were temples, and every temple preserved its independent constitution with which the clergy of the neighbouring temples had nothing to do: the only master they acknowledged was the lord of the territory on which the temple was built, either Pharaoh or one of his nobles The tradition which made Phanoh the held of the different worships in Egypt prevailed everywhere, but Pharaoh soared too far above this world to confine himself to the functions of any one particular order of priests:1 he officiated before all the gods without being specially the minister of any, and only exerted his supremacy in order to make appointments to important sacordotal posts in his domain.4 He reserved the high priesthood of the Memphite Phtah and that of Ra of Heliopolis either for the princes of his own family or more often for his most faithful servants, 3 they were the docile instruments of his will, through whom he excited the influence of the gods, and disposed of their property without having the trouble of administrating it. The feudal lords, less removed from mortal affairs than the Pharaoh, did not disdain to combine the priesthood of the temples dependent on them with the general supervision of the different worships practised on their lands. The princes of the Gazelle nome, for instance bore the title of "Directors of the Prophets of all the Gods," but were, correct v speaking, prophets of Horus, of Khnûmu master of Haorit, and et Pakhît i s tiess of the Speos-Artemidos.1 The religious suzeramty of such princes was too complement of their civil and military power, and their ordinary income with augmented by some portion at least of the revenues which the Linus in mormain furnished annually. The subordinate sacerdotal functions were filled by professional priests whose status varied according to the gods they served in a

The only exception to this rule wis in the case of the Theban kines of the XXI density and even here the exception is more appoint than i.e.d. As a matter of fact, these kines Help and Pinozmu, begin by being high priests of Amon before exceeding the throne the well parties who become Phareds, not Flavous who excited themselves pentitis. Possibly velous hit place Smoothburf of the XIV dynasty in the same entropy, it, is Bingsche issues as (Gosele et al gyptens, p. 181, et req. et Wildenstein, A gyptenshe trashichte, p. 267), his name, Musmashar identical with a title of face high priest of Osmis at Mendes, thus proving that how is pould Osmis in that they below here came king.

Among the interiors, we have that of the king of the AAI I unitedyristy, who opportunity and prost of the Phoban Amon (Biggson, Recueil de monuments, vol. 1.11) of the state is now in the Lourge and that of the last king of the same dynasty, Pau one if we interied the same office on prince Aupath, son of Sheshonqu (Mestino, Les Monues sonales d. 1). Bukari, in the Meno — the Mission du Care, vol. 1.p. 730, et. seq.) The king's right of antion harmonized very weight that the redditary transmission of the priestly office through menoit the same family as we shall have occasion to show later on

<sup>2</sup> A list, as yet very incomplete, of the high priests of Phian it Mon phis, was driven of E Schriptelli in his Catalogie of the Lyptim Museum at Florence (pp. 201-203). One of t Shopsishphtah I, married the cliest daughter of Phaiaoh Shopsishat of the IV<sup>th</sup> dynasty (1 Rocher has sur les monuments qu'on pout attribuer aux six premières dynastics ac Mair pp. 67-71); Khamoisit, one of the fivourite sons of Ramsis II, was also high priest of the Memi Phiah during the greater part of his father's reign

4 See their titles collected in Masilleo's La Grande Inscription de Bent-Hassan (Reiv Iravaux, vol. 1. pp. 179, 160), the sacerdotal titles borne by the princes and princesses of 11 under the XXth dynasty will be found in Maspleo, Lee Monies royales de Detr-el-Buhari

the provinces in which they were located. Although between the mere priest nd the chief prophet there were a number of grades to which the majority never attained, still the temples attracted many people from divers sources, who, once stablished in this calling of life, not only never left it, but never rested until they had introduced into it the members of their families. The offices they alled were not necessarily hereditary, but the children, born and bred in the snelter of the sanctuary, almost always succeeded to the positions of their fathers, and certain families thus continuing in the same occupation for generations. at last came to be established as a sort of sacerdotal nobility.2 supplied them with daily meat and drink; the temple buildings provided them, with their lodging, and its revenues furnished them with a salary proportionate to their position. They were exempted from the ordinary taxes, from military service, and from forced labour; it is not surprising, therefore, that those who were not actually members of the priestly families strove to have at least a share in their advantages. The servitors, the workmen and the employés who congregated about them and constituted the temple corporation,3 the scribes attached to the administration of the domains, and to the receipt of offerings, shared de justo if not de jure in the immunity of the priesthood; as a body they formed a separate religious society, side by side, but distinct from, the civil population. and freed from most of the burdens which weighed so heavily on the latter.4

The soldiers were far from possessing the wealth and influence of the clergy. Whitaty service in Egypt was not universally compulsory, but rather the profession and privilege of a special class of whose origin but little is known. Perhaps originally it comprised only the descendants of the conquering race, but in historic times it was not exclusively confined to the latter, and recruits were

the only hierarchy of which we have any knowledge is that of the Thebon Amon, at Kanoke mode to the inscription in which Bokanikhonsa has fold us of the advance to his error under Sett and Rannés I, from the rank of priest to that of "First Prophet," i.e. of High Priest of Amon (In Diversa, Le Monament biographique de Balenkhonson, pp. 12-11; cf. A. Bantit, be l'I be tion de Grasse Prêtre d'Animon, in the Revue Arché degique, 2nd series, 1862, vol. ii.).

We passess the collins of the process of the Theban Month for nearly thirty generations, vization to NVik dynasty () the time of the Prolemes. The inscriptions give us then gene decres, as well as the internarriages, and slow us that they belonged almost exclusively to two or three 1 aperiant 1 at who intermarried with one another or took their wives from the families of the process of Amon.

<sup>(</sup>W) (110, Egyptian Documents, in the Transactions of the Society of Bibliod Archaeley, vol. vol. (111) we have already son Quabitità as formin; put of the entourage of kings (see p. 277, note 3)

We know what the organization of the temples during the Ptolemaic epoch was, and its main tentures are set forth summarily in Lauracoso's Teonomic politique de Ptaggle sons les Lagale. Ptolemaic et al. 1992 274. As ady of the information which we glean here and there from the monument of the end of the properties of the ptolemail of the only dufference being that there was more regularity and precision in the distribution of the pricess into classes.

This class was called Monfitti in American Egypt (MASPERO, Littles Lyppticanes, vol. ii pp. a.b., 36., eff. ii., Die Agyptologie, pp. 232, 233). The Greek historians, from the time of Herodotus onwords, geometry designated them by the term μάχιμοι (Herodorus, ii. 164, 168; Dionomas Specific 28, 73, 74. Papyrus No. LXIII. du Lourre, in Liernonnia, Les Papyrus Grees du Lourre, p. 350, et seq.).

raised everywhere among the fellahs,1 the Bedouin of the neighbourhood, the negroes,<sup>2</sup> the Nubians,<sup>8</sup> and even from among the prisoners of war, or adventurer. from beyond the sea.4 This motley collection of foreign mercenaries composed ordinarily the body-guard of the king or of his barons, the permanent nucleus round which in times of war the levies of native recruits were rallied. Every Egyptian soldier received from the chief to whom he was attached, a holding of land for the maintenance of himself and his family. In the fifth century Bo twelve arure of arable land was estimated as ample pay for each man,5 and tradition attributes to the fabulous Sesostris 6 the law which fixed the pay at this rate. The soldiers were not taxed, and were exempt from forced labour during the time that they were away from home on active service; with this exception they were liable to the same charges as the rest of the population. Many among them possessed no other income, and lived the precarious life of the fellah,-tilling, reaping, drawing water, and pasturing their cattle,-in the interval between two musters.7 Others possessed of private fortunes let their holdings out at a moderate rental, which formed an addition to their patrimonal income.8 Lest they should forget the conditions upon which they possessed this

1 This is shown, inter alia, by the real or supposititious letters in which the master-scribe endeavours to deter his pupil from adopting a military career (MASPERO, Du Genre Épistolaire, pp. 10-11; cf Egys) A'gypten and A'gyptisches Lebanim Alterium, pp 721, 722), recommending that of a scribe in preter acc

Cni, under Papi I., recruited his army from among the inhabitants of the whole of Egypt, from the phantine to Letopolis at the mouth of the Delta, and as far as the Mediterranean, from among the Bedom . of Labya and of the Isthmus, and even from the six negro races of Nubia (Inscription d'Ouni, Il. 11 19;

The Nubian tribe of the Mazaiu, afterwards known as the Libyan tribe of the Mashanesh furnished troops to the Egyptian kings and princes for contaries; indeed, the Mazon formed such an integral part of the Egyptian armies that their name came to be used in Coptic as a synonym for soldier, under the form "mator."

4 Later on we shall come across the Shardana of the Royal Guard under Ramses H. (E DE Royal, Extrait d un memoire sur les attaques, p. 5); later still, the lonany, Camans, and Greek mercant ,

will be found to play a decisive part in the history of the Saite dynastics.

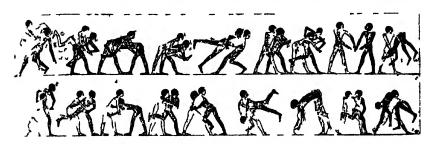

Hi reports, ii. 168. The arms being equal to 27 52 ares [an are = 100 square maters military fief contained 27 82 x 12 = 33 3 51 arcs. [The "arms," according to F. L. Griffin we a square of 100 Egyptian cubits, making about g of an acre, or 2000 square metres (Proceedings or the). Society of Biblical Archaology, vols xiv., xv.) .- The J The chifliks created by Mohammad-Ah, with a view to bringing the abandoned districts into cultivation, allotted to each labourer who offered to reclaim it, a plot of land varying from one to three feddans, i.e. from 4200 by square metres to 12602-19 square metres, according to the nature of the soil and the accessities of each family (Court, Le Nil, le Soul n. l'Egypte, p. 210). The military ficts of ancient Egypt were, therefore, nearly 11 . times as great in extent as these abadiyels, which were considered, in modern Egypt, sufficient to supply the want of a whole family of peasants; they must, therefore, have secured not not a a bare subsistence, but my le provision for their proprietors.

\* Diodorus Sicelle, , 51, 73, 95; cf. Aristotle, Polit, vii. 9 No Egyptian monument cont any reference to the passing of such a law. The passage in the "Poom of Pentaunit," which is been quoted in this connection (REVILLOUT, La Caste Militaire organi er par Ramses II. dague Diodore de Sicile et le Poème de Pentaour, in the Rovas Égyptologique, vol. 111. pp. 101-104), doc- 101 contain any statement to this effect. It merely makes a general allusion to the favours with woch

the king loaded his generals and soldiers.

7 This follows from the expressions used in Papyrus No. LXIII. du Louvre, and from the 7 mendations addressed by the ministers of the Ptolemes to the royal administrators in regu soldiers who had sunk into pauperism. 14

Diodorus Siculus says in so many words (i. 74) that "the farmers spent their life in cultlands which had been let to them at a moderate rent by the king, by the priests, and by the water ilitary holding, and should regard themselves as absolute masters of it, they are seldom left long in possession of the same place: Herodotus asserts that allot allot allot allot allot allot away yearly and replaced by others of equal extent the difficult to say if this law of perpetual change was always in force; at any inte, it did not prevent the soldiers from forming themselves in time into a kind of aristocracy, which even kings and barons of highest rank could not ignore. They were enrolled in special registers, with the indication of the holding which

SOMF OF THE MILITARY ATHLETIC FYERGISES

was temporarily assigned to them. A military scribe kept this register in every rotal nome or principality. He superintended the redistribution of the lands, the registration of privileges, and in addition to his administrative functions, he had in time of war the command of the troops furnished by his own district; in which case he was assisted by a "lieutenant," who as opportunity officied acted is his substitute in the office or on the battle-field. Military service was not hereditary, but its advantages, however trifling they may appear to us, seemed in the eyes of the fellahs so great, that for the most part those who were engaged in it had their children also enrolled. While still young the latter was taken to the barracks, where they were taught not only the use of the bow, the battle-axe, the mace, the lance, and the shield, but were all instructed in such exercises as rendered the body supple, and prepared them for manceuving, regimental matching, running, jumping, and wrestling either with closed or open hand. They prepared themselves for battle by a regular war dance, proposetting, leaping, and brandishing their bows and quivers in the

air. Their training being finished, they were incorporated into local companies and invested with their privileges. When they were required for service, part or the whole of the class was mustered; arms kept in the arsenal were distributed among them, and they were conveyed in boats to the scene of action. The Egyptians were not martial by temperament; they became soldiers rather from interest than inclination.

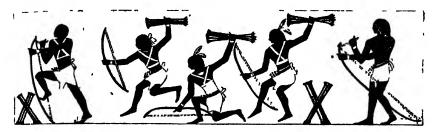

The power of Pharaoh and his barons rested entirely upon these two classes. the priests and the soldiers; the remainder, the commonalty and the peasantry. were, in their hands, merely an inert mass, to be taxed and subjected to forced labour at will. The slaves were probably regarded as of little importance; the bulk of the people consisted of free families who were at liberty to dispose of themselves and their goods. Every fellah and townsman in the service of the king, or of one of his great nobles, could leave his work and his village when he pleased, could pass from the domain in which he was born into a different one, and could traverse the country from one end to the other, as the Egyptians of to-day still do.2 His absence entailed neither loss of goods, nor persecution of the relatives he left behind, and he himself had punishment to fear only when he left the Nile Valley without permission, to reside for some time it a foreign land.3 But although this independence and liberty were in accordance with the laws and customs of the land, yet they gave rise to inconveniences from which it was difficult to escape in practical life. Every Egyptian, the King excepted, was obliged, in order to get on in life, to depend on one more powerful than himself, whom he called his master. The feudal lord was prove

With regard to the unwarlike character of the Egyptians, see what STRABO says, lib. xxii \(^{1} \text{3}, p. 819. Diodones Significantly, i. 73, expressly states that tiefs were given to the fighting-men \(^{1} that the possession of this landed property might render them more zealous in risking then livebehalf of their country."

<sup>2</sup> In the "Instructions of Khiti, son of Daadf, to his son Papt" (Maspeno, Du Style epithelica, p. 18, et seq.; Lattu, Die allägyptische Hochschule zu Chennu, in the Sitzungsberichte of the Academy of Munich, 1872, i. p. 37, et ~q.,, the sente shows us the working classes as being always in the move; this totall the boutman (§ vil.), then the husbandman (§ xil.), the armour (§ xiv.), the courier (§ xv). Immunion have those wandering prests of Isis or Osiris, who, in the second continuous our era, hawked about their "thermeles are action-penny oracles all over the provinces of the Relation Empire, and whose traces are found even so far affeld as the remote parts of the Island of Brita.

The t. at a between Ramses and the Prince of Khfti contains a formal extradition of the reference to Explans or Hittites, who had quitted their native country, of course without to permission of their sovereign (E. de Rot of, Traite entre Ramsès II. et le prince de Khel, of Revue Archéologique. — cries, vol. iv. p. 268, and in Egora, Eindes sur les traites publics, pp. 252; Chabas, Le Voyage a'an Eypptien, p. 332, et seq.). The two contracting parties extra stipulate that persons extradited on one side or the other shall not be punished for having containing that their property is not to be confiscated, nor are their families to be held responsible to the flight (II. 22–36, in the edition of Bourdany's Recueil de Travaux, vol. xiii. pp. 156–158, and vol. pp. 68, 69). From this clause it follows that in ordinary times unauthorized emigration brought in the oulprit corporal punishment and the confiscation of his goods, as well as various penalty. The way in which Sinthit makes excuses for his flight, the fact of his asking the force returning to Egypt (Masuros, Les Contes populaires, 2nd edit., p. 109, et seq.), the very of the letter in which the king recalls him and assures him of impunity, show us that the against emigration were in full force under the XII<sup>th</sup> dynasty.

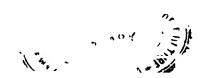

recognize Pharaoh as his master, and he himself was master of the soldiers of priests in his own petty state. From the top to the bottom of the social alle every free man acknowledged a master, who secured to him justice and protection in exchange for his obedience and fealty. The moment an Egyptim tried to withdraw himself from this subjection, the peace of his life was at mend; he became a man without a master, and therefore without a recognized protector. Any one might stop him on the way, steal his cattle, merchandise, or property on the most trivial pretext, and if he attempted to protest, might

WAR DANCE PELEORMED BY TOTETIAN SOLDIES BEFORE A LATTEL 3

heat him with almost certain impunity. The only resource of the victim was to sit at the gate of the palace, waiting to appeal for justice till the laid or the king should appear. It by chance, after many rebuffs, his humble petition were granted, it was only the beginning of fresh troubles. Even if the justice of the cause were indisputable, the fact that he was a man without home or master inspired his judges with an obstinate mistrust, and delayed the satisfaction of his claims. In vain he followed his judges with his complaints and flatteries, chanting their virtues in every key: "Thou art the tather of the unfortunate, the husband of the widow, the brother of the orphan, the clothing of the motherless: enable me to proclaim thy name as a law throughout the land. Good lord, guide without caprice, great without littleness, thou who destroyest falsehood and causest truth to be, come at the words of my mouth; I speak, listen and do justice. O generous one, generous of the a perous, destroy the cause of my trouble; here I am, uplift me; judge

<sup>1</sup> th expressions which bear witness to this fact the very numerous. Mist such = ' He who I'v maker;"  $A_{i,j}$  is 'iff  $x_i$  since = "He who enters into the heart of his mister," etc. They have a frequently in the texts in the case of persons of all ranks, that it was thought no impertance  $\frac{d_{i,j}}{d_{i,j}}$  is attached to them. But the constant repetition of the word NIB, "master," shows that  $w_{i,j}$  differ this view, and give those phrases their full meaning

the expression, "a man without a master," occurs sever it times in the Berlin Pappins, \(\circ\) in the received times in the Berlin Pappins, \(\circ\) in time, the peasant who is the hero of the story, says of the lord Minut rea, the file is the ridder of heaven, the guide of the earth, the balance which carries the offerings the battiess of the ring walls, the support of that which falls, the great master who takes who were is the information to lavish on him the goods of his house, a jug of beer and three leaves" each day (Il 90 b)

me, for behold me a suppliant before thee." <sup>1</sup> If he were an eloquent speaker and the judge were inclined to listen, he was willingly heard, but his causmade no progress, and delays, counted on by his adversary, effected his ruin. The religious law, no doubt, prescribed equitable treatment for all devoteed of Osiris, and condemned the slightest departure from justice as one of the gravest sins, even in the case of a great noble, or in that of the king himself, <sup>2</sup> but how could impartiality be shown when the one was the recognized protector, the "master" of the culprit, while the plaintiff was a vagabond, attached to no one, "a man without a master" <sup>18</sup>

The population of the towns included many privileged persons other than the soldiers, priests, or those engaged in the service of the temples. Those employed in royal or feudal administration, from the "superintendent of the storehouse" to the humblest scribe, though perhaps not entirely exempt from forced labour, had but a small part of it to bear.4 These employés constituted a middle class of several grades, and enjoyed a fixed income and regular employment: they were fairly well educated, very self-satisfied, and always ready to declare loudly their superiority over any who were obliged to gain their living by manual labour. Each class of workmen recognized one or more chiefs,-the shoemakers, their master-shoemakers, the masons, their master-masons, the blacksmiths, their master-blacksmiths,-who looked after their interests and represented them before the local authorities 5 It was said among the Greeks, that even robbers were united in a corporation like the others, and maintained an accredited superior as their representative with the police, to discuss the somewhat delicate questions which the practice of their trade gave occasion to. When the members of the association

<sup>&</sup>lt;sup>2</sup> See, on this point, the "Negative Confession" in chap, exxv. of the Book of the Dead, a complete translation of which has been given on pp. 188-191 of the present work.

The whole of this picture is taken from the "History of the Peasant," which has been preserved to us in the Berlin Papyrus, No. ii. (Chabas, Les Papyrus hieratiques de Berlin, p. 5, et seq. Goodwin in Chabas, Melanges Egyptologiques, 2nd series, p. 219, et seq.; Mastino, Les Contes populaires, 2 a chil., p. 33, et seq.). The Egyptian writer has placed the time of his story arbite a king of the Heracleopolitan dynastics, the IX<sup>th</sup> and the X<sup>th</sup>; but what is true of that eq. this equally true of the Ancient Empire, as may be proved by comparing what he says with the tawhich can be gleaned from an examination of the paintings on the Memphite tombs.

This is a fan inference from the indirect testimony of the Letters: the writer, in councilding the liabilities of the mous professions, implies by contrast that the scribe (i.e. the emplosument) is not subject to them, or is subject to a less onerous share of them than others the beginning and end of the instructions of Khiti would in themselves be sufficient to show us the advantages which the middle classes under the XII<sup>th</sup> dynasty believed they could derive from adopting the profession of scribe (MASPERO, Du Genre Épistolaire, pp. 49, 50, 66, et seq.)

The steles of Abydos are very useful to those who desire to study the populations of a still town. They give us the names of the head-men of trades of all binds: the head-mason lithua (Marierre, Catalogue general, p. 129, Nos. 593 and 339, No. 947), the master-mason As (id., 1. 161, No. 640), the master-shoomaker Kahikhonti (Bouriant, Petits Monuments et petits Texts, in the Recueil, vol. vii. p. 127, No. 19), the head-smiths Osirtasen-Uati, Hotpû, Hotpûrekhsû (Mar. 11, Catalogue general, p. 287, No. 856), etc.

tad stolen any object of value, it was to this superior that the person robbed sorted, in order to regain possession of it: it was he who fixed the amount required for its redemption, and roturned it without fail, upon the payment of this sum. Most of the workmen who formed a state corporation, lodged, or at least all of them had their stalls, in the same quarter or street, under the direction of their chief. Besides the poll and the house tax, they were subject

by acacias or sycamores, where the country-folk of the suburbs held their market on certain days, twice or thrice a month; then came waste ground covered with filth and refuse, over which the dogs of the neighbourhood fought with hawks and vultures. The residence of the prince or royal governor, and the houses of rich private persons, covered a considerable area, and generally presented to the street a long extent of bare walls, crenellated like those of a fortress:

STELE OF SÎTÊ, REPRESENTING THE FRONT OF A HOUSE.1

the only ornament admitted on them, consisted of angular grooves, each surmounted by two open lotus flowers having stems intertwined. Within these walls domestic life was entirely secluded, and as it were confined to its own resources; the pleasure of watching passers-by was sacrificed to the advantage of not being seen from outside, . The entrance alone denoted at times the importance of the great man who concealed himself within the enclosure. Two or three steps led up to the door, which sometimes had a columned portico, ornamented with statues, lending

an air of importance to the building. The houses of the citizens were small, and built of brick; they contained, however, some half-dozen rooms, either vaulted, or having flat roofs, and communicating with each other usually by arched doorways. A few houses boasted of two or three stories; all possessed a terrace, on which the Egyptians of old, like those of to-day, passed most of their time, attending to household cares or gossiping with their neighbours over the party wall or across the street. The hearth was hollowed out in the ground, usually against a wall, and the smoke escaped through a hole in the ceiling: they made their fires of sticks, wood charcoal, and the dung of oxen and asses. In the houses of the rich we meet with state apartments, lighted in the centre by a square opening, and supported by rows of wooden columns;

the other: there was scarcely a family, however poor, who did not place in front of their door a new lamp in which burned an oil saturated with salt, and who did not spend the whole night in feasting and gossiping.1 The festival of the living gods attracted considerable crowds, who came not only from the nearest nomes, but also from great distances in caravans and in boats laden with merchandise, for religious sentiment did not exclude commercial interests and the pilgrimage ended in a fair. For several days the people occupied themselves solely in prayers, sacrifices, and processions, in which the faithful clad in white, with palms in their hands, chanted hymns as they esconted the priests on their way. "The gods of heaven exclaim 'Ah! ah!" in satisfaction, the inhabitants of the earth are full of gladness, the Hathors beat then tabors, the great ladies wave their mystic whips, all those who are gathered together in the town are drunk with wine and crowned with flowers the tridespeople of the place walk joyously about, their heids scented with perfumed oils, all the children rejoice in honour of the goddess, from the rising to the setting of the sun." The nights were as noisy as the days, for a fe hours, they made up energetically for long months of torpor and monotor as existence. The god having it entered the temple and the pilgims til i their departure, the regular routine was resumed and dia god on its term course, interrupted only by the weekly market. At an early hour on that 100 the peasant tolk came in from the surrounding country in an interminal stream, and installed themselves in some open space, reserved from timimmemorial for their use. The sheep, geese, goits, and large horned cital were grouped in the centre, awaiting purchasers. Market gardeners, fishermer, fowlers and gazelle hunters, potters, and small tradesmen, squatted on the roadsides or against the houses, and offered their wares for the inspection of then customers, heaped up in reed baskets, or piled on low round tall vegetables and fruits, loaves or cakes baked during the night, meat either in or cooked in various ways, stuffs, perfumes, ornaments,—all the necessities in luxures of 'aily life. It was a good opportunity for the workpeople, is will as for the 10 vnsfolk, to lay in a store of provisions at a cheaper rate than it the ordinary shops; and they took advantage of it, each according to his me as

other towns besides Dendera

The night of the 1. Thot—which, according to our computation, would be the night of the 16th to the 17th—was, as may be seen from the Great Inscription of Suit (1.36, et seq.), and for the eccentory of "lighting the fire" before the status of the deal and of the gods. A "Feest of Lamps" mentioned by Herodotus (ii. 62), the religious eccentory was accompanied general allumination which lasted all the night, the object of this, probably, was to indicate it wist which the souls of the dead were supposed to pay at this time to the family residence.

<sup>&</sup>lt;sup>2</sup> Demicht v, Dendera, pl xxviii il 1 :-1). The people of Denders crudely encur's this the "Feast of Drunkenness". I rom what we know of the earlier epochs, we are just 1 making this description a general one, and in applying it, as I have done here, to the festive

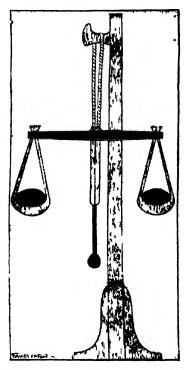

Business was mostly carried on by barter. The purchasers brought with them some product of their toil—a new tool, a pair of shoes, a reed mat, pots of unguents or cordials; often, too, rows of cowries and a small box full of ings, each weighing a "tubnu," made of copper, silver, or even gold, all destined to be bartered for such things as they needed.2 When it came to be a question of some large animal or of objects of considerable value, the discussions which arose were keen and stormy: it was necessary to be agreed not only as to the amount, but as to the nature of the payment to be made, and to draw up a sort of invoice, or in fact an inventory, in which beds, sticks, honey, oil, pick-axes, and garments, all figure as equivalents for a bull or a she-ass.3 Smaller retail largains did not demand so many or such complicated calculations. Two townsfolk stop for a moment in front of a fellah who offers onions and corn in a basket for sale. The first appears to possess no other circulating medium than two necklaces made of glass beads or many-coloured enamelled terracotta; the other flourishes about a circular fan with a wooden handle, and one of those triangular contrivances used by cooks for blowing up the fire. "Here is a fine necklace which will suit you," cries the former, "it is just what you are wanting;" while the other breaks in with: "Here is a fan and a ventilator." The fellah, however, does not let himself be disconcerted by this double attack, and proceeding methodically, he takes one of the necklaces to examine it at his leisure: "Give it to me to look at, that I may fix the price." The one asks too much, the other offers too little; after many concessions, they at last come to an agreement, and settle on the number of onions or the quantity of grain which corresponds exactly with the value of the necklace or the fan. I little further on, a customer wishes to get some perfumes in exchange for a pair of sandals, and conscientiously praises his wares: "Here," says he, "is a strong pair of shoes." But the merchant has no wish to be shod just then,

The scenes of market life here described are borrowed from a tomb at Sapquia (LIPSUS, binkma, it 96). Attention was drawn to them in my lectures at the College of Prime in 1876, and they were reproduced among the pictures of Egyptian customs collected by Mirictle for the Pairs Sabibition of 1878 (Makilith, La Galerie de l'Egyptianciane à l'Urposition retrospective du Iroca-aco, p. 41). I published them about the same time in the Gazette Archeologue, 1880, p. 97, et seq. M Chabas had, indeed, a cognized in them seenes of market lite (Reheckles sur les Pouls, Mesures et Monailes des Anciens Egypticus, pp. 15, 16), but did not fully understand then det all and composition.

The name deciphered as \$\tilde{u}nd\_{\text{o}}^{\text{o}}\$ ten," since the researches of Chabas must vow be read tabui (W. \$10 \text{110000}, \text{Die I count des Gewichtes Tabui, in the Recuei de Travane, vol \text{ Nv. pp. 145, 146)} \text{Par chavations of Chabas (Note sur un Poids egyptien de la collection de M. Harris d'Aleaandre, in the lieue Archaelogque, 1861, 2nd series, vol. in. p. 12, et seq; Determination merrque de deur Me in egyptiennes de capacite, 1857; Recherches sur les Poids, Mesures et Monnaies des Incident Informations de l'Academie des Inscriptions et belles-Lettres, Savants étrangers, vol. \text{Nvi)} have established the fact that the average weight of the tabun varied from 91 to 22 grunn s. Id. et 3\text{ ozs avoirdupois —Tres.}]; these results have been confirmed with but trilling date is ees by the t-sis of Professor Flinders Petrie.

Several invoices of this nature will be found translated in Chenas, Recher has no to Poids, the notes Monnaies des Anciens Typptiens, p. 17, et seq. They are all of the XX!! dynasty, and me in the sussession of the British Museum (S. Bira ii, Inscriptions in the Hieratia and Demotic Character, pl.

and demands a row of cowries for his little pots: "You have merely to take a few drops of this to see how delicious it is," he urges in a persuasive tone. A scated customer has two jars thrust under his nose by a woman—they probably

No 296), which were used as a basis of exchange (Brandis, Monuments Lypptens, vol. ii. 11. No 296), which were used as a basis of exchange (Brandis, Das Munz-Mass- and thruth in Vorder-Asia, p. 82) are made on the Chaldro-Babyloman pattern, and belong to the \( \) system (Fr. Li norm = 1 a Monnaie dams Pantiquite, vol. i. pp. 103, 104). We must, pet i agree with Fr. Li normain (op. c.t., pp. 104, 105), in his conclusion that the only kind of national of exchange in use in Egypt was a copper wire or plate had thus \( \) , (his being a sign invariably used in the hicroglyphics in writing the word tabus?

<sup>2</sup> Drawn by Faucher-Gudin, after a sketch by Rosini in, Monumenti cirdi, pl. In. 1. As to the struction of the Egyptian scales, and the working of their various parts, see I in the Principal of A Season in Egypt, p. 42, and the drawings which he has brought together on pl. xx. of the same well.

The weighing of rings is often represented on the monuments from the XVIII<sup>th</sup> divides onwards (Larsits, *Denkm.*, iii 10 a, 39 a, d, etc.). I am not acquainted with any instance of the last the bas-reliefs of the Ancient Empire. The giving of false weight is alluded to in the paragraph the "Negative Confession," in which the dead man declares that he has not interfered with beam of the scales (cf. p. 189 of the present work).

Die elected free free gheleter Welsen 16

clever and unscrupulous dealer would alloy the rings, and mix with the precious metal as much of a baser sort as would be possible without danger of detection. The honest merchant who thought he was receiving in payment for some article, say eight tabnû of fine gold, and who had handed to him eight tabnû of some alloy resembling gold, but containing one-third of silver, lost in a single transaction, without suspecting it, almost one-third of his goods. The fear of such counterfeits was instrumental in restraining the use of tabnû for a long time among the people, and restricted the buying and selling in the markets to exchange in natural products or manufactured objects.

The present rural population of Egypt scarcely ever live in isolated and scattered farms; they are almost all concentrated in hamlets and villages of considerable extent, divided into quarters often at some distance from each other.1 The same state of things existed in ancient times, and those who would realize what a village in the past was like, have only to visit any one of the modern market towns scattered at intervals along the valley of the Nile; half a dozen fairly built houses, inhabited by the principal people of the place; groups of brick or clay cottages that hed with durra stalks, so low that a min standing upright almost touches the roof with his head · courtyards filled with tall circular mud-built sheds, in which the corn and durra for the house hold is carefully stored, and wherever we turn, pigeons, ducks, geese, and animals all living higgledy-piggledy with the family. The majority of the peasantr were of the lower class, but they were not everywhere subjected to the same idegree of servitude. The slaves, properly so called, came from other countries, they had been bought from foreign merchants, or they had been seized in a raid and had lost their liberty by the fortune of war.2 Their master removed them from place to place, sold them, used them as he pleased, pursued them if they succeeded in escaping, and had the right of recapturing them as soon as an received information of their whereabouts. They worked for him under his overseer's orders, receiving no regular wages, and with no hope of recovering their liberty.3 Many shose concubines from their own class, or intermatted

<sup>1</sup> Maspit s, t'tal's Égypticanes, vol. ii. pp. 161, 172.

<sup>2</sup> The first allusion to presents of war brought back to Egypt, is found in the brography of I m (Il. 26, 27). The method in which they were distributed among the officers and soldiers is indiced in several inscriptions—the New Empire, in that of Ahmosis Pannekhabit (Liveres, Auswahl I uichtigsten Urhunden, pl. aiv. a, Il. 5, 7, 10; cf. Presse D'Averse, Monuments de l'Igypte, 1] and especially Maspire, Notes sur quelques points de Grammaire et d'Histoire, in the Zeitschrift, 18 pp. 77, 78, where a complete text is given), in that of Ahmosis si-Ahma (Liveres, Bunkin, 11 where one of the inscriptions contains a list of slaves, some of whom are toreigners), in the Amenemhabi (Erens, Zeit und Thatia Titles III), in the Zeitschrift, 18-5, pp. 1-9 and 65, et so We may form some idea of the number of slaves in Egypt from the tact that in thirty years Ram III, presented 113,433 of them to the temples alone (Breasen, Die Zegyptologie, pp. 264, 265; Lie Zegypten, p. 406). The "Directors of the Royal Slaves," at all periods, occupied an important of the Court of the Pharachs (Maspira, Étades Egyptiennes, vol. ii. pp. 8, 39).

owners of adjoining lands, and the area and nature of the ground. They noted down, to within a few cubits, the extent of the sand, marshland, pools, canaly, groups of palms, gardens or orchards, vinoyards and cornfields, which it contained. The cornland in its turn was divided into several classes, according to whether it was regularly inundated, or situated above the highest rise of the water, and consequently dependent on a more or less costly system of artificial irrigation. All this was so much information of which the scribes took advantage in regulating the assessment of the land-tax.

Everything tends to make us believe that this tax represented one-tenth of the gross produce, but the amount of the latter varied.2 It depended on the annual rise of the Nile, and it followed the course of it with almost mathematical exactitude: if there were too much or too little water, it was immediately lessened, and might even be reduced to nothing in extreme cases. The king in his capital and the great lords in their fiefs had set up nilometers, by means of which, in the critical weeks, the height of the rising or subsiding flood was taken daily. Mossengers carried the news of it over the country: the people, kept 1 ga larly informed of what was happening, soon knew what kind of season to extect and they could calculate to within very little what they would have to pay, I theory, the collecting of the tax was based on the actual amount of land covered by the water, and the produce of it was constantly varying. In practice, it was regulated by taking the average of preceding years, and deducting from that a fixed sum, which was never departed from except in extraordinary circumstance 1 The year would have to be a very bad one before the authorities would lower the ordinary rate: the State in ancient times was not more willing to deduct any thing from its revenue than the modern State would be. The payment of taxes

<sup>&</sup>lt;sup>1</sup> See in the great macription of Beni-Hasan the passage in which are enumerated at full let the in a legal document, the constituent parts of the principality of the Gazello, "its watercourses, it fields, its trees, its sands, from the river to the mountain of the West" (II. 16-53)

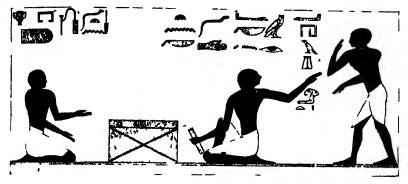

<sup>&</sup>lt;sup>2</sup> The tithe is cleared to in the Philae inscription (Liusus, Denkm, iv 27 b) during the Ptokara period (Brussen, Die A'gyptologie, pp. 266-277), and all the evidence accums to point to its have already been in existence under the earliest Pharaolis (Liumbroso, Recherches sur l'Écone e politique, p. 288, et seq.).

Didde Us Saules, i '36, Strabo, lib. xvii. p. 817, who mentions the two informaters of Merel is and Elepi intides. Hilliopouts, Ethiopica, lib. ix., speaks of the nilometer which had is described by Stabo, but which he places at Syone. On the subject of nilometers, ct. Convidence is to Account of Alephantine et les Mesures Lypptianes (in the Description de l'Us vol 11, 19. 1-96), at Markla, Mémoire sur le Megyas de l'ils de Rondah (in the Description de l'Egypte, vol. xiv. pp. 1-150, 387-582). Every temple had its well which served as a nilome the well of the temple of Ldfù was employed for this purpose.

<sup>4</sup> We know that this was so, in so far as the Roman period is concerned, from a passage of edict of Tiberus Alexander (II. 55, 56). The practice was such a natural one, that I have notation in tracing it back to the time of the Anorent Empire; repeatedly condemned as a passad administration, it reappeared continually. At Beni-Hasan, the nomarch Amoui (I. 21) be refer to when there had been abundant Niles, and the owners of wheat and barley crops had thus a had not increased the rate of the land-tax," which seems to indicate that, so far as he was come he had fixed the tax on land at a permanent figure, based on the average of good and bad hars

The two decrees of Rosetta (II. 12, 13, 28, 29) and of Canopus (II, 13-17), however, it reductions granted by the Ptolemies after an insufficient rise of the Nile.

a seacted in wheat, durra, beans, and field produce, which were stored in the maries of the nome. It would seem that the previous deduction of one tenth of the gross amount of the harvest could not be a heavy builden, and that the wietched fellah ought to have been in a position to pay his dues without difficulty. It was not so, however, and the same writers who have given us such a lamentable picture of the condition of the workmen in the towns, have painted tor us in even darker colours the miseries which overwhelmed the country people. "Dost thou not recall the picture of the farmer, when the tenth of his grain is levied?

IM TIVES OF THE LAX THE TAXIANTER IN THE SCHIEF'S OFFICE

We mish we destroyed half of the wheat, and the hippopotami have eiten the lest there are swarms of rats in the fields, the grasshoppers alight there, the cuttle devour, the little birds pilter, and if the farmer lose sight for an instant of whit remains upon the ground, it is carried off by robbers; the thongs, moreover, which bind the iron and the hoe are worn out, and the team has died at the plough. It is then that the scribe steps out of the boat at the landing-place to key the tithe, and there come the keepers of the doors of the grainary with culgels and the negroes with ribs of palm-leaves, who come crying "Come now, corn". There is none, and they throw the cultivator till length upon the ground bound, dragged to the canal, they fling him in head first, "his wife is bound with

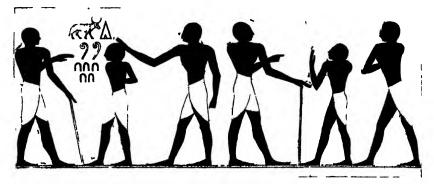

<sup>1</sup> the insurption of Rosett's represents the tax as being paid in wheat, in linear, er in wine (II 11, 14 to 28 31), even in the time of the Ptolemies, when the use of money had become general in Lynt's it Wilcken (Die Griechise) in Oste that in the Jahrbuch des Veree se in Altertum from lennin Rheinland 1 to 18 part in the Lax is paid in wheat in 1 birley. him, his children are put into chains; the neighbours, in the mean time, leave hum and fly to save their grain." One might be tempted to declare that the picture is too dark a one to be true, did one not know from other sources of the brutal ways of filling the treasury which Egypt has retained even to the present day. In the same way as in the town, the stick facilitated the operations of the tax-collector in the country: it quickly opened the granaries of the rich, it revealed resources to the poor of which he had been ignorant, and it only failed in the case of those

TINYING THE TAX: THE TAXENTE IN THE HANDS OF THE ENGLOSS

who had really nothing to give. Those who were insolvent were not let off e chewhen they had been more than half killed: they and their families were sent to prison, and they had to work out in forced labour the amount which they had to led to pay in current merchandise. The collection of the taxes was usually termor ded by a rapid revision of the survey. The scribe once more recorded the dimen ions and character of the domain lands in order to determine afresh the amount of the tax which should be imposed upon them. It often happened, indeed, that, owing to some freak of the Nile, a tract of ground which had been fertile enough the ceding year would be buried under a gravel bed, or transformed into a marsh. The owners who thus suffered were allowed an equivalent deduction; as for the farmer, no deductions of the burden were permitted in their case, but a tract equalling in value that of the part they had lost was granted to them out of the radio seignor, all domain, and their property was thus made up to its original variance.

This is evident from a pressage in the ballier Papyrus n I, quoted above, in which the taxpayer in letters, diagged out to clean the canals, his whole family, wife and children panying him in bonds.

<sup>1</sup> III nonort 4, 11. 109, who attributes the establishment of this regulation to the 11 c attended to 11 c att

What the collection of the taxes had begun was almost always brought to a limax by the corvées. However numerous the royal and seignoral glaves might have been, they were insufficient for the cultivation of all the lands of the domains, and a part of Egypt must always have lain fallow, had not the number of workers been augmented by the addition of those who were in the position of freemen. This excess of cultivable land was sub livided into portions of equal dimensions, which were distributed among the inhabitants of neighbouring villages by the officers of a "regent" nominated for that purpose. Those dispensed from agri-

VII these details are set forth in the Ptolemaic period, in the letter t D non which refers to

for their benefit: 1 to these they sent their flocks after the subsidence of the inundation, for the pasturage on them was so rich that the were doubly productive in wool and offspring.2 This was a mere a a wage: the forced labour for the irrigation brought them no conwhich separate the basins, and the network of canals for asscributing the water and irrigating the land, demand continual attention: every year some need strengthening, others re-excavating or cleaning out. The men employed in this work pass whole days standing in the water, scraping up the mud with both hands in order to fill the baskets of platted leaves, which boys and girls lift on to their heads and carry to the top of the bank: the semi-liquid contents ooze through the basket, trickle over their faces and soon coat their bodies with a black shining mess, disgusting even to look at. Sheikhs preside over the work, and urge it on with abuse and blows.8 When the gangs of workmen had toiled all day, with only an interval of two hours about noon for a siesta and a meagre pittance of food, the poor wretches slept on the spot, in the open air, huddled one against another and but ill protected by their rags from the chilly nights. The task was so hard a one, that malefactors, bankrupts, and prisoners of war were condemned to it; it wore out so many hands that the free peasantry were scarcely ever exempt.4 Having returned to their homes, they were not called until the next year to any established or periodic corvée, but many an irregular one came and surprised them in the midst of their work, and forced them to abandon all else to attend to the affairs of king or lord. Was a new chamber to be added to some neighbouring temple, were materials wanted to strengthen or rebuild some piece of wall which had been undermined by the inundation, orders were issued to the engineers to go and fetch a stated quantity of limestone or sandstone, and the peasants were commanded to assemble at the nearest quarry to cut the blocks

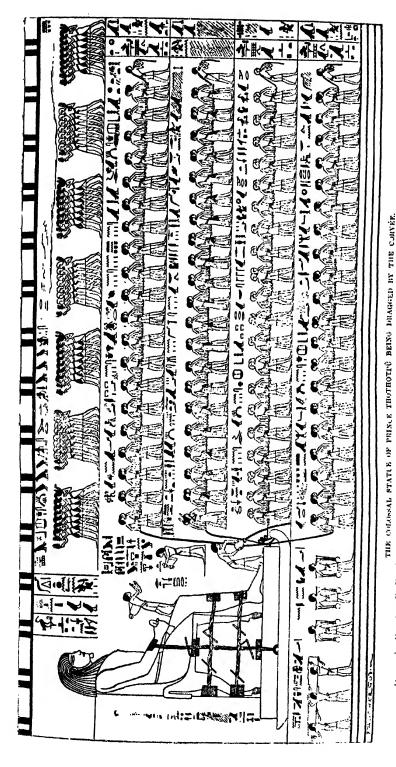

a royal edict. As Signor Lumbroso has well remarked (op. cit., p. 4, et seq, and Recherches sur l'Économie politique, p. 75, et seq), the Ptolemies merely copied exactly the misdeeds of the old native governments. Indeed, we come across frequent allusions to the enforced labour of men and beasts in inscriptions of the Middle Empire at Beni Hasan or at Siût; many of the pictures on the Memphite tombs show hands of such labourers at work in the fields of the great landowners or of the king.

<sup>&</sup>lt;sup>1</sup> Louvre Papyrus B, ll. 170-172, where I follow the explanation of the passage suggested by Signor Lumbrose (Il papiro LXIII del Louvre, p. 18 a, and Recherches sur l'Économic politique, p. 93)

<sup>2</sup> Diodorus Siculas, i 36.

<sup>&</sup>lt;sup>2</sup> The corvers of the Ptoleman period were superintended by old men, of πρεσβότεροι (Icer Papyrus 66, l. 21), i.e. by the sheikhs, and by the τάdūū, narirs, as well as by the âa usitiú or roof the works (Mayrage, Études Égyptiennes, vol. 11. pp. 44, 45). The shawishes (exactors) of time are the rabdophors or rabdisti of the Greek period (Louire Papyrus 66, l. 19; Schow, Cha is papyracea, § 4, ll. 11, 12), whose duty it was to stimulate the working with blows.

In the paperus published by Schow, we notice, side by side with the slaves, pen (1, 7, 1, 15, 11, 1, 18), cowherds, and shepherds (3, 1, 16, 5, 11, 1, 2), ass-drivers (2, 1, 16), and we men belonging to various trades—potters (6, 11, 21, 22), mat-makers (11, 1, 8), fullers (7, 1, 21, 22), mat-makers (11, 1, 8), fullers (7, 1, 21, 22), mat-makers (10, 1, 4), barbers (3, 1, 26).

Drawn by Faucher-Gudin, from Wilkinson, A Popular Arround of the Manners and Curtons of the Arrient Egyptians, vol. ii., frontispiece.

from it, and if needful to ship and convey them to their destination. On perhaps the sovereign had caused a gigantic statue of himself to be carved, and a few hundred men were requisitioned to haul it to the place where he wished it to be set up.<sup>2</sup> The undertaking ended in a gala, and doubtles in a distribution of food and drink: the unfortunate creatures who had been got together to execute the work could not always have felt fitly compensated for the precious time they had lost, by one day of drunkenness and rejoicing

We may ask if all these corvées were equally legal? Even if some of them were illegal, the peasant on whom they fell could not have found the meanto escape from them, nor could be have demanded legal reparation for the injury which they caused him. Justice, in Egypt and in the whole Orient 1 world, necessarily emanates from political authority, and is only one branch of the administration amongst others, in the hands of the lord and has representatives.3 Professional magistrates were unknown-men brought a to the study of law, whose duty it was to ensure the observance of it, apair from any other calling-but the same men who commanded armies, offered sacrifices, and assessed or received taxes, investigated the disputes of ordinary citizens, or settled the differences which arose between them and the representatives of the lords or of the Pharaoh. In every town and village, those who held by birth or favour the position of governor were ex-officio invest d with the right of administering justice. For a certain number of days in the month, they sat at the gate of the town or of the building which served as then residence, and all those in the town or neighbourhood possessed of any title position, or property, the superior priesthood of the temples, scribes who had advanced or grown old in office, those in command of the militia or the police, the heads of divisions or corporations, the "qonbîtiû," the "people of the angle," might if they thought fit take their place beside them, and help them to decide ordinary lawsuits.4 The police were mostly recruited from foreigners

<sup>&</sup>lt;sup>1</sup> This was the course adopted by King Smendes of the XXI<sup>4</sup> dynasty, in order to promptly and cheaply restore a portion of the temple of Kurnak, which had been support by water v<sup>-1</sup> threatened to fall into ruins (G. and negroes, or from Bedouin belonging to the Nubian tribe of the Mazaid. he litigants appeared at the tribunal, and waited under the superintendence If the police until their turn came to speak: the majority of the questions and decided in a few minutes by a judgment from which there was no appeal; only the more serious cases necessitated a cross-examination and prolonged coscussion. All else was carried on before this patriarchal jury as in our courts of justice, except that the inevitable stick too often elucidated the truth and cut short discussions: the depositions of the witnesses, the speeches on both sides, the examination of the documents, could not proceed without the frequent taking of oaths "by the life of the king" or "by the tivour of the gods," in which the truth often suffered severely. Penulties were valled somewhat-the bastinado, imprisonment, additional days of work for the corvic, and, for grave offences, forced labour in the Ethiopun mines,2 their less of nose and ears,3 and finally, death by strangulation, by beheading,1 by cropalement,5 and at the stake.6 Criminals of high rank obtained permission' to carry out on themselves the sentence passed upon them, and thus avoided by suicide the shame of public execution.7 Before tribunals thus constituted, to beliah who came to appeal against the exactions of which he was the victim had little chance of obtaining a hearing; had not the scribe who had overtaxed him, or who had imposed a fresh corvée upon him, the right to appear among the Judges to whom he addressed himself? Nothing, indeed, prevented him from appealing from the latter to his feudal lord, and from him to Pharaob, but such an appeal would be for him a mere delusion. When he had left his village and presented his petition, he had many delays to encounter before cenerty by Griffien, The Qubt (in the Proceedings of the Society of Biolical Archaelogy, vol vin, 1800 11, p. 1400, whose conclusions have been endorsed by Spiroting of Studies and Materialies, 1 1 of seq. Their name, "people of the corner," is probably due to a metiphor analogous of the chich gave rise to the title of Omdah, or "columns" of the administration, which was bestowed or the notables of Egyptim towns.

a solution could be arrived at; and if the adverse party were at all in favour at court, or could command any influence, the sovereign decision would confirm, even if it did not aggravate, the sentence of the previous judges. In the mean while the peasants' land remained uncultivated, his wife and children bewailed their wretchedness, and the last resources of the family were consumed in proceedings and delays: it would have been better for him at the outset to have made up his mind to submit without resistance to a fate from which he could not escape.

In spite of taxes, requisitions, and forced labour, the fellahin came off fairly well, when the chief to whom they belonged proved a kind master, and did not add the exactions of his own personal caprice to those of the State. The inscriptions which princes caused to be devoted to their own glorification, are so many enthusiastic panegyries dealing only with their uprightness and kindness towards the poor and lowly. Every one of them represents himself as faultless: "the staff of support to the aged, the foster father of the children, the counsellor of the unfortunate, the refuge in which those who suffer from the cold in Thebes may warm themselves, the bread of the afflicted which never failed in the city of the South." 1 Their solicitude embraced everybody and everything: "I have caused no child of tender age to mourn; I have despoiled no widow, I have driven away no tiller of the soil; I have taken no workmon away from their foreman for the public works; none have been unfortunate about me, nor starving in my time. When years of scarcity arose, as I had cultivated all the lands of the nome of the Gazelle to its northern and southern boundaries, causing its inhabitants to live, and creating provisions, none who were hungry were found there, for I gave to the widow as well as to the woman who had a husband, and I made no distinction between high and low in all that I gave. If, on the contrary, there were high Niles, the possessors of lands became rich in all things, for I did not raise the rate of the tax upon the fields."2 The canals engrossed all the prince's attention; he cleaned them out, enlarged them, and dug fresh ones, which were the means of bringing fertility and plenty into the most remote corners of his property. His seek had a constant supply of clean water at their door, and were no longer content with such food as durra; they ate wheaten bread daily.3 His vigilance and severity were such that the brigands dared no longer appear within reach of

is arm, and his soldiers kept strict discipline: "When night fell, whoever slept by the roadside blessed me, and was [in safety] as a man in his own house; the fear of my police protected him, the cattle remained in the fields in the stable; the thief was as the abomination of the god, and he no more cell upon the vassal, so that the latter no more complained, but paid exactly the dues of his domain, for love" of the master who had procured for him this needom from care.1 This theme might be pursued at length, for the composers of epitaphs varied it with remarkable eleverness and versatility of imagination. The very zeal which they display in describing the lord's virtues betrays how precarious was the condition of his subjects. There was nothing to hinder the unjust prince or the prevaricating officer from ruining and ill-treating as he chose the people who were under his authority. He had only to give an order, and the corvée fell upon the proprietors of a village, carried off their slaves and obliged them to leave their lands uncultivated; should they declare that they were incapable of paying the contributions laid on them, the prison opened for them and their families. If a dyke were cut, or the course of a channel altered, the nome was deprived of water:2 prompt and inevitable ruin came upon the unfortunate inhabitants, and their property, confiscated by the treasury in payment of the tax, passed for a small consideration into the hands of the scribe of the dishonest administrator. Two or three years of neglect were almost chough to destroy a system of irrigation: the canals became filled with mud, the banks crumbled, the inundation either failed to reach the ground, or spread over it too quickly and lay upon it too long. Famine soon followed with its attendant sicknesses:3 men and animals died by the hundred, and it was the work of nearly a whole generation to restore prosperity to the district.

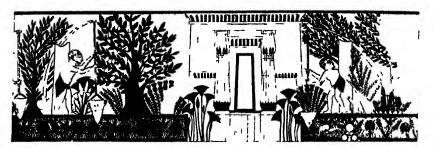

The lot of the fellah of old was, as we have seen, as hard as that of the fellah of to-day. He himself felt the bitterness of it, and complained at times, or rather the scribes complained for him, when with selfish complacency they contrasted their calling with his. He had to toil the whole year round,—digging, sowing, working the shadouf from morning to night for weeks, hastening at the first requisition to the corvée, paying a heavy and cruel tax,—all without even the certainty of enjoying what remained to him in peace, or of seeing his wife and children profit by it. So great, however, was

<sup>1</sup> Genffirm, The Inscriptions of Siût, pl. 11, Il. 7-12; cf. Maspleo, Reque Critique, 1889, vol. in p. 417

Mention of famines is made on the Egyptian monuments, at Beni-Hasan (Mestido Leteral Inscription de Béni-Hasan, in the Recueil de Travaux, vol. 1. p. 171), at 1 (-Kab. B. 68). As a Elephantine (Breasen, Die Biblischen sieben Jahr der Hungersach, p. 131, et sog.).

the elasticity of his temperament that his misery was not sufficient to depresent him: those monuments upon which his life is portrayed in all its minutial represent him as animated with inexhaustible cheerfulness. The summer months ended, the ground again becomes visible, the river retires into its bed, the time of sowing is at hand: the peasant takes his team and his implements with him and goes off to the fields. In many places, the soil, softened by the water, offers no resistance, and the hoe easily turns it up, elsewhere it is hard, and only yields to the plough. While one of the farmservants, almost bent double, leans his whole weight on the handles to force

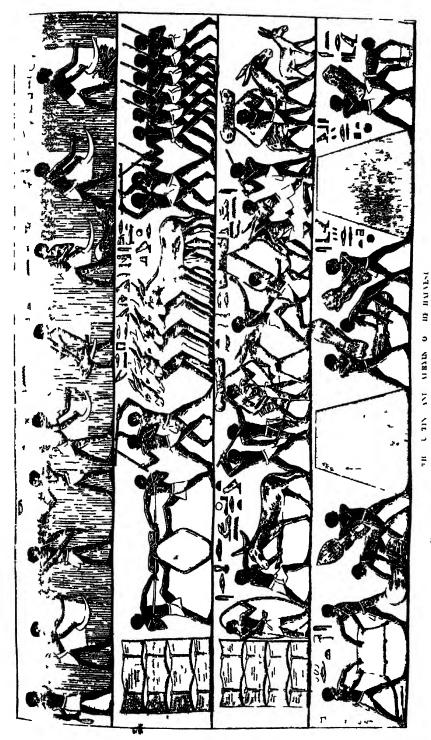

TWO ILILAHÎN WORK THE SHADOUF IN A GALDEN.

the ploughshare deep into the soil, his comrade drives the oven and encoungs them by his songs: these are only two or three short sentences, set to an unvarying chant, and with the time beaten on the back of the nearest animal Now and again he turns round towards his comrade and encourages him "Lean hard!"—"Hold fast!" The sower follows behind and throws handleds of grain into the furrow: a flock of sheep or goats brings up the rear, and a they walk, they tread the seed into the ground. The herdsmen erack the whips and sing some country song at the top of their voices,—based on the complaint of some fellah seized by the corvée to clean out a canal. "The digger is in the water with the fish,—he talks to the silurus, and exchanges greetings with the oxyrrhynchus:—West! your digger is a digger from the West!" All this takes place under the vigilant eye of the master: as soon

Marker, Etudes Egyptiennes, vol. ii. pp. 74-78; cf. the woodcut on p. 192 of the provides a The text of this couplet is given in Brusson, Die Egyptische Grüberwelt, pl. 1-35 of the translation in Brusson, Diet. Hier, p. 59; in Erman, Egypten, p. 515; and in Massita, here Egyptiennes, vol. ii. pp. 73, 74. The silurus is the electrical fish of the Nile (Description de l'1 mg. vol. xxiv. p. 299, et sq.). The text ironically hints that the digger, up to his waist in which engaged in dredging the dykes or repairing a bank swept away by an inundation, is hable in the engaged in dredging the dykes or repairing a bank swept away by an inundation, is hable in the object of the salute, i.e. to meet with a silurus or an oxyrrhynchus ready to attack him; he is de and to death, and this fact the couplet expresses by the words, "West! your digger is a digger from in West." The West was the region of the tembs; and the digger, owing to the dangers of his. All 5, was on his way thither.

Diawn by I meher (auliu, fr n | graph by Deatune Les illate, vel 1 pl 2

as his attention is relaxed, the work slackens, quarrels arise, and the spint of idleness and theft gains the ascendency. Two men have unharnessed their team. One of them quickly milks one of the cows, the other holds the animal and impatiently awaits his turn: "Be quick, while the farmer is not there." They run the risk of a beating for a potful of milk.1 The weeks pass. the corn has ripened, the harvest begins. The fellahîn, armed with a short sickle, cut or rather saw the stalks, a handful at a time. As they advance in line, a flute-player plays them captivating tunes, a man joins in with his voice marking the rhythm by clapping his hands, the foreman throwing in now and then a few words of exhortation: "What lad among you, when the season is over, can say: 'It is I who say it, to thee and to my comrades, you are all of you but idlers!'-Who among you can say: 'An active lad for the job am I!" A servant moves among the gang with a tall jar of beer, offering it to those who wish for it. "Is it not good!" says he; and the one who drinks answers politely: "Tis true, the master's beer is better than a cake of durra!"8 The sheaves once bound, are carried to the singing of fresh songs addressed to the donkeys who bear them: "Those who quit the ranks will be tied, those who roll on the ground will be beaten,-Geeho! then." And thus threatened, the ass trots forward.4 Even when a tragic element enters the scene, and the bastinado is represented, the sculptor, catching the bantering spirit of the people among whom he lives, manages to insunuate a vein of comedy. A peasant, summarily condemned for some misdeed, lies flat upon the ground with bared back: two friends take hold of his arms, and two others his legs, to keep him in the proper position. His wife or his son intercedes for him to the man with the stick. "For mercy's sake strike on the ground!" And as a fact, the bastinado was commonly rather a mere form of chastisement! than an actual punishment: the blows, dealt with apparent ferocity, missed their aim and fell upon the earth; 5 the culprit howled loudly, but was let off with only a few bruises.

An Arab writer of the Middle Ages remarks, not without irony, that the Egyptians were perhaps the only people in the world who never kept any stores of provisions by them, but each one went daily to the market to buy

the pittance for his family. The improvidence which he laments over in the contemporaries had been handed down from their most remote ancestors. Workmen, follahin, employés, small townsfolk, all lived from hand to mouth in the Egypt of the Pharachs. Pay-days were almost everywhere days of rejoicing and extra cating: no one spared either the grain, oil, or beet of the treasury, and copious feasting continued unsparingly, as long as anything was left of their wages. As their resources were almost always exhausted before the day of distribution once more came round, beggany

A FLOCK OF GOATS AND THE SONG OF A COAFHELD?

succeeded to fulness of living, and a part of the population was literally starving for several days. This almost constant alternation of abundance and dearth had a reactionary influence on daily work: there were scarcely any seignorial workshops or undertakings which did not come to a stand-till every month on account of the exhaustion of the workmen, and help had to be provided for the starving in order to avoid popular seditions. improvidence, like their cheerfulness, was perhaps an innate trut in the national character: it was certainly fostered and developed by the system of government adopted by Egypt from the earliest times. What incentive was there for a man of the people to calculate his resources and to lay up for the inture, when he knew that his wife, his children, his cattle, his goods, all that belonged to him, and himself to boot, might be carried off at any moment, without his having the right or the power to resent it? He was born, he lived, and he died in the possession of a master. The lands or houses which his father had left him, were his merely on sufferance, and he enjoyed them only by paramission of his lord. Those which he acquired by his own labour went to swell his master's domain. If he married and had sons, they were but servicts for the master from the moment they were brought into the world

shall of to give the history of these stoppages of work and of the strikes which accompanied them

Whatever he might enjoy to-day, would his master allow him possession of it to-morrow? Even life in the world beyond did not offer him much make security or liberty: he only entered it in his master's service and to do his bidding; he existed in it on tolerance, as he had lived upon this earth, and he found there no rest or freedom unless he provided himself abundantly with "respondents" and charmed statuettes. He therefore concentrated his mind and energies on the present moment, to make the most of it as of almost the only thing which belonged to him: he left to his master the task of anticipating and providing for the future. In truth, his masters were often changed; now the lord of one town, now that of another; now a Pharaoh of the Memphite or Theban dynasties, now a stranger installed by chance upon the throne of Horus. The condition of the people never changed; the burden which crushed them was never lightened, and whatever hand happened to hold the stick, it never fell the less heavily upon their backs.

## CHAPTER V.

## THE MEMPHITE EMPIRE.

The royal pyramid builders: Kheops, Khephren, Mykerinos—Memphite literature and art— Extension of Egypt towards the South, and the conquest of Nubia by the Pharaobs.

A T that time 2 "the Majesty of King Hani died, and the Majesty of King Snofrai arose to be a sovereign benefactor over this whole earth." All that we know of him is contained in one sentence: he fought against the nomads of Sinai, constructed fortresses to protect the eastern frontier of the Delta, and made for himself a tomb in the form of a pyramid.

The almost uninhabited country which connects Africa with Asia is flanked towards the south by two chains of hills which unite at right angles, and together form the so-called Gebel et-Tih. This country is a table-land, gently inclined

from south to north, bare, sombre, covered with flint-shingle, and siliceous

Drawn by Boudier, from the chromolithograph in Lersius, Denkin, i. pl. 45. The vignette, also by Boudier, represents Rahotpû, a dignitary of Mêdûm, of whom mention is made further extended of this History); the drawing is made from a photograph by Emil Brugsch-Bey.

<sup>&</sup>lt;sup>2</sup> About B.C. 4100, with the possibility of an error of several centuries more or less.

Prisse Papyrus, pl. ii. II. 7, 8 (VINEY's edition, p. 24). The fragments of the Royal Canon of Turin appear to attribute to Huni and Snofrai reigns of equal length, namely, of twenty-four years (E. Die Royaé, Recherches sur les monuments qu'on peut attribuer aux six premières dynastics de Manethon, p. 154, note 2).

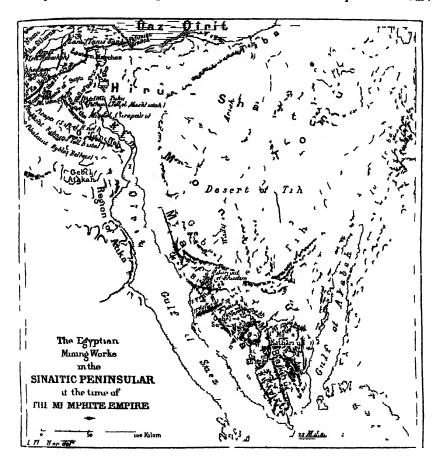

rocks, and breaking out at frequent intervals into long low chalky high seamed with wadys, the largest of which—that of El-Arish—having drain-d all the others into itself, opens into the Mediterranean halfway between Pelusium and (faza.1 Torrents of rain are not infrequent in winter and spring. but the small quantity of water which they furnish is quickly evaporated, and barely keeps alive the meagre vegetation in the bottom of the valleys. Sometimes, after months of absolute drought, a tempest breaks over the more elevated parts of the desert.2 The wind rises suddenly in squall-like blasts; thick clouds borne one knows not whence, are riven by lightning to the incessant accompaniment of thunder; it would seem as if the heavens had broken up and were crashing down upon the mountains. In a few moments streams of muddy water rushing down the ravines, through the gulleys and along the slightest depressions, hurry to the low grounds, and meeting there in a foaming concourse. follow the fall of the land; a few minutes later, and the space between one hill side and the other is occupied by a deep river, flowing with terrible velocity and irresistible force. At the end of eight or ten hours the air becomes clear, the wind falls, the rain ceases; the hastily formed river dwindles, and for lack of supply is exhausted; the inundation comes to an end almost as quickly set began. In a short time nothing remains of it but some shallow pools scattered in the hollows, or here and there small streamlets which rapidly dry up. The flood, however, accelerated by its acquired velocity, continues to descend towards the sea. The devastated flanks of the hills, their torn and corroled bases, the accumulated masses of shingle left by the eddies, the long lines of rocks and sand, mark its route and bear evidence everywhere of its power. habitants, taught by experience, avoid a sojourn in places where tempests have once occurred. It is in vain that the sky is screne above them and the sun shines overhead; they always fear that at the moment in which danger seems least likely to threaten them, the torrent, taking its origin some twenty leagues off, may be on its headlong way to surprise them. And, indeed, it comes so suddenly and so violently that nothing in its course can escape it: men and beasts, before there is time to fly, often even before they are aware of its approach,

Our acquaintance with Smai and the neighbouring countries is due to the work of the 1 the commission, Ordinance Survey of the Peninsula of Senai, 3 vols. fol of photographs, 1 vol. (201) and plans, 1 vol. of text. It has been popularized by E. H. Palmin, The Desert of the 1 on 2 vols octave, 1871; and by H. Sp. Palmin, Sinni, from the IV<sup>th</sup> Payptian Dynasty to the m 15me, 1878.

<sup>2</sup> In chap viii, of the Account of the Survey, pp. 226-228, Mr. Holland describes a such storm or "seil" on Occember 3, 1867, which drowned thrty persons, destroyed droves of consists, shocks of sheep and goats, and swept away, in the Wady Feiran, a thousand pulm to a grove of tamarisks, two nules in length. Towards 130 in the afternoon, a few drops of ring to fall, but the storm did not break till 5 p.m. At 5.15 it was at its height, and it was not to fall.

930. The torrent, which at 8 p.m was 10 feet deep, and was about 1000 feet in widt in the next day, reduced to a small streamlet.

Aia,1 Kadûma.2 They called its inhabitants Hirû-Shâîtû, the lords of the Sands; Nomiù-Shâitù, the rovers of the Sands; and they associated them with the Amû-that is to say, with a race which we recognize as Semitic.1 Th. type of these barbarians, indeed, reminds one of the Semitic massive head aquiline nose, retreating forehead, long beard, thick and not infrequently crists hair.5 They went barefoot, and the monuments represent them as girt with a short kilt, though they also were the abayah. Their arms were those commonly used by the Egyptians -the bow, lance, club, knife, battle-axe, and shield They possessed great flocks of goats or sheep,7 but the horse and camel were unknown to them, as well as to their African neighbours. They lived chiefly upon the milk of their flocks, and the fruit of the date-palm. A section of them tilled the soil: settled around springs or wells, they managed by industrious labour to cultivate moderately sized but fertile fields, flourishing orchards. groups of palms, fig and olive trees, and vines. In spite of all this their resources were insufficient, and their position would have been precarious it they had not been able to supplement their stock of provisions from Egypt or Southern Syria. They bartered at the frontier markets their honey, wool, gums manna, and small quantities of charcoal, for the products of local manufacture.

of Palestine. Tonu appears to me to be the territory which belonged later on to the tribe of Sum-n, extending to Arabah and to the middle course of the Wady Arish (Les Contes populaires de l'I q  $\eta$  h. Ancienne, 2nd edit., p. 91).

- <sup>1</sup> Berlin Pappins w L, 1. 81, where a description of the country will be found; cf. p. 471 of this History.
- This name had been read Adımâ, Adumâ, and identified with that of Edom and Chabas (I Pappins higheritiques de Berlin, pp. 10, 75), an identification which was adopted by all Exyptologists Messrs. Ed. Meyer (Geschichte Agyptens, p. 182, note 3) and Erman (Algebra and Englise Leben in Altertum, p. 195), followed by Mr. Max Müller (Asien and Enopa, pp. 16, 47), read "Kaduma" possibly the Hebrew "Kedem;" Mr. Max Müller places this country of "Kaduma Kedem" to the south-cast or east of the Dead Sea.
- <sup>2</sup> The Hira-Shaîta were pointed out for the first time by Birch (On a new historical Tablet et trigin of Thothmes III., pp. 9, 10, taken from the Archaeologia, vol. xxxvin ) as being probably the inhabitants of the desert. This sense, adopted and expanded by £ de Rouge (Recherches sen les monuments, pp. 122, 127) and by Chabas (Lindes sur P.Antiquité historique, 2nd edit., pp. 114-11) is now admitted to be correct by all Egyptologists. The variant "Nomin-Shaita" occurs only, temp knowledge, in the Berlin Pappius n. I., 1. 73, and in Mannetia, Kainak, pl. xxxvi. 1. 33 (cf. 1 and J. in Rougé, Inscriptions recueillies en Egypte, pl. xxvi. 1. 11), in a text of the second Theban Empire.
- The Inscription of Papinakhtti, which will be mentioned later on, pp. 434, 435 of this Hi tory, in connection with the journeys undertaken by the princes of Elephantine, says that the Him-St et a were Amu.
- <sup>5</sup> The pictures of the Monîtû, in Larstes, Dealin, ii. 39 a, 116 a, 152 a (cf. p. 351 of this He<sup>1</sup> D) give an idea of the appearance of the Hiru-Shûîtû, with whom they are often confounded.
- A description of a Tonu warrior, prepared for war, occurs in the Berlin Pappus n 1, 11 127-129, 134, 135 (Masselbo, Les Contes populaires, 2nd edit., p. 108; cf. p. 472 of this History)
- In the Papyrus no I, 11, 112, 117-128, where the here includes cats in the enuncration of the cattle, probably time cats, which were carried from Egypt into Asiatic countries.
- \* Cf. the description of Aia, in the Berlin Papyrus no I, II. 79-92 (MASPERO, Les Conde 1 1 In Indices, 2nd edit, pp. 101-108; Parker, Egyptian Tales, vol. i. pp. 105-107; cf. p. 471 of this II. (1984). The narrative given by Uni of his campaigns against the Hira-shatth, under Papi I (I. 25, cf. (1), cf. pp. 419-121), is a confirmation of the picture traced by Sinthit of the country, and shims that conditions of it had not changed between the Memphites and the XIII dynasty,

but especially for wheat, or the cereals of which they stood in need.<sup>1</sup> The sight of the riches gathered together in the eastern plain, from Tanis to Bubastis, excited their pillaging instincts, and awoke in them an irrepressible covetousness. The Egyptian annals make mention of their incursions at the very com-

mencement of history, and they maintained that even the gods had to take steps to protect themselves from them. Gulf of Suez and the mountainous rampart of Gebel Geneffeh in the south, and the marshes of Pelusium on the north, protected almost completely the eastern boundary of the Delta; but the Wady Tumilât laid open the heart of the country to the invaders. The Pharaohs of the divine dynastics 2 in the first place, and then those of the human dynasties, had fortified this natural opening, some say by a continuous wall, others by a line of military posts, flanked on the one side by the waters of the gulf.3 Snofrůi restored or

constructed several castles in this district, which perpetuated his name for a long time after his death.<sup>5</sup> These had the square or rectangular form

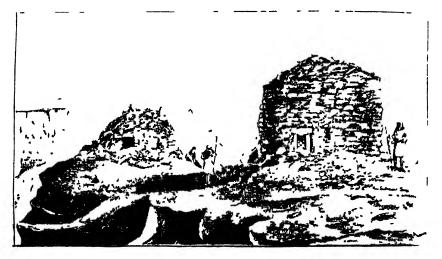

<sup>&</sup>lt;sup>1</sup> These are, with scarcely any difference, the products which the Bedonin of those parts used to bring regularly to the Egyptian frontier at the beginning of our century (J. M. J. Cottelli, Observations sur la topographie de la presqu'ile du Sinai, in the Description de l'Égypte, vol. xvi. pp. 185-187).

See p. 170 of this History for information on the forts built by the god Rå, on the cast of the Delta. The existence of the wall, or of the line of military posts, is of very ancient date, for the name Kum-Oirît is already followed by the hieroglyph of the wall (Pepi L. 1, 27; Mirnici, 1, 38; Teti, 1, 271), or by that of a fortified enclosure (Mirnici, 1, 142) in the texts of the Pyramids. The expression Kim-Oirît, "the very black," is applied to the northern part of the Red Sea, in contradistinction to log-Oirit, Eaxit-Oirit, "the very green," the Mediterraneau (Emma. Zur Erk äring der Pyramiderieste, in the Zeitschrift, vol. xxix. pp. 44, 45; cf. Max Müller, Asia and Interparament Altigaptischen Drehmülern, p. 40, et seq.); a town, probably built at a short distance from the village of Maghfar, had taken its name from the gulf on which it was situated, and was also called Kim-Oirit.

Drawn by Faucher-Gudin, from a photograph by Petrie. The original is of the time of Nect-noto, and is at Kurnak; I have chosen it for reproduction in preference to the heads of the time of the Angient Empire, which are more injured, and of which this is only the traditional copy.

Berlin Papyrus nº I., II. 16, 17 (cf. Chanas, Les Papyrus hieratiques de Inclin, pp. 18, 30), and St. Petersburg Papyrus nº I., quoted and analysed by Golenischeff in the Zeitscheift, 1876, p. 110; Inscription of Uni, 1, 21. In the latter text Snofrůi is designated only by his name of Horns, "Horn nib maît" (cf. Sether, Kin neuer Horusname, in the Zeitschrift, vol. xxx p. 62).

of the towers, whose ruins are still to be seen on the banks of the Nile Standing night and day upon the battlements, the sentinels kept a strict look out over the desert, ready to give alarm at the slightest suspicious movement. The marauders took advantage of any inequality in the ground to approach unperceived, and they were often successful in getting through the lines; they scattered themselves over the country, surprised a village or two, bore off such women and children as they could lay their hands on, took possession of herds of animals, and, without carrying their depredations further, hastened to regain their solutudes before information of their exploits could have reached the

IND BILLGE TOWERS OF THE HIST-SHALL, IN THE WADY BIAL

garrison. If their expeditions became numerous, the general of the Laster Marches, or the Pharaoh himself, at the head of a small army, started or a campaign of reprisals against them. The maraudors did not wait to be attacked, but betook themselves to refuges constructed by them beforehand at certain points in their territory. They erected here and there, on the crest it some steep hill, or at the confluence of several wadys, stone towers put together without mortar, and rounded at the top like so many bechives, in unequal groups of three, ten, or thirty; here they massed themselves as well as they could, and defended the position with the greatest obstinacy, in the hope that their assailants, from the lack of water and provisions, would soon be forced to return the Elsewhere they possessed fortified "duars," where not only their families but

We find in the Berlin Papyrus no I, l. 16, et seq. (MASPERO, Les Contes populares, 2nd et l. p. 99; Perrus, Egyptian Tales, vol 1 pp 100, 101), the description of one of these forts, and h. manner in which Sindhit concealed his advance from the watch; he lay hidden in the neighbourhus brushwood during the day, and resumed his march only at midnight.

to their herds could find a refuge—circular or oval enclosures, surrounded to low walls of massive rough stones crowned by a thick ramput made of massive rough stones crowned by a thick ramput made of massive rough stones crowned by a thick ramput made of inches of acacia interlaced with thorny bushes, the tents or huts being ranged in hind, while in the centre was an empty space for the cattle. These primitive to tresses were strong enough to overawe nomads; regular troops made short alk of them. The Egyptians took them by assault, overtuined them cut of whith fruit trees, burned the crops, and retreated in security, after having a stroyed everything in their maich. Each of their campuigns, which hardly

the Paimer, The Desert of the Landus, pp. 20-22. Nationally to the following of the Soluty of Biblical declary villar 1801 3-11 - 10 cm by Boudier, from the water colour drawing published by Diricular Diricular to the conscription of Unit (11 22-32) furnishes us with the inviriable type of the lift of the basic chiefs of Karnak might say to the lift of the third-Shatta the basic chiefs of Karnak might say to the lift of th

and plunges into the sea at Ras-Mohammed. A complicated system of gorges and valley-Wady Nash, Wady Kidd, Wady Hebran, Wady Baba-furrows the country and holds it as in a network of unequal meshes. Feiran contains the most fertile oasis in the peninsula. A never-failing stream waters it for about two or three miles of its length; quite a little forest of palms enlivens both banks-somewhat meagre and thin, it is true. but intermingled with acacias, tamarisks, nabecas, carob trees, and willows Birds sing amid their branches, sheep wander in the pastures, while the huts of the inhabitants peep out at intervals from among the trees. Valleys and plains, even in some places the slopes of the hills, are sparsely covered with those delicate aromatic herbs which affect a stony soil. Then life is a perpetual struggle against the sun: scoiched, dried up, to all appearance dead, and so friable that they crumble to pieces in the fingers when one attempts to gather them, the spring rains annually infuse into them new life. and bestow upon them, almost before one's eyes, a green and perfumed youth of some days' duration. The summits of the hills remain always naked, and no vegetation softens the ruggedness of their outlines, or the glare of their colouring. The core of the peninsula is hewn, as it were, out of a block of granite, in which white, rose-colour, brown, or black predominate, according to the quantities of felspar, quartz, or oxides of iron which the rocks contain. Towards the north, the masses of sandstone which join on to Gebel et Tib assume all possible shades of red and grey, from a delicate lilac neutral tut to dark purple. The tones of colour, although placed crudely side by side, present nothing jarring nor offensive to the eye; the sun floods all, and blends them in his light. The Smaitic peninsula is at intervals swept, like the desert to the east of Egypt, by terrible tempests, which denude its mountains and transform its wadys into so many ephemeral torrents. The Monîtû who frequented this region from the dawn of history did not differ much from the "Lords of the Sands;" they were of the same type, had the same costume, the same arms, the same nomadic instincts, and in districts while the soil permitted it, made similar brief efforts to cultivate it. shipped a god and a goddess whom the Egyptians identified with Horus and Hathor; one of these appeared to represent the light, perhaps the sun, the other the heavens.2 They had discovered at an early period in the sides of

represent the great raid led by Seti I, into the territory of the Shansas and their allies, by the frontier of Egypt and the town of Hebron (Champolinos, Monuments de l'Égypte et de la Nubie, pls. celxxxix.-eccii.; Roslinasi, Monumenti Reuli, pls. alvi.-ixi.; Li psits, Deuk 126, 127).

These are the divinities most frequently invoked in the religious worship of the Fr. ' ' officers and miners residing in the neighbourhood of the mines of Matkait (Larsus, Denhau, 11

he hills rich metalliferous veins, and strata, bearing precious stones; from hese they learned to extract iron, oxides of copper and manganese, and 1 irquoises, which they exported to the Delta. The fame of their riches, carried the banks of the Nile, excited the capidity of the Pharaolis; expeditions darted from different points of the valley, swept down upon the peninsula, and established themselves by main force in the midst of the districts where the mines lay.1 These were situated to the north-west, in the region of andstone, between the western branch of Gebel et-Tih and the Gulf of Suez. They were collectively called Mafkaît, the country of turquoises, a fact which accounts for the application of the local epithet, lady of Matkait, to Hathor. The earliest district explored, that which the Egyptians first attacked, was aparated from the coast by a narrow plain and a single range of hills: the produce of the mines could be thence transported to the sea in a few hours without difficulty. Pharaoh's labourers called this region the district of Baît, the mine par excellence, or of Bebit, the country of grottoes, from the numerous tunnels which their predecessors had made there; the name Wady Maghara, Valley of the Cavern, by which the site is now designated, is simply on Mabie translation of the old Egyptian word.3

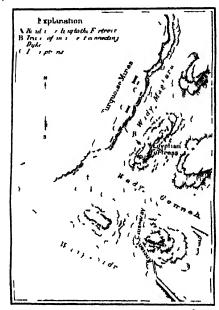

The Monîtû did not accept this usurpation of their rights without a stinggle, and the Egyptians who came to work among them had either to purchase their forbearance by a tribute, or to hold themselves always in readiness to repulse the assaults of the Monîtû by force of arms. Zositi had dieady taken steps to ensure the safety of the turquoise-seekers at their work; Snotiûi was not, therefore, the first Pharaoh who passed that way, but none of his predecessors had left so many traces of his presence as he did in this outof the way corner of the empire. There may still be seen, on the north-west slope of the Wady Maghara, the bas-relief which one of his heutenants engraved there in memory of a victory gained over the Monatû. A Bedoum sheikh fallen on his knees prays for mercy with suppliant gesture, but Pharaoh his already seized him by his long hair, and brandishes above his head a white stone mace to fell him with a single blow. The workmen, partly

the history of the Egyptian mining works in the Smatte pranisals has bencheded down the street Smat, and by Bricos II, Bunch Gosen zum Smat, and by Bricos II, Bunderung with der Luckis Mener, the minimum of the inscriptions will be found briefly translated by Brich in the seventh encoder of the 1 and of the Survey, p. 168, et seq.

The actual form of the Egyptian name appears to have clume to one of the smaller wilds which come to the mines of Wady Maghara with those of Surbut el-Khadam—the Wady Butch el 118, but | Gosen zum Simil, pp. 130, 535; Breascu, Wanderung nach der Turkis Minen end to Son, d., pp. 81, 82); Babit, however, is perhaps a fault of transcription for 11d, the last in The Bedouin usually call the Wady Maghara, the Wady Genuch or Waly 121 | 1 H. various sizes, whence they followed the lead of the veins of precious mineral The turquoise sparkled on every side—on the coiling and on the walls—and the miners, profiting by the slightest fissures, cut round it, and then with torcible blows detached the blocks, and reduced them to small fragments, which they crushed, and carefully sifted so as not to lose a particle of the gem. The oxides of copper and of manganese which they met with here and elsewhere in moderate quantities, were used in the manufacture of those beautiful blue enamels of various shades which the Egyptians esteemed so highly. The few hundreds of men of which the permanent population was composed, provided for the daily exigencies of industry and commerce. Royal inspectors crived from time to time to examine into their condition, to rekindle their zeal, and to collect the product of their toil. When Pharaoh had need of a greater quantity than usual of minerals or turquoises, he sent thither one of his officers, with a select body of carriers, mining experts, and stone-diesers. Sometimes as many as two or three thousand men poured suddenly into the peninsula, and remained there one or two months; the work went briskly forward, and advantage was taken of the occasion to extract and transport to Egypt beautiful blocks of diorite, serpentine or granite, to be afterwards mannfactured there into sarcophagi or statues. Engraved stelle, to be seen on the sides of the mountains, recorded the names of the principal chiefs, the different bodies of handieraftsmen who had participated in the campaign, the name of the sovereign who had ordered it and often the year of his reign.

It was not one tomb only which Snofrüi had caused to be built, but two le called them "Khå." the Rising, the place where the dead Phanaoh, identified with the sun, is raised above the world for ever. One of these was probably situated near Dahshûr; the other, the "Khå rîsi," the Southern Rising, appears to be identical with the monument of Mêdûm. The pyramid, like the mastaba, represents a tumulus with four sides, in which the earthwork

These tombs are mentioned in a certain number of inscriptions (Masriko, Quatre Anices de louilles, in the Mémoires de la Mission du Caire, vol. 1. p. 190); the name is determined in excell cases by two pyramids, and in one instance at least, at Dahshür, the "southern pyramid klar' is mentioned. As was the case with the Pharaoh Ai, towards the end of the XVIII<sup>10</sup> dynasty, our must have been with Snotiüi; after having prepared a tomb for himself on the Dahshur atchmist, owing to a change of residence, have relinquished the idea of occupying it, and must have constructed a second one at Médum.

No satisfactory etymon for the word pyramid has as yet been proposed; the least failed his that put forward by Cantor-Eisenfohr (Eisenden, Dis Mesures égyptiennes, in the Transite of the International Congress of Orientalists, 1874, p. 288, and Ein Mathematisches Handbuch wir laypter, p. 116), according to which pyramid is the Greek form, xopapis, of the compound in pirim-uisi," which in Eryption mathematical phraseology designates the salient angle, the or height of the pyramid (L. Rodf e, Sur un Manuel du Calculatur decouvert data un proposition, p. 8; taken from the Bulletin de la Societé mathématique de France, 1878, vol. vi and Reither and the Calculatur decouvert data un proposition, vol. vi tout, Note sur l'equerre egyptionie et son emploi, d'après le Papyrus Mathematique.

is replaced by a structure of stone or brick.<sup>1</sup> It indicates the place in which lies a prince, chief, or person of rank in his tribe or province. It was built on a base of varying area, and was raised to a greater or less elevation according to the fortune of the deceased or of his family.<sup>2</sup> The fashion of burying in a pyramid was not adopted in the environs of Memphis until tolerably late times, and the Pharaohs of the primitive dynastics were interred, as their subjects were, in sepulchral chambers or mastabas.

as their subjects were, in separative chambers or mastab Zosiri was the only exception, if the step-pyramid of Saqqūra, as is probable, served for his tomb. The motive which determined Snofrū's choice of Medūm as a site, is unknown to us: perhaps he dwelt in that city of Heracleopolis, which in course of time frequently became the favourite residence of the kings: perhaps he improvised for himself a city in the plain between El-Wastah and Kafr el-Ayat. His pyramid, at the present time, is composed of three large

THE PYRAMID OF MEDEM.4

unequal cubes with slightly inclined sides, arranged in steps one above the other. Some centuries ago 5 five could be still determined, and in ancient times, before ruin had set in, as many as seven. Each block marked a progressive increase of the total mass, and had its external face polished—a fact which we can still determine by examining the slabs one behind another; a facing of large blocks, of which many of the courses still exist towards the base, covered the whole, at one angle from the apex to the foot, and brought it into conformity with the type of the classic pyramid. The passage had its orifice in the middle of the north face about sixty feet above the ground: 7 it is five feet high, and dips at a tolerably steep angle

Barry de Merval, Études sur l'Architecture égyptienne, p. 122, et seq.; Perrot-Chinez, Histoire de l'Art dans l'Antiquité, vol. i. p. 200, et seq.; Maspero, Archéologie égyptienne, p. 125.

<sup>&</sup>lt;sup>2</sup> The brick pyramids of Abydos were all built for private persons (Mariette, Abydos, vol. ii. pp. 38, 39, 42-44). The word "mirit," which designates a pyramid in the texts, is elsewhere applied to the tembs of nobles and commoners as well as to those of kings.

It is difficult to admit that a pyramid of considerable dimensions could have disappeared without bearing any traces behind, especially when we see the enormous masses of masonry which still mark the sites of those which have been most injured; besides, the inscriptions connect none of the predetests of Snofrai with a pyramid, unless it be Zosiri (cf. pp. 242-244 of this History). The steppyramid of Snqqara, which is attributed to the latter, belongs to the same type as that of Médun; so does also the pyramid of Rigah, whose occupant is unknown. If we admit that this last-mentioned pyramid served as a tomb to some intermediate Pharaoli between Zosiri and Snofrail—for instance, Hun;—the use of pyramids would be merely exceptional for sovereigns anterior to the IV<sup>th</sup> dynasty.

Oriwn by Faucher-Gudin, from the plans of FLINDERS PETRIE, Medum, pl. ii.

MAKRIZI, Description de l'Egypte et du Caire, Boulaq edition, vol. i. p. 116: "There is another pyramid, called the Pyramid of Méddin, which is like a mountain, and has five stories;" he cites as his authority for this statement the Sheikh Abû-Mohammed Abdallah, son of Ab ierrahîm el-Qaisi.

W. Fl., Peruiz, Medum, p. 5, et seq., where the testimony of various authorities is briefly given.

The pyramid of Médûm was opened in 1882 by Maspero (Études de Mythologie et d'Archéologie,

through the solid masonry. At a depth of a hundred and ninety-seven feet it becomes level, without increasing in aperture, runs for forty feet on the plane, traversing two low and narrow chambers, then making a sharp tunit ascends perpendicularly until it reaches the floor of the vault. latter is hewn out of the mountain rock, and is small, rough, and devoid of ornament: the ceiling appears to be in three heavy horizontal courses of masonry, which project one beyond the other corbel-wise, and give the impression of a sort of acutely pointed arch. Snofrâi slept there for ages. then robbers found a way to him, despoiled and broke up his munny, scattered the fragments of his coffin upon the ground, and carried off the stone sarcophagus. The apparatus of beams and cords of which they made use for the descent, hung in their place above the mouth of the shaft until ten years ago. The rifling of the tomb took place at a remote date, for from the XXth dynasty onwards the curious were accustomed to penetrate into the passage; two scribes have scrawled their names in ink on the back or the framework in which the stone cover was originally inserted.1 The sepulchial chapel was built a little in front of the east face; it consisted of two smallsized rooms with bare surfaces, a court whose walls abutted on the pyramid, and in the court, facing the door, a massive table of offerings flanked by two large stelle without inscriptions, as if the death of the king had put a ston to the decoration before the period determined on by the architects. It was still accessible to any one during the XVIIIth dynasty, and people came there to render homage to the memory of Snofrui or his wife Mirisonkhu. Visitors recorded in ink on the walls their enthusiastic, but stereotyped impressions: they compared the "Castle of Snofrůi" with the firmament, "when the sun arises in it; the heaven rains incense there and pours out perfunces on the roof." Ramses II., who had little respect for the works of los predecessors, demolished a part of the pyramid in order to procure cherply the materials necessary for the buildings which he restored to Heraeleopolis. His workmen threw down the waste stone and mortar beneath the place where they were working, without troubling themselves as to what might be beneath. the court became choked up, the sand borne by the wind gradually invaded the chambers, the chapel disappeared, and remained buried for more than three thousand years.3

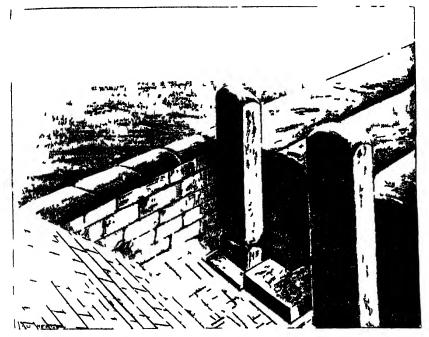

The officers of Snofrûi, his servants, and the people of his city wisked, vol. i. pp. 149, 150; cf. Archéologie égyptienne, p. 138). It was explored afresh, nine years be Professor Petrie, who measured its dimensions with scrapulous exactness (Medum, pp. 10, 11)

been placed in the grave, the relatives who had taken part in the mourning heaped together in a neighbouring hole the functary furniture, flint implements, copper needles, miniature pots and pans made of rough and badly burned clay, bread, dates, and catables in dishes wrapped up in linen! The nobles ranged their mastabas in a single line to the north of the pyramid; these form fine-looking masses of considerable size, but they are for the most part unfinished and empty.2 Snofrai having disappeared from the scene, Kheops who succeeded him forsook the place, and his courtiers, abandoning their unfinished tombs, went off to construct for themselves others around that of the new king. We rarely find at Mêdâm finished and occupied sepulchies except those of individuals who had died before or shortly after Snofrûn.3 The mummy of Rânofir, found in one of them, shows how far the Egyptians had carried the art of embalming at this period. His body, though much shrunken, is well preserved; it had been clothed in some fine stuff, then covered over with a layer of resin, which a clever sculptor had modelled in such a manner as to present an image resembling the deceased it was then rolled in three or four folds of thin and almost transparent gauge. Of these tombs the most important belonged to the Prince Noticman and his wife Atiti: it is decorated with bas-reliefs of a peculiar composition; the figures have been cut in outline in the limestone, and the hollows thus made are filled in with a mosaic of tinted pastes which show the moulding and colour of the parts.<sup>5</sup> Everywhere else the ordinary methods of sculpture have been employed, the bas-reliefs being enhanced by brilliant colouring in a simple and delicate manner. The figures of men and animals are portrayed with a vivacity of manner which is astonishing; and the other objects, even the hicroglyphs, are rendered with an accuracy which does not neglect the smallest detail.6 The statues of Râhotpû and of the lady Nofrit, discovered in a half-ruined mastaba, have fortunately reached us without having suffered the least damage, almost without losing anything of their original freshness;

and who had established the kingdom of Egypt. The latter were represented by the munima disposed at full length (Medum, p. 21).

These mastabas were explored for the first time and described by Mariette, Les Mastaba d PAncien Empire, pp. 468-482, and Monuments divers, pls. xvii. xix.; et Villient-Studiet, Nile Gleaning pp. 27-39, and Fgypt after the War, pp. 469-472. They have been excavated atresh by W. Fi. Petiti Medum, 1892, who has carefully reproduced in colour the most interesting fragments of the decormal

<sup>\*</sup> W. Fr. Prinis, Medum, pp. 17, 18 Professor Petric has presented this munimy, the most one of specimen perhaps in existence, to the Anatomical Museum of the Royal College of Surgeons, I and

Mr. Spurrill has made, for Mr. Petrie, in a most complete manner, a chomical analysis at technical study of these coloured pastes (Medum, pp. 28, 29)

<sup>•</sup> Mr. Petrie has devoted to the hieroglyphs of these sepulchres a most searching ox unin it is and has reproduced a considerable number of them in the coloured plates which accompany volume (Medum, pp. 29–33).

<sup>7</sup> See the hoad of Rahotpa at p. 317 of this History, where it serves as the initial vignetic of the chapter.

The Pomers Segul

they are to be seen in the Gizeh Museum just as they were when they left the hands of the workman.1 Rahotpu was the son of a king, perhaps of Snofiûl: but in spite of his high origin, I find something humble and retiring in

his physiognomy. Nofrît, on the contrary, has an imposing appearance: an indescribable air of resolution and command invests her whole person, and the sculptor has eleverly given expression to it. She is represented in a robe with a pointed opening in the front: the shoulders, the bosom, waist, and hips, are shown under the material of the dress with a purity and delicate grace which one does not always find in more modern works of art. The wig. secured on the forehead by a richly embroidered band, frames with its somewhat heavy masses the firm and rather plump face: the eyes are living, the nostrils breathe, the mouth smiles and is about to speak. The art of Egypt has at times been as fully inspired; it has never been more so than on the day in which it produced the statue of Nofrît.

The worship of Snofrůi was perpetuated from century to century. After the fall of the Memphite empire it passed through periods of intermittence, during which it ceased to be observed, or was observed only in an irregular way; it reappeared under the Ptolemies 8 for the last time before becoming extinct

MOFERT, LADY OF MEDEN 3

for ever. Snofråi was probably, therefore, one of the most popular kings of the good old times; but his fame, however great it may have been allong the Egyptians, has been eclipsed in our eyes by that of the Pharaohs who immediately followed him-Kheops, Khephren, and Mykerinos we are really better acquainted with their history. All we know of them 19 made up of two or three series of facts, always the same, which the contempor meous monuments teach us concerning these rulers Khnûmû-Khûfûr,\*

The discovery of these statues has been described by Daninos Pasha, Letter to M G Maspero, in the Recueil de Travaux, vol viii pp. 69-73. They are reproduced in Mariatic, Monument. ducts 11 20

Drawn by Boudier, from a photograph taken by Emil Brugsch-Bey We have evidence that his worship was observed under the Vth dynasty (MARIETIA Ice Mastal as de l'Ancien Empire, p. 198; of. possibly Lersius, Denkm, il 152), liter under the All' (MARIEITL, Catalogue general des monuments d'Abydos, p 588), and lastly under the Ptolemic (Louvre, D 18, and LEEMANS, Lettre & M. François Salvolini, p 141, pl. xxviii No 284)

The existence of the two cartouches Khûfûn and Khuûmû-Khûfûn on the same monument- has caused much embarrassment to Egyptologists the majority have been inclined to see here two different kings, the second of whom, according to M Robiou, would have been the person who

abbreviated into Khûfui, the Kheops of the Greeks, was probably the son of Snofiûn 4 He reigned twenty-three years,8 and successfully defended the mines of the Sinaitic peninsula against the Bedouin, he may still be seen on the face of the rocks in the Wady Maghara sacrificing his Asiatic prisoners, now before the jackal Anubis, now before the ibis-headed Thot 4 The gods reaped advantage from his activity and riches; he restored the temple of Hathor at Dendera,5 embel lished that of Bubastis,6 built a stone sanctuary to the Isis of the Sphinx, and consecrated there gold, silver, bronze, and wooden statues of Horus, Nephthys, Selkit, Phtah, Soklut. Osnis, Thot, and Hams Scores of other Pharaohs had done as much or more, on whom no one bestowed a thought a century after their death, and Kheons would have succumbed to the same indifference had he not forcilly attracted the continuous attention t posterity by the immensity of his tomb 5 The Egyptians of the The bin period were compelled to form then AIAIA III JAILI OF KIHOIST

years.¹ But a more serious danger threatened them in the great weight of the materials above. In order to prevent the vault from being crushed under the burden of the hundred metres of limestone which surmounted it, they arranged above it five low chambers placed exactly one above the other in order to relieve the superincumbent stress. The highest of these was protected by a pointed roof consisting of enormous blocks made to lean against each other at the top: this ingenious device served to transfer the perpendicular thrust almost entirely to the lateral faces of the blocks. Although an earthquake has to some extent dislocated the mass of masonry, not one of the stones which encase the chamber of the king has been crushed, not one has yielded by a hair's-broadth, since the day when the workmen fixed it in its place.

The Great Pyramid was called Khûît, the "Horizon" in which Khûfûî had to be swallowed up, as his father the Sun was engulfed every evening in the horizon of the west.<sup>2</sup> It contained only the chambers of the deceased, without a word of inscription, and we should not know to whom it belonged, if the masons, during its construction, had not daubed here and there in red paint among their private marks the name of the king, and the dates of his reign.<sup>3</sup> Worship was rendered to this Pharaoh in a temple constructed a little in front of the eastern side of the pyramid, but of which nothing remains but a mass of ruins.<sup>4</sup> Pharaoh had no need to wait until he was mummified before he became a god; religious rites in his honour were established on his accession; and many of the individuals who made up his court attached themselves to his double long before his double had become disembodied.<sup>5</sup> They served him faithfully during their life, to repose finally m his shadow in the little pyramids and mastasbas which clustered around him.<sup>6</sup> Of Dadûfri, his immediate successor, we can probably say that he reigned eight years,<sup>7</sup>

¹ Professor Petrie thinks (The Pyramids and Temples of Gizeh, pp. 158, 217) that the pyramids it Gizeh were rifted, and the mannings which they contained destroyed during the long early wars which raged in the interval between the Vi<sup>th</sup> and XII<sup>th</sup> dynastics. If this bettrie, it will be necessary to admit that the kings of one of the subsequent dynastics must have restored what had been damaged, for the workness of the Caliph Al-Mannoun brought from the sepalchral chamber of the "Horizon" "a stone trough, in which lay a stone statue in human form, enclosing a man who had on his breast a golden pectoral, adorned with precious stones, and a sword of inestimable value, and on his head a carbinode of the size of an egg, brilliant as the sun, having characters which no man can read." All the Vi be authors, whose accounts have been collected by Jomanil, relate in general the same story (Incomplian generale de Memphis et des Pyramides, in the Description de l'Égypte, vol. ix. p. 451, et sq.). One can easily recognize from this description the sarcophagus still in its place, a stone case in human shaps, and the minimum of Khoops leaded with jewels and arms, like the body of Queen Åthotpu 1

<sup>&</sup>lt;sup>2</sup> E DE Rough, Recherches sur les monuments qu'on peut attriouer aux sex premières dynas'a

The workmen often drew on the stones the cartouches of the Pharach under whose Property had been taken from the quarry, with the exact date of their extraction; the inscribed blocks pyramid of Kheeps bear, among others, a date of the year XVI. (Larsius, Denhm., u. 1 g).

<sup>\*</sup> Professor Petrie thinks that the slabs of basalt which may be seen at the foot of the properties of the pyramid belonged to the funereal temple (The Pyramids and Temples of Givh, pp 1 ... ...)

temple of the Sphinx, to which it must have borne a striking resemblance.2 The plan of it can be still clearly traced on the ground, and the rubbish cannot be disturbed without

> vases, and tables of offerings, some of them covered with hieroglyphs, like the mace-head of white stone which belonged in its day to Khe phren himself.4 The internal arrangements of the pyramid are of the simplest character; they consist of a granite-built passage care fully concealed in the north tare, running at first at an angle of 25°,

and then horizontally, until stopped by a granite barrier at a point which indicates a change of direction; a second passage, which begins on the outside, at a distance of some yards in advance of the base of the pyramid, and proceeds after passing through an unfinished chamber, to rejoin the first, finally, a chambar

<sup>1</sup> These stone sheds had been somewhat superficially examined by former explorers, Probasor Petro cleared them out partly, and was the first to recognize their use, having turned over the rubbish with particular care (The Pyramids and Temples of Gizch, pp. 101-103).

The connection of the temple of the Sphinx with that of the second pyramid was discovered in December, 1880, during the last diggings of Marietto. I ought to say that the whole or that part of the building into which the passage leads shows truces of having been hastily executed and at a time long after the construction of the rest of the edifice; it is possible that the 11 - 1' condition of the place does not date back further than the time of the Antonines, when the FP " was cleared for the last time in ancient days.

The temple was in tolerably good condition at the end of the XVIII century, as appears in .

greater part of its course 1 upon an embankment raised above the neighbouring around. This temple was in fair condition in the early years of the eighteenth century,2 and so much of it as has escaped the ravages of the Mameluks, bears witness to the scrupulous care and refined art employed in its construction. ('oming from the plain, we first meet with an immense halting-place measuring 100 feet by 46 feet, and afterwards enter a large court with an egress on each side: beyond this we can distinguish the ground-plan only of five chambers. the central one, which is in continuation with the hall, terminating at a distance of some 42 feet from the pyramid, exactly opposite the middle point of the eastern face. The whole mass of the building covers a rectangular area 181 feet long by a little over 177 feet broad. Its walls, like those of the temple of the Sphinx, contained a core of limestone 7 feet 10 inches thick, of which the blocks have been so ingeniously put together as to suggest the idea that the whole is cut out of the rock. This core was covered with a casing of granite and alabaster, of which the remains preserve no trace of hieroglyphs 3 or of wall scenes: the founder had caused his name to be inscribed on the statues, which received, on his behalf, the offerings, and also on the northern face of the pyramid, where it was still shown to the curious towards the first century of our era.1 The arrangement of the interior of the pyramid is somewhat complicated, and bears witness to changes brought unexpectedly about in the course of construction.<sup>5</sup> The original central mass probably did not exceed 180 feet in breadth at the base, with a vertical height of 154 feet. It contained a sloping passage cut into the hill itself, and an oblong low-roofed cell devoid of ornament.6 The main bulk of the work had been already completed, and the casing nor

<sup>&</sup>lt;sup>1</sup> JOHARD, Description generale de Memphis, etc., in the Description de l'Egypte, vol v pp 655-655. This causeway should not be contounded, as is frequently done, with that which may be seen a some distance to the east in the plain: the latter led to limestone quarries in the mount on to the south of the plateau on which the pyramids stand. These quarries were worked in very ancient times (Pitrie, The Pyramids and Tomples of Gizch, pp. 115, 116).

<sup>&</sup>lt;sup>2</sup> Benoit de Maillet visited this temple between 1692 and 1708. <sup>a</sup>It is alreast square in form There are to be found inside four pillars which doubtless supported a vaulted roof covering the altar of the idel, and one moved around these pillars as in an ambulatory. These stones were cased with granitic marble. I found some pieces still unbroken which had been attached to the stones with mastic. I believe that the exterior as well as the interior of the temple was cased with this mathle. (Le Mascrilla, Description de l'Egypte, 1755, pp. 223, 224). Fourment had no scrupb in equal to this passage, almost word for word, in his Description historique et general laque des planas d'He appolis et de Momphis, 1755, pp. 259-261.

M. Grebaut enriched the Greb Museum, in 1888, with statues of Krephier Mykeimes

when young, mature, or already in his decadence. They are in most case. cut out of a breccia of green diorite, with long irregular yellowish veins, and of such hardness that it is difficult to determine the tool with which they were worked. The Pharaoh sits squarely on his royal throne, his hands on his lap, his body firm and upright, and his head thrown back with a look of self-satisfaction. A sparrow-hawk perched on the back of his seat covers his head with its wings-an image of the god Horus protecting his son. The modelling of the torso and legs of the largest of these statues, the dignity of its pose, and the ammation of its expression, make of it a unique work of art which may be compared with the most perfect products of antiquity. Even if the cartouches which tell us the name of the king had been hammered away and the insignia of his rank destroyed, we should still be able to determine the Pharaoh by his bearing: his whole appearance indicates a man accustomed from his infancy to feel himself invested with limitless authority. Mykerinos stands out less impassive and haughty: 2 he does not appear so far removed from humanity as his predecessor, and the expression of his countenance agrees, somewhat singularly, with the account of his piety and good nature preserved by the legends. The Egyptians of the Theban dynastics, when comparing the two great pyramids with the third, imagined that the disproportion in their size corresponded with a difference of character between their royal occupants. Accustomed as they were from infancy to gigantic structures, they did not experience before "the Horizon" and "the Great" the feeling of wonder and awe which impresses the beholder of to-day. They were not the less apt on this account to estimate the amount of labour and effort required to complete them from top to bottom. This labour seemed to them to surpass the most excessive corvée which a just ruler had a right to impose upon his subjects, and the reputation of Kheops and Khephren suffered much in consequence. They were accused of sacrilege, of cruelty, and profligacy. It was urged against them that they had arrested the whole life of their people for more than a century for the erection of their tombs.

Menkauhorû, and Üsirnit, besides the one nameless which I attribute to Kheops (cf. p. 364 of this History) (Maspiro, Revue critique, 1890, vol. ii. pp. 416, 417). Some Expetologists, deceived by the opithet, "loved of Hapi," coupled with the name of Mykerinos, have believed that they came from the still undiscovered Serapeum of the Memphite dynastics at Saqqara. They have been reproduced by Grifart T. La Musée Égyptien, i. pls. viii.—xiv.; Stoindorff thinks that they may be works of a limiture, belonging probably to the XXVII dynasty (Ueber archaiche ägyptische Stotuen in the Jahibuch des K. D. Archaologischen Institute, 1893, t. viii. pp. 65, 66).

· GRÉBAUT, Le Musée Égyptien, i. pl. ix.; see the statue reproduced at p. 374 of this History

They were discovered in 1860 by Marietto, in the temple of the sphinx, at the bottom of a vell into which they had been thrown at an unknown date (Marietre, Lettre à M. le Vicomte de Rou pp. 7, 8); several of them had been broken in their full. They are now in the Gizeh Museum that careful reproduction of them which has appeared is to be found in Rouge-Bannell, de photographique, Nos. 91, 92, and in E. de Rouge, Recherches sur les monuments, pla iv., v. Stein if (op. l., pp. 65-66) attributes them to a later period, together with those discovered by Grebant.

· theops began by closing the temples and by prohibiting the offering of the lifes: he then compelled all the Egyptians to work for him. To some he issigned the task of dragging the blocks from the quarries of the Alabian

chain to the Nile: once shipped. the duty was incumbent on others i transporting them as far as the Libran chain. A hundred thousand men worked at a time, and were udleved every three months.2 The penod of the people's suffering was divided as follows: ten years in making the causeway along which the blocks were dragged-a work, in my opinion, very little less oneious thin that of electing the pyramid, for its length was five stadia, its breidth ten orgyie, its gicatest height eight, and it was made of cut stone and covered with figures.3 Ten years, therefore, were consumed in constructing this causeway and the subterranean chambers hollowed out in the hill. . . . As for the pyrimid itself, twenty years were employed in the making of it.

DIOLITE STATUL OF MISTIRES, CITER MUSTING

There are recorded on it, in Egyptian characters, the value of the sumpud m turnips, onions, and garlie, for the labourers attached to the works. If I concember anglet, the interpreter who deciphered the inscription told methat the total amounted to sixteen hundred talents of silver. If this were the

In a story in the Westerr Papyrus, it appears that Kheops gave the order to the entire that of the god R3 at Sakhibā (Masprao, I's Contes populares, 2n leht 1 86

<sup>1)</sup> I sor Petric (The Pyramids and Iemples of Gizch, pp 20) 211) thinks that this detail restance in authorite tradition. The figures which he pa is now if his window it is also below the responsibility for them to the popular marginal in (Williams cates Buch, p. 465).

case, how much must have been expended for iron to make tools, and for provisions and clothing for the workmen?"1 The whole resources of the reval treasure were not sufficient for such necessaries: a tradition represents Kheons as at the end of his means, and as selling his daughter to any one that offered in order to procure money.2 Another legend, less disrespectful to the rotal dignity and to paternal authority, assures us that he repented in his old ago. and that he wrote a sacred book much esteemed by the devout.8 Khephren had imitated, and thus shared with, him, the hatred of posterity.4 The Egyptimes avoided naming these wretches: their work was attributed to a shepherd called Philitis, who in ancient times pastured his flocks in the mountain; 5 and even those who did not refuse to them the glory of having built the most enormous sepulchres in the world, related that they had not the satisfaction of reposing in them after their death. The people, exasperated at the tyranny to which they had been subject, swore that they would tear the bodies of these Pharaola from their tombs, and scatter their fragments to the winds: they had to be buried in crypts so securely placed that no one has succeeded in finding them,

Like the two older pyramids, "the Supreme" had its anecdotal history, in which the Egyptians gave free rein to their imagination. We know that its plan had been rearranged in the course of building, that it contained two sepulchral chambers, two sarcophagi, and two mummies: these modifications, it was said, belonged to two distinct reigns; for Mykerinos had left his tomb unfinished, and a woman had finished it at a later date—according to some, Nitokris, the last queen of the VI<sup>th</sup> dynasty; <sup>7</sup> according to others, Rhodops.

<sup>2</sup> Himopores, ii. 126. She had profited by what she received to build a pyramid or hers it in the neighbourhood of the great one—the middle one of the three small pyramids: it would appear in fact, that this pyramid contained the munmy of a daughter of Kheops, Hondson's.

<sup>&</sup>lt;sup>1</sup> Hi rodott s, ii. 124, 125. The inscriptions which were read upon the pyramids were the stable of visitors, some of them carefully executed (Li troder, Surle resilement des pyramides de Gizch, surles sculptures hiëroglyphiques qui les décoraient, et sur les inscriptions greeques et latines que les consquers y acton et gravés, in the (Chures choisies, 1st series, vol. i. pp. 441–152). The figures which were own to Herodotus represented, according to the dragoman, the value of the sums expended for vegeté les for the workmen; we ought, probably, to regard them as the thousands which, in many of the velue templos, served to matk the quantities of different things presented to the god, that they in 14 be transmitted to the deceased (Masserse, Nouveau Fragment d'un Commentaire sur le livre Hallie lete, in the Annuaire de la Societé pour l'eurouragement des études greeques en France, 1875, p. 16, et seq.)

<sup>&</sup>lt;sup>3</sup> Manno, Unord's edition, p. 91. The ascription of a book to Kheops, or rather the account of the discovery of a "sacred book" under Kheops, is quite in conformity with Egyptian idea. The British Museum possesses two books, which were thus discovered under this king; the one, excited treatise, in a temple at Copios (Bircu, Medical Papyrus with the name of Cheops, in the Zeds both, 1871, pp. 61, 64; cf. pp. 224, 225 of this History); the other comes from Tanis (Printi tree tink, 1871, pp. 61, 62; cf. pp. 224, 225 of this History); the other comes from Tanis (Printi tree tink) (Collections des anciens alchimistes grees, vol. i. pp. 211-211), there are two small treatises and to Sophé, possibly Souphis or Kheops: they are of the same kind as the book mentioned by Worth's and which Syneclius says was bought in Egypt.

<sup>4</sup> HERODOTUS, 11. 127.

<sup>&</sup>lt;sup>5</sup> HERODOTTS, it. 128; cf. WIFDLMANN, Herodots Zweiles Buch, pp. 477, 478; several strains have been inclined to see in this name of Philifis, the shepherd, a reminiscence of the Hyl.

<sup>•</sup> Diodort's Sicolus, i. 61.
† Manetho, Unger's edition, p. 102, asserts that Nitokris built the third pyramid: an via a dien of his statement has been given by Lepsius in Bunsen's Egyptons Stelle, vol. ii. pp 172, 2...

the Ionian who was the mistress of Psammetichus I. or of Amasis.1 The beauty and richness of the granite casing dazzled all eyes, and induced many visitors to prefer the least of the pyramids to its two imposing sisters; its comparatively small size is excused on the ground that its founder had returned to that moderation and picty which ought to characterize a good king. "The actions of his father were not pleasing to him; he reopened the temples and sent the people, reduced to the extreme of misery, back to their religious observances and their occupations; finally, he administered justice more equitably than all other kings. On this head he is praised above those who have at any time reigned in Egypt: for not only did he administer good justice, but if any one complained of his decision he gratified him with some present in order to appease his wrath."2 There was one point, however, which excited the anxiety of many in a country where the mystic virtue of numbers was an article of faith: in order that the laws of celestial arithmetic should be observed in the construction of the pyramids, it was necessary that three of them should be of the same size. The anomaly of a third pyramid out of proportion to the two others could be explained only on the hypothesis that Mykerinos, having broken with paternal usage, had ignorantly infringed rdecree of destiny-a deed for which he was mercilessly punished. He first lost his only daughter; a short time after he learned from an oracle that he had only six more years to remain upon the earth. He enclosed the corpse of his child in a hollow wooden herfer, which he sent to Sais, where it was honoured with divine worship.8 "He then communicated his reproaches to the god, complaining that his father and his uncle, after having closed the templess forgotten the gods and oppressed mankind, had enjoyed a long

<sup>1</sup> Zorgi (De Origine et Usu Obeliscorum, p. 390, note 22) had already recognized that the Khod spis of the Greeks was no other than the Nitokiis of Manetho, and has opinion was adopted and developed by Ban on (A gyptens stelle, pp. 237, 238). The logend of Rhodopis was completed by the additional samption to the ancient Egyptian queen of the character of a courtesan, this repullment true scenis to have been borrowed from the same class of legends as that which concerned itself with the due her of Kheops and her pyramid. The marrative thus developed was mea smaller manner conand d with another popular story, in which occurs the episode of the slipper, so well known from the till of Cinderella (LACIB, Konigen Attohres-Rhodopis and Aschenbrodel's I rial I, we the Doutsch Recor, July, 1879). Herodotus connects Rhodopis with his Amasis (n. 154). Ener (Varie Hist), Min (2) with King Psammotichus of the XXVIth dynasty.

<sup>&</sup>quot; He mores, it 129; cf. Wiedlann, Herodols Zweetes Buch, p. 478, et seq.

<sup>1</sup> buts, n. 129-133. The manner in which Herodottas describes to cow which was slown to him to the temple of Sais, proves that he was dealing with Nit, in control toria, With mill, the "test tile helfor who had given birth to the Sun. How the people could have attached to this States the he end of a daughter of Mykerinos is now difficult to understand. The idea of a munion tra corps that up in a statue, as in a coffin, was familiar to the Egyptims two of the queen utene lat Den el Baharî, Nofritari and Abhotpů II, were found hidden in the centre of rimer of Osum figures of wood, covered with stu coed fabric (Maspero, La Ticuraille de Le 1. Het it. the Memories de la Mission française, vol. 1. pp. 535-514, and pl. v.). Egyptian traditi n supposed t at the last. the bodies of the gods rested upon the earth (De Iside et Osiride, \$ 22, p. 56, Paranta s edite at the first the gods rested upon the earth (De Iside et Osiride, \$ 22, p. 56, Paranta s edite at the first th p 111 of this History). The cow Milifulfitt might, therefore, he holdly enclosed in a specific gas in the fame of a heiter, just as the munmified gazelle of Deir el-Bahari is exclused in a sucophical d sielle form (Maspero, La Trouvaille de Dérel Bahari, pl xxi B), it is ever p sible that the state she as to Herodotus roally contained what was thought to be a munmay of the g ddess

life, while he, devout as he was, was so soon about to perish. The oracle answered that it was for this very reason that his days were shortened, for he had not done that which he ought to have done. Egypt had to suffer for a hundred and fifty years, and the two kings his predecessors had known this while he had not. On receiving this answer, Mykerinos, feeling himself condemned, manufactured a number of lamps, lit them every evening at dusk. began to drink and to load a life of jollity, without ceasing for a moment night and day, wandering by the lakes and in the woods wherever he thought to find an occasion of pleasure. He had planned this in order to convince the oracle of having spoken falsely, and to live twelve years, the nights counting as so many days."1 Legend places after him Asychis or Sasychis a later builder of pyramids, but of a different kind. The latter preferred brick as a building material, except in one place, where he introduced a stone bearing the following inscription: "Do not despise me on account of the stone pyramids: I surpass them as much as Zeus the other gods. Because, a pole being plunged into a lake and the clay which stuck to it being collected, the brick out of which I was constructed was moulded from it."2 The virtueof Asychis and Mykerinos helped to counteract the bad impression which Kheops and Khephren had left behind them. Among the five legislators of Egypt Asychis stood out as one of the best. He regulated, to minute details, the ceremonies of worship. He invented geometry and the art of observing the heavens.3 He put forth a law on lending, in which he authorized the borrower to pledge in forfeit the mummy of his father, while the creditor had the right of treating as his own the tomb of the debtor: so that if the debt was not met, the latter could not obtain a last resting-place for himself or his family either in his paternal or any other tomb.4

History knows nothing either of this judicious sovereign or of many other Pharaohs of the same type, which the dragomans of the Greek period assiduously enforced upon the respectful attention of travellers. It merely affirms that the example given by Kheops, Khephren, and Mykerinos were by no means lost in later times. From the beginning of the IV<sup>th</sup> to the end of the XIV<sup>th</sup> dynasty—during more than fifteen hundred years—the construction of pyramids was a common State affair, provided for by the administration, secured by special services.<sup>5</sup> Not only did the Pharaohs build them for them-

<sup>1</sup> Herodotus, ii. 133.

<sup>&</sup>lt;sup>2</sup> HERODOTUS, ii. 136.

<sup>&</sup>lt;sup>2</sup> DIODORUS, i. 91. It seems probable that Diodorus had received knowledge from some Absendrian writer, now lost, of traditions concerning the legislative acts of Shashanqu I. of the AMI<sup>11</sup> dynasty; but the name of the king, commonly written Scsonkhis, had been corrupted by the harmman into Sasykhis (Wilkinson, in G. Rawlinson, Herodotus, vol. ii. p. 182, note 7).

<sup>4</sup> HERODOTUS, ii. 136.

<sup>&</sup>lt;sup>5</sup> On the construction of pyramids in general, cf. Perror-Cuipiez, Histoire de l'Art, vol. 1 pp.

selves, but the princes and princesses belonging to the family of the Pharaohs constructed theirs, each one according to his resources; three of these econdary mausoleums are ranged opposite the eastern side of "the Horizon," three opposite the southern face of "the Supreme," and everywhere else-near Abousir, at Saqqara, at Dahshur or in the Fayum—the majority of the royal pyramids attracted around them a more or less numerous cortège of pyramids of princely foundation often debased in shape and faulty in proportion.1 The materials for them were brought from the Arabian chain. of the latter, projecting in a straight line towards the Nile, as far as the village of Troiû, is nothing but a mass of the finest and whitest limestone.2 The Egyptians had quarries here from the earliest times. By cutting off the stone in every direction, they lowered the point of this spur for a depth of some hundreds of metres. The appearance of these quarries is almost as astonishing as that of the monuments made out of their material. The extraction of the stone was carried on with a skill and regularity which denoted ages of experience. The tunnels were so made as to exhaust the finest and whitest seams without waste, and the chambers were of an enormous extent; the walls were dressed, the pillars and roofs neatly finished, the passages and doorways made of a regular width, so that the whole presented more the appearance of a subterranean temple than of a place for the extraction of building materials.3 Hastily written graffiti, in red and black ink, preserve the names of workmen, overseers, and engineers, who had laboured here at certain dates, calculations of pay or rations, diagrams of interesting details, as well as capitals and shafts of columns, which were shaped out on the spot to reduce their weight for transport. Here and there true official stelle are to be found set apart in a suitable place, recording that after a long interruption such or such an illustrious sovereign had resumed the exeavations, and opened fresh chambers.4 Alabaster was met with not far from here in the Wady

195-216; Plenne, The Pyramids and Temples of Gizel, pp. 162-172; Mastern, Archeologic Lyppinum, pp. 126-128.

<sup>&</sup>lt;sup>1</sup> The description of these pyramids may be found for the most part in VVSE-PIRRIEG. Operations at the Pyramids in 1837, vol. ii. The smaller pyramids in the Fayum have been quite recently cleared by Pertin, Illahun, Kahan and Gureb, pp. 1, 5.

<sup>110</sup>th is the Troja of classical writers (Balosen, Das Lypptische Troja, in the Zeitschrift, 1867–119, 89–93), which D'Anville (Memoires sur l'Egypte Ambunic et Moderae, p. 175) had previously identified with the modern village of Turah; cf. the map of the Delta at p. 75 of this History.

The description of the quarries of Turah, as they were at the beginning of the century, was somewhat briefly given by Jomard (Description generale de Memples et des Pyramiles, in the Description de l'Egypte, vol. v. pp. 672-674), afterwards more completely by Perring (Vysi, Operations, vol. iii. p. 90, et seq.). During the last thirty years the Cano masons have destroyed the greater part of the ancient remains formerly existing in this district, and have completely changed the approximate of the place.

<sup>&</sup>lt;sup>4</sup> Stelle of Amenomhaît III, of the XII<sup>th</sup> dynasty (Vyse, Operations, vol. iii., plate facing p 94; Lil ii. Dealon., iii. 143 i), of Ahmosis I. (Vyse, Operations, vol. iii. p. 94; Leesus, Dealon., iii.

The Pharaohs of very early times established a regular colony here. in the very middle of the desert, to cut the material into small blocks for tranport: a strongly built dam, thrown across the valley, served to store up the winter and spring rains, and formed a pond whence the workers could always supply themselves with water.1 Kheops and his successors drew their alabaster from Hâtnûbû,2 in the neighbourhood of Hermopolis, their granite from Syene, their diorite and other hard rocks, the favourite material for their sarcophagi, from the volcanic valleys which separate the Nile from the Red Sea-especially from the Wady Hammamat. As these were the only materials of which the quantity required could not be determined in advance, and which had to be brought from a distance, every king was accustomed to send the principal persons of his court to the quarries of Upper Egypt, and the rapidity with which they brought back the stone constituted a high claim on the favour of their master. If the building was to be of brick, the bricks were made on the spot, in the plain at the foot of the hills. If it was to be a limestone structure. the neighbouring parts of the plateau furnished the rough material in abundance. For the construction of chambers and for easing wills, the rose granito of Elephantinê and the limestone of Troiu were commonly employed, but they were spared the labour of procuring these specially for the occasion. The city of the White Wall had always at hand a supply of them in its stores, and they might be drawn upon freely for public buildings, and consequently for the royal tomb. The blocks chosen from this reserve, and conveyed in boats close under the mountain-side, were drawn up slightly inclined causewayby oxen to the place selected by the architect.8

The internal arrangements, the length of the passages and the height of the pyramids, varied much: the least of them had a height of some thirty-time feet morely. As it is difficult to determine the motives which influenced the Pharaohs in building them of different sizes, some writers have thought that the mass of each increased in proportion to the time bestowed upon its construction—that is to say, to the length of each reign. As soon as a prince mounted the

<sup>3</sup> a, b) of Akhopiruri (Vyse. Operations, vol. iii. p. 95), of Amenôthes III (Vyse. Operations, vol. ii) p 96; Lersius, Diukm., III. 71 a, b) of the XVIII<sup>th</sup> dynasty, and finally Nectanebo II of the XVV (Vyse. Operations, vol. iii 99; Brusson, Reiseberichte, p. 16, et seq.)

<sup>1</sup> Schweinfurth, Sur une anciente dique de pierre aux environs d'Helonan, in the Bullete de l'Institut Égyptien, 2nd series, vol. vi. pp. 139-115. Schweinfurth thinks that the altitust remployed in building the temple of the Sphinx came very probably from the quarres et W. I. Gerrauf.

The quarries of Hâtnûbû were discovered by Mr. Newberry in 1891 (Fyppt Prilon to Fund, Report of the Fifth Ordinary General Meeting, 1890-91, pp. 27, 28; cf. G. Williams Frazer, Hatnub, in the Proceedings of the Society of Biblical Archeology, vol. xvi. 1893-91, 19 73-82; Generice, El Bresheh, vol. ii. pp. 17-54).

<sup>&</sup>lt;sup>3</sup> One of the stelse of Turah shows us a block of limestone placed upon a sledge drawn by the large oxen (Vvsz. Operations, vol. iii., plate facing p. 99; Lersus, Denka., iii. 3 a).

throne, he would probably begin by roughly sketching out a pyramid sufficiently capacious to contain the essential elements of the tomb; he would then, from year to year, have added fresh layers to the original nucleus, until the day of his death put an end for ever to the growth of the monument.1 This hypothesis is not borne out by facts: such a small pyramid as that of Saqqara belonged to a Pharaoh who reigned thirty years,2 while "the Horizon" of Gizch is the work of Kheops, whose rule lasted only twenty-three years. The plan of each pyramid was arranged once for all by the architect, according to the instructions he had received, and the resources at his command. Once set on foot, the work was continued until its completion, without addition or diminution, unless something unforescen occurred. The pyramids, like the mastabas,

1 This was the theory formulated by Lepsius (Uder den Bau der Pyramiden, in the Berliner Monatsberichte, 1843, pp. 177-203), after the researches made by himself, and the work done by Erbkam, and the majority of Egyptologists adopted it, and still maintain it (ERERS, Circrone durch das Alte und Neus Agypten, vol. i. pp. 133, 134; WIEDEMANN, Ægyptische Geschichte, pp. 181, 182). It was vigorously attacked by Perrot-Chipiez (Histoire de l'Art, vol i. pp. 214-221) and by Petrie (The Pyramals and Temples of Gizeh, pp. 163-166); it was afterwards revived, with amendments, by lie dardt (Lepsius's Theorie des Pyramidenhoms, in the Zeitschrift, vol. xxx. pp. 102-106), whose conclusions have been accepted by Ed. M ver (Geschichte des Alten Ægyptens, p. 106, et a 1). The examinations which I have had the opportunity of bestowing on the pyramids of Suppara, Abusir, Dahshur, Rîgah, and

THE MEMPHITE NOME AND THE POSITION OF THE PYRAMIDS OF THE ANCIENT IMPIRE.

Lisht have shown me that the theory is not applicable to any of these monuments. Such, also, is the white limestone pyramid of Caus, of which the dimensions are still less.

ought to present their faces to the four cardinal points; but owing to unskilfulness or negligence, the majority of them are not very accuratel. orientated, and several of them vary sensibly from the true north. The great pyramid of Saqqara does not describe a perfect square at its base, but is an oblome regtangle, with its longest sides east and west: it is stepped—that is to say, the six sloping sided cubes of which it is composed are placed upon one another so as to form a series of treads and risers, the former being about two yards wide and the latter of unequal heights.1 The highest of the stone pyramids of Dahshûr makes at its lower part an angle of 54° 41' with the horizon, but at half its height the angle becomes suddenly more acute and is reduced to 12° 59'. It reminds one of a mastaba with a sort of huge attic on the top.2 Each of these monuments had its enclosing wall, its chapel and its college of priests, who performed there for ages sacred rites in honour of the deceased prince, while its property in mortmain was administered by the chief of the "priests of the double." Each one received a name, such as "the Fresh." "the Beautiful," "the Divine in its places," which conferred upon it a personality and, as it were, a living soul. These pyramids formed to the west of the White Wall a long serrated line whose extremities were lost towards the south and north in the distant horizon: Pharaoh could see them from the terraces of his palace, from the gardens of his villa, and from every point in the plain in which he might reside between Heliopolis and Mêdûm -as a constant reminder of the lot which awaited him in spite of his divine origin. The people, awed and inspired by the number of them, and by the variety of their form and appearance, were accustomed to tell stories of them to one another, in which the supernatural played a predominant part. They were able to estimate within a few ounces the heaps of gold and silver, the jewels and precious stones, which adorned the royal mummics or filled the sepulchral chambers: they were acquainted with every precaution taken by the architects to ensure the safety of all these riches from robbers, and were convinced that magic had added to such safeguards the more effective protection of talismans and genii. There was no pyramid so insignificant that it had not its mysterious protectors, associated with some amulet-in most cases with a statue, animated by the double of the founder.4 The Arabs of to-day are still well acquainted with these protectors, and possess a traditional respect for them. The great pyramid concealed a black and white image, seated on a throne and invested

<sup>&</sup>lt;sup>1</sup> See pp 212-241 of this History for a more complete description of this pyramid.

<sup>&</sup>lt;sup>2</sup> Vyse, Operations carried on at the Pyramids in 1837, vol. iii. pp. 65-70.

<sup>&</sup>lt;sup>2</sup> "The Fresh," Qorne, was the pyramid of Shopsiskaf, the last king of the IV<sup>th</sup> dynasiy (E 1 "Rough, Recherches sur les Monuments, p. 74); "the Beautiful," Norm, that of Dadkerl Assi ("p. 100); and "the Divine in its places," Norm Isorro (id., p. 99), that of Menkathora, who belong to the V<sup>th</sup> dynasty.

<sup>&</sup>lt;sup>4</sup> Maspero, Etudes de Mythologie et d'Archéologie Lgyptiennes, vol. i. p. 77, et soq.

with the kingly sceptre. He who looked upon the statue "heard a terrible noise proceeding from it which almost caused his heart to stop beating, and he who had heard this noise would die." An image of rose-coloured granite watched over the pyramid of Khephren, standing upright, a sceptre in his hand and the uræus on its brow, "which serpent threw himself upon him who approached it, coiled itself around his neck, and killed him." A sorcerer had invested these protectors of the ancient Pharaohs with their powers, but another equally potent magician could elude their vigilance, paralyze their energies, if not for ever, at least for a sufficient length of time to ferret out the treasure and rifle the mummy. The cupidity of the fellahîn, highly inflamed by the stories which they were accustomed to hear, gained the mastery over their terror, and emboldened them to risk their lives in these well-guarded tombs. How many pyramids had been already rifled at the beginning of the second Theban empire!

The IV<sup>th</sup> dynasty became extinct in the person of Shopsiskaf, the successor and probably the son of Mykerinos.<sup>8</sup> The learned of the time of Ramses II. regarded the family which replaced this dynasty as merely a secondary branch of the line of Snofrûi, raised to power by the capricious laws which settled hereditary questions.<sup>4</sup> Nothing on the contemporary monuments, it is true, gives indication of a violent change attended by civil war, or resulting from a revolution at court: the construction and decoration of the tombs continued without interruption and without indication of haste, the sons-in-law of Shopsiskaf and of Mykerinos, their daughters and grandchildren, possess under the new kings, the same favour, the same property, the same privileges, which they had enjoyed previously.<sup>5</sup> It was stated, however, in the time of

The series of kings beginning with Mykerinos was drawn up for the first time in in accurate manner by E or Rolling Recherches sur les Monuments qu'on peut attribuer aux six premaires dynasties, pp. 66-81. M de Rouge's results have been since adopted by all Egyptologists (Balescii, is schichte Egyptons, p. 84, et seq.; Lauth, Aus Agyptons Voreit, p. 129, et seq. Williams, is gyptische inschichte, pp. 193-197. Ed. Meyen, dieschichte des Alten Agyptons, p. 129, et seq.) The table of the IV<sup>th</sup> dynasty, restored as far as possible with the approximate dates, is subjoined.—

The fragments of the royal Turin Papyrus exhibit, in fact, no separation between the kings a shield in which attributes to the IVth dynasty and those which he ascribes to the Vth, which seems to show that the Egyptian annalist considered them all as belonging to one and the same family of Pherichs

<sup>1</sup> Les Mercelles de l'Égypt de Mourtadi, from the translation of M. Pipere Vatilla, pp. 46-48.

<sup>·</sup> The pyramid of Medam, for instance; of p. 360 of this History

The most striking example is that of Sakhemkari, son of Khephren, who died at earliest under the Hannoh Sahuri (E. de Rouge, Recherches sur les monuments, pp. 77, 78; Lersus, Hendin, 11, 42).

the Ptolemies, that the Vth dynasty had no connection with the IVth; it was regarded at Memphis as an intruder, and it was asserted that it came from Elephantine. The tradition was a very old one, and its influence is betrayed in a popular story, which was current at Thebes in the first years of the New Empire.2 Kheops, while in search of the mysterious books of Thot in order to transcribe from them the text for his sepulchral chamber,8 had asked the magician Didi to be good enough to procure them for him; but the latter refused the perilous task imposed upon him. "'Sire, my lord, it is not I who shall bring them to thee.' His Majesty asks: 'Who, then, will bring them to me?' Did: replies. 'It is the eldest of the three children who are in the womb of Ruditdidit who will bring them to thee.' His Majesty says: 'By the love of Ra! what is this that thou tellest me; and who is she, this Rudîtdidît?' Didi says to him: 'She is the wife of a priest of Râ, lord of Sakhîbû. She carries in her womb three children of Râ, lord of Sakhîbû, and the god has promised to her that they shall fulfil this beneficent office in this whole earth,4 and that the eldest shall be the high priest at Heliopolis.' His Majesty, his heart was troubled at it, but Didi says to him: 'What are these thoughts, sire, my lord? Is it because of these three children? Then I say to thee: Thy son, his son, then one of these '" The good king Kheops doubtless tried to lay his hands upon this threatening trio at the moment of their birth; but Râ had anticipated this, and saved his offspring. When the time for their birth drew near, the Majesty of Ra, lord of Sakbibû, gave orders to Isis, Nephthys, Maskhonit,6 Hiquit,7 and Khuûmu:

<sup>1</sup> Such is the tradition accepted by Manetho (UNGLR's edition, pp. 96, 97). Lepsus think that the copyrists of Manetho were under some distracting influence, which made them transfer the record of the origin of the VI<sup>th</sup> dynasty to the V<sup>th</sup>: it must have been the VI<sup>th</sup> dynasty which took its crisin from Elephantinė (Königsbuch der Alten Ægypter, pp. 20, 21). I think the safest plan is to reject the text of Manetho until we know more, and to admit that he knew of a tradition ascribing the oreal of the V<sup>th</sup> dynasty to Elephantinė.

· ERMAN, Die Marchen des Papyrus Westoar, pl. ix. pp. 11-13; MA-Pero, Les Contes popularie 2nd cdit, pp. 73-86.

The Great Pyramid is mute, but we find in other pyramids inscriptions of some hundreds of lines. The author of the story, who knew how much certain kings of the VPh dynasty had I bounce to have extracts of the sacred books engraved within their tombs, funcied, no doubt, that his Kheep had done the like, but had not succeeded in procuring the texts in question, probably on account of the impacty ascribed to him by the legends. It was one of the methods of explaining the absence of any religious or funcient inscription in the Great Pyramid.

4 This kind of circumlocution is employed on several occasions in the old texts to destand royalty. It was contrary to oriquette to mention directly, in common speech, the Pharaon, or any-

thing belonging to his functions or his family. Cf. pp. 263, 261 of this History.

This phrase is couched in oracular form, as befitting the reply of a magician. It appears have been intended to reassure the king in affirming that the advent of the three sons of Rew not be immediate: his son, then a son of this son, would succeed him before destiny would accomplished, and one of these divine children succeed to the throne in his turn. The author o's story took no notice of Dadufti or Shopsiskaf, of whose reigns little was known in his time.

See pp. 81, 82 of this History for a notice of Maskhonit, and the rôle she played at the but'r

children.

<sup>7</sup> Hamit as the frog-goddess, or with a frog's head (Lanzone, Dizionario di Mitologia Egirat 852-855), was one of the midwives who is present at the birth of the sun every morning. Her the set therefore, natural in the case of the spouse about to give birth to royal sons of the sun.

"Come, make haste and run to deliver Rudîtdidît of these three children which she carries in her womb to fulfil that beneficent office in this whole earth. and they will build you temples, they will furnish your altars with offering, they will supply your tables with libations, and they will increase your mortmain possessions." The goddesses disguised themselves as dancers and itinerant musicians: Khnûmû assumed the character of servant to this band of nautchgirls and filled the bag with provisions, and they all then proceeded together to knock at the door of the house in which Ruditdidit was awaiting her delivery. The earthly husband Rausir, unconscious of the honour that the gods had in store for him, introduced them to the presence of his wife, and immediately three male children were brought into the world one after the other. named them, Maskhonit predicted for them their royal fortune, while Khnûmû infused into their limbs vigour and health; the eldest was called Usirkaf, the second Sahuri, the third Kakiu. Rausir was anxious to discharge his obligation to these unknown persons, and proposed to do so in wheat, as if they were ordinary mortals; they had accepted it without companction, and were already on their way to the firmament, when Isis recalled them to a sense of their dignity, and commanded them to store the honorarium bestowed upon them in one of the chambers of the house, where henceforth prodigies of the strangest character never ceased to manifest themselves. Every time one entered the place a murmur was heard of singing, music, and dancing, while acclamations such as those with which kings are wont to be received gave sure presage of the destiny which awaited the newly born. The manuscript is mutilated, and we do not know how the prediction was fulfilled. trust the romance, the three first princes of the Vth dynasty were brothers. and of priestly descent, but our experience of similar stories does not encourage us to take this one very seriously: did not such tales affirm that Kheops and Khephren were brothers also?

The  $V^{th}$  dynasty manifested itself in every respect as the sequel and complement of the  $1V^{th}$ . It reckons nine Pharaohs after the three which tradition made

travelled in person to collect the riches which were offered to them by these peoples in exchange for the products of the Nile, the Egyptians could not have been the unadventurous and home-loving people we have imagined. They willingly left their own towns in pursuit of fortune or adventure, and the sea did not inspire them with fear or religious horror. The ships which they launched upon it were built on the model of the Nile boats, and only differed from the latter in details which would now pass unnoticed. The hull, which was built on a curved keel, was narrow, had a sharp stem and stern, was decked from end to end, low forward and much raised aft, and had a long deck cabin: the steering apparatus consisted of one or two large stout ours. each supported on a forked post and managed by a steersman. It had one mast, sometimes composed of a single tree, sometimes formed of a group of smaller masts planted at a slight distance from each other, but united at the top by strong ligatures and strengthened at intervals by crosspieces which made it look like a ladder; its single sail was bent sometimes to one yard, sometimes to two; while its complement consisted of some fifty men, oarsmen, sailors, pilots, and passengers. Such were the vessels for cruising or pleasure; the merchant ships resembled them, but they were of heavier build, of greater tonuage, and had a higher freeboard. They had no hold; the merchandise had to remain piled up on deck, leaving only just enough room for the working of the vessel.2 They nevertheless succeeded in making lengthy voyages, and in transporting troops into the enemy's territory from the mouths of the Nile to the southern coast of Syria.3 Inveterate prejudice alone could prevent us from admitting that the Egyptians of the Memphite period went to the ports of Asia and to the Haûi-nibû by sea. Some, at all events, of the wood required for building 4 and for joiner's work of a civil or

smiths had worked from the earliest times. Caravans plied between Egypt and the lands of Chaldaan civilization, crossing Syria and Mesopotamia, perhaps even by the shortest desert route, as far as Ur and Babylon. The communications between nation and nation were frequent from this time forward, and very productive, but their existence and importance are matters of inference, as we have no direct evidence of them. The relations with these nations continued to be pacific, and, with the exception of Sinai, Pharaoh had no desire to leave the Nile Valley and take long journeys to pillage or subjugate countries from whence came so much treasure. The desert and the sea which protected Egypt on the north and east from Asiatic cupidity, protected Asia with equal security from the greed of Egypt.

On the other hand, towards the south, the Nile afforded an easy means of access to those who wished to penetrate into the heart of Africa. The Egyptians had, at the outset, possessed only the northern extremity of the I valley, from the sea to the narrow pass of Silsileh; they had then advanced as far as the first cataract, and Syene for some time marked the extreme limit of their empire.1 At what period did they cross this second frontier and resume their march southwards, as if again to seek the cradle of their race? They had approached nearer and nearer to the great bend described by the river near the present village of Korosko,2 but the territory thus conquered had, under the Vth dynasty, not as yet either name or separate organization: it was a dependency of the fieldom of Elephantinê, and was under the immediate authority of its princes. Those natives who dwelt on the banks of the river appear to have offered but a slight resistance to the invaders: the desert tribes proved more difficult to conquer. The Nile divided them into two distinct bodies. On the right side, the confederation of the Unuain spread in the direction of the Red Sea, from the district around Ombos to the neighbourhood of Korosko, in the valleys now occupied by the Ababdehs: it was bounded on the south by the Mazain tribes, from whom our con temporary Mâazeh have probably descended.4 The Amamiû were settled on

See pp. 41, 45, and 74 of this History for information on the early frontiers of Egypt to the south This appears to follow from a passage in the inscription of Uni. This minister was natural troops and exacting wood for building among the desert tribes whose territories adjoined at this put of the valley: the manner in which the requisitions were off-select (II 15, 16, 18, 45-47) shows that

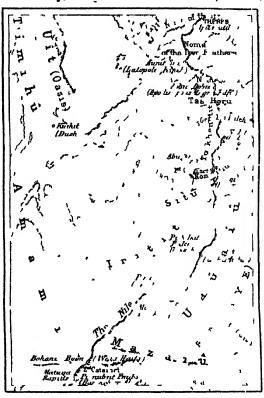

of the valley: the manner in which the requisitions were effected (Il. 15, 16, 18, 45-47) shows that it was not a question of a new exaction, but a familiar operation, and consequently that the prophenentioned had been under regular treaty obligations to the Egyptians, at least for some time previously.

The position of the Canain was correctly determined by Brugsch (Die Negerstümme der Unit Inschrift, in the Zeitschrift, 1882, p. 31). Their name was assimilated by the Egyptians to the rest nata, to cry, to scream, and denoted the banders, the screamers; and later, the people who cry, who conspire against Horus the younger, and who support Sit, the murdorer of Osiris.

The Mazaiû, from information furnished by the inscriptions of Uni and Hikkûî, are consigned on the north with the Unûniû. They had relations with Phanit and their country was that encounted

the left bank opposite to the Mâzaiû, and the country of Iritit lay facing the ferritory of the Ûaûaiû. None of these barbarous peoples were subject to Egypt int they all acknowledged its suzerainty,—a somewhat dubious one, indeed,

analogous to that excicised Oct then descendants by Khedives of to-day. with the authorities of the country, they are permitted to descend into the plain in order to exchange peaceably for corn and dourah, the acacia-wood of their forests, the charcoal that they make, gums, game, skins of animals, and the gold and precious stones which they get from their mines: they agree in return to refrain from any act of plunder, and to constitute a desert police provided that they receive a regular pay. The same arrangement existed in ancient times.1 The tribes hired themselves out to Pharaoh. They brought him beams of "sont" at the first demand, when he was in need of materials to build a fleet beyond the first cataract.2 They provided him with bands of men ready armed, when a campaign against the Libyans or the Asiatic tribes forced him to seek recruits for his armies:8 the Mazaiû entered the Egyptian service in such numbers, that their name served to designate the soldiery in general, just as in Cairo porters and night watchmen are all called Berberines.4 Among these people respect for their oath of feelty yielded sometimes to their natural disposition, and they allowed themselves to be carried away to plunder the principalities which they had agreed to defend: the colonists in Nubia were often obliged to complain of their exactions. When these exceeded all limits, and it became impossible to wink at their misdoings any longer, light-armed troops were sent against them, who quickly brought them to reason. As at Sinai, these were easy victories They recovered in one expedition what the Unuaiu had stolen in ten, both in flocks and fellahin, and the successful general perpetuated the memory of his exploits by inscribing, as he returned, the name of Pharaoh on some tock at Syene or Elephantine: we may surmise that it was after this fashion that Usirkaf, Nofiririkeff, and Unas carried on the wars in Nubia.5 Their arms probably never went beyond the second cataract, if they even reached so far: further south the country was only known by the accounts of the natives or by the few merchants who had made their way into it. Beyond the Mâzaiù, but still between the Nile and the Red Sea, lay the country of Parint. rich in ivory, ebony, gold, metals, gums, and sweet-smelling resins.<sup>6</sup> When

the dwarfs with whom he loved to be surrounded; none knew better that they the dance of the god—that to which Bîsû unrestrainedly gave way in his merry moments. Towards the end of his reign Assi procured on which a certain Biûrdidi had purchased in Pûanît. Was this the first which had made its appearance at court, or had others preceded it in the goal graces of the Pharaohs? His wildness and activity, and the extraordinary positions which he assumed, made a lively impression upon the courtiers of the time, and nearly a century later there were still reminiscences of him.

A great official born in the time of Shopsiskat, and living on to a great age linto the reign of Nofiririkerî, is described on his tomb as the "Scribe of the House of Books," 2 This simple designation, occurring incidentally among two higher titles, would have been sufficient in itself to indicate the extraordinary development which Egyptian civilization had attained at this time. The "House of Books" was doubtless, in the first place, a depository of official documents, such as the registers of the survey and taxes, the correspondence between the court and the provincial governors or feudal lords, deeds of gift to temples or individuals, and all kinds of papers required in the administration of the State It contained also, however, literary works, many of which even at this citly date were already old, prayers drawn up during the first dynasties, devout poetry belonging to times prior to the misty personage called Mini-hymns to the gods of light, formulæ of black magic, collections of mystical works. such as the "Book of the Dead" and the "Ritual of the Tomb;" scientific treatises on medicine, geometry, mathematics, and astronomy; manuals of practical morals; and lastly, romances, or those marvellous stories which preceded the romance among Oriental peoples.<sup>6</sup> All those, if we had them, would form "a library much more precious to us than that of Alexandria."

A fragment of a story, preserved in the Berlin Papyrus 3 (LEPSIUS, Denkm., vi : 1156-191), dates back, perhaps, to the Ancient Empire (Maspero, Études Égyptiennes vi 73-80).

infortunately up to the present we have been able to collect only insignificant mains of such rich stores.1 In the tombs have been found here and there pagments of popular songs.2 The pyramids have furnished almost intact a ritual of the dead which is distinguished by its verbosity, its numerous pions platitudes, and obscure allusions to things of the other world; but, among all the trash, are certain portions full of movement and savage vigour, in which poetic glow and religious emotion reveal their presence in a mass of mythological phraseology. In the Berlin Papyrus we may read the end of a philosophic dialogue between an Egyptian and his soul, in which the latter applies himself to show that death has nothing terrifying to man. "I say to myself every day: As is the convalescence of a sick person, who goes to the court after his affliction, such is death. . . . I say to myself every day: As is the inhaling of the scent of a perfume, as a seat under the protection of an outstretched curtain, on that day, such is death. . . . I say to myself every day: As the inhaling of the odour of a garden of flowers, as a seat upon the mountain of the Country of Intoxication, such is death. . . . I say to myself every day: As a road which passes over the flood of inundation, as a man who goes as a soldier whom nothing resists, such is death. . . . I say to myself every day: As the clearing again of the sky, as a man who goes out to catch birds with a net, and suddenly finds himself in an unknown district, such is death." papyrus, presented by Prisse d'Avennes to the Bibliothique Nationale. Paris, contains the only complete work of their primitive wisdom which has come down to us.4 It was certainly transcribed before the XVIIIth dynasty, and contains the works of two classic writers, one of whom is assumed to have lived under the III<sup>rd</sup> and the other under the Vth dynasty; it is not without reason, therefore, that it has been called "the oldest book in the world." The first leaves are wanting, and the portion preserved has, towards its end, the

beginning of a moral treatise attributed to Qaqimni, a contemporary of Hūni Then followed a work now lost: one of the ancient possessors of the papyrahaving efficient it with the view of substituting for it another piece, which was never transcribed. The last fifteen pages are occupied by a kind of pamphlet, which has had a considerable reputation, under the name of the "Proverbs :: Phtahhotpů."

This Phtahhotpù, a king's son, flourished under Menkaûhorû and Assi: his tomb is still to be seen in the necropolis of Saqqara.1 He had sufficient reputation to permit the ascription to him, without violence to probability, of the editing of a collection of political and moral maxims which indicate a profound knowledge of the court and of men generally. It is supposed that he presented himself, in his declining years, before the Pharach Assi, exhibited to 'him the piteous state to which old age had reduced him, and asked authority to hand down for the benefit of posterity the treasures of wisdom which he had stored up in his long career. The nomarch Phtahhotpû says: "'Sire, my lord, when age is at that point, and decrepitude has arrived, debility comes and a second infancy, upon which misery falls heavily every day: the eyes become smaller, the ears narrower, strength is worn out while the heart continues to beat; the mouth is silent and speaks no more; the heart becomes darkened and no longer remembers yesterday; the bones become painful, everything which was good becomes bad, taste vanishes entirely; old age renders a man miserable in every respect, for his nostrils close up, and he breathes no longer, whether he rises up or sits down. If the humble servant who is in thy presence receives an order to enter on a discourse bofitting an old man, then I will tall to thee the language of those who know the history of the past, of those who have heard the gods; for if thou conductest thyself like them, discontent shall disappear from among men, and the two lands shall work for thee!' The majesty of this god says: 'Instruct me in the language of old times, for it will work a wonder for the children of the nobles; whosoever enters and under stands it, his heart weighs carefully what it says, and it does not produce satiety." 2 We must not expect to find in this work any great profundity of thought. Clever analyses, subtle discussions, metaphysical abstractions, were not in fashion in the time of Phtahhotpu. Actual facts were preferred to speculative fancies: man himself was the subject of observation, his passions, his habits, his temptations and his defects, not for the purpose of constructing

<sup>&</sup>lt;sup>1</sup> He calls himself son of a king (pl. v. ll. 6, 7); he addresses his work to Assi (pl. iv. l. 1). <sup>1</sup> the name of Menkathora is found in his tomb (E. de Rougé, Recherches sur les Monuments. 1 <sup>1</sup> Démichen, Resultate, vol. i. pls. viii.—xv.; E. Mariette, Les Mastabas, pp. 350-356). A control Qaqimni has been found to belong to the V<sup>th</sup> dynasty (Steindorff, die Mastaba des Ka-bi-la Zeitschrift, t xxxiii. p. 72.

<sup>&</sup>lt;sup>2</sup> Prisse Papyrus, pl. iv. l. 2; pl. v. l. 6; cf. Virey, Études sur le Papyrus Prisse, pp. 27-32

sistem therefrom, but in the hope of reforming the imperfections of his nature and of pointing out to him the road to fortune. Ptahhotpû, therefore, does not how much invention or make deductions. He writes down his reflections just is they occur to him, without formulating them or drawing any conclusion from them as a whole. Knowledge is indispensable to getting on in the world: Lince he recommends knowledge. Gentleness to subordinates is politic, and shows good education; hence he praises gentleness.3 He mingles advice throughout on the behaviour to be observed in the various circumstances of hie, on being introduced into the presence of a haughty and choleric man,3 on entering society, on the occasion of dining with a dignitary, on being married. "If thou art wise, thou wilt go up into thine house, and love thy wife at home: thou wilt give her abundance of food, thou wilt clothe her back with garments; all that covers her limbs, her perfumes, is the joy of her life; as long as thou books at to this, she is as a profitable field to her master."5 To analyse such a work m detail is impossible: it is still more impossible to translate the whole of it. The nature of the subject, the strangeness of certain precepts, the character of the style, all tend to disconcert the reader and to mislead him in his interpretations. From the very earliest times ethics has been considered as a healthy and praiseworthy subject in itself, but so hackneyed was it, that a change in the mole of expressing it could alone give it freshness. Ptahhotpû is a vætim to the exigencies of the style he adopted. Others before him had given utterance to the truths he wished to convey; he was obliged to clothe them in a startling and interesting form to airest the attention of his readers. In some places he has expressed his thought with such subtlety, that the meaning is lost in the pagle of the words.

The art of the Memphrite dynasties has suffered as much as the literature from the hand of time, but in the case of the former the tragments are at least numerous and accessible to all. The kings of this period erected temples in their cities, and, not to speak of the chapel of the Sphinx, we find in the remains still existing of these buildings chambers of grante, alabaster and himestone, covered with religious scenes like those of more recent periods, although in some cases the walls are left bare. Their public buildings have all, or nearly

I discovered in the masonry of one of the pyramids of Lisht, the remains of a temple book for fall force (Maspino, I tudes de Mythologie et d'Archeologie I gyptienn s. vol. i. pp. 118. 11.0 and Verille drew attention to the fragments of another temple, decorated by the same king in this predict sor Kheops, at Bubastis (Naville, Bubastis, pl. xxvii. a-b, pp. 3, 5, 6, 10)

all, perished: breaches have been made in them, by invading armies or by civil wars, and they have been altered, enlarged, and restored scores of times in the course of ages; but the tombs of the old kings remain, and afford proof of th. skill and perseverance exhibited by the architects in devising and carrying out their plans.1 Many of the mastabas occurring at intervals between Gizeh and Mêdûm have, indeed, been hastily and carelessly built, as if by those who were anxious to get them finished, or who had an eye to economy; we may observe in all of them neglect and imperfection,-all the trade-tricks which an unscrupulous jerry-builder then, as now, could be guilty of, in order to keep down the net cost and satisfy the natural parsimony of his patrons without lessening his own profits.2 Where, however, the master-mason has not been hampered by being forced to work hastily or cheaply, he displays his conscientionsness, and the choice of materials, the regularity of the courses, and the homogeneousness of the building leave nothing to be desired; the blocks are adjusted with such precision that the joints are almost invisible, and the mortar between them has been spread with such a skilful hand that there is scarcely an appreciable difference in its uniform thickness.8 The long low flat mass which the finished tomb presented to the eye is wanting in grace, but it has the characteristics of strength and indestructibility well suited to an "eternal house." The tagade, however, was not wanting in a certain graceful severity: the play of light and shade distributed over its surface by the stelle, niches, and deep-set doorways, varied its aspect in the course of the day, without lessening the impression of its majesty and serenity which nothing could disturb. The pyramids themselves are not, as we might imagine, the coarse and ill-considered reproduction of a mathematical figure disproportionately enlarged. The architect who made an estimate for that of Kheops, must have carefully thought out the relative value of the elements contained in the problem which had to be solved—the vertical height of the summit, the length of the sides on the ground line, the angle of pitch, the inclination of the lateral faces to one another -before he discovered the exact proportions and the arrangement of lines which render his monument a true work of art, and not merely a costly and mechanical arrangement of

<sup>&</sup>lt;sup>1</sup> See the part devoted to the study of mustabas in Perrot and Chipper (Histoire de l'Art, vol 1 pp 168-194)

The similarity of the materials and technicalities of construction and decoration seem to me to prove that the majority of the tembs were built by a small number of contractors or corporation, lay or ceclesiastical, both at Memphis, under the America, as well as at Thebes, under the America.

Speaking of the Great Pyramid and of its easing, Professor Petric stys; "Though the 1 is were brought as close as 45 inch, or, in fact, into contact, and the mean opening of the motal wes but 1 inch, yet the builders managed to fill the joint with rement, despite the great area of it. I the weight of the stone to be moved—some 16 tons. To merely place such stones in exact constant the sides would be careful work; but to do so with cement in the joint seems almost imposes. The Pyramids and Temples of Gizeh, p. 11)

stones.1 The impressions which he desired to excite, have been felt by all who came after him when brought face to face with the pyramids. From a great distance they appear like mountain-peaks, breaking the monotony of the Libyan borizon; as we approach them they apparently decrease in size, and seem to be merely unimportant inequalities of ground on the surface of the plain. 'It is not till we reach their bases that we guess their enormous size. The lower courses then stretch seemingly into infinity to right and left, while the summit sours up out of our sight into the sky. "The effect is gained by majesty and simplicity of form, in the contrast and disproportion between the statute of man and the immensity of his handiwork: the eye fails to take it in; it is even difficult for the mind to grasp it. We see, we may touch hundreds of courses formed of blocks, two hundred cubic feet in size, . . . and thousands of others scarcely less in bulk, and we are at a loss to know what force has moved, transported, and raised so great a number of colossal stones, how many men were needed for the work, what amount of time was required for it, what machinery they used; and in proportion to our inability to answer these questions, we increasingly admire the power which regarded such obstacles as trifles." 2

We are not acquainted with the names of any of the men who conceived these prodigious works. The inscriptions mention in detail the princes, nobles, and scribes who presided over all the works undertaken by the sovereign, but they have never deigned to record the name of a single architect.<sup>3</sup> They were people of humble extraction, living hard lives under fear of the stick, and their ordinary assistants, the draughtsmen, painters, and sculptors, were no better off than themselves; they were looked upon as mechanics of the same social status as the neighbouring shoemaker or carpenter. The majority of them

Of Boia itampa's article, Wis worden die Boschungen der Pyramiden beste unte (ein the Zeitschrift, vol van pp. 9-17), in which the author—an architect by profession as well as an Leypt degist—interprets the theories and problems of the Rhind mathematical Papyrus in ern wording (Eisentone, Ion Mathematisches Handbuch der Alten Ægypten, pl. vini pp. 116-131), competing the result with a soon calculations, made from measurements of pyramids still standars and in which he shows in examination of the diagrams discovered on the wall of a mistaba at Me in a, that the Leyptian for that to so of the Memphite period were, at that early date, applying the rules and methods of prosedure which we find set forth in the Papyri of The bin times (Pintin, Medure, pp. 12-13, and 14-8, et. Gairenia, Medure, in the Proceedings of the Society of Lement Architectory, vol. and \$1-32, p. 186).

He title "mir kaûtû nîbû nîtî sûton," frequently met with an lee the Ameient Pimpre, does not nate the architects, as many Egyptologists have thoughtent sign fies "directors oil the kines virile," and is applicable to irrigation, dykes and canals, mines and queries, and all beinesses in the cris profession, as well as to those of the architect's. The "directors of all the kinesses dignitiaries deputed by Pharaoh to take the necessary measurements ter the bullenesses to take the dignitiaries deputed by Pharaoh to take the necessary measurements ter the bullenesses to take the presentation of the architector of the diameter to the line of the presentation of the architector of the architect

were, in fact, clever mechanical workers of varying capability, accustomed to chisel out a bas-relief or set a statue firmly on its legs, in accordance with invariable rules which they transmitted unaltered from one generation to

ONE OF THE WOODIN PANIS OF HOSE, IN THE GIVE MESTER 2

another: some were found among them, however. who displayed unmistakable genius in their art. and who, rising above the general mediocrity, produced masterpieces. Their equipment of tools was very simple-iron picks with wooden handles. mallets of wood, small hammers, and a bow for boring holes.1 The sycamore and acacia furnished them with a material of a delicate grain and soft texture, which they used to good advantage Egyptian art has left us nothing which, in punity of line and delicacy of modelling, surpasses the panels of the tomb of Hosi,2 with their seated or standing male figures and their vigorously cut hieroglyphs in the same relief as the picture Egypt possesses, however, but few trees of suitable fibre for sculptural purposes, and even those which were fitted for this use were too small and stunted to furnish blocks of any The sculptor, therefore, considerable size. turned by preference to the soft white limeston of Turah. He quickly detached the general form of his statue from the mass of stone, fixed

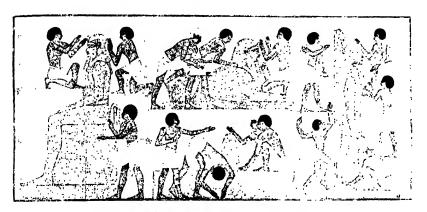

the limits of its contour by means of dimension guides applied horizontally from top to bottom, and then cut away the angles projecting beyond the guides, and softened off the outline till he made his modelling correct. This simple in I regular method of procedure was not suited to hard stone: the latter had to he first chiselled, but when by dint of patience the rough howing had reached the desired stage, the work of completion was not entrusted to metal tools. Stone hatchets were used for smoothing off the superficial roughnesses, and it was assiduously polished to efface the various tool-marks left upon its surface.

statues did not present that variety of gesture, expression, and attitude which we aim at to-day. They were, above all things, the accessories of a temple or tomb, and their appearance reflects the particular ideas entertained with regard to their nature. The artists did not seek to embody in them the ideal type of male or female beauty: they were representatives made to perpetuate the existence of the model. The Egyptians wished the double to

A SCULPTOR'S STUDIO, AND EGYPTIAN PAINTERS AT WORK.1

be able to adapt itself easily to its image, and in order to compass that end, it was imperative that the stone presentment should be at least an approximate likeness, and should reproduce the proportions and peculiarities of the hiving prototype for whom it was meant. The head had to be the faithful portrait of the individual: it was enough for the body to be, so to speak, an average one, showing him at his fullest development and in the complete enjoyment of his physical powers. The men were always represented in their maturity, the women never lost the rounded breast and slight hips of their girlhood, but a dwarf always preserved his congenital ugliness, for his salvation in the otherworld demanded that it should be so.<sup>2</sup> Had he been given normal stature, the double, accustomed to the deformity of his members in this world, would have been unable to accommodate himself to an upright carriage, and would not have been in a fit condition to resume his course of life. The particular pose of the statue was dependent on the social position of the person. The king, the

<sup>&</sup>lt;sup>1</sup> Drawn by Faucher-Gudin, from a chromolithograph by Paisse d'Avennes, Histoire de l'Art l'gratien. The original is in the temb of Rakhmirt, who lived at Thebes under the XVIII'd dynasty (cf. Virey, Le Tombeau de Rekhmará, in the Mémoires de la Mission française du Caire, vol. v. pls. xiii., xvii., xviii.). The methods which were used did not differ from these employed by the sculptors and painters of the Memphite period more than two thousand years previously

<sup>&</sup>lt;sup>2</sup> Cf. on p. 280 of this History the painted limestone statue of the dwarf Khuumhotpu.

nobleman, and the master are always standing or sitting: it was in these postures they received the homage of their vassals or relatives. The wife shares her husband's seat, stands upright beside him, or crouches at his feet as in daily

lite. The son, if his statue was ordered while he was a child, wears the dress of childhood; if he had arrived to manhood, he is represented in the dress and with the attitude suited to his calling. Slaves grind the grain, collarers coat their amphore with pitch, bakers knead their dough.

mourners make lamentation and tear their hair 2

The exigencies of rank clung to the Egyptians in temple and tomb, wherever their statues were placed, and left the sculptor who represented them scarcely any liberty. He might be allowed to vary the details and arrange the accessories to his taste.

he might alter nothing in the attitude or the general likeness without compromising the end and aim of his work.<sup>3</sup>

The statues of the Memphite period may be counted at the present day by hundreds. Some are in the heavy and barbaric style which has caused them to be mistaken to primeval monuments, as, for instance, the statues of Sapi and his wife, now in the Louvre, which are attributed to the beginning of the III<sup>rd</sup> dynasty or even carlier. Groups

exactly resembling these in appearance are often found in the tombs of the V<sup>th</sup> and VI<sup>th</sup> dynasties, which according to this reckoning would be still older than that of Sapi: they were productions of an inferior studio, and their supposed archaism is merely the want of skill of an ignorant sculptor. The majority of the remaining statues are not characterized either by glaring faults

or by striking merits: they constitute an array of honest good-natured folk, without much individuality of character and no originality. They may be easily divided into five or six groups, each having a style in common, and all

apparently having been executed on the lines of a few chosen models; the sculptors who worked for the mastaba contractors were distributed among a very few studios, in which a traditional routine was observed for centuries. They did not always wait for orders, but, like our modern tombstone-makers, kept by them a tolerable assortment of half-finished statues, from which the purchaser could choose according to his taste. hands, feet, and bust lacked only the colouring and final polish, but the head was merely rough-hewn, and there were no indications of dress; when the future occupant of the tomb or his family had made their choice, a few hours of work were sufficient to transform the rough sketch into a portrait, such as it was, of the deceased they desired to commemorate, and to arrange his garment according to the latest tashion.1 If, however, the relatives or the sovenign 2 declined to be satisfied with these commonplace images, and demanded a less conventional treatment of body for the double of him whom they had lost, there were always some among the assistants to be found capable of entering

fio, and collide with each other, while the boatmen come to blows with their last-hooks within sight of hippopotami and crocodiles. In the upper portions we see a band of slaves engaged in fowling among the thickets of the river-

bank, or in the making of small boats, the manufacture of ropes, the scraping and salting of fish. Under the cornice, hunters and dogs drive the gazelle across the undulating plains of the desert. Every row represents one of the features of the country; but the artist, instead of arranging the pictures in perspective, separated them and depicted them one above the other.1 The groups are repeated in one tomb after another; they are always the same, but sometimes they are reduced to two or three individuals, sometimes increased in number, spread out and crowded with figures and inscriptions. Each chief draughtsman had his book of subjects and texts, which he combined in various ways, at one time bringing them close together, at another duplicating or extending them according to the means put at his disposal or the space he had to cover The same men, the same animals, the same teatures of the landscape, the same accessories, appear everywhere: it is industrial and mechanical art at its highest. The whole is, however, harmonious, agreeable to the eye, and instructive. The conventionalisms of the drawing as well

as those of the composition are very different from

NOFIR, THE DIRE , IR OF GRANATIFS,2

outs. Whether it is man or beast, the subject is invariably presented in outline by the brush, or by the graving tool in sharp relief upon the background; but the animals are represented in action, with their usual gait, movement, and play of limbs distinguishing each species. The slow and measured walk of the ox, the short step, meditative ears, and ironical mouth of the ass, the calm strength of the lion at rest, the grimaces of the monkeys, the slender gracefulness of the gazelle and antelope, are invariably presented with a consummate skill in drawing and expression. The human figure is the least perfect: every one is acquainted with those strange figures, whose heads in profile, with the eye drawn in full face, are attached to a torso seen from the front and supported by limbs

Drawn by Boudier, from a photograph by Emil Brugsch-Bey The original is in the Gozeli Mus un - Vis dynasty.

MASTRO, Les Peintures des Tombiaux égyptiens, et la Mosaque de l'alestrine (extructe l'uem tres Millimps publiés par la Section historique et philologique de l'Loole des Hautes Liudes par le divine et anniversuse de sa fondation, pp. 45-47; and from the Gazette Archéologique, 1879, pp. 1-35, il ologie l'applienne, pp. 182-185.

in profile. These are truly anatomical monsters, and yet the appearance they present to us is neither laughable nor grotesque. The defective limbs are a deftly connected with those which are normal, that the whole becomes natural: the context and fictitious lines are so ingeniously blent together that they seem

I AS ITHIL ON INORY.

to rise necessarily from each other. The actors in these dramas are constructed in such a paradoxical fashion that they could not exist in this world of ours; they live not withstanding, in spite of the ordinary laws of physiology, and to any one who will take the trouble to regard them without prejudice, their strangeness will add a charm which is lacking in works more conformable to nature.1 of colour spread over the whole heightens and completes them. This colouring is never quite true to nature nor yet entirely false. It approaches reality as far as possible, but without pretending to copy it in a servile way. The water is always a uniform blue, or broken up by black zigzag lines; the skin of the men is invariably brown, that of the women pale yellow. The shade belitting each being or object was taught in the workshops, and once the recept for it was drawn up, it was never varied in application The effect produced by these conventional colours, how ever, was neither discordant nor jarring. The most bulliant

colours were placed alongside each other with extreme audacity, but with a perfect knowledge of their mutual relations and combined effect. They do not par with, or exaggerate, or kill each other: they enhance each other's value, and by their contact give rise to half-shades which harmonize with them. The sepulchial chapels, in cases where their decoration had been completed, and where they have reached us intact, appear to us as chambers hung with beautifully luminous and interesting tapestry, in which rost ought to be pleasant during the heat of the day to the soul which dwells within them, and to the friends who come there to hold intercourse with the dead.

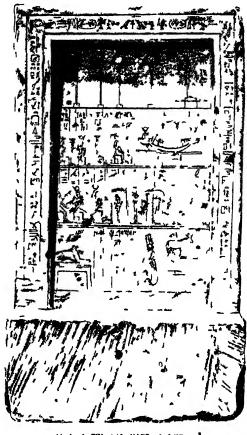

The decoration of palaces and houses was not less sumptuous than that of the sepulchres, but it has been so completely destroyed that we should find at difficult to form an idea of the furniture of the living if we did not so the frequently depicted in the abode of the double. The great armchairs, folding

artistic value.1 A taste for pretty things was common, at least among the upper classes, including not only those about the court, but also those in the most distant nomes of Egypt. The provincial lords, like the courtiers of the palace, took a pride in collecting around them in the other world everytking of the finest that the art of the architect, sculptor, and painter could conceive and execute. Their mansions as well as their temples have dis appeared, but we find, here and there on the sides of the hills, the sepulchres which they had prepared for themselves in rivalry with those of the courtiers or the members of the reigning family. They turned the valley into a vast series of catacombs, so that wherever we look the horizon is bounded by a row of historic tombs. Thanks to their rock-cut sepulchres, we are beginning to know the Nomarchs of the Gazelle and the Hare,2 those of the Serpent-Mountain.1 of Akhmîm, 4 Thinis, 5 Qasr-cs-Savad, 6 and Aswan, 7-all the scions, in fact, of that feudal government which preceded the royal sovereignty on the banks of the Nile, and of which royalty was never able to entirely disembarrass itself. The Pharaohs of the IVth dynasty had kept them in such check that we can hardly find any indications during their reigns of the existence of these great barons: the heads of the Pharaonic administration were not recruited from among the latter, but from the family and domestic circle of the sovereign. It was in the time of the kings of the Vth dynasty, it would appear, that the barons again entered into favour and gradually gained the upper hand; we find them in increasing numbers about Ânû, Menkaûhorû, and Assi. Did Ûnas,

lists, and a tradition of the Greek period maintained that he had been assassinated by his guards.2 Teti III. was the actual founder of the VIth dynasty, historian, representing him as having been the immediate successor of Unas.4 He lived long enough to build at Saggâra a pyramid whose internal chambers are covered with inscriptions,5 and his son succeeded him without opposition. Papi I.6 reigned at least twenty years.7 He manifested his activity in all corners of his empire, in the nomes of the Said as well as in those of the Delta, and his authority extended beyond the frontiers by which the power of his immediate predecessors had been limited. He owned sufficient territory south of Elephantinô to regard Nubia as a new kingdom added to those which constituted ancient Egypt: we therefore see him entitled in his preamble "the triple Golden Horus," "the triple Conqueror-Horus," "the Delta-Horus," "the Said-Horus," "the Nubia-Horus," The tribes of the desert furnished him, as was customary, with recruits for his army, for which he had need enough, for the Bedouin of the Sinaitic Peninsula were on the move, and were even becoming dangerous Papi, aided by Uni, his prime minister, undertook against them a series of

pp. 44, 45) with the Othocs of Manctho, and this identification has been generally adopted (I: 10 Rotai, Recherches, pp. 108, 100, 148, 149; Wilderann, Lapptische Geschiehte, p. 207; Lavin, fes. Egyptens Foreit, p. 119, et seq.; E. Miyra, Geschichte des Alten Lypptens, pp. 132, 433). M. d. Rougé (Recherches, p. 146) is inclined to attribute to him as pronounce the cartouche Usirketi, which is given in the Table of Abydos between those of Teti III, and Papi I. Mariette (Table d'Abydes, p. 15) prefers to recognise in Crikeri an independent Pharmon of short reign. Several blocks of the Mastabat-el-Faraun at Saqqàra contain the cartouche of Unas, a fact which induced Mariette is regard this as the tomb of the Pharmon. The excavations of 1881 showed that Unas was entants elsewhere, and the indications are in favour of attributing the mastaba to Ati. We know, and of the pyramids of Teti III., of the two Papis, and of Metesouphis I.; Ati is the only prince of that period with whose temb we are unacquainted. It is thus by elimination, and not by direct evidence, that the identification has been arrived at: Ati may have drawn upon the workshops of his predecess of Unas, which fact would explain the presence on these blocks of the cartouche of the latter.

- <sup>1</sup> Upon that of Abydos, if we agree with E. do Rougé (Recherches, p. 119) that the cartonch C sirkeri contains his pranomen; upon that from which Manetho borrowed, if we admit his identification with Othoes. Cf. Maserko, Notes sur quelques points, dans le Requi il de Travaux, vol. xvii pp. 56-64
  - <sup>2</sup> Manetho (Under's edition, p. 101), where the form of the name is Othors.
- He is called Teti Menephtah, with the cartouche prenomen of Seti I., on a monument of the carly part of the XIX<sup>11</sup> dynasty, in the Museum at Marseilles (E. NAVILLE, Le Roi Teti Mercaphtah in the Zeitscheift, 1876, pp. 69, 72): we see him in his pyramid represented as standing. This pyramid was opened in 1881, and its chambers are covered with long functory inscriptions.

acquitted himself with credit. Alone, without other help than that of a subordinate scribe, he transacted all the business and drew up all the documents connected with the harem and the privy council. He obtained an ample reward for his services. Pharaoh granted to him, as a proof of his complete satisfaction, the furniture of a tomb in choice white limestone; one of the officials of the necropolis was sent to obtain from the quarries at Troiù the blocks required, and brought back with him a sarcophagus and its lid, a door-shaped stele with its setting and a table of offerings.1 He affirms with much selfsatisfaction that never before had such a thing happened to any one; moreover, he adds, "my wisdom charmed his Majesty, my zeal pleased him, and his Majesty's heart was delighted with me." All this is pure hyperbole, but no one was surprised at it in Egypt; etiquette required that a faithful subject should declare the favours of his sovereign to be something new and unprecedented, even when they presented nothing extraordinary or out of the common. Gifts of sepulchral furniture were of frequent occurrence, and we know of more than one instance of them previous to the VIth dynasty-for example, the case of the physician Sokhîtniônkhû, whose tomb still exists at Saggâra, and whom Pharaoh Sahuri rewarded by presenting him with a monumental stele in stone from Turah.3 Henceforth Uni could face without apprehension the future which awaited him in the other world; at the same time, he continued to make his way no less quickly in this, and was soon afterwards promoted to the rank of "sole friend" and superintendent of the irrigated lands of the king. The "sole friends" were closely attached to the person of their master.8 In all coremonies, their appointed place was immediately behind him, a place of the highest honour and trust, for those who occupied it literally held his life in their hands. They made all the arrangements for his processions and journeys, and saw that the proper ceremonial was everywhere observed, and that no accident was allowed to interrupt the progress of his train. Lastly, they had to take care that none of the nobles ever departed from the precise position to which his birth or office entitled him. This was a task which required a great deal of tact, for questions of precedence gave rise to nearly as many heart-burnings in Egypt as in modern courts.

<sup>&</sup>lt;sup>1</sup> For an explanation of the limestone monuments given to Uni, see Maspeno, De quelques terms d'acchitecture égyptionne, in the Proceedings of the Society of Biblical Archivology, vol. xi. p. 309, et en

<sup>&</sup>lt;sup>2</sup> Mariette, Les Mastabas de l'Ancien Empire, pp. 202-205; cf. Marieno, De quelques territare egyptienne, in the Proceedings, vol. xi. p. 304, ct seq. Under Pap. II., Zâu, princ the Serpent-Mountain, received from the king a coffin and the necessary swathing for his munic (Sayle, Gleanings from the Land of Egypt, in the Recueil de Travaux, vol. xiii. p. 66; and Mariet Sur l'inscription de Zâou, ibid., pp. 69, 70).

This definition of the functions of the "sole friend" appears to me to follow from the passage its of the inscription of Uni (II 8, 9)—The translation of the title "Samíra aaiti" was supplied by L. Rou at, Recherches sur les Monuments, p. 57; in regard to the objections raised by LEPAGL-Resource, the priestly Character of the Egoptian Civilization, in the Proceedings of the Society of Biblical Archae' vol. xii. p. 359, cf. MASPLEO, Eludes de Mythologie et d'Archeologie Egyptiennes, vol. i. p. 290, mot

One acquitted himself so dexterously, that he was called upon to act in a still more delicate capacity. Queen Amftsi was the king's chief consort. Whether she had dabbled in some intrigue of the palace, or had been guilty of untaithfulness in act or in intention, or had been mixed up in one of those reminine dramas which so frequently disturb the peace of haroms, we do not know. At any rate, Papi considered it necessary to proceed against her, and appointed Uni to judge the case. Aided only by his secretary, he drew up the indictment and decided the action so discreetly, that to this day we do not know of what crime Amîtsi was accused or how the matter ended. Uni felt great pride at having been preferred before all others for this affair, and not without reason, "for," says he, "my duties were to superintend the royal forests, and never before me had a man in my position been initiated into the secrets of the Royal Harem; but his Majesty initiated me into them because my wisdom pleased his Majesty more than that of any other of his lieges, more than that of any other of his mamelukes, more than that of any other of his servants." 2

These anteredonts did not seem calculated to mark out Uni as a future minister of war; but in the East, when a man has given proofs of his ability m one branch of administration, there is a tendency to consider him equally well fitted for service in any of the others, and the fiat of a prince transforms the clever scribe of to-day into the general of to-morrow. No one is surprised, not even the person promoted; he accepts his new duties without flinching, and frequently distinguishes himself as much in their performance as though he had been bred to them from his youth up. When Papi had resolved to give a lesson to the Bedouin of Sinai, he at once thought of Uni, his "sole friend," who had so skilfully conducted the case of Queen Amîtsi.3 The expedition was not one of those which could be brought to a successful issue by the troops of the frontier nomes; it required a considerable force, and the whole military organization of the country had to be brought into play. "His Majesty raised troops to the number of several myriads, in the whole of the south from Elephantinê to the nome of the Haunch, in the Delta, in the two halves of the valley, in each fort of the forts of the desert, in the land of Iritit, among the blacks of the land of Maza,1 among the blacks of the land of Amamit, among the blacks of the land of Ûaûait, among the blacks of the land of Kaaû, among the blacks of To-Tamû, and his Majesty sent me at the

This episode in the life of Cni, which E. de Rouge was unable to explain with certainty at the prement of the discovery (Recherches sur les Mounaents, p. 121), has since been unravelled and make the object of general properties of the commentar cur inschrift des Una, in the Leitschrift, 1882, pp. 10-12.

Inscription of Uni, II. 11-13.

The Egyptian expedition had, therefore, been provoked by some previous attack of the near 15

The word in the text is "Zama," but this is an accidental inversion of the two states and in write the name of Maza; the list of Nubian races would not be complete unless the most of the "Mazau" appeared in it.

head of this army. It is true, there were chiefs there, there were mamelukes of the king there, there were sole friends of the Great House there, there were princes and governors of castles from the south and from the north 'gilded friends,' directors of the prophets from the south and the north. directors of districts at the head of troops from the south and the north, of castles and towns that each one ruled, and also blacks from the regions which I have mentioned, but it was I who gave them their orders-although my post was only that of superintendent of the irrigated lands of Pharach,—so much so that every one of them obeyed me like the others." It was not without much difficulty that he brought this motley crowd into order, equipped them, and supplied them with rations. At length he succeeded in arranging everything satisfactorily; by dint of patience and persoverance, "each one took his biscuit and sandals for the march, and each one of them took bread from the towns, and each one of them took goats from the peasants." I He collected his forces on the frontier of the Delta, in the "Isle of the North," between the "Gate of Imhotpů" and the "Tell of Horû nib-mâît," and set out into the desert.2 He advanced, probably by Gebel Magharah and Gebel Helal, as tar as Wady-el-Arish, into the rich and populous country which lay between the southern slopes of Gebel Tih and the south of the Dead Sea: 3 once there he acted with all the rigour permitted by the articles of war, and paid back with interest the ill usage which the Bedouin had inflicted on Egypt. "This army came in peace, it completely destroyed the country of the Lords of the Sands. This army came in peace, it pulverized the country of the Lords of the Sands This army came in peace, it demolished their 'douars.' This army came in peace. it cut down their fig trees and their vines. This army came in peace, it built the houses of all their people. This army came in peace, it slaughtered then troops to the numbers of many myriads. This army came in peace, it brought back great numbers of their people as living captives, for which thing his

Inscription of Uni, II. 14-21.

<sup>&</sup>lt;sup>2</sup> With regard to the name of these localities, see Erwan's remarks in *Der Ausdruck TP-Rs.* to the *Zeitschrift*, vol. xxix. p. 120, note 1. In the name of the latter of these two localities, the doublititle "Horu nib-mait" indicate 8 Snofrūi, as pointed out by K. Shthr, *Ein neuer Horusname*, in the *Zeitschrift*, vol. xxx. p. 62 The "Islo of the North" and the two fortresses must have been situated between Ismailiah and Tel-Defonneh, at the starting-point of the land route which crosses the desert of Trie; cf. p. 351 of the present work.

of the campaign, especially the mention of the oval or circular enclosures—flant—within we they entrenched themselves. These enclosures, or dûars, correspond to the naûami which mentioned by travellers in these regions (E. H. Palmen, The Desert of the Exodus, pp. 321, 322), which are singularly characteristic (cf. pp. 352, 353 of this History). The "Lords of the Sand mentioned by Uni occupied the naûami country, i.e. the Negeb regions situated on the calculation of Tih, round about Afn-Qadis, and beyond it as far as Akabah and the Dead Sea (MAS) Notes au jour le jour, § 30, in the Proceedings of the Society of Biblical Archaeology, vol. xiv. 1891 pp. 326, 327). Assuming this hypothesis to be correct, the route followed by Uni must have be the same as that which was discovered and described nearly twenty years ago, by Holleton Journey on foot through Arabia Petrza, in the Quarterly Statements of the Palestine Exploration for 1878, pp. 70-72, and Notes to accompany a Map, ibid., 1884, pp. 4-15.

Majesty praised me more than for aught else." As a matter of fact, these poor whether were sent off as soon as taken to the quarries or to the dockvards, thus relieving the king from the necessity of imposing compulsory Tabour too frequently on his Egyptian subjects.1 "His Majesty sent me five times to lead this army in order to penetrate into the country of the Lords of the Sands, on each occasion of their revolt against this army, and I bore myself so well that his Majesty praised me beyond everything." 2 The Bedouin at longth submitted, but the neighbouring tribes to the north of them, who had no doubt assisted them, threatened to dispute with Egypt the possession of the territory which it had just conquered. As these tribes had a seaboard on the Mediterranean, Uni decided to attack them by sea, and got together a fleet in which he embarked his army.3 The troops landed on the coast of the district of Tiba,4 to the north of the country of the Lords of the Sands, thereupon "they set out. I went, I smote all the barbarians, and I killed all those of them who resisted." On his return, Uni obtained the most distinguished marks of favour that a subject could receive, the right to carry a staff and to wear his sandals in the palace in the presence of Pharaoh,5

These wars had occupied the latter part of the reign; the last of them took place very shortly before the death of the sovereign.<sup>6</sup> The domestic administration of Papi I, seems to have been as successful in its results, as was his activity abroad. He successfully worked the mines of Sinai, caused them to be regularly inspected, and obtained an unusual quantity of minerals from them; the expedition he sent thither, in the eighteenth year of his reign, left behind it a bas-relief in which are recorded the victories of Uni over the barbarians

<sup>&</sup>lt;sup>4</sup> E 10 Ron Gv, Recherches sur les Menuments qu'on peut attribuer aux six premières dynasties, p. 128, <sup>5</sup> Inscription d'Ûni, 41, 23-28. The expression "came in peace," which our text repeats with captasis, must be taken in the same sense as its Arabic counterpart bi's-salâmah, and mea is that the cap dition was successful—not that it met with no resistance on the part of the enemy.

For a description of the Egyptian vessels, see p. 392 of the present work, and the illustration of one of them which is given on p. 393; as stated in the passage referred to, the sca-going craft cannot have differed materially from the large beats which were in use on the Nile at the same period.

The name was first read as "Takhiba" (E. de Rougl, Recherches sur les Monnaculs, p. 12a). The reading "Tiba" (Maspero, Notes sur quelques points de Grammaire et d'Histoire, in the Zeitschrift, 1883, p. 61) has been disputed (Piehl, Varia, in the Zeitschrift, 1888, p. 111), but, I think, or insufficient grounds (Maspero, Inscription of Uni, in Records of the Past, 2nd series, vol. 11, p. 8, note 2). Krali (Studien zur Geschichte des Alten "Lyptens, iii, p. 22) identities at with the name of Tehn, which we meet with in the text of Edfa (Dumenen, Tempel-Inschriften, vol. 1, pl. 1881), 2, and Im Otsen der lybischen Wüste, pl. xvi. e), but which Brugsch (Ross much der Grossen Onse, p. 123 is unable to localise. The passage in the inscription of Uni (Il. 30, 31), which tells us that the country of Tibe lay to the north of the country of the "Lords of the Sands," obliges us to recognize in it the region which extends between Lake Sirbonis and Gaza, probably the northern parts of Wudy-cl Arish, and the neighbouring country in an eastward direction.

For Bound, Recherches sur les Monuments, p. 128. With regard to the wars which were even about this time against the "Lords of the Sands," cf. Kuall, Die Vorlaufer der Hylose, a. C. Zilscheeft, 1879, pp. 64-67.

This seems to be proved by the fact that immediately after making mention of the recomposises word on account of his victories. Unit goes on to enumerate the favours which were granted him by Photoh Mirmit (11, 32, 33).

and the grants of territory made to the goddess Hathor.1 Work was carried on uninterruptedly at the quarries of Hatnûbû 2 and Rohanû; 8 building operations were carried on at Memphis, where the pyramid 4 was in course of crection, at Abydos, whither the oracle of Osiris was already attracting large numbers of pilgrims,5 at Tanis,6 at Bubastis,7 and at Heliopolis.8 The temple of Dendera was falling into ruins; it was restored on the lines of the original plans which were accidentally discovered,9 and this picty displayed towards one of the most honoured deities was rewarded, as it deserved to be, by the insertion of the title of "son of Hathor" in the royal cartouche.10 The vassals rivalled their sovereign in activity, and built new towns on all sides to serve them as residences, more than one of which was named after the Pharaoh,11 The death of Papi I. did nothing to interrupt this movement; the elder of his two sons by his second wife, Miriri-onkhnas, succeeded him without Mirnini Mihtimsauf I. (Metesouphis) 13 was almost a child The recently conquered Bodouin gave him when he ascended the throne.

- Thus, Haît-Papi—the Citadel of Papi—in the Hermopolitan nome (Lepsius, Denkm., n. 112 d-c).

  12 The genealogy of the whole of this family has been made out by E. de Rotal (Recherkes set les Monuments, pp. 129-184) from the monuments discovered by Mariette at Abydos. Queen Mirmonkas was the daughter of Khûi and of the lady Nibit, who appears to have been of royal block and to have made her husband a participator in her rights to the crown (E. de Rotal Recherches, p. 132, note 1; cf. p. 274, note 1, of the present work); she had a brother named Zau (Manitato, Alyes vol. i. pl. 2 a; and Catalogue General, p. 84, No. 523), whose son was prince of the Serpent Mountain under Papi II. (Mastero, Sur Pinscription de Zdon, in the Recueil de Traraux, vol. xiii. p. 68). Schad two sons by Papi I., both of whom succeeded their father, viz. Metescuphis I. and Papi II.
- 13 The name has been read successively "Mentensaf" (MARILTTE, La Nouvelle Table d'Abye. p. 16; cf. lieue Archeologique, 2nd series, vol. xiii. p. 88), "Huremsaf" (Bacescu, Zwei Pyramic mit Inschriften, in the Zeitschrift, 1881, p. 9). "Sokarimsaf" (Maspero, Guide du Visiteur, p. "'. No. 5150, and passim). The true reading, "Mihtimsaf," or rather "Mihtimsaff," was pointed a almost simultaneously by Lauth (Pyramidentexte, pp. 317, 318; cf. Sitzungsberichte of the Mane Academy, 1881, vol. ii.) and by Maspero.

no trouble; the memory of their reverses was still too recent to encourage them to take advantage of his minority and renew hostilities. moreover, was at hand, ready to recommence his campaigns at the slightest provocation. Metesouphis had retained him in all his offices, and had even entrusted him with new duties. "Pharaoh appointed me governor-general of Upper Egypt, from Elephantine in the south to Letopolis in the north, because my wisdom was pleasing to his Majesty, because my zeal was pleasing to his Majesty, because the heart of his Majesty was satisfied with me. . . . When I was in my place I was above all his vassals, all his mamelukes, and all his servants, for never had so great a dignity been previously conferred upon a mere subject. I fulfilled to the satisfaction of the king my office as superintendent of the South, so satisfactorily, that it was granted to me to be second in rank to him, accomplishing all the duties of a superintendent of works, judging all the cases which the royal administration had to judge in the south of Egypt as second judge, to render judgment at all hours determined by the royal administration in this south of Egypt as second judge,1 transacting as a governor all the business there was to do in this south of Egypt." 2 The honour of fetching the hard stone blocks intended for the king's pyramid fell to him by right: he proceeded to the quarries of Abhaît,3 opposite Schêl, to select the granite for the royal sarcophagus and its cover, and to those of Hatnûbû for the alabaster for the table of offerings. The transport of the table was a matter of considerable difficulty, for the Nile was low, and the stone of colossal size: Uni constructed on the spot a raft to carry it, and brought it promptly to Saqqara in spite of the sandbanks which obstruct navigation when the river is low.4 This was not the limit of his enterprise: the Pharaohs had not as yet a fleet in Nubia, and even if they had had, the condition of the channel was such as to prevent it from making the passage of the cataract. He demanded acacia-wood from the tribes of the desert

<sup>&</sup>lt;sup>1</sup> The first judge was, of course, Pharaoh himself; this is, therefore, Chi's way of sixing that he was made Viceroy of Upper Ezypt. As to the right of acting as judges in their respective districts injoyed by political administrators, cf. p. 336 of the present work.

<sup>&</sup>lt;sup>2</sup> Inscription of Uni, 11, 34-37.

Abbuilt is, perhaps, Mahallah, opposite Schel, where fairly extensive rects of grey ground have been found (Maserno, Do quelques termes d'architecture emplieure, p. 8, note 1, in the Proceedings of the Society of Biblical Archivology, vol. xi. p. 311). M. Schlapskell (La Cutona Oriental dell' Lutto p. 51, note 2) identifies this locality with a certain Abbuît in the vicinity of Wally Hammannia, the way in the desert: the inscription of Uni states (II. 41, 42) that the Abbuît reterred to by 1 m was accessible by water, as was Elephantine itself; Schiapsrelli's hypothesis may, therefore, be dismissed is untenable.

Inscription of Uni, II. 37-45. Prof. Perrie (A Season in Egypt. 1887, pp. 19-21) has tried to prove from the passage which relates to the transport, that the date of the reign of Pap I must have been within sixty years of 3240 g.c.; this date I believe to be at least four centures too lot its perhaps, to this voyage of Uni that the inscription of the V<sup>th</sup> year of Metesouphus I reters given by Blackber-Frazer in A Collection of Hieratio Grafiti from the Alabaster Quarry of Hat any place. 2

the peoples of Iritit and Uaûaît, and from the Mâzaiû, laid down his ships on the stocks, built three galleys and two large lighters in a single year; during this time the river-side labourers had cleared five channels through which the flotilla passed and made its way to Memphis with its ballast of granite.<sup>1</sup> This

THE INLAND OF HITTHANLINE

was Uni's last exploit; he died shortly afterwards, and was buried in the cemetery at Abydos, in the sarcophagus which had been given him by Papi 1'

Was it solely to obtain materials for buildin. the pyramid that he had re-established communi cation by water between Egypt and Nubia? The Egyptians were gaining ground in the south every day, and under their rule the town of Elephantine was fast becoming a depôt for trade with the Soudan.3 The town occupied only the smaller half of a long narrow island, which was composed of detached masses of granite, formed gradually into a compact whole by accumulations of sand, and over which the Nile, from time immemorial, had deposited a thick coating of its mud. It is now shaded by acacias, mulberry trees, date trees, and dôm palms, growing in some places in lines along the pathways, in others distributed in groups among the fields. Half a dozen saqiyehs, ranged in a line along the river-bank, raise water day and night, with scarcely any cessation of their

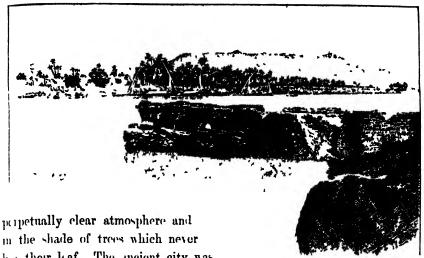

monotonous creaking. The inhabitants do not allow a foot of their narrow domain to lie idle; they have cultivated wherever it is possible small plots of durra and barley, bersim and beds of vegetables. A few scattered buffaloes and cows graze in corners, while fowls and pigeons without number roam about in flocks on the look-out for what they can pick up. It is a world in miniature, tranquil and pleasant, where life is passed without effort, in a

<sup>&</sup>lt;sup>1</sup> Inscription of Uni, 11. 45-50. As to the canal works executed by Uni at the first extinct, of Muspero's note in the Recuel do Travaux, vol xni, pp. 203, 204.

Papi II Nofirkers is nowhere named in the inscription, which shows that Unidid not live during his 101-30. The tomb of Uni was constructed in the form of a masteba, it was placed on the first the hill commanding what Mariette calls the Necropolis of the Contre (Mariette, Catalogue General, p. 84, No. 522). The stelle of Uni is in the Museum of Glach (Mariette, Catalogue General, p. 10) No. 529).

<sup>&</sup>lt;sup>3</sup> The growing importance of Elephantine is shown by the dimensions of the tombs which its princes had built for themselves, as well as by the number of graffiti commemorating the visits <sup>3</sup> princes and functionaries, and still remaining at the present day (Permin, A Season in Egypt, pl. vi. Nos. 309, 311, 312).

Red Sea or in that of the Oasis; however little they might carry away in their raids—of oxen, slaves, wood, charcoal, gold dust, amethysts, cornelian or green felspar for the manufacture of ornaments—it was always so much to the good, and the treasury of the prince profited by it. They never

went very far in their expeditions - it they desired to strike a blow at a distance, to reach, for example, those regions of Pûanît of whose in hethe barbarians were wont to boast, the aridity of the district around the second cataract would arrest the advance of their foot-soldiers, while the rapids of Wady Halfa would offer an almost impassable barrier to their ships In such distant operations they did not have recourse to arms, but disguised themselves as praceful merchants. An easy road led almost direct from their capital to Ris Banat, which they called the "Head of Nekhabit," on the Red Ser arrived at the spot where in later times stood one of the numcious Berenices, and having quickly put together a boat from the wood or the neighbouring forest, they made

voyages along the coast, as far as the Smartic peninsula and the Huû Shâîtû on the north, as well as to the land of Pûânît itself on the south. The small size of these improvised vessels rendered such expeditions dangerous, while it limited their gain; they preferred, therefore, for the most part the land journey. It was fatiguing and interminable: donkeys—the only beest of burden they were acquainted with, or, at least, employed—could make but short stages, and they spent months upon menths in passing through countries

This was the route traversed in 1859, and described by Gott viscours in Unc 1 and Beance, in the Remail do Travaux, vol. xiii. pp. 89-93, on his return from Berence. The Art grafitt, with which the rocks of certain wadys are covered, show that this route has been used that up to our own times

they were accustomed to fasten to the legs of their chairs on days of solenin reception: but the dwarf, the Danga, was the rare commodity which was always in demand, but hardly ever attainable.1 Partly by commerce, and partly by pillage, the lords of Elephantine became rapidly wealthy, and began to play an important part among the nobles of the Said: they were soon obliged to take serious precautions against the cupidity which their wealth excited among the tribes of Konusit.2 They entrenched themselves behind a wall of sun-dried brick, some seven and a half miles long, of which the ruins are still an object of wonder to the traveller. It was flanked towards the north by the ramparts of Syene, and followed pretty regularly the lower course of the valley to its abutment at the port of Mahatta opposite Phila: guards distributed along it, kept an eye upon the mountain, and uttered a call to arms, when the enemy came within sight.8 Behind this bulwark the population felt quite at ease, and could work without fear at the granite quarries on behalf of the Pharaoh, or pursue in security their callings of fishermen and sailors. The inhabitants of the village of Satit and of the neighbouring islands claimed from carliest times the privilege of piloting the ships which went up and down the rapids, and of keeping clear the passages which were used for navigation t They worked under the protection of their goddesses Anûkît and Satit: travellers of position were accustomed to sacrifice in the temple of the goddesses at Schôl,5 and to cut on the rock votive inscriptions in their honour, in gratitude for the prosperous voyage accorded to them. We meet their scrawls on every side, at the entrance and exit of the cataract, and on the small islands where they moored their boats at nightfall during the four or five days required for the passage; the bank of the stream between Elephantinê and Philæ is, as it were, an immense visitors' book, in which every generation of Ancient Egypt has in turn inscribed itself.6 The markets and

<sup>2</sup> The inscription attributed to King Zosiri expressly states that the wall was built for the purp stof repelling the attacks of the people of Konûsit (l. 11; cf. Brudsch, Die Siehen Jahre der Hung is noth, pp. 55, 56)

streets of the twin cities must have presented at that time the same motle. blending of types and costumes which we might have found some years back in the bazaars of modern Syene. Nubians, negroes of the Soudan, perhap people from Southern Arabia, jostled there with Libyans and Egyptians of the Delta. What the princes did to make the sojourn of strangers agreeable. what temples they consecrated to their god Khnûmû and his companions, in gratitude for the good things he had bestowed upon them, we have no means of knowing up to the present. Elephantine and Syene have preserved for us nothing of their ancient edifices; but the tombs which they have left tell us their history. They honeycomb in long lines the sides of the steep hill which looks down upon the whole extent of the left bank of the Nile opposite the narrow channel of the port of Aswan. A rude flight of stone steps led from the bank to the level of the sepulchres. The mummy having been carried slowly on the shoulders of the bearers to the platform, was deposited for a moment at the entrance of the chapel. The decoration of the latter was rather meagre, and was distinguished neither by the delicacy of its execution nor by the variety of the subjects. More care was bestowed upon the exterior, and upon the walls on each side of the door, which could be seen from the river or from the streets of Elephantine. An inscription borders the recess, and boasts to every visitor of the character of the occupant: the portrait of the deceased and sometimes that of his son, stand to the right and left: the scenes devoted to the offerings come next, when an artist of sufficient skill could be found to engrave them.1

The expeditions of the lords of Elephantinê, crowned as they frequently were with success, soon attracted the attention of the Pharachs: Metesouphis deigned to receive in person at the cataract the homage of the chiefs of  $\hat{\mathbf{t}}$  and Iritît and of the Mâzaiû during the early days of the fifth year of his reign. The most celebrated caravan guide at this time was Hirkhûf, own consin to Mikhû, Prince of Elephantinê. He had entered upon office under the auspices (Monuments divers, pls. 70-73, pp. 23-25), by Petric and Griffith (A Season in Fgypt, pls. i.-xui.), ut

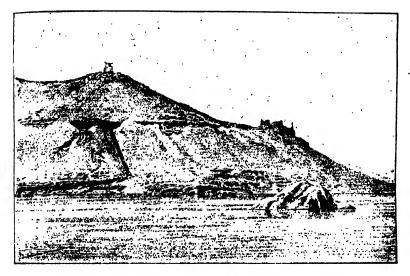

by J. de Morgan, Catalogue General, vol. i. pp. 2-14, 65-103, 128, 201-207.

1 The tembs of Aswan, which had been long forgetten, have been excavated in succession from 1885 onwards, partly owing to the efforts of Sir F. Grenfell (Mastero, Lindes de Mythologo et d'Archeologie I gyptionnes, vol. i. pp. 246-251; E. W. Buder, Excavations made at Assam, in the Proceedings of the Society of Biblical Archeology, vol. x. pp. 4-40; Bournant, Less Tombound Assami, in the Record de Travaux, vol. x. pp. 181-198, Scheil, Note additionals sur les tombound dissonar, in the Record de Travaux, vol. xiv. pp. 91-96; E. Schiaparelli, Una Tomba Egiziana della 14-Dinastia, in the Memorie della R. Acc. dei Line i, Scr. 4°, vol. i. part 1, pp. 21-53).

<sup>&</sup>lt;sup>2</sup> Champollion, Monuments de l'Egypte et de la Nubic, vol. 1. p. 214; Lapsius, Denhm, 110.

Petrie, A Scason in Egypt, pl. xiii. No. 338. The words used in the inscription, "The king him all went and returned, ascending the mountain to see what there was on the mountain," prove that Metesouphis inspected the quarries in person. Another inscription, discovered in 1893, give the year V. as the date of his journey to Elephantinë, and adds that he had negotiations with the last of the four great Nubian races (Savee, Gleanings from the Land of Egypt, in the Recueil de Trate 41, vol. xv. pp. 147, 148).

this father Iri, "the sole friend." A king whose name he does not mention, but who was perhaps Unas, more probably Papi I., despatched them both to the country of the Amamît. The voyage occupied seven months, and was extraordinarily successful: the sovereign, encouraged by this unexpected good fortune, resolved to send out a fresh expedition. Hirkhûf had the sole command of it; he made his way through Iritît, explored the districts of Satir and Darros, and retraced his steps after an absence of eight months. He brought back

THE MOUNTAIN OF ASWAN AND THE TOMBS OF THE PRINCES OF ELEPHANTINE.

with him a quantity of valuable commodities, "the like of which no one had ever previously brought back." He was not inclined to regain his country by the ordinary route: he pushed boldly into the narrow wadys which furrow the territory of the people of Iritit, and emerged upon the region of Situ, in the neighbourhood of the cataract, by paths in which no official traveller who had visited the Amamit had up to this time dared to travel. A third expedition which started out a few years later brought him into regions still less frequented. At set out by the Oasis route, proceeded towards the Amamit, and found the

<sup>&</sup>lt;sup>1</sup> As to the first journey of Hirkhūf, which he undertook in partnership with his father Iri, cf. Schlaparellit, Una Tomba Egiziana inedita della VI: Dinastia, p. 18, ll. 4-6 of the inscription.

<sup>&</sup>lt;sup>2</sup> Drawn by Boudier, from a photograph by Insinger. The entrances to the tombs are haltway up; the long trench, cutting the side of the mountain obliquely, shelters the still existing steps which led to the tembs of Pharaonic times. On the sky-line may be noted the rains of several mosques and Coptic monasteries; cf. the woodcut on p. 425 of the present work.

The second journey of Hirkhuf to Iritit, and his return ria Situ, are briefly recounted in Scha-Parella, Una Tomba Egiziana inedita della VIa Dinastia, pp. 18, 19, II. 5-10 of the inscription.

The rescript in regard to the Danga is really dated year II, of Papi II. Metesouphis I, reigned fourteen years, according to fragment 59 of the Royal Canon of Turin (Lursus, Auswald, pl. iv. col. vi.), where Edman (Das Brief des Königs Nefer-ke-re, in the Zeitschrift, vol. xxxi. p. 72) wishes to read "four" years.

country in an uproar. The sheikhs had convoked their tribes, and were making preparations to attack the Timihû "towards the west corner of the heaven," in that region where stand the pillars which support the iron firmament at the setting sun. The Timihû were probably Berbers by race and language Their tribes, coming from beyond the Sahara, wandered across the frightful solitudes which bound the Nile Valley on the west. The Egyptians had constantly to keep a sharp look out for them, and to take precautions against their incursions; having for a long time acted only on the defensive, they at length took the offensive, and decided, not without religious misgivings, to pursue them to their retreats. As the inhabitants of Mendes and of Busins had relegated the abode of their departed to the recesses of the impenetrable marshes of the Delta, so those of Siût and Thinis had at first believed that the sou's of the deceased sought a home beyond the sands: the good jackal Anubis acted as their guide, through the gorge of the Cleft or through the gate of the Oven, to the green islands scattered over the desert. where the blessed dwelt in peace at a convenient distance from their nature cities and their tombs. They constituted, as we know, a singular folk, those úiti whose members dwelt in coffins, and who had put on the swaddling clothes of the dead; the Egyptians called the Oasis which they had colonised, the land of the shrouded, or of mummies, úit, and the name continued to designate it long after the advance of geographical knowledge had removed this paradise further towards the west.2 The Oases fell one after the other into the hands of frontier princes—that of Bahnesa coming under the dominion of the lord or Oxyrrhynchus, that of Dakhel under the lords of Thinis.3 The Nubians of Amamît had relations, probably, with the Timihû, who owned the Ousis of Dush—a prolongation of that of Dakhel, on the parallel of Elephantine Hirkhûf accompanied the expedition to the Amanît, succeeded in establishing peace among the rival tribes, and persuaded them "to worship all the gods of Pharaoh: " he afterwards reconciled the Iritit, Amamit, and Ûaûaît, who lived

¹ Until now, the earliest mention of the Timihû did not go further back than the MIC dynasty (Charas, Les Papyrus hieratiques de Berlin, pp. 41, 42). Dévèria (La Race suppose proto-cellique est-elle figuree sur les monuments égyptiens t in the Rerue Archéologique, 3rd series, vol. ix. pp. 38-48) connected them with the white races who peopled Northern Africa, especially Aleris, and General Faidherbe tried to identify their name with that of the Tamachek. The presence Berber words, noticeable in Egyptian from the XII<sup>th</sup> dynasty (Marrino, On the Name of an I applian Dog, in the Transactions of the Society for Biblical Archwology, vol. v. pp. 127, 128), added to the lot that the inhabitants of the casis of Siûali still speak a Berber dialect (Basser, Le Dialecte de Signathi, seems to prove that the Timihû belonged to the great race which now predominates in Northical Africa.

<sup>&</sup>lt;sup>2</sup> Masplro, Études de Mythologie et d'Archéologie Égyptiennes, vol. ii. pp. 421-427; ct. p. <sup>2</sup> of the present work for information already given as to the mysterious character of the great Oast

The first prince of Thinis and of the Ousis of whom we have any knowledge is the Anthu f Stele C 26 in the Louvre collection, who flourished at the beginning of the XII<sup>th</sup> dynasty (Bauch B. Reise nach der Grossen Ouse, pp 62, 63).

an a state of perpetual hostility to each other, explored their valleys, and collected from them such quantities of incense, abony, ivory, and skins that three hundred asses were required for their transport. He was even fortunate cough to acquire a Danga from the land of ghosts, resembling the one brought

tiom Pûanît by Biûrdidi in the reign of Assi eighty years before.2 Metesouphis, in the pe an time, had died, and his young brother and successor, Papi II., had already been a var upon the throne. new king, delighted to possess a dwarf who could perform "the dance of the god," addiessed a rescript to Hirkhût to express his satisfaction; at the same time he sent him a special messenger, Uni, a distant relative of Papi I.'s minister, who was to invite him to come and give an account of his expedition. The boat in which the explorer embarked to go down to Memphis, also brought the Danga, and from that moment the latter became the most important personage of

HIRABLY RECEIVING POSTRI WOLS HOMAGE AT THE DOOR OF

the party. For him all the royal officials, lords, and sacerdotal colleges hastened to prepare provisions and means of conveyance; his health was of greater importance than that of his protector, and he was anxiously watched lest he should escape. "When he is with thee in the boat, let there be cautious persons about him, lest he should fall into the water; when he rests during the night, let careful people sleep beside him, in case of his escaping quickly in the night-time. For my Majesty desires to see this dwarf more than all the treasures

Hirkhüf's third expedition is described at greater length than the others. The part of the use intermediate which contained most detail has unfortunately suffered more than the remainder, on it is sold lines there are lacung difficult to fill up, cf. Schlaparelli, Una Fonda Egiziut ve latidella | I\* Dinastia, p. 19, ll. 10-14 of the hieroglyphic text, and pp. 22, 23.

As to the Dauga brought to Egypt in the time of Assi, see p. 397 of this History brawn by Faucher-Gudin, from a photograph, taken in 1892, by Alexander Gayet

which are being imported from the land of Pûanît." 1 Hirkhûf, on his return to Elephantinê, engraved the royal letter and the detailed account of his journeys to the lands of the south, on the façade of his tomb.

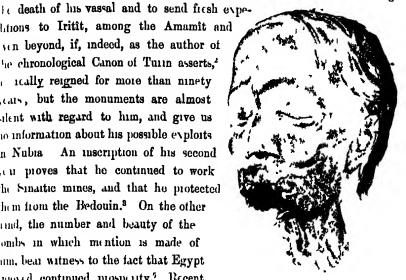

These repeated expeditions produced in course of time more important and permanent results than the capture of an accomplished dwarf, or the acquisition of a fortune by an adventurous nobleman. The nations which these merchants visited were accustomed to hear so much of Egypt, its industries, and its military force, that they came at last to entertain an admiration and respect for her, not unmingled with fear: they learned to look upon her as a power superior to , all others, and upon her king as a god whom none might resist. They adopted Egyptian worship, yielded to Egypt their homage, and sent the Egyptians presents: they were won over by civilization before being subdued by arms. We are not acquainted with the manner in which Nofirkiri-Papi II, turned these friendly dispositions to good account in extending his empire to the south. The expeditions did not all prove so successful as that of Hirkhûf, and one at least of the princes of Elephantine, Papinakhiti, met with his death in the course of one of them. Papi II, had sent him on a mission, after several others, "to make profit out of the Uauaiu and the Iritit." He killed considerable numbers in this raid, and brought back great spoil, which he shared with Pharaoh; "for he was at the head of many warriors, chosen from among the bravest," which was the cause of his success in the enterprise with which his Holiness had deigned to entrust him. Once, however, the king employed him in regions which were not so familiar to him as those of Nubia, and tate was against him. He had received orders to visit the Amû, the Asiatic tribes inhabiting the Sinaitic Peninsula, and to repeat on a smaller scale in the south the expedition which Uni had led against them in the north; he proceeded thither, and his sojourn having come to an end, he chose to return by sea. To sail towards Pûanît, to coast up as far as the "Head of Nekhabît," to land there and make straight for Elophantine by the shortest route, presented no unusual difficulties, and doubtless more than one traveller or general of those times had safely accomplished it; Papinakhîti failed miserably. As he was engaged in constructing his vessel, the Hirû-Shâitû fell upon him and massacred him, as well as the detachment of troops who accompanied him: the remaining soldiers brought home his body, which was buried by the side of the other

<sup>&</sup>lt;sup>1</sup> The rescript of Papi II. has been published by Schiaparelli, Una Tomba Egiziana, pp. 19-22, of on the Dangu in Egypt, Marrino, Études de Mythologie et d'Archéologie Egyptiennes, vol. 11 pp. 429-443.

we have deciphered in the texts, have been uncovered at Saqqara, and the inscriptions which they contain reveal to us the names of the sovereigns who reposed within. Unas, Teti III., Papi I., Metesouphis I., and Papi II. now have as clearly defined a personality for us as Ramses II. or Seti I.; even the nummy of Metesouphis has been discovered near his sancophagus, and can be seen under glass in the Grach Museum. The body is thin and slender; the

head refined, and ornamented with the thick side-lock of boyhood; the features can be easily distinguished, although the lower jaw has disappeared and the pressure of the bandages has appeared and the pressure of the state of the flattened the nose. All the pyramids of the

dynasty are of a uniform type, the model being furnished by that of Unas The entrance is in the centre of the northern façade, underneath the lowest course, and on the ground-level. An inclined passage, obstructed by enormous stones leads to an antechamber, whose walls are partly bare, and partly covered with long columns of hicroglyphs. a level passage, blocked towards the middle by three granite barriers, ends in a nearly square chamber; on the left are three low cells devoid of ornament, and on the right an oblong chamber containing the sarcophagus. These two principal rooms had high-pitched roofs. They were composed of large slabs of limestone, the upper edges of which lemon one against the other, while the lower edges rested on a continuous ledge which ran round the chamber: the first row of slabs was sur mounted by a second, and that again by a third, and the three together effectively protected the apartments of the dead against the thrust of the The wall-surfaces superincumbent mass, or from the attacks of lobbers close to the sarcophagus in the pyramid of Unas are decorated with minvcoloured ornaments and sculptured and painted doors representing the hout of a house: this was, in fact, the dwelling of the double, in which he read d with the dead body. The inscriptions, like the pictures in the tombs, we meant to furnish the sovereign with provisions, to dispel serpents and malevolers divinities, to keep his soul from death, and to lead him into the bank of t'

(Metesouphis II.) and Nîtaûqrît (Nitokris). Metesouphis II. was killed, so runs the tale, in a riot, a year after his accession.2 His sister, Nitokris, the "rosychecked," to whom, as was the custom, he was married, succeeded him and avenged his death. "She built an immense subterranean hall; under pretext of inaugurating its completion, but in reality with a totally different aim, she then invited to a great feast, and received in this hall, a considerable number of Egyptians from among those whom she knew to have been instigators of the crime. During the entertainment, she diverted the waters of the Nile into the hall by means of a canal which she had kept concealed. This is what is related of her. They add, that after this, the queen, of her own will, threw herself into a great chamber filled with ashes, in order to escape punishment."3 She completed the pyramid of Mykerinos, by adding to it that costly easing of Syenite which excited the admiration of travellers; she reposed in a sareophagus of blue basalt, in the very centre of the monument, above the secret chamber where the pious Pharaoh had hidden his mummy.4 The Greeks, who had heard from their dragomans the story of the "Rosy-cheeked Beauty," metamorphosed the princess into a courtesan, and for the name of Nitokris, substituted the more harmonious one of Rhodopis, which was the exact translation of the characteristic epithet of the Egyptian queen.<sup>5</sup> One day while she was bathing in the river, an eagle stole one of her gilded sandals, carried it off in the direction of Memphis, and let it drop in the lap of the king, who was administering justice in the open air. The king, astonished at the singular occurrence, and at the beauty of the tiny shoe, caused a search to be made throughout the country for the woman to whom it belonged: Rhodopis thus became Queen of Egypt, and could build herself a pyramid.6

<sup>&</sup>lt;sup>1</sup> Metesouphis II. is mentioned in the table of Abydos (Marietif, La Nouvelle Table d' Abydos p. 16; ef Reine Archeologique, 2nd series, vol. xiii. p. 88), and in Manetho (Ungir's edition, p. 100) Nitafurit is named in Manetho (Ungir's edition, pp. 102, 106), in Entosthenes (Fragm chronel, p. 185), and in the Royal Canon of Turin (Liebil , Austodil, pl. iv. col. v. tragm. 45), in which it was discovered by E. de Rougé (Examen de l'Ouvrage di M. le Chevalier de Buissin, n. p. 5). Lesuem (Chronologie des Rois d'Egypte, pp. 223, 268), and afterwards Stein (Die Randbemerkungen in dem Unauthouscher Königscanon, in the Zeitschrift, 1885, p. 92), have maintained that Nitaupit was not the name of a woman, and that Queen Nitokris was a Pharaoh called Nitaqerti. Meyer (Geschichte des Alterthums, vol. i. pp. 104, 105, and Geschichte des Alten Ægyptens, p. 139) does not behave that the Nitauqrit of the Papyrus immediately followed Metesouphis, and inserts several kings between the m

MANLIIO (UNDIR'S colition, pp. 102, 106, 107) does not mention this fact, but the legend given by Herodotus says that Nitokris wished to average the king, her brother and predecessor, who was killed in a revolution; and it follows from the narrative of the facts that this anonymous biomes was the Metesouphis of Manetho (Herodotus, ii. 100). The Turin Papyrus (Lepsus, Auswahl, pl. 10 col. vi. fragm. 59) assigns a reign of a year and a month to Militimsauf-Metesouphis II.

<sup>4</sup> HLEODOTUS, ii. 100; cf. WII DEMANN, Herodots Zweites Buch, pp. 399, 400.

The legend which ascribes the building of the third pyramid to a woman has been preserve by Herodotus (ii. 134): E. de Bunsen, comparing it with the observations of Vyse, was melined to attribute to Nitokris the enlarging of the monument (*Egyptens Stelle*, vol. ii op. 236-238), was appears to me to have been the work of Mykerinos himself; cf. pp. 376, 380, 381 of this Histor).

Christianity and the Arab conquest did not entirely efface the remembrance of the courtesan-princess. "It is said that the spirit of the Southern Pyramid never appears abroad, except in the form of a naked woman, who is very beautiful, but whose manner of acting is such, that when she desires to make people fall in love with her, and lose their wits, she smiles upon them, and immediately they draw near to her, and she attracts them towards her, and makes them infatuated with love; so that they at once lose their wits, and wander aimlessly about the country. Many have seen her moving round the pyramid about midday and towards sunset." It is Nitokris still haunting the monument of her shame and her magnificence.

After her, even tradition is silent, and the history of Egypt remains a mere blank for several centuries. Manetho admits the existence of two other Memphite dynasties, of which the first contains seventy kings during as many days. Akhthoës, the most crael of tyrants, followed next, and oppressed his subjects for a long period: he was at last the victim of raving madness, and met with his death from the jaws of a crocodile. It is related that he was of Heraeleopolite extraction, and the two dynasties which succeeded him, the IX<sup>th</sup> and the X, were also Heraeleopolitan.<sup>3</sup> The table of Abydos is incomplete, and the Turin Papyrus, in the absence of other documents, too mutilated to furnish us with any exact information; the contemporaries of the Ptolemies were almost entirely ignorant of what took place between the end of the VI<sup>th</sup> and the beginning of the XII<sup>th</sup> dynasty; and Egyptologists, not finding any monuments which they could attribute to this period, thereupon concluded that Egypt had passed through some formidable crisis out of which she with difficulty extricated herself.<sup>6</sup> The so-called Heraeleopolites of Manetho were assumed to

vol. xi. p. 221-223) has put forward the opinion that the epithet Rhodopis, Red countenance, wis applied at first to the Great Sphinx of Gizeh, whose face was actually painted red: in folk-ctymbely the epithet Red-face had been mistakenly applied to Nitauqrit, and the evil genus of the red countenance who animated the Sphinx would thus have become the Rhodopis of the fluid pyramed.

<sup>&</sup>lt;sup>5</sup> The fragments of the Royal Canon of Turin which belongs to this period have been incorrectly classified by Lepsius (Auswahl der wichtigsten Urkunden, pl. iv. cols. v., vi., Nos. 43, 47, 48, 59, 11 more carefully by Lauth (Manetho und der Turiner Königspapyrus, cols. iv., v.), and especially Lieblein (Recherches eur la Chronologie Egyptienne, pls. ii., iii.).

tive been the chiefs of a barbaric people of Asiatic origin, those same " Lords of he Sands" so roughly handled by Uni, but who are considered to have invaded the Delta soon after, settled themselves in Heracleopolis Parva as their capital, nd from thence held sway over the whole valley. They appeared to have destroyed much and built nothing; the state of barbarism into which they sank. uld to which they reduced the vanquished, explaining the absence of any monu ments to mark their occupation. This hypothesis, however, is unsupported by any direct proof; even the dearth of monuments which has been cited is an argument in favour of the theory, is no longer a fact.1 The sequence of note and details of the revolutions are wanting, but many of the kings and cutum facts in their history are known, and we are able to catch a glimpse of the general course of events. The VIIth and VIIIth dynasties are Memphite. and the names of the kings themselves would be evidence in favour of their numeness, even if we had not the direct testimony of Manetho the one recuiing most frequently is that of Nofiskeri, the prenomen of Pipi II, and a third Pupi figures in them, who calls himself Papi Sonbu to distinguish himself from hi nunesakes.2 The little recorded of them in Ptolemne times even the legend t the seventy Phariohs reigning seventy days, betrays a troublous period and rapid change of rulers.3 We know as a fact that the su cessors of Natokiis in the Royal Turin Pipyrus, scarcely did more than appear upon the thron 1

Nofirkerî reigned a year, a month, and a day; Nofîrûs, four years, two months. and a day; Abû, two years, one month, and a day. Each of them hoped, no doubt, to enjoy the royal power for a longer period than his predecessors, and, like the Ati of the VIth dynasty, ordered a pyramid to be designed for him without delay: not one of them had time to complete the building, nor even , to carry it sufficiently far to leave any trace behind. As none of them had any tomb to hand his name down to posterity, the remembrance of them perished with their contemporaries. By dint of such frequent changes in the succession, the royal authority became enfeebled, and its weakness favoured the growing influence of the feudal families and encouraged their ambition. The descendants of those great lords, who under Papi I. and II. made such magnificent tombs for themselves, were only nominally subject to the supremacy of the reigning sovereign; many of them were, indeed, grandchildren of princesses of the blood, and possessed, or imagined that they possessed, as good a right to the crown as the family on the throne. Memphis declined, became impoverished, and dwindled in population. Its inhabitants ceased to build those immense stone mastabas in which they had proudly displayed their wealth, and erected them merely of brick, in which the decoration was almost entirely confined to one narrow niche near the sarcophagus. Soon the mastaba itself was given up, and the necropolis of the city was reduced to the meagre proportions of a small provincial cometery. The centre of that government, which had weighed so long and so heavily upon Egypt, was removed to the south, and fixed itself at Heraelcopolis the Great.

two arms of the river, were small in comparison with the wealth which their ruler derived from his lands on the other side of the mountain range The Fayûm is approached by a narrow and winding gorge, more than 511 miles in length-a depression of natural formation, deepened by the land of man to allow a free passage to the waters of the Nile.3 The canal which conveys them leaves the Bahr Yûsûf at a point a little to the north of Heracleopolis, carries them in a swift stream through the gorge in the Libyan chain, and emerges into an immense amphithcatre, whose highest side is parallel to the Nile valley, and whose terraced slopes descend abruptly to about a hundred feet below the level of the Mediterranean. Two great arms separate themselves from this canal to the right and left-the Wady Tamich and the Wady Nazleh; they wing at first along the foot of the hills, and then again approaching each other, empty themselves into a great crescent or horn shaped lake, lying cast and west-the Meris of Strabo, the Birket-Kerun of the Arabs.8 A third branch penetrates the space enclosed by the other two, passes the town of Shodû, and is then subdivided into numerous canals and ditches, whose ramifications appear on the map as a network resembling the reticulations of a skeleton leaf. The lake formerly extended beyond its present limits, and submerged districts from which it has since withdrawn.1 In years

pp. 81, 85, No. 730), drawn by Faucher-Gudin, from a photograph by Goléaischeff (cf. Gola vi chill Amenemba III et les sphins de San, pl. iii, in the Recueil de Travaux, vol. xv. p. 136).

But use if (Die "Liggpfologie, p. 447) reads the name of the name as Im or Amil; but the various of the name of its capital (Bacuscu, Diet. Geogr., pp. 310, 316, 331) seem to me to prove that it should be read Navit or Navit. The situation of the name was at first misapprehended, and Bruged identified its capital with Bubastis (Marility, Renseignements sur les soieunte-quatre Apr. in to Bulletin Archeologique de l'Athénieum Français, 1856, p 98, note 103), and later with the Oisis of Amon (Geoge, Ins., vol. i. pp. 292-294; cf. Chabas, Les Pappeus hieratiques de Berliu, pp. 17 - 60 / 1 pe Rocal was the first to show that it was Heracleopolis Magua (Ins rigition historique de l'un m Meriamen, pp. 19, 20; cf. Recue Archeologique, 1864, 2nd series, vol. vii. pp. 113, 114). The name of the city reads Hinnish (Darkssy, Remarques et Notes, § Ax., in the Recurit de Tracana, vol M p. 80; Bregsen, Der altigyptische Name der Stadt Gross-Heraldeopolis, in the Zeitschrift, 1886, pp. 75, 76). The name To-shit was applied to the Fayum by Barasch (Das alta pytische Section), in the Zeitschrift, 1872, pp. 89-91), an application which he afterwards restricted to the district of El Bats which extends along the foot of the Libyan range from Illahun to the neighbourhood of Tam ... (Der Möris-See, in the Zeitschrift, vol. xxx. p. 73, et seq.). With the help of data derived from the Greek geographers, Jonard clearly defined the boundaries of the Heracle opolitan nome (Description de l'Heptanomide, in the Description de l'Egypte, vol. iv. p. 400, et seq.).

For the geography of the Fayum, cf. Jomand, Description des Antiquites du nome Arsinotle, (1) the Description de l'1 gypte, vol. iv. pp. 140-186, and Monoice sur le lac Mocris, in the Description of L'Lyppte, vol. vi. pp. 157-162; Chille, Le Nil, Le Sondan, l'Égypte, p. 381, et seq., and a 10 l' publication by Major R. H. Brown, The Fayum and Lake Mocris, 1892.

<sup>\*</sup> Strab, and pp. 809-811; Jonard, Memoire sur le lac de Maris, in the Description, vol. v. p. 1

<sup>\*</sup> Most of the specialists who have latterly investigated the Fayum have greatly exageerated extent of the Buket-Kerun in historic times. Prof. Pletan. (Hauma, Budhau, and Assimo, pp. 1 states that it covered the whole of the present province throughout the time of the Memphat kanned that it was not until the reign of Amenemhalt I. that even a very small portion was discovered Brown adopts this theory, and considers that it was under Amenemhalt III, that the gireal of the Fayum was transformed into a kind of artificial reservoir, which was the Moris of Herric (The Fayum and Lake Maris, p. 69, et seq.). The city of Shodu, Shadu, Shadut—the capital of Fayum—and its god Sovku are mentioned even in the Pyramid texts (Maspero, La Pyramid

when the inundation was excessive, the surplus waters were discharged into the take; when, however, there was a low Nile, the storage which had not been absorbed by the soil was poured back into the valley by the same channels, and carried down by the Bahr-Yûsûf to augment the inundation of the Western Delta. The Nile was the source of everything in this principality, and hence

they were gods of the waters who received the homage of its three nomes. The inhabitants of Heracleopolis worshipped the ram Harshafitû, with whom they associated Osiris of Narûdûf as god of the dead; the people of the Upper Oleander adored a second ram, Khnûmû of Hâsmonîtû, and the whole Fayûm was devoted to the cult of Sovkû the crocodile. Attracted by the fertility of the soil, the Pharaohs of the older dynastics had from time to time taken up their residence in Heracleopolis or its neighbourhood, and one of them—

prosperity.1 The banks of the Nile already bristled with citadels, where the nomarchs lived and kept watch over the lands subject to their authority: 2 other fortresses were established wherever any commanding site -such as a narrow part of the river, or the mouth of a defile leading into the desert -- presented itself. All were constructed on the same plan, varied only by the sizes of the areas enclosed, and the different thickness of the outer The outline of their ground-plan formed a parallelogram, whose enclosure wall was often divided into vertical panels easily distinguished by the different arrangements of the building material. At El-Kab and other places the courses of crude brick are slightly concave, somewhat resembling a wide inverted arch whose outer curve rests on the ground.8 In other places there was a regular alternation of lengths of curved courses, with those in which the courses were strictly horizontal. The object of this method of structure is still unknown, but it is thought that such building offers better resistance to shocks of earthquake. The most ancient fortress at Abydos, whose ruins now lie beneath the mound of Kom-cs-Sultan, was built in this way.4 Tombs having encroached upon it by the time of the VI'h dynasty, it was shortly afterwards replaced by another and similar fort, situate rather more than a hundred yards to the south-east; the latter is still one of the best-preserved specimens of military architecture dating from the times immediately preceding the first Theban empire.<sup>5</sup> The exterior is unbroken by towers or projections of any kind, and consists of four sides, the two longer of which are parallel to each other and measure 143 yards from east to west: the two shorter sides, which are also parallel, measure 85 yards from north to south. The outer wall is solid, built in horizontal courses, with a slight batter, and decorated by vertical grooves, which at all hours of the day diversify the surface with an incessant play of light and shade. When perfect it can hardly have been less than 40 feet in height. The walk round the ramparts was crowned by a slight, low parapet, with rounded battlements, and was reached by narrow staircases

<sup>&</sup>lt;sup>1</sup> These facts are implied by the expressions found in early XII<sup>a</sup> dynasty texts, in the Great Inscription at Benr-Hasan (l. 36, et seq.), in the "Instructions of Amenenhait" (pl. 1. II. 7-9; et below, p. 461), but especially in the panegyries of the princes of Sint, summarised or translated below on pp. 156–468.

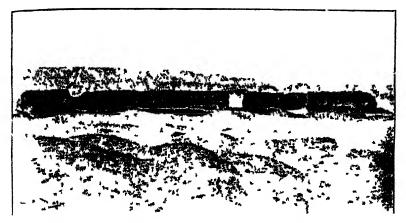

On pp. 297, 298 we have already treated of these castles or fortified dwellings in which the great Lgyptian nobles passed their lives.

<sup>&</sup>lt;sup>3</sup> The south face of the fortress at El-Kab is built in the same way as the fortress of kemer Sultan; it is only on the north and east faces that the courses run in regular undulations from a to end.

<sup>4</sup> Cf. what is said of the first fortress at Abydos on p. 232 of the present work.

MASPLEO, Archeologic Lgyptianne, pp. 22-28; Divolarov, Il Acropole de Suse, pp. 163-166. We first opinion was that the second fortress had been built towards the time of the XVIII<sup>th</sup> dynat the carliest, perhaps even under the XX<sup>th</sup> (Archeologic Lgyptianne, p. 23). Further consider to the details of its construction and decoration now leads me to attribute it to the period between the VI<sup>th</sup> and XII<sup>th</sup> dynastics.

refully constructed in the thickness of the walls. A battlemented covering a ll, about five and a half yards high, encurled the building at a distance of time four feet. The fortress itself was entered by two gates, and posterns the dat various points between them provided for sortes of the garrison and principal entrance was concealed in a thick block of building at the cuthern extremity of the east front. The corresponding entrance in the covering

missiles, and did they succeed in carrying that also, it was at the cost of enormous sucrifice. The peoples of the Nile Valley knew nothing of the swing battering-ram, and no representation of the hand-worked battering-ram has ever been found in any of their wall-paintings or sculptures; they forced their way into a stronghold by breaking down its gates with their axes or by setting fire to its doors. While the sappers were hard at work, the archers endeavoured, by the accuracy of their aim, to clear the enemy from the curtain, while soldiers sheltered behind movable mantelets tried to break

ATTACK UPON AN EGYPTIAN FORTRESS BY TROOPS OF VARIOUS ARYS.

down the defences and dismantle the flanking galleries with huge metal-tipped lances. In dealing with a resolute garrison none of these methods proved successful; nothing but close siege, starvation, or treachery could overcome its resistance.

The equipment of Egyptian troops was lacking in uniformity, and men armed with slings, or bows and arrows, lances, wooden swords, clubs, stone or metal axes, all fought side by side. The head was protected by a padded cap, and the body by shields, which were small for light infantry, but of great width for soldiers of the line. The issue of a battle depended upon a succession of single combats between foes armed with the same weapons; the lancers alone seem to have charged in line behind their huge bucklers. As a rule, the wounds were trifling, and the great skill with which the shields were used made the risk of injury to any vital part very slight. Sometimes, however, a lance might be driven home into a man's chest, or a vigorously wielded sword or club might fracture a combatant's skull and stretch him unconsciou on the ground. With the exception of those thus wounded and incapacitated for flight, very few prisoners were taken, and the name given to them "Those struck down alive"—sokirûonkhû—sufficiently indicates the methor of their capture. The troops were recruited partly from the domain

<sup>&</sup>lt;sup>1</sup> Drawn by Faucher-Gudin, from a scene in the tomb of Amoni-Amenomhâft at Bent-Histon (1) Griffith and Newberry, Bent-Hasan, vol. 1. pl. xiv., Archaelogical Survey of Egypt Explorit Fund).

of military fiefs, partly from tribes of the desert or Nubia, and by their aid the hadal princes maintained the virtual independence which they had acquired for themselves under the last kings of the Memphite line. Here and there, at Hermopolis, Siût, and Thebes, they founded actual dynasties, closely connected with the Pharaonic dynasty, and even occasionally on an equality with it, though they assumed neither the crown nor the double cartouche. Thebes was admirably adapted for becoming the capital of an important state. It rose on the right bank of the Nile, at the northern end of the curve made by the river towards Hermonthis, and in the midst of one of the most fertile plains of Egypt. Exactly opposite to it, the Libyan range throws out a precipitous spur broken up by ravines and arid amphitheatres, and separated from the river-bank by a mere strip of cultivated ground which could be easily defended. A troop of armed men stationed on this neck of land could command the navigable arm of the Nile, intercept trade with Nubia at their pleasure, and completely bar the valley to any army attempting to pass without having first obtained authority to do so. The advantages of this site do not seem to have been appreciated during the Memphite period, when the political life of Upper Egypt was but feeble. Elephantinê, El-Kab, and koptos were at that period the principal cities of the country. Elephantinô particularly, owing to its trade with the Sondan, and its constant communication with the peoples bordering the Red Sea, was daily increasing in importance. Hermonthis, the Aûnû of the South, occupied much the same position, from a religious point of view, as was held in the Delta by Heliopolis, the Aûnû of the North, and its god Montû, a form of the Solar Horus, disputed the supremany with Minû of Koptos. Thebes long continued to be merely an insignificant village of the Üisit nome and a dependency of Hermonthis. It was only towards the end of the VIIIth dynasty that Thebes began to realize its power, after the triumph of feudalism over the crown had culminated in the downfall of the Memphite kings.1 A family which, to judge from the fact that its members affected the name of Monthotpû, originally came from Hermonthis, settled in Thebes and made that town the capital of a small principality, which rapidly enlarged its borders at the expense of the neighbouring nomes.2 All the towns and cities of the plain, Mâ lût, Hfûit, Zorit, Hermonthis, and

<sup>&</sup>lt;sup>1</sup> This surmise is grounded on a comparison of the number of these fendal princes as given in the effect and asts with what seems to be the most correct estimate of the duration of the two Here cloopenian dynastics (Maspano, Quatre Anners de fouilles, in Mem. towards the south, Aphroditopolis Parva, at the gorge of the Two Mountain, (Gebelên) which formed the frontier of the fief of El-Kab, Kûsît towards the north, Denderah, and Hû, all fell into the hands of the Theban princes and enormously increased their territory. After the lapse of a very few years, their supremacy was accepted more or less willingly by the adjacent principalities of El-Kab, Elephantine, Koptos, Quer-ce-Sayad, Thinis, and Ekhmim. Antuf, the founder of the family, claimed no other title than that of Lord of Thebes, and still submitted to the suzerainty of the Heracleopolitan kings. His successors considered themselves strong enough to cast off this allegiance, if not to usurp all the insignia of royalty, including the uraus and the cartouche. Monthotpû I., Antûf II., and Antûf III. must have occupied a somewhat remarkable position among the great lords of the south, since their successors credited them with the possession of a unique preamble. It is true that the historians of a later date did not venture to place them on a par with the kings who were actually independent; they enclosed their · names in the cartouche without giving them a prenomen; but, at the same time, they invested them with a title not met with elsewhere, that of the first Horus-Horû tapi. They exercised considerable power from the outset. It extended over Southern Egypt, over Nubia, and over the valleys lying between the Nile and the Red Sea.2 The origin of the family was somewhat obscure, but in support of their ambitious projects, they did not fail to invoke the memory of pretended alliances between their ancestors and daughters of the solar race; they boasted of their descent from the Papis, from Usirnin Auû, Sahûri, and Snofrûi, and claimed that the antiquity of their titles did away with the more recent rights of their rivals.3

The revolt of the Theban princes put an end to the IX<sup>th</sup> dynasty, and, although supported by the feudal powers of Central and Northern Egypt, and more especially by the lords of the Terebinth nome, who viewed the sudden prosperity of the Thebans with a very evil eye, the X<sup>th</sup> dynasty did not succeed in

<sup>&</sup>lt;sup>1</sup> I believe that the stele, shown on p. 115, belonged to this prince (MARITTE, Mon. divers pl. 50 h and p. 16; MASPERO, Guide du Visiteur, p. 34, and plate; cf. Petrie, A Hist. of Lauft vol. i. p. 126). He was certainly the Antif with the title of prince only require—and no cartouches, in the "Hall of Ancestors" at Karnak (Prisse d'Anentes, Notice sur la Salle des Ancetes, in the Rev. Arch., 1st series, vol. i. pl. anii.; and Lepsies, Austeahl der wichtigsten Urkunden, pl. 1).

In the "Hall of Ancestors" the title of "Horus" is attributed to several Antifs and Monthety bearing the cartouche. This was probably the compiler's ingenious device for marking the subord nate position of these personages as compared with that of the Heracleopolitan Pharachs, who also among their contemporaries had a right to be placed on such official lists, even when those lists we compiled under the great Theban dynasties. The place in the XI<sup>th</sup> dynasty of princes bearing title of "Horus" was first determined by E. d. Rougf, Letter a. M. Leemans, in the Revue Arch logique, 1st series, vol. vi. p. 561, et seq. [See Appendix, pp. 788, 789.—Th.]

of their building are found at Koptos, Gebelen, El-Kab, and Abydos, Thebes itself has been too often overthrown since that time for any traces of work of the XIth dynasty kings in the temple of Amon to be distinguish able; but her necropolis is still full of their "eternal homes," stretching in lines across the plain, opposite Karnak, at Drah abû'l-Neggah, and on the northern slopes of the valley of Deir-el-Bahari. Some were excavated in the mountain-side, and presented a square façade of dressed stone. surmounted by a pointed roof in the shape of a pyramid.4 Others were true pyramids, sometimes having a pair of obelisks in front of them, as well as a temple.5 None of them attained to the dimensions of the Memphite tombs; for, with only its own resources at command, the kingdom of the south could not build monuments to compete with those whose construction had taxed the united efforts of all Egypt,6 but it used a crude black brick. made without grit or straw, where the Egyptians of the north had preferred more costly stone. These inexpensive pyramids were built on a rectangular base not more than six and a half feet high; and the whole erection, which was simply faced with whitewashed stucco, never exceeded thirty-three feet in The sepulchral chamber was generally in the centre; in shape it height. resembled an oven, its roof being "vaulted" by the overlapping of the courses, Often also it was constructed partly in the base, and partly in the foundations below the base, the empty space above it being intended merely to lighten the weight of the masonry. There was not always an external chapel attached to these tombs, but a stele placed on the substructure, or fixed in one of the outer faces, marked the spot to which offerings were to be brought for the dead; sometimes, however, there was the addition of a square vestibule in front of the tomb, and here, on prescribed days, the memorial ceremonies took place. The

<sup>&</sup>lt;sup>1</sup> Mr. Harris pointed out that in the masonry of the bridge at Koptos there are blocks bearing the cartouches of Nubkhopirri Antui (Birch-Charas, Le Papyrus Abbott, in the Revue Archeologip 1 1st screes, vol. xvi. p. 267).

None of the Theban pyramids are now standing; but in 1860 Marietto discovered the structures of two of them, viz. those of the pyramids of Nübkhopiri Antôf and of Anaa (Mariette à M. le Vicomte de Rouge, pp. 16, 17), which were made precisely like those of the pyrof Abydos (Mariette, Abydos, vol. ii. pp. 42–44, pls. lxvi., lxvii.; Marpero, Archéologie dec., pp. 139-142).

statues of the double were rude and clumsy, the coffins heavy and massive, and the figures with which they were decorated inclegant and out of proportion.2 while the stelle are very rudely cut.3 From the time of the VIth dynasty the lords of the Said had been reduced to employing workmen from Memphis to adorn their n numents; but the rivalry between the Thebans and the Heracleopolitins. which set the two divisions of Egypt against each other in constant hostility. pliged the Antûls to entrust the execution of their orders to the local schools of sculptors and painters. It is difficult to realize the degree of rudeness to which the unskilled workmen who made certain of the Akhmim and Gebelên sarcophasi 4 must have sunk; and even at Thebes itself, or at Aby dos, the execution of both bas-reliefs and hieroglyphs shows minute carefulness rather than any and skill or artistic feeling. Failing to attain to the beautiful, the Egyptians indeavoured to produce the sumptuous. Expeditions to the Wady Hammamat to total blocks of grante for sarcophage 5 became more and more frequent, and wells were sunk from point to point along the road leading from Koptos to the mountains. Sometimes these expeditions were made the occasion for pushing on astu as the port of Saû and embarking on the Red Sea. A hastily constructed hat cruised along by the shore, and gum, incense, gold, and the precious stones of the country were bought from the land of the Troglodytes. On the return if the convoy with its block of stone, and various packages of merch indise, there was no lack of scribes to recount the dangers of the campaign in exaggerated langauge, or to congratulate the reigning Pharaoh on having sown abroad the fame and terror of his name in the countries of the go Is, and as far as the I in I of Puanit

two kingdoms under the rule of the Theban house, are supposed to have been the work of that Monthotpû whose throne-name was Nibkhrôûrî; his, at any rate, was the name which the Egyptians of Ramesside times inscribed in the royal lists as that of the founder and most illustrious representative of the XIth dynasty.1 The monuments commemorate his victories over the Uniting and the barbarous inhabitants of Nubia.2 Even after he had conquered the Delta 8 he still continued to reside in Thebes; there he built his pyramid.4 and there divine honours were paid him from the day after his decease.<sup>5</sup> A scene carved on the rocks north of Silsileh represents him as standing before his son Antûf; he is of gigantic stature, and one of his wives stands behind him.6 Three or four kings followed him in rapid succession; the least insignificant among them appearing to have been a Monthotpû Nibtoûiri. Nothing but the prenomen—Sonkheri 7—is known of the last of these latter princes, who was also the only one of them ever entered on the official lists. In their hands the sovereignty remained unchanged from what it had been almost uninter ruptedly since the end of the VIth dynasty. They solemnly proclaimed then supremacy, and their names were inscribed at the head of public documents but their power searcely extended beyond the limits of their family domain, and the feudal chiefs never concerned themselves about the sovereign except when he evinced the power or will to oppose them, allowing him the mere semblance of supremacy over the greater part of Europe. Such a state of affairs could only be reformed by revolution.8 Amenembâît I., the leader of the new dynasty, was of

In the XLI<sup>4</sup> year of his reign, two officers passing through Aswan mention the truspect by river of troops sent out against the Uanain of Nubin (Prinir, A Season in Physic, pl. viii, No. 215).

Among other proofs of his authority over the Delta, I would draw attention to the fact that there was at Elephantine, in the Ist year of his reign, a personage who was prince of Helicophis, I whom Monthotpů had entrusted a military command (Petrii, A Scason in Egypt, pl. viii., No. 210).

them according to that which was in the cadastral surveys of former times." Hostile nobles, or those whose allegiance was doubtful, lost the whole or part of their fiefs; those who had welcomed the new order of things received accessions of territory as the reward of their zeal and devotion. Depositions and substitutions of princes had begun already in the time of the XIth dynasty. Antûf V., for instance, finding the lord of Koptos too lukewarm, had had him removed and promptly replaced.2 The fief of Siût accrued to a branch of the family which was less warlike, and above all less devoted to the old dynasty than that of Khiti had been.8 Part of the nome of the Gazelle was added to the dominions of Nûhri, prince of the Hare nome; the eastern part of the same nome. with Monaît-Khûfûi as capital, was granted to his father-in-law, Khnûmhotpu 11 Expeditions against the Ûaûaiû, the Mûzaiû, and the nomads of Libya and Arabia delivered the fellahîn from their ruinous raids and ensured to the Egyptians safety from foreign attack.3 Amenemhâît had, moreover, the wit to recognize that Thebes was not the most suitable place of residence for the lord of all Egypt; it lay too far to the south, was thinly populated, ill-built, without monuments, without prestige, and almost without history. He gave it into the hands of one of his relations to govern in his name,6 and proceeded to establish himself in the heart of the country, in imitation of the glorious Pharaohs from whom he claimed to be descended. But the ancient royal cities of Kheops and bechildren had ceased to exist; Memphis, like Thebes, was now a provincial town, and its associations were with the VIth and VIIIth dynastics only. Amenembia took up his abode a little to the south of Dahshur, in the palace of Titour,

<sup>5</sup> Sallier Papyrus n. 2, pl. ii. l. 10; pl. iii. l. 1. In the XXIVth year of Amenemhatt, Mont und Prince of Thebes, boasts of having conquered the "Lords of the Sands," the Bedouin of Sant. and the nomads of the desert between the Nile and the Red Sea; he had ravaged their fields, taken the r towns, and entered their ports (MASPERO, Un Gouverneur de Thèbes au début de la XII dynasta, in the Memoirs of the First International Congress of Orientalists, in Paris, vol. ii. pp. 60, 61). These exerts must have taken place before the XXth year of Amenembalt I.; that is to say, while he yet reigned alone

· Montansisa, to whom reference has just been made, in every way presents the appearance of having been a great baron, making war and administering the fief of Thebes on behalf of his sovereign (\*) C 1 in the Louvre, in Gaver, Steles de la XII. dynastie, pl. 1; cf. Maspetto, Un Gouverneur de In ' ", in the Memoirs of the First International Congress of Orientalists, in Paris, vol. ii. pp. 48-61).

<sup>7</sup> A stele of his XXX<sup>th</sup> year, found in the necropolis of Abydos, states that the palace of 1 dec. was his royal residence (Mariette, Abydos, vol. ii. pl. 22; of. Banyille-Rougé, Album photographic. de la mission de M. de Rouge, No. 146); his establishment there seems to have been entered in the ich he enlarged and made the seat of his government. Conscious of long in the hands of a strong ruler, Egypt breathed freely after centuries of distress, and her sovereign might in all sincerity congratulate himself on having restored peace to his country. "I caused the mourner to mourn to longer, and his lamentation was no longer heard,—perpetual fighting was no longer witnessed,—while before my coming they fought together as buils unmindful of yesterday,—and no man's welfare was assured, whether he was ignorant or learned."—"I tilled the land as far as Elephantinê,—I spread joy throughout the country, unto the marshes of the Delta.—At my prayer the Nile granted the inundation to the fields:—no man was an hungered under me, no man was athirst under me,—for everywhere men acted according to my commands, and all that I said was a fresh cause of love." 1

In the court of Amenembâît, as about all Oriental sovereigns, there were doubtless men whose vanity or interests suffered by this revival of the royal authority; men who had found it to their profit to intervene between Pharaoh and his subjects, and who were thwarted in their intrigues or exactions by the presence of a prince determined on keeping the government in his own hands. These men devised plots against the new king, and he escaped with difficulty from their conspiracies. "It was after the evening meal, as night came on,--I gave myself up to pleasure for a time, - then I lay down upon the soft coverlets in my palace, I abandoned myself to repose,—and my heart began to be overtaken by slumber; when, lo! they gathered together in arms to revolt against me, -and 1 become weak as a serpent of the field.—Then I aroused myself to fight with my own hands,—and I found that I had but to strike the unresisting.—When I took a for, weapon in hand, I made the wretch to turn and flee; -strength forsook him, even in the night; there were none who contended, and nothing vevatious was effected against me." 2 The conspirators were disconcerted by the promptness with which Amenembaît had attacked them, and apparently the rebellion was suppressed on the same night in which it broke out. But the king was growing old, his son Usirtasen was very young, and the nobles were bestirring them selves in prospect of a succession which they supposed to be at hand. The best means of putting a stop to their evil devices and of ensuring the future of

Dain Cinon as marking an event in Egyptian history, probably the beginning of the XIII dynisty (1 Fig. , Australia, pl. iv. fragin. 64). This is the interpretation which I put upon a passage in the Sallier Papprus  $n = \{1, i, i\}$  in which Amonemhatt says that advantage was taken of Cantason's youth to conspire  $a_i$  and tomple is the ills bred by these conspiracies to the have wrought by the locusts or by the Nice

the dynasty was for the king to appoint the heir-presumptive, and at once associate him with himself in the exercise of his sovereignty. In the  $X\lambda^{\mu}$ year of his reign, Amenemhaît solemnly conferred the titles and prerogatives of royalty upon his son Usirtasen: "I raised thee from the rank of a subject. I-granted thee the free use of thy arm that thou mightest be feared .-- As for me, I apparelled myself in the fine stuffs of my palace until I appeared to the eye as the flowers of my garden,—and I perfumed myself with essences as freely as I pour forth the water from my cisterns." 1 Usirtasen naturally assumed the active duties of royalty as his share. "He is a here who wrought with the sword, a mighty man of valour without peer: he beholds the barbarians. he rushes forward and falls upon their predatory hordes. He is the hurler of javelins who makes feeble the hands of the foe; those whom he strikes never more lift the lance. Terrible is he, shattering skulls with the blows of his war-mace, and none resisted him in his time. He is a swift runner who smites the fugitive with the sword, but none who run after him can overtake him. He is a heart alert for battle in his time. He is a lion who strikes with his claws, nor ever lets go his weapon. He is a heart girded in armour at the sight of the hosts, and who leaves nothing standing behind him. He is a valiant man rushing forward when he beholds the fight. He is a soldier rejoicing to fall upon the barbarians: he seizes his buckler, he leaps forward and kills without a second blow. None may escape his arrow; before he bends his bow the barbarians flee from his arms like dogs, for the great goldess? has charged him to fight against all who know not her name, and whom he strikes he spares not; he leaves nothing alive." 8 The old Pharaoh "remained in the palace," waiting until his son returned to announce the success of his enterprises,4 and contributing by his counsel to the prosperity of their common empire. Such was the reputation for wisdom which he thus acquired, that a writer who was almost his contemporary composed a treatise in his name, and in it the king was supposed to address posthumous instructions to his son on the art of governing. He appeared to his son in a dream, and thus admonished him: "Hearken unto my words!-Thou art king over

<sup>1</sup> Saller Papyrus nº 2, pl. i. ll. 5-7. There has been considerable discussion as to the date at which Usitasen I, began to share his father's throno. By a stele from Abydos, dating from the XXX<sup>th</sup> year of Amenembât I and the X<sup>th</sup> of Usitasen (Mariette, Notice des Principeur Monuments, 1861, pp. 85, 86, No. 72; Abydos, vol. ii. pl. XXII.; Catalogue General, pp. 101, 105, No. 55, Banyille-Rouge, Albam photographique, No. 116, Inscriptions requeillies on I gypte, pl. viii.), the illing is fixed as the XX<sup>th</sup> year of Amenembât.

<sup>&</sup>lt;sup>2</sup> The great goddess Sokhit, with the head of a liones, had destroyed men at the command of not and made herself dranken with their blood (cf. pp. 165, 166 of the present work); and from that the onward she was the goddess of battle-fields and carnage.

the two worlds, prince over the three regions. Act still better than did thy nedecessors -Let there be harmony between thy subjects and thee,--lest they we themselves up to fear; keep not thyself apart in the midst of them; make not thy brother solely from the rich and noble, fill not thy heart with them tone; yet neither do thou admit to thy intimacy chance-comers whose place 15 unknown."1 The king confirmed his counsels by examples taken from his own life, and from these we have learned some facts in his history. The little work was widely disseminated and soon became a classic; in the time of the MIAth dynasty it was still copied in schools and studied by young scribes as in exercise in style.2 Usirtasen's share in the sovereignty had so accustomed the Egyptians to consider this prince as the king de facto, that they had gradually come to write his name alone upon the monuments. When Amenembait died, after a reign of thirty years, Usirtasen was engaged in a war against the Libyans. Dreading an outbreak of popular feeling, or perhaps an attempted isurpation by one of the princes of the blood, the high officers of the crown kept Amenomhâit's death secret, and despatched a messenger to the camp to recall the young king. He left his tent by night, unknown to the troops, returned to the capital before anything had transpired among the people, and thus the trustion from the founder to his immediate successor—always a delicate crisis for a new dynasty -seemed to come about quite naturally.4 The precedent of o regnancy having been established, it was scrupulously followed by most of the succeeding sovereigns. In the XLHn1 year of his sovereignty, and after

having reigned alone for thirty-two years, Üsirtasen I. shared his throne with Amenemhâît II.; <sup>1</sup> and thirty-two years later Amenemhâît II. acted in a similar way with regard to Üsirtasen II.<sup>2</sup> Amenemhâît III. and Amenemhâît IV. were long co-regnant.<sup>3</sup> The only princes of this house in whose cases any evidence of co-regnancy is lacking are Üsirtasen III., and the queen Sovknofriūrî, with whom the dynasty died out.

It lasted two hundred and thirteen years, one month, and twenty-seven days, and its history can be ascertained with greater certainty and complete-

AN ASIATIC CHIEF IS PRESENTED TO KHNÛMHOTPÛ BY NOFIRHOTPÛ, AND BY KHÎTI, THE SUPERINTENDENT OF THE HUNTSMEN.<sup>5</sup>

ness than that of any other dynasty which ruled over Egypt. We are doubtless far from having any adequate idea of its great achievements, for the biographies of its eight sovereigns, and the details of their interminable wats are very imperfectly known to us. The development of its foreign and

<sup>1</sup> See Stele V. 4 of the Leyden Museum, which is dated the XLIV<sup>th</sup> year of Ûsirtasen I. and the H<sup>ad</sup> year of Amenemhâît II. (Leemans, Lettre à François Salvolini, pp. 31-36, and pl. iv. 37; and Description raisonnée des monuments sypptiens du Musée de Leyde, p. 261; Leesuus, Auswahl der wichtigsten Urkunden, pl. x.)

<sup>2</sup> A votive tablet at Aswan, dated the XXXV<sup>th</sup> year of Amenomhâît II, and the III<sup>rd</sup> year of Ûsirtasen II. (Young, *Hieroglyphics*, pl. lxi.; Lepsius, Auswahl der wichtigsten Urkunden, pl. x., and Denkm., ii. 123 c).

<sup>2</sup> E. DE ROUGÉ, Lettre à M. Leemans, in the Revue Archéologique, 1st series, vol. vi. p. 573. We have several monuments of their joint reign (Lersius, Auswahl der wichtigsten Urkunden, pl. x., and

Denkm., ii. 140 m), but they give no dates enabling us to fix the time of its commencement

4 This is its total duration, as given in the Turin papyrus (Lepsus, Auswahl der wichlight in Urkunden, pl. vii. fragm. 72, I. 3). Soveral Egyptologists have thought that Manetho had, in he estimate, counted the years of each sovereign as consocutive, and have hence proposed to conclude that the dynasty only lasted 168 years (Brusson, Geschichte Ægyptens, pp. 114, 115), or 160 (Lubi Leile, Recherches sur la Chronologie Égyptienne, pp. 76-83), or 194 (Ed. Meyer, Geschichte des Allerthauss, vol. i. p. 122, and Geschichte des alten Ægyptens, p. 172, note 1). It is simpler to admit that the compiler of the papyrus was not in error; we do not know the length of the reigns of Usirtasen III., and Amenemhaît III., and their unknown years may be considered as completing the tale of the two hundred and thirteen years (cf. Petreir, A History of Egypt, vol. i. pp. 145-147).

<sup>3</sup> Drawn by Faucher-Gudin, from a chromolithograph in Lersius, Denkm., ii. 133.

domestic policy we can, however, follow without a break. Asia had as little attraction for these kings as for their Memphite predecessors, they seem to have always had a certain dread of its warlike races, and to have merely

certain on this account. Dwellers by the streams of the Delta were accustomed to see the continuous arrival in their towns of isolated individuals or of whole bands driven from their homes by want or revolution, and begging for refuge under the shadow of Pharaoh's throne, and of caravans offering the rarest products of the north and of the east for sale. A celebrated scene in one of the tombs of Beni-Hasan illustrates what usually took place. We do not know what drove the thirty-seven Asiatics, men, women, and children, to cross the Red Sea and the Arabian desert and hills in the VI'm year of Usirtasen II;1 they had, however, suddenly appeared in the Gazelle nome, and were there received by Khîti, the superintendent of the huntsmen, who, as his duty was brought them before the prince Khnûmhotpû. The foreigners presented the prince with green eye-paint, antimony powder, and two live ibexes, to conciliate his favour; while he, to preserve the memory of their visit, had them represented in painting upon the walls of his tomb. The Asiatics carry bows and arrows. javelins, axes, and clubs, like the Egyptians, and wear long garments or closefitting loin-cloths girded on the thigh. One of them plays, as he goes, on an instrument whose appearance recalls that of the old Greek lyre. The shape of their arms, the magnificence and good taste of the fringed and patterned statts with which they are clothed, the elegance of most of the objects which they have brought with them, testify to a high standard of civilisation, equal at least to that of Egypt. Asia had for some time provided the Pharaohs with slaves, certain perfumes, cedar wood and cedar essences, enamelled vases, precious stones, lapis-lazuli, and the dved and embroidered woollen fabries of which Chaldaca kept the monopoly until the time of the Romans.2 Merchants of the Delta braved the perils of wild beasts and of robbers lurking in every valley, while transporting beyond the isthmus products of Egyptian manufacture,3 such as fine linens, chased or doisonné jewellery, glazed pottery, and glass paste or metal amulets. Adventurous spirits who found life dull on the banks of the Nile, men who had committed crimes, or who believed themselves suspected by their lords on political grounds, conspirators, deserters, and exiles were well received by the Asiatic tribes, and sometimes gained the favour of the sheikhs. In the time of the XII'h dynasty, Southern Syria, the country of the "Lords of the Sands," and the kingdom of Kadama were full of Egyptians whose

This bas-relief was first noticed and described by Champollion (Monuments de Plymple, plecelvi., ecclvi.), who took the immigrants for Greeks of the archaic period (Lettre scribes d'lyg)t pp. 76, 77; and Monuments, vol. ii. pp. 410-412). Others have wished to consider it as representably Abraham, the sons of Jacob, or at least a band of Jews entering into Egypt, and on the strength of this hypothesis it has often been reproduced: Rosellini, Monumenti Storici, pls. XXXIII, XXXIII, Lepsis, Donlin., ii. 131-133; (Brugsen, Histoire d'Egypte, p. 63; Genfrigi and Ni Williaks, of Archeological Survey of Egypt Exploration Fund, vol. i. pls. XXXII, XXXII.

eventful careers supplied the scribes and story-tellers with the themes of many romances.<sup>1</sup>

Sinulit, the hero of one of these stories,2 was a son of Amenembat I., and had the misfortune involuntarily to overhear a state secret. He happened to be near the royal tent when news of his father's sudden death was brought to Usirtasen. Fearing summary execution, he fled across the Delta north of Memphis, avoided the frontier-posts, and struck into the desert. "I pursued my way by night; at dawn I had reached Puteni, and set out for the lake of Kîmoîrî,3 Then thirst fell upon me, and the death-rattle was in my throat, my throat cleaved together, and I said, 'It is the taste of death!' when suddenly I lifted up my heart and gathered my strength together: I heard the lowing of the herds. I perceived some Asiatics; their chief, who had been in Egypt, knew me; he gave me water, and caused milk to be boiled for me, and I went with him and joined his tribe." But still Sinubit did not feel himself in safety, and fled into Kadûma, to a prince who had provided an asylum for other Egyptian exiles, and where he "could hear men speak the language of Egypt." Here he soon gained honours and fortune. "The chief preferred me before his children, giving me his eldest daughter in marriage, and he granted me that I should choose for myself the best of his land near the frontier of a neighbouring country. It is an excellent land, Am is its name. Figs are there and grapes; wine is more plentiful than water; honey abounds in it; numerous are its olives and all the produce of its trees; there are corn and flour without end, and cattle of all kinds. Great, indeed, was that which was bestowed upon me when the prince came to invest me, installing me as prince of a tribe in the best of his land. I had daily rations of bread and wine, day by day; cooked meat and roasted fowl, besides the mountain game which I took, or which was placed before me in addition to that which was brought me by my hunting dogs. Much butter was made for me, and

<sup>&</sup>lt;sup>2</sup> Part of the text is to be found in Berlin (Lipsus, D. a.m., vi. 101-107), put we U gland (Courperint, Fragments of Old Egyptian Stories, in the Proceedings of the Sect by of Indical Andrology, 1891-92, vol. xiv. pp. 452-458); portions of it were copied on Ostraca now in the British Museum (Caren, Inscriptions in the Hieratic and Demotic Character, 1.-8, pl. xxiii., No. 5629), and in the Museum of Gizeh (Mastero, Les Premières Liques des Museums de Sinúhit, in the Mon fies d'Museum of Gizeh (Mastero, Les Premières Liques des Museums de Sinúhit, in the Mon fies d'Institut Égyptien, vol. ii. pp. 1-23). It has been summarised by Curi vs (Les papparis de Larlia, Plustitut Égyptien, vol. ii. pp. 13-51, and Panthém Latterine, vol. i), translated into Fu lish locates d'il y a quatre mille ans, pp. 37-51, and Panthém Latterine, vol. i), translated into Fu lish locates d'il y a quatre mille ans, pp. 37-51, and Panthém Latterine, vol. i), translated into Fu lish locates d'il y a quatre mille ans, pp. 37-51, and Parties, vol. ii. pp. 97-127), into French by Master d'Inquires de l'Égypte Ancienne, 2nd edit, pp. 87-132).

Aumorit was not far from the modern village of El-Maghtar (NANULE, The Store U'y) and the Bonte of the Exodus, pp. 21, 22), and its lake as the lake of Ismailiah, whose I is well as part of the hed of the Red Sea, or as the Egyptians called it, the "Very Black of the present work.

milk prepared in every kind of way. There I passed many years, and the children which were born to me became strong men, each ruling his own tribe. When a messenger was going to the interior or returning from it, he turned aside from his way to come to me, for I did kindness to all: I gave water to the thirsty, I set again upon his way the traveller who had been stopped on it, I chastised the brigand. The Pitaîtiû, who went on distant campaigns to fight and repel the princes of foreign lands, I commanded them and they marched forth; for the prince of Tonû made me the general of his soldiers for long years. When I went forth to war, all countries towards which I set out trembled in their pastures by their wells. I seized their cattle, I took away their vassals and carried off their slaves, I slew the inhabitants, the land was at the mercy of my sword, of my bow, of my marches, of my well-conceived plans glorious to the heart of my prince. Thus, when he knew my valour, he loved me, making me chief among his children when he saw the strength of my arms.

"A valiant man of Tonû came to defy me in my tent; he was a hero beside whom there was none other, for he had overthrown all his adversaries. He said: 'Let Sinuhît fight with me, for he has not yet conquered me!' and he thought to seize my cattle and therewith to enrich his tribe. The prince talked of the matter with me. I said: 'I know him not. Verily, I am not his brother. I keep myself far from his dwelling; have I ever opened his door, or crossed his enclosures? Doubtless he is some jealous fellow envious at seeing me, and who believes himself fated to rob me of my cats, my goats, my kine, and to fall on my bulls, my rams, and my oxen, to take them. . . . If he has indeed the courage to fight, let him declare the intention of his heart! Shall the god forget him whom he has heretofore favoured? This man who has challenged me to fight is as one of those who lie upon the funeral couch." I bent my bow, I took out my arrows, I loosened my poignaid, I furbished my arms. At dawn all the land of Tonu ran forth; its tribes were gathered together, and all the foreign lands which were its dependencies, for they were impatient to see this duel. Each heart was on live coals because of me; men and women cried 'Ah!' for every heart was disquieted for my sake, and they said. 'Is there, indeed, any valiant man who will stand up against him? Lo! the enemy has buckler, battle-axe, and an armful of javelins.' When he had come forth and I appeared, I turned aside his shafts from me. When not one of them touched me, he fell upon me, and then I drew my bow against him. When my arrow pierced his neck, he cried out and fell to the earth upon his nose; I snatched his lance from him, I shouted my cry of victory upon his back. While the country people rejoiced, I made his vassals whom he had oppressed to give

chanks to Montû. This prince, Ammianshi,1 bestowed upon me all the 1068cssions of the vanquished, and I took away his goods, I carried off his ttle. All that he had desired to do unto me that did I unto him; I took cossession of all that was in his tent, I despoiled his dwelling; therewith was the abundance of my treasure and the number of my cattle increased,"2 In later times, in Arab romances such as that of Antar or that of Abû-Zeît, we . find the incidents and customs described in this Egyptian tale; there we have the exile arriving at the court of a great sheikh whose daughter he ultimately marries, the challenge, the fight, and the raids of one people against another. Even in our own day things go on in much the same way. Seen from afar, these adventures have an air of poetry and of grandeur which fascinates the reader, and in imagination transports him into a world more heroic and more noble than our own. He who cares to preserve this impression would do well not to look too closely at the men and manners of the desert. Certainly the hero is brave, but he is still more brutal and treacherous; fighting is one object of his existence, but pillage is a far more important one. How, indeed, should it be otherwise? the soil is poor, life hard and precarious, and from remotest antiquity the conditions of that life have remained unchanged; apart from firearms and Islam, the Bedouin of to-day are the same as the Bedouin of the days of Sinuhît.3

There are no known documents from which we can derive any certain information as to what became of the mining colonies in Sinai after the reign of Papi II.<sup>4</sup> Unless entirely abandoned, they must have lingered on in comparative idleness; for the last of the Memphites, the Heracleopolitans, and the carly Thebans were compelled to neglect them, nor was their active life resumed until the accession of the XII<sup>th</sup> dynasty.<sup>5</sup> The veins in the Wady Maghara were much exhausted, but a series of fortunate explorations revealed the existence of untouched deposits in the Sarbût-el-Khâdîm, north of the original

<sup>1</sup> This was the name of the prince of Tonu, who had taken Smuhit into such high favour.

workings.¹ From the time of Amenembât II.² these new veins were worked, and absorbed attention during several generations. Expeditions to the mines were sent out every three or four years, sometimes annually, under the command of such high functionaries as "Acquaintances of the King," "Chart Lectors," and Captains of the Archers. As each mine was rapidly worked

out, the delegates of the Pharaohs were obliged to find new voics in order to meet industrial demands. The task was often aidnous, and the commissioners generally took care to inform posterity very fully as to the anxieties which they had felt, the pains which they had taken, and the quantities of turquouse or of oxide of copper which they had brought into Egypt Thus the Captain Harceris tells us that, on arriving at Sarbût in the month Phamenoth of an unknown year of Amenemhâit III., he made a bad beginning in his work of exploration. Wearied of fruitless efforts, the workmen were quite ready to desert him if he had not put a good face on the business and stoutly promised them the support of the local Hâthor. And, as a matter of fact, fortune did change. When he began to despair, "the desert burned like summer, the mountain was on fire, and the vein exhausted; one morning the overseer who was there questioned the miners, the skilled workers who were

<sup>&</sup>lt;sup>1</sup> For Sarbut-el-Khadim and its history, see Birch's short summary, Pgyptian Remains, in <sup>1</sup> Account of the Survey of the Penricula of Sinai, ch. vii. pp. 180-182.

sed to the nine, and they said. There is turquoise to eternity in the countain. At that very moment the vein appeared." And, indeed, the wealth is the deposit which he found so completely indemnified. Hence it is his first insuppointments, that in the month Pachons, three months after the opening of ness workings, he had finished his task and prepared to leave the country arying his spoils with him. From time to time Pharaoh sent convoys of.

THE PUNS ROLL INVITED HALLOR AT AFFILL KHALL

cattle and provisions—corn, sixteen oven, that y geese, fresh ve\_ctables, live poultry—to his vissals at the mines. The mining population mere ised so fist that two chapels were built, dedicated to Hâthor, and served by volunteer priests. One of these chapels presumably the oldest, consists of a single a ck-cut chamber, upheld by one large square pillar, wills and pillar having been covered with finely sculptured scenes and inscriptions which are now almost effaced. The second chapel included a beautifully proportioned acctingular court, once entered by a portico supported on pillars with H then head capitals, and beyond the court a narrow building divid d into many small integular chambers. The editice was altered and rebuilt, and to distroyed; it is now nothing but a confuse I hap of ruins, of which the original plan cannot be traced. Votive stells of all shapes and siz-

in granite, sandstone, or limestone, were erected here and there at random in the two chambers and in the courts between the columns, and flush with the walls. Some are still in situ, others lie scattered in the midst of the ruins. Towards the middle of the reign of Amenemhaît III., the industrial demand for turquoise and for copper ore became so great that the . mines of Sarbût-el-Khâdîm could no longer meet it, and those in the Wady Maghara were reopened.1 The workings of both sets of mines were carried on with unabated vigour under Amenembaît IV.,2 and were still in full activity when the XIIIth dynasty succeeded the XIIth on the Egyptian throne. Tranquillity prevailed in the recesses of the mountains of Sinai as well as in the valley of the Nile, and a small garrison sufficed to keep watch over the Bedouin of the neighbourhood. Sometimes the latter ventured to attack the miners, and then fled in haste, carrying off their meagre booty; but they were vigorously pursued under the command of one of the officers on the spot, and generally caught and compelled to disgorge their plunder before they had reached the shelter of their "douars." The old Memphite kings prided themselves on these armed pursuits as though they were real victories, and had them recorded in triumphal bas-reliefs; but under the XIIth dynasty they were treated as unimportant frontier incidents, almost beneath the notice of the Pharaoh, and the glory of them-such as it was-he left to his captains then in command of those districts.

Egypt had always kept up extensive commercial relations with certain northern countries lying beyond the Mediterranean. The reputation tor wealth enjoyed by the Delta sometimes attracted bands of the Haiù-nibù to come prowling in piratical excursions along its shores; but their expeditions seldom turned out successfully, and even if the adventurers escaped summary execution, they generally ended their days as slaves in the Fayûm, or in some village of the Saïd. At first their descendants preserved the customs, religion, manners, and industries of their distant home, and went

<sup>&</sup>lt;sup>1</sup> Inscriptions of the H<sup>104</sup>, XXX<sup>th</sup>, XLII<sup>th</sup>, XLIII<sup>th</sup>, XLIII<sup>th</sup>, and XLIV<sup>th</sup> years of Amenomb at 111, are given in Burton, Exerpta Hieroglyphica, pl. xii.; Champollion, Monuments de l'Egypt et de la Nubie, vol. ii. pp. 689-691; Li phits, Donkin, ii. 137 c, f-i; Biron, Egyptian Remains, in the A case of the Survey, ch. vii. pp. 175-177, and Photographs, vol. iii. pl. 3.

to pass successively beyond Gebel-Silsileh and Elephantinê now drove the XII dynasty beyond the second cataract, and even further. The nature of the valley compelled them to this course. From the Tacazze, or rather from the confluence of the two Niles down to the sea, the whole valley forms as it were Greater Egypt; for although separated by the cataracts into different divisions. it is everywhere subject to the same physical conditions. In the course of centuries it has more than once been forcibly dismembered by the chances of war, but its various parts have always tended to reunite, and have coales ad at the first opportunity. The Amami, the Iritît, and the Sitiú, all those nations which wandered west of the river, and whom the Pharaohs of the VI<sup>th</sup> and subsequently of the XIth dynasty either enlisted into their service or the conquered, do not seem to have given much trouble to the successors of Amenembait I. The Vaûaiû and the Mâzaiû were more turbulent, and it was necessary to subdue them in order to assure the tranquillity of the colonists scattered along the banks of the river from Phila to Korosko. They were worsted by Amenemhâit I. in several encounters.1 Usntasen I. made repeated campaigns against them, the earlier ones being undertaken in his father's lifetime.2 Afterwards he pressed on, and straightway "raised his frontiers" at the rapids of Wady Halfa; and the country was henceforth the undisputed property of his successors. It was divided into nomes like Egypt sitself; the Egyptian language succeeded in driving out the native dialects, and the local deities, including Didûn, the principal god, were associated or assimilated with the gods of Egypt. Khnûmû was the favourite deity of the northern nomes, doubtless because the first colonists were natives of Elephantine, and subjects of its princes.4 In the southern nomes, which had been annexed under the Theban kings and were peopled with Theban immigrants, the worship of Khnûmû was carried on side by side with the worship of Amon, or Amon-Ra, god of Thebes. In accordance with local affinities, now no longer intelligible, the other gods also were assigned smaller areas in the new territory-Thot at Pselcis and Pnubsit, where

The triumphal stele of Wady Halfa, on the site of the ancient Bohani, which record to event, is now in Florence (Charpolator, Letter desired Egypte, 2nd edit., p. 121). [A portion of it has recently been discovered by Captain Lyons, and sent to Florence En ]

<sup>\*</sup> In Nubia Khinunu was entitled "Governor of the inhabitants of Lower Nubii, direct is gate of the mountain regions" (Bat Gen, Dictionautre Geographique, p. 1288). Under the Normal dynasty he took the form of Khinunu-Rû, in the temples of Sebuah (Literus, Denha. 10 11 Kummeh (ibid., id., 66), and other places.

Lepsius was the first to show that the progress of the Theban colonisation may be a that of the worship of Amon (*Weber die widderhöpfigen Götter Ammon und Chnumis*, in the 1977, p. 14, et seq.).

pigantic nable tree was worshipped, Rå near Deri, and Horus at Maint Id Baûka. The Pharaohs who had civilized the country here is error, the inne honours while still alive. Usirtasen HI was placed in trick at a oth Didûn, Amon, and Khnûmû, temples were rused to him at Semich, shot nu, and Doshkeh; and the anniversary of a decisive victory which, had gained over the barbarians was still celebrated on the 21st of Pachon, thousand years afterwards, under Thutmosis III. The feudal system spread over the land lying between the two cataracts, where hereditary arrors held their courts, trained their aimies, built their cistles, and servited their superbly decorated tombs in the mountain sides. The new difference between Nubian Egypt and Egypt proper lay in the greater heart and smaller wealth of the former, where the narrower, less fertile, and less well-witered land supported a smaller population and yielded less abundant a venues.

The Pharaoh kept the charge of the more important strategical points in his can hands. Strongholds placed at bends of the river and at the mouths of rivines leading into the desert, secured freedom of navigation, and kept off the pilliging nomads. The fortiess of Deir [Kabbin 2—ED], which was often a brill, dates in part at least from the early days of the conquest of Nation I fortingular boundary—a dry brick will—is only broken by easily filled up a ups, and with some repairs it would still resist an Ababdeh attack. The most

mest meient bricks in the faitheuti as a Deri, ea will to a

considerable Nubian works of the XIIth dynasty were in the three places from which the country can even now be most effectively commanded, namely, at the two catalacts, and in the districts extending from Derr to Dakkoh. tinê already possessed an entrenched camp which commanded the rapids and the land route from Syene to Phila. Usirtasen III. restored its great wall; he also cleared and widened the passage to Schol, as did Papi I, to such good effect that easy and rapid communication between Thebes and the new towns was at all times practicable. Some little distance from Philip he established a station for boats, and an emporium which he called Hirû Khâkerî "the Ways of Khâketî"-after his own throne name-Khâketî.1 Its exact site is unknown, but it appears to have completed on the south side the system of walls and redoubts which protected the cataract provinces against either surprise or regular attacks of the barbarians. Although of no appreciable use for the purposes of general security, the fortifications of Middle Nubra were of great importance in the eyes of the Pharaohs. They command to the desert roads leading to the Red Sea, and to Berber and Gebel Barkel or the Upper Nile. The most important fort occupied the site of the present village of Kuban, opposite Dakkeh,2 and commanded the entrance to the Wady Olaki, which leads to the richest gold deposits known to Ancient Egypt. The valleys which furrow the mountains of Ethai, the Web Shauanib, the Waddy Umm Teyur, Gebel Iswud, Gebel Umm Kibiiteli ill have gold deposits of their own. The gold is found in nuggets and repockets in white quartz, mixed with iron oxides and titanium, to which the ancients had no use. The method of mining practised from immemorial antiquity by the Danain of the neighbourhood was or the simplest, and traces of the workings may be seen all over the sides of the ravines. Tunnels followed the direction of the lodes to a depth of fifty by to sixty-five yards; the masses of quartz produced from them were broker up in gravite mortars, pounded small and afterwards reduced to a powder in querns, similar to those used for crushing grain; the residue was sitted on stone tables, and the finely ground parts afterwards wished to

to the later restorations, are identical in shape and size with those of the walls at Syene and Li k and the wall at El-Kab was certainly built not later than the XII<sup>th</sup> dynasty.

<sup>2</sup> On the ruins of this important fortress, we the notice by Priesl D'Avennle, publist . Charas, Les Inscriptions des Mines d'or, pp. 13, 14.

<sup>1</sup> The widening of the passage was effected in the VIII<sup>th</sup> year of his reign (Wilbork & the Cataract, in the Record de Trawacz, vol. xiii. pp. 202-201), the same year in which he etal the Cataract, in the Record de Trawacz, vol. xiii. pp. 202-201), the same year in which he etal the Explican frontier at Senach. The other constructions are mentioned, but not very close a stele of the same year which came from Elephantine, and is now in the British Moscian B Tablets of the Alleh dynasty, in the Zidschrift, 1875, pp. 50, 51). The votive tablet, engine homour of Anüklt at Schel (Larsus, Benlin, ii, 136 b), in which the king boosts of having me the goddess "the excellent channel [called] the Ways of Khākeārī," probably efers to this we hand deepening of the passage in the VIII<sup>th</sup> year.

owls of sycamore wood, until the gold dust had settled to the bottom 1 This as the Nubian gold which was brought into Egypt by nomad tribes, and for which the Egyptians themselves, from the time of the XIIth dynasty onwards, , at to seek in the land which produced it. They made no attempt to stablish permanent colonies for working the mines, as at Smai; but a detailand of troops was despatched nearly every year to the spot to receive the mount of precious metal collected since their previous visit. The king

rebuilt the fortress of Kubban, the starting-place of the little army, and the spot to which it returned. It is a square enclosure measuring 328 feet on each side; the ramparts of crude brick are sloped slightly inwards, and are strengthened at intervals by bastions projecting from the external face of the wall. The river protected one side; the other three were defended by ditches communicating with the Nile. There were four entrances, one in the centre

THE SHOND CATALACT BLIWLEN HANKER AND WADY HAITA.

of each façade: that on the east, which faced the desert, and was exposed to the soverest attacks, was flanked by a tower.

The cataract of Wady Halfa offered a natural barrier to invasion from the south. Even without fortification, the chain of granite rocks which crosses the valley at this spot would have been a sufficient obstacle to prevent any fleet which might attempt the passage from gaining access to northern Nubia. The Nile here has not the wild and im posing aspect which it as sumes lower down, between Aswân and Philae. bordered by low and recedua-

hills, devoid of any definite outline. Masses of bare black rock, here and there covered by scanty herbage, block the course of the river in some place in such profusion, that its entire bed seems to be taken up by them. For a distance of seventeen miles the main body of water is broken up into an infinitude of small channels in its width of two miles; several of the streams thus formed present, apparently, a tempting course to the navigator, so calm and safe do they appears, but they conceal ledges of hidden roefs, and are unexpectedly forced into none, passages obstructed by granite boulders. The strongest built and best palet in boat must be dashed to pieces in such circumstances, and no effort or skillule on the part of the crew would save the vessel should the owner venture, in

th reace two projections which formed bistions. The town on the other bank, Samanu-Kharp-Khakeri, occupied a less favourable position: 2 its eastern flank was protected by a zone of rocks and by the river, but the three other sides were of easy approach. They were provided with ramparts which rose to the height for his two feet above the plain, and were strengthened at unequal distances by a amous buttresses. These resembled towers without parapets, overlooking to by 10 to the energeling road, and from them the defenders could take the

attacking sappers in flank. The intervals between them had been so calculated as to enable the archers to sweep the intervening space with their arrows. The main building is of crude brick, with beams laid horizontally between; the base of the external rampart is nearly vertical, while the upper part forms an angle of some seventy degrees with the horizon, making the scaling of it,

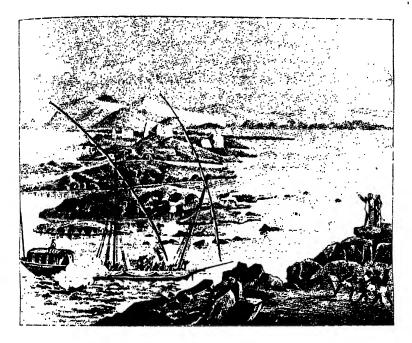

L.Thuilhor, del<sup>4</sup>
The rapids of the nile at semnen, and the two fortresses event by Csietasen 10.4

if not impossible, at least very difficult. Each of the enclosing walls of the two fortresses surrounded a town complete in itself, with temples dedicated to their founders and to the Nubian deities, as well as numerous habitations, now in ruins.<sup>2</sup> The sudden widening of the river immediately to the south of the rapids made a kind of natural roadstead, where the Egyptian squadron could lie without danger on the eve of a campaign against Ethiopia; the galiots of the negroes there awaited permission to sail below the rapids, and to cover Egypt with their cargoes. At once a military station and a river custom-induse,

Map drawn up by Thuillier from the somewhat obsolete survey of Callianup, Vogage : Al. e et au Fleure Blanc, Atlas, vol. ii. pl. xxiii.

The site of the two ancient towns has been minutely described by Calillato, Voyage is there vol. i. p. 329; vol. iii. pp. 256-258; and Atlas, vol. ii. pls. xxiii.—xxx.; and thirty years later by Voccé, Fortifications de Semach en Nulde, in the Bulletin Archeologique de l'Athénaum Française, pp. 81-84; cf. Lapsus, Denkm., i. 111, 112; Pennor-Chiptez, Histoire de l'Art dans l'Antiquite, v. i. i. pp. 493-502; Maspeno, L'Archeologie Égyptienne, pp. 28-31; Marcel Dieulapov, L'Accipalited. v. i. pp. 167-170.

semmeh was the necessary bulwark of the new Egypt, and Ûsirtasen III. emperatically proclaimed the fact, in two decrees, which he set up there for the edification of posterity. "Here is," so runs the first, "the southern boundary fixed in the year VIII. under his Holiness of Khâkeri, Ûsirtasen, who gives liftedways and for ever, in order that none of the black peoples may cross it from

THE CHANNEL OF THE NILE BETWEEN THE TWO FORTRESSES OF SEMNER AND KUMMFR.

above, except only for the transport of animals, oxen, goats, and sheep belonging to them." <sup>2</sup> The edict of the year XVI. reiterates the prohibition of the year VIII., and adds that "His Majesty caused his own statue to be erected at the landmarks which he himself had set up." <sup>3</sup> The beds of the first and second cataracts were then less worn away than they are now; they were therefore more efficacious in keeping back the water and forcing it to rise to a higher level

above.¹ The cataracts acted as indicators of the inundation, and if their daily rise and fall were studied, it was possible to announce to the dwellers on the barks lower down the river the progress and probable results of the flood. As long as the dominion of the Pharaohs reached no further than Philæ, observations of the Nile were always taken at the first cataract; and it was from Elephantinê that Egypt received the news of the first appearance and progress of the inundation. Amenemhâit III. set up a new nilometer at the new frontier, and gave orders to his officers to observe the course of the flood.² They obeyed him scrupulously, and every time that the inundation appeared to them to differ from the average of ordinary years, they marked its height on the rocks of Semneh and Kummeh, engraving side by side with the figure the name of the king and the date of the year. The custom was continued there under the XIII<sup>th</sup> dynasty; afterwards, when the frontier was pushed further south, the nilometer accompanied it.¹

The country beyond Semneh was virgin territory, almost untouched and quite uninjured by previous wars. Its name now appears for the first time up on the monuments, in the form of Kaûshû—the humbled Kûsh.<sup>4</sup> It comprised the districts situated to the south within the immense loop described by the tiv 1 between Dongola and Khartoum, those vast plains intersected by the windings of the White and Blue Niles, known as the regions of Kordofan and Dutar, it was bounded by the mountains of Abyssinia, the marshes of Lake Nu, and all those semi-fabulous countries to which were relegated the "Isles of the Manes" and the "Lands of Spirits." It was separated from the Red Sea by the

It is evident, from the marks engraved on the rocks by the Egyptian officials, that the Nile and to rise from six to eight metres higher than it now does in the same districts of Seconda, during the last reigns of the XIII<sup>th</sup> dynasty and the early reigns of the XIII<sup>th</sup> (Liestes, Bruf and I have the Monatsberuhte of the Berlin Academy of Sciences, 1815).

<sup>-</sup> The carbest of these marks is dated the HIP year of Amenemhäit III. (Let sus, Dealer,  $u_1(e)$ ) We also possess marks of the years V., VII., IX., XIV., XVII., XXIII., XXIV., XXV., XXVII., XXIV., XIV., XXIV., XIII., XIII., XIII., of this king (Lipsus, Dealem,  $u_1$ , 139  $u_2$ ,  $p_1$  on the other hand, we have denominate in the reign of his successor, Amenemhait IV., which is dated year V. (Latsus, Dealem,  $u_1$ ) and  $u_2$ .

The only instances of these high-water marks which we moet with under the XIII<sup>th</sup> dynesty () to the reign of Sakhemkhutoùii Sovkhotpû, the first of his line (E. on Rougi, Inscriptures described in the Semieh, in the Rerne Archeologique, series 1, vol. v. pp. 311-314; Lepsits, Denhau, v. bit = 0. the custom of making them probably ceased when the officers of Amenembait III, had disapper in the custom of making them probably ceased when the officers of Amenembait III, had disapper in the custom of making them probably ceased.

<sup>\*</sup> Khaisit, the humiliated or prostrate one, is the official epithet of Ethiopia in the month is The different ways in which this word is spelt on the Egyptian monuments show us that the to numeration must have been "Kaûshû," which later became Kûshû, Kûsh. Lepsius, who conseced the Kushites of the Nile with the races of Elam, thought (Nubische Grammatek, Penkeinung, P et seq.) that they had arrived from Asia by the Straits of Bab-el-Mandeb, during the interval which separates Papi II, from Amenombalt 1., and that they had driven buck the actribe, who occupied Nubia under the VII dynasty towards the Upper Nile. A comparison t names contained in the inscription of Uni with those which we meet with on the monument of an period, show us that the population of the Nubian desert did not change during this lapse. (Burgsen, Die Negerstämme der Una-Inschrift, in the Zeitschrift, 1882, p. 30, et seq.) I believe ' the absence of the name of Kaûshû-Kûsh, from the texts prior to the XIIth dynasty, is due to the that Egypt, whose boundaries at that time stopped between Korosko and Wady Halfa, was see from the tribes who inhabited Ethiopia by a triple rampart of Nubian nations. The country of its begins beyond Semneh; it could not, therefore, come into constant contact with the F yphi after the I haraohs had conquered the intermediate territories and peoples between Asain and S · See what has already been said as to these fabulous regions on pp. 19, 20 of the present

It dof Pûanît; and to the west, between it and the confines of the world, by the limb. Scores of tubes, white, copper-coloured, and black, beining strunger is, wrangled over the possession of this vaguely defined territory, some of them were still savage or emerging from barbarism, while others had attimed to putch of material civilization almost comparable with that of Layet. The

b itated to "strike the humbled Kush" whenever the opportunity presented The last-mentioned king in particular chastised them severely in his · Ith, 1 XIIth, 2 XVIth, 3 and XIXth years, 4 and his victories made him so popular, to the Egyptians of the Greek period, identifying him with the Sesostris of 11 orlotus, attributed to him the possession of the universe.5 On the base of a · lossal statue of rose granite which he erected in the temple of Tanis, we find preserved a list of the tribes which he conquered: the names of them appear to us most outlandish—Alaka, Matakaraû, Tûrasû, Pamaîka, Uarakî, Paramakâ and we have no clue as to their position on the map. We know merely that they lived in the desert, on both sides of the Nile, in the latitude of Berber or thereabouts. Similar expeditions were sent after Usirtasen's time, and Amenembait III. regarded both banks of the Nile, between Semneh and Dongola, as forming part of the territory of Egypt proper. Little by little, and by the force of circumstances, the making of Greater Egypt was realized; she approached nearer and nearer towards the limit which had been prescribed for her by nature, to that point where the Nile receives its last tributaries, and where its peerless valley takes its origin in the convergence of many others.

The conquest of Nubia was on the whole an easy one, and so much personal advantage accrued from these wars, that the troops and generals entered on them without the least repugnance. A single fragment has come down to us which contains a detailed account of one of these campaigns, probably that conducted by Usintasen III. in the XVIth year of his reign.7 The Pharaoh had received

<sup>1</sup> Several of the steles at Elephantmê refer to this campaign of the VIIIth year (Birch, Tall to of ile A II" dynasty, in the Zeitschrift, 1875, pp. 50, 51), also at the cataract (Wil not B. Canalering the (warnet, in the Recueil de Truraux, vol. xiii, pp. 202-204) and at Semneh (Lersies, Deakm., ii 136 c)

<sup>.</sup> The campaign of the XIIth year seems to have been described at some length in a rather mutilated prescynems on the read from Aswan to Phila (Perrit, A Season in Egypt, pl. xiii., No. 340). 4 Larsus, Denkm., ii. 186 h.

information that the tribes of the district of Hûâ, on the Tacazzo,1 v re harassing his vassals, and possibly also those Egyptians who were attracted by commerce to that neighbourhood. He resolved to set out and chastise them severely, and embarked with his flect. It was an expedition almost entuely devoid of danger: the invaders landed only at favourable spots, carried off any of the inhabitants who came in their way, and seized on their cattle—on one occasion as many as a hundred and twenty-three oxen and eleven asses, on others has Two small parties marched along the banks, and foraging to the right and left. drove the booty down to the river. The tactics of invasion have scarcely undergone any change in these countries; the account given by Cailliand of the first conquest of Fazogl by Ismail-Pasha, in 1822, might well serve to complete the fragments of the inscription of Usirtasen III., and restore for us, almost in every detail, a faithful picture of the campaigns carried on in these regions by the kings of the XIIth dynasty.2 The people are hunted down in the same fashion; the country is similarly ravaged by a handful of well-armed, fairly disciplined men attacking naked and disconnected hordes, the young men are mas sacred after a short resistance or forced to escape into the woods, the women are carried off as slaves, the huts pillaged, villages burnt, whole tribes exterminated in a few hours. Sometimes a detachment, having imprudently ventured into some thorny thicket to attack a village perched on a rocky summit, world experience a reverse, and would with great difficulty regain the main body of troops, after having lost three-fourths of its men.3 In most cases there was no prolonged resistance, and the attacking party carried the place with the loss of merely two or three men killed or wounded. The spoil was never very considerable in any one locality, but its total amount increased as the raid was carried afield, and it soon became so bulky that the party had to stop and retrace their steps, in order to place it for safety in the nearest fortress. The booty consisted for the most part of herds of oxen and of cumbrous heap of grain, as well as wood for building purposes. But it also comprised objects of small size but of great value, such as ivory, precious stones, and particularly and. The natives collected the latter in the alluvial tracts watered by the Tacazz.

The district of Hût is mentioned again under Ramses III. (Lipsius, Denhm., iii. 209) 1 with Phanft; it was a mountainous country, which was reached by water. Possibly we controlled it on the banks of the Nilo itself: the vicinity of Phanft, however, indicates that it was the countries on the shores of the Red Sca, or one of those watered by the Atbana, rather that regions of the Blue Nilo.

<sup>&</sup>lt;sup>2</sup> I refer the reader especially to the chapters in which Cailliand tells of the taids can by Ismail-Pasha or by his licutenants on the Fazogl (Voyage à Méroé, vol. ii. chaps. NNVI. pp. 354-398), and on the Qamâmyl (Voyage à Méroé, chaps. xxxix,-xlii., vol. ii. p. 598, et set vol. iii. pp. 1-56).

<sup>&</sup>lt;sup>2</sup> See Cailliand (Voyage à Méroe, vol. ii. pp. 376-378) for an account of the attack <sup>12</sup> Ismail's camp by the negroes of Mount Taby, and the panic which ensued. We know that Pasha himself was surprised and burnt in his house at Shendy, in 1822 (id., vol. iii pp. 0.1) by Melek Nimr and a band of rebels.

he Blue Nile and its tributaries. The women were employed in searching nuggets, which were often of considerable size; they enclosed there in nutle leather cases, and offered them to the merchants in exchange for products i Egyptian industry, or they handed them over to the goldsmiths to be made poto bracelets, ear, nose, or finger rings, of fairly fine workmanship. Gold was t and in combination with several other metals, from which they did not know lunt to separate it: the purest gold had a pale yellow tint, which was valued above all others, but electrum, that is to say, gold alloyed with silver in the proportion of eighty per cent., was also much in demand, while greyish-coloured gold, mixed with platinum, served for making common jewellery. None of these expeditions produced any lasting results, and the Pharaohs established no colonies in any of these countries. Their Egyptian subjects could not have lived there for any length of time without deteriorating by intermarriage with the natives or from the effects of the climate; they would have degenerated into a half-bred race, having all the vices and none of the good qualities of the aborigines. The Pharaohs, therefore, continued their hostilities without further scruples, and only sought to gain as much as possible from their victories. They cared little if nothing remained after they had passed through some district, or it the passage of their armies was marked only by ruins. They seized upon everything which came across their path-men, chattels, or animals - and carried them back to Egypt; they recklessly destroyed everything for which they had no use, and made a desert of fertile districts which but yesterday had been covered with crops and studded with populous villages. The neighbouring inhabitants, realizing their incapacity to resist regular troops, endeavoured to buy off the invaders by yielding up all they possessed in the way of slaves. flocks, wood, or precious metals. The generals in command, however, had to reckon with the approaching low Nile, which forced them to beat a retreat, they were obliged to halt at the first appearance of it, and they turned homewards "in peace," their only anxiety being to lose the smallest possible number of men or captured animals on their return journey.

As in earlier times, adventurous merchants penetrated into districts not reach d by the troops, and prepared the way for conquest. The princes of the phantinô still sent caravans to distant parts, and one of them, Strampitů, who lived under Üsirtasen L and Amonemhâit II., recorded his explorations on his a such, after the fashion of his ancestors: the king at several different

dhand has briefly described the aurif rons sand of the Quantity, and the way in one of (Voyage à Méroe, vol. in, pp. 16-19); it is from him that I have borrowed the disc. I vi. From analyses which I caused to be made at the Bulaq Museum of Payton of the XVIII<sup>th</sup> dynasty, which had been broken and were without value, it may not be point of view, I have demonstrated the presence of the platinum and the conding to the inscription on the tomb which he hollowed out for harson of the point of the inscription on the tomb which he hollowed out for harson of the point of the inscription on the tomb which he hollowed out for harson of the point of the phantina.

times had sent him on expeditions to the Soudan, but the inscription in which he gives an account of them is so mutilated, that we cannot be sure which tribes he visited. We learn merely that he collected from them skins, ivolv ostrich feathers-everything, in fact, which Central Africa has furnished as articles of commerce from time immemorial.1 It was not, however, by land only that Egyptian merchants travelled to seek fortune in foreign countries: the Red Sea attracted them, and served as a quick route for reaching the land of Pûanît, whose treasures in perfumes and rarities of all kinds had formed the theme of ancient traditions and navigators' tales.2 Relations with it had been infrequent, or had ceased altogether, during the wars of the Heracleopolitan period: on their renewal it was necessary to open up afresh routes which had been forgotten for centuries. Traffic was confined almost entirely to two or three out of the many,-one which ran from Elephantine or from Nekhabit to the "Head of Nekhabît," the Berenice of the Greeks; 8 others which started from Thebes or Koptos, and struck the coast at the same place or at Sau. the present Kosseir.4 The latter, which was the shortest as well as the favourite route, passed through Wady Hammamât, from whence the Pharaoha drew the blocks of granite for their sarcophagi. The officers who were sent to quarry the stone often took advantage of the opportunity to visit the coast, and to penetrate as far as the Spice Regions. As early as the year VIII. of Sonkherî, the predecessor of Amenemhâit I., the "sole friend ' Hûnû had been sent by this road, "in order to take the command of a squadron to Phanit, and to collect a tribute of fresh incense from the princes of the desert." He got together three thousand men, distributed to each one a goatskin bottle, a crook for carrying it, and ten loaves, and set out from Koptos with this little army. No water was met with on the way: Hûnû bored several wells and cisterns in the rock, one at a halting-place called Bait, two in the district of Adahait, and finally one in the valleys of Adabehaît. Having reached the seaboard, he quickly constructed a great barge, freighted it with merchandise for barter, as well as with provisions, oven, cows, and goats, and set sail for a cruise along the coast: it is not known how

<sup>&</sup>lt;sup>1</sup> In the inscription ivory is called uaptru, uapuru, which seems to be the original form of the Latin chur, through the intermediate form aburu.

and that of Khentkhitioniû, who in the XXVIIIth year of Amenembâit II entered the haven of Saû after a fortunate cruise to Pûanît, without having lost a viscol or even a single man.<sup>2</sup> Navigation is difficult in the Rel Sca. The coist as a rule is precipitous, bristling with itefs and islets, and almost entirely without strand or haven. No river or stream runs into it it is bordered by no tertile or wooded tract, but by high cliffs, half disintegrated by the burning sun, or by steep mountains, which appear sometimes a dull red, some times a dingry grey colour, according to the material—granite or sand-tone—which predominates in their composition. The few tribes who inhabit this desolate region maintain a miserable existence by fishing and hunting they were considered, during the Greek period, to be the most unfortunate of mortals, and if they appeared to be so to the mariners of the Ptolemies, doubtless they

enjoyed the same reputation in the more remote time of the Pharaohs. few fishing villages, however, are mentioned as scattered along the littory watering-places, at some distance apart, frequented on account of their wills of brackish water by the desert tribes: such were Nahasît, Tap-Nekhabît, So and Taû: these the Egyptian merchant-vessels used as victualling stations, and · took away as cargo the products of the country-mother-of-pearl, amethyst. emeralds, a little lapis-lazuli, a little gold, gums, and sweet-smelling resins. 1: the weather was favourable, and the intake of merchandise had been scanty. the vessel, braving numerous risks of shipwreck, continued its course as lat as the latitude of Sûakîn and Massowah, which was the beginning of Pûrmit properly so called. Here riches poured down to the coast from the interior. and selection became a difficulty: it was hard to decide which would make the best cargo, ivory or ebony, panthers' skins or rings of gold, myrrh, incense. or a score of other sweet-smelling gums. So many of these odoriferous resins were used for religious purposes, that it was always to the advantage of the merchant to procure as much of them as possible: incense, fresh or dried, was the staple and characteristic merchandise of the Red Sea, and the good people of Egypt pictured Pûanît as a land of perfumes, which attracted the sailor from afar by the delicious odours which were wafted from it.2

These voyages were dangerous and trying: popular imagination seized upon them and made material out of them for marvellous tales. The hero chosen was always a daring adventurer sent by his master to collect gold from the mines of Nubia; by sailing further and further up the river, he reached the mysterious sea which forms the southern boundary of the world.<sup>3</sup> "I set sail in a vessel one hundred and fifty cubits long, forty wide, with one hundred and fifty of the best sailors in the land of Egypt, who had seen heaven and earth and whose hearts were more resolute than those of lions. They had fore that the wind would not be contrary, or that there would be even none at all; but a squall came upon us unexpectedly while we were in the open, and as we

<sup>&</sup>lt;sup>1</sup> Brugsch suggests very felicitously that Nahasit may be identical with Ptolemy's North to (Typplische Völkertofel, p. 64); some writers wish to locate it at Mersa Zebara, others at Mersa Mumbrua, but there seems to be no sufficient reason for preferring either of these localities to the continuous distributions.

<sup>&</sup>lt;sup>2</sup> The trade of the Egyptians with Puantt and their voyaces in the Red Sca have prevent material for several monographs: Mastern, Ds quelques navigations des Lypptiens sur les côte de Mer Leythese (extracted from the Revue Historique, 1879, vol. 18.); Labort 18, Handel and 8 leauf dem Rothen Meere in alten Zeiten, nach Typptischen Quellen, 1886; Kralle, Das Lond Inc. (extracted from the Sitzungsberichte of the Vienness Academy of Sciences, vol. 2281, pp. 1801.) Sciences La Catena Orientale dell' Egitto, 1890.

<sup>&</sup>lt;sup>2</sup> The manuscript of this story, which dates back at least as far as the end of the MH<sup>th</sup> dy or the beginning of the XIII<sup>th</sup>, was discovered and translated by Goldans index, Sur un tuch Egyptien, Notice lue an Congrès des Orantalistes à Berlin, 1881 (and in the Verhandlungen of Internationalen Orientalisten-Congresses, vol. ii., Afrikanische Schtion, pp. 109-122): Golems translation has been reproduced with slight modifications by Massero, Les Contes popular P/gypte ancienne, 2nd edit, pp. 131-146, and Ixxxvin. xeviii. The hieratic text of the nomanic sot yet been published.

proached the land, the wind freshened and raised the waves to the height of , thit cubits. As for me, I clung to a beam, but those who were on the vessel , ished without one escaping. A wave of the sea cast me on to an island . or having spent three days alone with no other companion than my own art. I slept there in the shade of a thicket; then I set my legs in motion a quest of something for my mouth." The island produced a quantity of d ocious fruit: he satisfied his hunger with it, lighted a fire to offer a sacrifice to the gods, and immediately, by the magical power of the sacred rites, the adhabitants, who up to this time had been invisible, were revealed to his eyes. · I heard a sound like that of thunder, which I at first took to be the noise of the flood-tide in the open sea; but the trees quivered, the earth trembled. I uncovered my face, and I perceived that it was a serpent which was approaching. He was thirty cubits in length, and his wattles exceeded two cubits; his body was incrusted with gold, and his colour appeared like that of real lapis. He taised himself before me and opened his mouth; while I prostrated myself before him, he said to me: 'Who hath brought thee, who hath brought thee, little one. who hath brought thee? If thou dost not tell me immediately who brought thee to this island, I will cause thee to know thy littleness: either thou shalt tand like a woman, or thou shalt tell me something which I have not yet heard. ahl which I knew not before thee.' Then he took me into his mouth and carried me to his dwelling-place, and put me down without hurting me; was sate and sound, and nothing had been taken from me." Our hero tells the supent the story of his shipwreck, which moves him to pity and induces him to reciprocate his confidence. "Fear nothing, fear nothing, little one, let bet thy countenance be said! If thou hast come to me, it is the god who has spared thy life; it is he who has brought thee into this 'Isle of the Double," where nothing is lacking, and which is filled with all good things Here thou shalt pass one month after another till thou hast remained four months in this island, then shall come a vessel from thy country with mariners: thou caust depart with them to thy country, and thou shalt die in thy city. to converse rejoices the heart, he who enjoys conversation bears mistortune better: I will therefore relate to thee the history of this island." The populaconsisted of seventy-five scrpents, all of one family - it formerly comprised a young girl, whom a succession of misfortunes had cast on the island, who was killed by lightning. The hero, charmed with suc hat he, overwhelmed the hospitable dragon with thanks, and promised his numerous presents on his return home. "I will slay asses to

Ve to the "Islo of the Double," and the sugadar manner in which the inged the route taken by his here, if, what has been said at ve in the work

sacrifice, I will pluck birds for thee, I will send to thee vessels filled with all to riches of Egypt, meet for a god, the friend of man in a distant country unknown to men." The monster smiled, and replied that it was needless to think of send ing presents to one who was the ruler of Pûanît; besides, "as soon as thou hast quitted this place, thou wilt never again see this island, for it will be changed into waves."-" And then, when the vessel appeared, according as he had predicted to me, I went and perched upon a high tree and sought to distinguish those who manned it. I next ran to tell him the news, but I found that he was already informed of its arrival, and he said to me: 'A pleasant journey home, little one; mayst thou behold thy children again, and may thy name be well spoken of in thy town; such are my wishes for thee!' He added gifts to these obliging words. I placed all these on board the vessel which had come, and pro-trating myself, I adored him. He said to me: 'After two months thou shalt reach thy country, thou wilt press thy children to thy bosom, and thou shalt rest in thy sepulchre.' After that I descended the shore to the vessel, and I hailed the sailors who were in it. I gave thanks on the shore to the master of the island, as well as to those who dwelt in it." This might almost be an episode in the voyages of Sindbad the Sailor; except that the monsters which Sindbad met with in the course of his travels were not of such a kindly disposition as the Egyptian serpent: it did not occur to thom to console the shipwrecked with the charm of a lengthy gossip, but they swallowed them with a healthy appetite. Putting aside entirely the marvellous element in the story, what strikes us is the frequency of the relations which it points to between Egypt and Panit. The appearance of an Egyptian vessel excites no astonishment on its coasts: the inhabitants have already seen many such, and at such regular intervals, that they are able to predict the exact date of their arrival. The distance between the two countries. it is true, was not considerable, and a voyage of two months was sufficient to accomplish it.

While the new Egypt was expanding outwards in all directions, the old country did not cease to add to its riches. The two centuries during which the XII<sup>th</sup> dynasty continued to rule were a period of profound peace, the monuments show us the country in full possession of all its resources at its arts, and its inhabitants both cheerful and contented. More than ever to the great lords and royal officers expatiate in their epitaphs upon the start justice which they have rendered to their vassals and subordinates, upon kindness which they have shown to the fellahin, on the paternal solicity with which, in the years of insufficient inundations or of bad harvests, have striven to come forward and assist them, and upon the unher

interestedness which kept them from raising the taxes during the times of rage Niles, or of unusual plenty.1 Gifts to the gods poured in from one , at of the country to the other, and the great building works, which had been standstill since the end of the VIth dynasty, were recommenced simulta-, ously on all sides. There was much to be done in the way of repairing the trans, of which the number had accumulated during the two preceding conturies. Not that the most audacious kings had ventured to lay their hands on the sanctuaries: they emptied the sacred treasuries, and partially confiscated their revenues, but when once their cupidity was satisfied, they respected the fabrics, and even went so far as to restore a few inscriptions, or, when needed, to replace a few stones. These magnificent buildings required careful supervision: in spite of their being constructed of the most durable materials—sandstone, gianite, limestone,-in spite of their enormous size, or of the strengthening of their foundations by a bed of sand and by three or four courses of carefully adjusted blocks to form a substructure,2 the Nile was ever threatening them, and secretly working at their destruction. Its waters, filtering through the soil, were perpetually in contact with the lower courses of these buildings, and kept the foundations of the walls and the bases of the columns constantly damp: the saltpetre which the waters had dissolved in their passage, crystallising on the limestone, would corrode and undermine everything, if precautions were not taken. When the inundation was over, the subsidence of the water which impregnated the subsoil caused in course of time settlements in the most solid foundations: the walls, disturbed by the unequal sinking of the ground, got out of the perpendicular and cracked; this shifting displaced the architraves which held the columns together, and the stone slabs which formed the roof. These disturbances, aggravated from year to year, were sufficient, if not at once remedied, to entail the fall of the portions attacked; in addition to this, the Nile, having threatened the part below with destruction, often hastened by direct attacks the work of ruin, which otherwise proceeded slowly. A breach in the embankments protecting the town or the temple allowed its waters to rush violently through, and thus to effect large gaps in the decaying walls, completing the overthrow of the columns and wrecking the entrance halls and secret chambers by the fall of the roofs.3 At the time when Egypt came under the rule of the XII<sup>th</sup> dynasty there were but few cities which did not cortain some ruined or dilapidated sanctuary. occupied in reducing the power of the feudal lords, restored the temple of far as he was able, and his successors pushed forward the work vigorously or nearly two centuries.

The Delta profited greatly by this activity in building. The monuments there had suffered more than anywhere else: fated to bear the first shoet of foreign invasion, and transformed into fortresses while the towns in which they were situated were besieged, they have been captured again and again by assault, broken down by attacking engines, and dismantled by all the conquerers of Egypt, from the Assyrians to the Arabs and the Turks. The fellahm in their neighbourhood have for centuries come to them to obtain limestone to burn in their kilns, or to use them as a quarry for sandstone or grante for the doorways of their houses, or for the thresholds of their mosques. Not only have they been ruined, but the remains of their ruins have, as it were. melted away and almost entirely disappeared in the course of ages. And yet, wherever excavations have been made among these remains which have suffered such deplorable ill-treatment, colossi and inscriptions commenorating the Pharaohs of the XIIth dynasty have been brought to light Amenemháit I. founded a great temple at Tanis in honour of the gods of Memphis: 1 the vestiges of the columns still scattered on all sides show that the main body of the building was of rose granite, and a statue of the same material has preserved for us a portrait of the king. He is seated, and wears the tall head-dress of Osiris. He has a large smiling face, thick lips, a slott nose, and big staring eyes: the expression is one of benevolence and gentlemes, rather than of the energy and firmness which one would expect in the found rot a dynasty.2 The kings who were his successors all considered it a privilege to embellish the temple and to place in it some memorial of their veneration for the god. Usirtasen I., following the example of his father, set up a statue of himself in the form of Osiris: he is sitting on his throne of grey granite, and his placid face unmistakably recalls that of Amenembait I.3 Amenembait II.4

Mr. Griffith (Tanis, ii. p. 16) thinks wif M (Notice des principaus Monuments, p. 261, No. 3) that this statue is identical with that who published in a more complete form in Burron's Excepta Hieroglyphica, pl. xl. 5, and the intended for Usirtasen I.

tasen II., and his wife Nofrit have also dedicated their images within anctuary. Nofrit's is of black granite: her head is almost eclipsed by heavy Hathor wig, consisting of two enormous tresses of hair which

cound the cheeks, and lie with an on and curve upon the breast; her eyes. which were formerly inlaid, have fallen out, the bronze eyelids are lost, her arms have almost disappeared. numains of her, however, gives us none the less the impression of a young and gareful woman, with a lithe and wellproportioned body, whose outlines are delicately modelled under the tight-fitting smock worn by Egyptian women; the small and rounded breasts curve outward h tween the extremities of her curls and the embroidered hem of her garment; and a rectoral bearing the name of her husband lies flat upon her chest, just below the column of her throat.2 These various statues have all an evident artistic relationship to the beautiful granite figures of the Ancient Empire. The sculptors who executed them belonged to the same school as those who carved Khephren out of the

THE STATUL OF NOLKIL.

solid diorite: there is the same facile use of the chisel, the same indifference to the difficulties presented by the material chosen, the same finish in the detail, the same knowledge of the human form. One is almost tempted to believe that Egyptian art remained unchanged all through those long centuries, and yet as soon as a statue of the early period is placed side by side with one of the N11th dynasty, we immediately perceive something in the one which is lacknown the other. It is a difference in feeling, even it the technique remains almost bined. It was the man himself that the sculptors desired to represent in the 11th Pharaohs, and however haughty may be the countenance which we

admire in the Khephren, it is the human element which predominates in the The statues of Amenembaît I. and his successors appear, on the contrary, to represent a superior race: at the time when these were produced, the Pharnoh had long been regarded as a god, and the divine nature in him had almost eliminated the human. Whether intentionally or otherwise, the sculptors idealized their model, and made him more and more resemble the type or the divinities. The head always appears to be a good likeness, but smoothed down and sometimes lacking in expression. Not only are the marks of age rendered less apparent, and the features made to bear the stamp of perpetual youth, but the characteristics of the individual, such as the accentuation of the evel-row. the protuberance of the cheek-bones, the projection of the under lip, are all softened down as if intentionally, and made to give way to a uniform expression of majestic tranquillity. One king only, Amenemhâtt III., refused to go down to posterity thus effaced, and caused his portrait to be taken as he really was He has certainly the round full face of Ameuemhâit or of Ûsirtasen I, and there is an undeniable family likeness between him and his ancestors; but at the first glance we feel sure that the artist has not in any way flattered his model. The forchead is low and slightly retreating, narrow across the temples; his nose is aquiline, pronounced in form, and large at the tip; the thick has are slightly closed; his mouth has a disdainful curve, and its corners are turned down as if to repress the inevitable smile common to most Egyptian statues; the chin is full and heavy, and turns up in front in spite of the weight of the false beard dependent from it; he has small narrow eyes, with full lids; his cheek-bones are accentuated and projecting, the cheeks hollow, and the muscles about the nose and mouth strongly defined. The whole presents so stronge an aspect, that for a long time statues of this type have been persistently looked upon as productions of an art which was only partially Egyptian. It is, indeed, possible that the Tanis sphinxes were turned out of workshops where the principles and practice of the sculptor's art had previously undergone some Asiatic influence; the bushy mane which surrounds the face, and the lion's cars emerging from it, are exclusively characteristic of the latter The purely human statues in which we meet with the same type of countenance have no peculiarity of workmanship which could be attributed to the imitation of a foreign art.1 If the nameless masters to whom we owe their existence de med

Ì١

The first monuments of this type were discovered in 1860 at Tanis, by Mariette, who the a recognized a foreign influence in them, and attributed them to the shopherd-kings, more extended to the last Apopi, whose curtouches are engraved on the shoulder of several statues and of sphinkes (Mariette, Lettre à M. le Viconte de Rongé sur les fouilles de Tanis, pp. 8-15, and des principaux Monuments, 1864, p. 233, No. 11, and p. 264, Nos. 11-13). The hypothesis adopted, in spite of some doubts raised by M. de Rongé in a note which he added to Main the was disputed by Maspero (Guide du Visituur au Musée de Boulag, pp. 64, 65, No. 161), who is these figures to the local school at Tanis, and declared that they belonged to one of the previous to the shepherds (Archéologie Égyptienne, pp. 216, 217). M. Golenischeff has sh

long the more important of the common necessary in modeling the measuring stakes," and marking out the four sides 1 th

is now marked only by a few almost imperceptible inequalities in the soil, some crumbling lengths of walls, and here and there some scattered blocks of linear stone, containing a few lines of mutilated inscriptions which can with difficulty be deciphered; the obelisk has survived even the destruction of the ruins, and to all who understand its language it still speaks of the Pharaoh who erected at.

The undertaking and successful completion of so many great structures had necessitated a renewal of the working of the ancient quarries, and the opening of fresh ones. Amenembâît I. sent Antuf, a great dignitary, chief of the prophets of Mînû and prince of Koptos, to the valley of Rohanû, to seek out fine granite for making the royal sarcophagi.? Amencinhât III. had, in the XLIII<sup>rd</sup> year of his reign, been present at the opening of several fine veins of white limestone in the quarries of Turah, which probably furnished material for the buildings proceeding at Heliopolis and Memphis.8 Thebes had also its share of both limestone and granite, and Amon, whose sanctuary up to this time had only attained the modest proportions suited to a provincial god, at last possessed a temple which raised him to the rank of the highest tendal divinities. Amon's career had begun under difficulties: he had been merely a vassal-god of Montû, lord of Hermonthis (the Aûnû of the south), who had granted to him the ownership of the village of Karnak only. The unforeseen good fortune of the Antufs was the occasion of his emerging from his obscurity: he did not dethrone Montû, but shared with him the homage of all the neighbouring villages-Luxor, Medamut, Bayadiyeh; and, on the other side of the Nile, Gurneh and Medinet-Habu. The accession of the XIIth dynisty completed his triumph, and made him the most powerful authority in Southern Egypt. He was an earth-god, a form of Mînû who reigned at Koptos, at Akhmim and in the desert, but he soon became allied to the sun, and from thenceforth he assumed the name of Amon-Râ. The title of "sûton nûtuû" which he added to it would alone have sufficed to prove the comparatively recent origin of his notoriety; as the latest arrival among the great gods, he

Luxor, 1 Zorit, 2 Edfû, 3 Hierakonpolis, El-Kab, 1 Elephantinê, 5 and Dendera, 6 Shared between them the favour of the Pharaohs; the venerable town of Abydos bee me the object of their special predilection. Its reputation for sanctity had been steadily growing from the time of the Papis: its god, Khontamentit, who was identified with Osiris, had obtained in the south a rank as high as that of the Mendesian Osiris in the north of Egypt. He was worshipped as the soverign of the sovereigns of the dead-he who gathered around him and welcomed in his domains the majority of the faithful of other cults. His sepulchre, or, more correctly speaking, the chapel representing his sepulchre, in which one of his relies was preserved, was here, as elsewhere, built upon the roof.7 Access to it was gained by a staircase leading up on the left side of the sanctuary: on the days of the passion and resurrection of Osiris solemn processions of priests and devotees slowly mounted its steps, to the chanting of funeral hymns, and above. on the terrace, away from the world of the living, and with no other witnesses than the stars of heaven, the faithful celebrated mysteriously the rites of the divine death and embalming. The "vassals of Osiris" flocked in crowls to these festivals, and took a delight in visiting, at least once during their lifetime, the city whither their souls would proceed after death, in order to present them selves at the "Mouth of the Cleft," there to embark in the "bari ' of their divine master or in that of the Sun. They left behind them, "under the staircase of the great god," a sort of fictitious tomb, near the representation of the tomb of Osiris, in the shape of a stele, which immortalized the memory of their piety, and which served as a kind of hostelry for their soul, when the latter should, in course of time, repair to this rallying-place of all Osman souls.8 The concourse of pilgrims was a source of wealth to the population,

<sup>&</sup>lt;sup>1</sup> Viney, Notice des principaux Monuments exposés au Mosée de Gizée, p. 44, No. 136 – 1 <sup>(1)</sup> of offerings, inscribed with the name of Osirtasen III., found in 1887 in the excavations at Logor

<sup>&</sup>lt;sup>2</sup> Table of offerings inscribed with the name of Usirtasen I., discovered at Zorit (new Levi) in 1881 (MASI 190, Notes sur differents points de Grammaire et d'Histoire, in the Zeitscheint, 1882 p 12 c)

<sup>&</sup>lt;sup>3</sup> An inscription in the great temple of Horus mentions the works of an Amenember of a la Usirtasen at Edia, but does not add the prenomens (Barasen, Drei Festlah adar von Ap ll ve ales Magna, pl. iv. 1. 23): reference is probably made to Amenembatt I. and Usirtasen 1.

MURRAY-WILKINSON, Handbook of Egypt, p. 308; I have not been able to find these frazaents M Grébaut, in 1891, discovered a sphinx at El-Kab similar to that which is reproduced in p. 503 of the present work (Virey, Notice des principaux Monuments exposes au Museo de Circh, p. 15, No. 1991. Birch, Tablets of the XII<sup>th</sup> Dynasty, in the Zeitschrift, 1875, pp. 50, 51.

<sup>&</sup>lt;sup>a</sup> Dümichen pointed out, in the masonry of the great eastern stuircase of the present tempts of Hathor, a stone obtained from the earlier temple, which bears the name of Amenembat (Ban under Tempelanlagen ron Dendera, p. 19; Mankette, Denderah, Supplement, pl. 11, c); another to all discovered and published by Mariette (Denderah, Supplement, pl. H, f), shows that Ameu to is here again referred to. The buildings erected by this monarch at Dendera must have be somewhat large scale, if we may judge from the size of this last fragment, which is the limit leavest at the limit leavest and the limit leavest and the limit leavest and large scale, if we may judge from the size of this last fragment, which is the limit leavest and large scale, if we may judge from the size of this last fragment, which is the limit leavest and large scale, if we may judge from the size of this last fragment, which is the limit leavest and large scale.

This is the temb referred to by Plutarch (De Iside et Osiride, § 20, Paternt v's educe, and which was so long sought for in vain by Mariette, who believed it to nave been bur't or intself, and not on the terrace of the temple (Maspeno, in the Revue Critique, 1881, vol i p. 8).

Indeed, the inscriptions state, in the case of most of these votive stells, that they were different under the staircase of the great god," and that they were regarded as representing the whether

well which was kept fully supplied by the infiltrations from the Nile. He enlarge and cleaned out the sacred lake upon which the priests launched the Holy Artson the nights of the great mysteries. The alluvial deposits of fifty centures have not as yet wholly filled it up: it is still an irregularly shaped pond, which dries up in winter, but is again filled as soon as the inundation reaches the village of El-Kharbeh. A few stones, corroded with saltpetre, mark here and there the lines of the landing stages, a thick grove of palms fringes its northern and southern banks, but to the west the prospect is open, and extends as the entrance to the gorge, through which the souls set forth in search of Paradise and the solar bark. Buffaloes now come to drink and walles.

into this reservoir and was stored here during the autumn. Countless little civulets escaped from it, not merely such canals and ditches as we meet with in the Nile Valley, but actual running brooks, coursing and babbling between the trees, spreading out here and there into pools of water, and in places forming little cascades like those of our own streams, but dwindling in volume as they proceeded, owing to constant drains made

THE COURT OF THE SMALL TEMPLE TO THE NORTH OF THE BIRKET-KERUN.

on them, until they were for the most part absorbed by the soil before finally reaching the lake. They brought down in their course part of the fertilizing earth accumulated by the inundation, and were thus instrumental in raising the level of the soil. The water of the Birkeh rose or fell according to the season of the year.<sup>2</sup> It formerly occupied a much larger area than it does at present, and half of the surrounding districts was covered by it. Its northern shores, now deserted and uncultivated, then shared in the

<sup>1</sup> Drawn by Faucher-Gudin, from a photograph by Major Brown (cf. The Fayûm and Lake Meris, pl. xv.).

A description of the shores of the lake will be found in Johann, Memoire sur le lac Moris (in the fiveription de l'Égypte, vol. vi. pp. 162-164), and Schweinfurth, Reise in day Depressionsychiet, p. 54, et s. 11.

benefits of the inundation, and supplied the means of existence for a civilized population. In many places we still find the remains of villages, and wills of uncemented stone; a small temple even has escaped the general ruin, and remains almost intact in the midst of the desolation, as if to point out the furthest limit of Egyptian territory. It bears no inscriptions, but the beauty of the materials of which it is composed, and the perfection of the work, lead us to attribute its construction to some prince of the XII<sup>th</sup> dynasty. An ancient causeway runs from its entrance to what was probably at one time the original margin of the lake. The continual sinking of the level of the

THE SHORIS OF THE BIRKLI-KERCS SLAR THE EMBOLCHURE OF THE WADA SALLIE

Birkeh has lett this temple isolated on the edge of the Libyan plate in and all life has retired from the surrounding district, and has concentrated itself on the southern shores of the lake. Here the banks are low and the better deepens almost imperceptibly. In winter the retreating waters leave exposed long patches of the shore, upon which a thin crust of snow-white salt is deposited, concealing the depths of mud and quicksands beneath lumindiately after the inundation, the lake regains in a few days the ground it had lost: it encroaches on the tamarisk bushes which fringe its banks, and the district is soon surrounded by a belt of marshy vegetation, affording covertor ducks, pelicans, wild geese, and a score of different kinds of birds which disjoint

<sup>1</sup> This temple was discovered by Schwiffsurth in 1884 (cf. Reise in day Depic ion , , a Umkreise des Fajums in Januar 1850, extracted from the Zettschrift fur Geellschaft fur Lidl , and Berlin, 1886, p. 48, ct seq.), it has been visited since then by Flindbur Pitruf, Ten Years' Dell I gypt, pp. 104-106, and by Major Brown, The Fayûm and Lake Mæris, pp 52-56, and pl , and Drawn by Boudier, from a photograph by Golenischeff

the selves there by the thousand. The Pharaohs, when tired of residing in cities, here found varied and refreshing scenery, an equable climate, gardens always gay with flowers, and in the thickets of the Kerun they could pursue their favourite pastimes of interminable fishing and of hunting with the boomerang.<sup>1</sup>

They desired to repose after death among the scenes in which they had, lived. Their tombs stretch from Heraeleopolis till they nearly meet the last pyramids of the Memphites: at Dahshur there are still two of them standing.

THE IWO PYRAMIDS OF THE SHE DANASIY AT HISHIT

The northern one is an immense erection of brick, placed in close proximity to the truncated pyramid, but nearer than it to the edge of the plateau, so as to overlook the valley. We might be tempted to believe that the Theban kings, in choosing a site immediately to the south of the spot where Papi II. slept in his glory, were prompted by the desire to renew the traditions of the older dynasties prior to those of the Heracleopolitans, and thus proclaim to all beholders the antiquity of their lineage. One of their residences was situated at no great distance, near Miniet Dahshur, the city of Titoùi, the favourite residence of Amenemhâît I. It was here that those royal princesses, Nobel ant, Sonît-Sonbît, Sîthâthor, and Monît, his sisters, wives, and daughters,

Several personages of the first Theban empire bear the various titles belonging to the "masters of the r val hunts" of the Fayum; for instance, the Sovkhotpa, whose statue is in the Murscilles Mus na (1. Navilles, Un Fonctionnaire de la XII dynastie, in the Recued de Triciane, v 1 i. pp 10,-112)

Drawn by Boudier, from a photograph by Emil Brugsch-Bey.

11 Pylamid has been summarily described by Porring in the third volume of Vis's great work, toperations carried on at the Pyramids in 1837, vol. ii. pp. 57-63

whose tombs lie opposite the northern face of the pyramid, flourished sice by side with Amenemhâît III. There, as of old in their harem, they sleep side by side, and, in spite of robbers, their mummies have preserved the ornaments with which they were adorned, on the eve of burial, by the pious act of their lords. The art of the ancient jewellers, which we have hitherto known only from pictures on the walls of tombs or on the board, of

PLUTORAL ORNAMING OF PHINTANIN HL

coffins, is here exhibited in all its cunning. The ornaments comprise a wealth of gold gorgets, necklaces of agate beads or of enamelled lotus-flowers, cornelian, amethyst, and onyx scarabs. Pectorals of pierced goldwork, inlaid with flakes of vitreous paste or precious stones, bear the cartouches of Ûsirtasen III. and of Amenemhâit II., and every one of these gems of art reveals a perfection of taste and a skilfulness of handling

which are perfectly wonderful. Their delicacy, and their freshness in spite of their antiquity, make it hard for us to realize that fifty centuries have clapsed since they were made. We are tempted to imagine that the royal ladies to whom they belonged must still be waiting within earshot, ready to reply to our summons as soon as we deign to call them; we may even anticipate the joy they will evince when these sumptuous ornaments are restored to them, and we need to glance at the worm-caten coffins which contain their stiff and disfigured mummies to recall our imagination to the stern reality of fact.<sup>2</sup> Two other pyramids, but in this case of stone, still exist further south, to the left of the village of Lisht:<sup>3</sup> their casing, torn off by the follahîn, has entirely disappeared, and from a distance they appear to be merely two mounds which break the desert horizon line, rather than two buildings raised by the hand of man. The sepulchral chambers, excavated at a great depth in the sand, are now filled with water which has infiltrated through the soil, and they have not as yet been sufficiently emptied to

<sup>1</sup> Drawn by Faucher Gudin, from a photograph by Emil Brugsch-Bey.

These are the jewels discovered by M. do Morgan in 1894, during his excuvations in the new bourhood of the pyramid of Dalishur (cf. the Comptes Rendus de l'Académie des Inscripte 1894, and published now by him in the first volume of Dalishour).

These pyramids, referred to by Johard, Description des Antiquites de l'Heptanomide (in 'n Description de l'Égypte, vol. 1v. pp. 429, 430), and by Perring-Vyse, Operations carried on, vol. in pp. 77, 78, were opened between 1882 and 1886. It was not possible to explore the chambers (Masili , Études de Mythologie et d'Archéologie Égyptionnes, vol. i. pp. 148, 149). Excavations conducted l'Gautier have led, in 1895, to the discovery of eleven statues of King Usirtasen I., in the runs of the exterior chapel; cf. Guide du Visiteur, pp. 222, 223, Nos. 1054-1057).

ermit of an entrance being effected: one of them contained the body of Usirtasen: does Amenemhâît I. or Amenemhâît II. repose in the other? We know, at all events, that Usirtasen II. built for himself the pyramid of Illahun, and Amenembâît III. that of Ilawâra. "Hotpû," the tomb of Usirtasen II., stood upon a rocky all at a distance of some two thousand feet from the cultivated lands. To the est of it lay a temple, and close to the temple a town, Haît-Usirtasen-Hotpû—the Castle of the Repose of Usirtasen"—which was inhabited by the workmen mployed in building the pyramid, who resided there with their families. The remains of the temple consist of scarcely anything more than the enclosing wall, whose sides were originally faced with fine white limestone covered with hieroglyphs and sculptured scenes. It adjoined the wall of the town, and the

THE EXECUTED OF HEATINA, AT THE ENGLANCE OF THE LANGUE

neighbouring quarters are almost intact: the streets were straight, and crossed each other at right angles, while the houses on each side were so regularly built that a single policeman could keep his eye on each thoroughfare from one end to the other. The structures were of rough material hastily put together, and among the dibris are to be found portions of older buildings, stelae, and fragments of statues. The town began to dwindle after the Pharaoh had taken possession of his sepulchre; it was abandoned during the XIII<sup>ct</sup> dynasty, and its turns were entombed in the sand which the wind heaped over them. The city which Amenembût III, had connected with his tomb maintained, on the contrary, a long existence in the course of the centuries. The king's last testing-place consisted of a large sareophagus of quartzose sandstone, while

The task of building the pyramid of Usut sen I was entrusted to Merri, who describes it on steep preserved in the Louvre (C.3, H. I., Lutter, Reinell d'inscriptions incidites, vol. 16, pp. 104, 105, to yie, Sièles de la XIP dynastic; pls 18, 8, et. Mastino, Notes sur différents points de Graun incident Histoire, in the Melanges d' bibgie, vol. 16, pp. 221, 222. Lindia de Mythologie, vol. 17, 3, not. 27. Di twin by Faucher-Goddin, from a photograph by Golemscheff.

The pyramid of Illahun was opened, and it, identity with the pyramid of Usitisen II proved by 11. Arg., Kahun, Gurob and Hawara, pp. 11, 12, 21-32, and Illahun, Kahun and Genell pp. 1-15

his favourite consort, Nofriuphtah, reposed beside him in a smaller coffin. The sepulchral chapel was very large, and its arrangements were of a somewhat complicated character. It consisted of a considerable number of chambers some tolerably large, and others of moderate dimensions, while all of them were difficult of access and plunged in perpetual darkness: this was the Egyptian Labyrinth, to which the Greeks, by a misconception, have given a world-wide renown.2 Amenemhâît III. or his architects had no intention of building such a childish structure as that in which classical tradition so fervently believed. He had richly endowed the attendant priests, and bestowed upon the cult of his double considerable revenues, and the chambers above mentioned were so many storehouses for the safe-keeping of the treasure and provisions for the dead, and the arrangement of them was not more singular than that of ordinary storage depôts. As his cult persisted for a long period, the temple was maintained in good condition during a considerable time: it had not, perhaps, been abandoned when the Greeks first visited it.3 The other sovereigns of the XIIth dynasty must have been interred not far from the tombs of Amenembaît III. and Usirtasen II.: they also had their pyramids, of which we may one day discover the site.4 The outline of these was almost the same as that of the Memphite pyramids, but the interior arrangements were different. As at Illahun and Dahshur, the mass of the work consisted of crude bricks of large size, between which fine sand was introduced to bind them solidly together, and the whole was covered with a facing of polished limestone.5 The passages and chambers are not arranged on the simple plan which we meet with in the pyramids of earlier date."

<sup>1</sup> Like the pyramid of Hahun, that of Hawara has also been opened, and the surceplugus of the Pharach discovered by Perait, Hawara, Biahani and Arsince, pp. 3-8; Kahun, Gurob and Hawara, pp. 5-8, 12-17.

2 The word "Labyrinth," λαβόρινθος, is a Grock adaptation of the Egyphan name raph-yahu at "temple of Rahûnît," pronounced in the local dialect laph-rahûnît (Maritte, Les Papares Lypptiens du Musée de Boulag, vol. i. p. 8, noto 2; Barosch, Das Lypptische Serland, in the Zeitschrift, 1872, p. 91, Dictionnaire géographique, p. 501) Brugsch has since disputed this etymology, which had, however, been one of the first to accept (Der Möris-See, in the Zeitschrift, vol. xxx. p. 70).

As to the Labyrinth of Egypt and the conjectures to which it has given rise, see Joua Description des enines setucis près de la pyramide d'Haouârah, considérées comme les crèts du labyrinthe, et comparaison de ces ruines avec les recits des anciens, in the Description de l'hypric, vol. iv. pp. 478-524. The identity of the ruins at Hawira with the remains of the Labyrinth, admitte by Jonard-Caristie and by Lepsius (Briefe aus Egypten, p. 74, et seq.), disputed by Vassali (Rapparl sur les fouilles du Fayoum adresse à M. Auguste Mariette, in the Recue il de Travaux, vol. vi. pp. 37-41), les n definitely proved by Petrie (Havara, Biahmu and Arsime, p. 4, et seq.), who found remains the buildings creeted by Amenemhâit III. under the ruins of a village and some Græco-Roman ton 1

We know the names of most of these pyramids; e.g. that of Amenenhatt I. was called Ka nen

(Louve, C 2, l. 1; GAYLE, Stèle de la XIF dynastie, pl 1i.).

The peculiar construction of these pyramids, to which attention was drawn by JOMARD-Carlo, Pyramide d'Haondrah and Description de la Pyramide d'Illahân (in the Description de l'1 agri vol. iv. pp. 482, 483, 514-516), has been gone into in greater detail by Vyre-Penring, Operatio carried on at the Pyramids in 1837, vol. iii. pp. 80-83; cf. Perri Chipala, Histoire de "Act de a l'Antiquité, vol. i. pp. 210, 211.

See the plans of the pyramid of Hawarn in Petrie, Kahun, Gurob and Hawara, pls. ii.-iv., of these the pyramid of Illahun in Petrie, Illahun, Gurob and Areinoe, pl. ii.

Experience had taught the Pharaohs that neither granite walls nor the multiplication of barriers could preserve their mummies from profanation: no sooner was vigilance relaxed, either in the time of civil war or under a feeble administration, than robbers appeared on the scene, and boring passages through the masonry with the ingenuity of moles, they at length, after indetatigable patience, succeeded in reaching the sepulchral vault and despoiling the mummy of its valuables. With a view to further protection, the builders multiplied blind passages and chambers without apparent exit, but in which

THE MCCNIAIN OF SICT WITH THE TOMES OF THE PRINCES.

reportion of the ceiling was movable, and gave access to other equally mysterious rooms and corridors. Shafts sunk in the corners of the chambers and again carefully closed put the sacrilegious intruder on a false seent, for, after causing him a great loss of time and labour, they only led down to the solid rock. At the present day the water of the Nile fills the central chamber of the Hawara pyramid and covers the sareophagus; it is possible that this was foreseen, and that the builders counted on the militration as an additional obstacle to depredations from without. The hardness of the cement, which fastens the lid of the stone coffin to the lower part, protects the body from damp, and the Pharaoh, lying beneath several feet of water, still defies the greed of the robber or the zeal of the archaeologist.

The absolute power of the kings kept their feudal vassals in check: far

Drawn by Boudier, from a photograph by Emil Brugsch-Bev, taken in 1881 Indeed, it should be noted that in the Greco-Roman period the presence of water in cortain made of the pyramids was a matter of common knowledge, and so frequently was it met with that has even supposed to exist in a pyramid into which water had never penetrated to find the cops. Herodotus (ii. 124) relates that, according to the testimony of the interpreters when the his guides, the waters of the Nile were carried to the sepulchral cavein of the 1 has not year.

tranean channel, and shut it in on all sides, like an island

from being suppressed, however, the seignorial families continued not only to exist, but to enjoy continued prosperity. Everywhere, at Elephantinê, Koptos, Thinis, in Aphroditopolis, and in most of the cities of the Said and of the Delta,

Nome of the Jack all thewarth,

It lines the short throat throat the short throat throat the short throat t

there were ruling princes who were descended from the old feudal lords or even from Pharaohs of the Memphite period, and who were of equal, if not superior rank, to the members of the reigning family. The princes of Sint no longer enjoyed an authority equal to that exercised by their ancestors under the Heraeleopolitan dynasties. but they still possessed considerable influence. Que of them, Hapizaûsi I., excavated for himself, in the reign of Ûsirtasen I., not far from the burying-place of Khîti and Tefabi, that beautiful tomb, which, though partially destroyed by Coptic monks or Arabs, still

attracts visitors and excites their astonishment.<sup>5</sup> The lords of Shashotpa in the south, and those of Hermopolis in the north, had acquired to some extent

<sup>&</sup>lt;sup>1</sup> Wo know of Siranpîtû I. at Elephantinê (cf. pp. 493, 494 of the present work), under Usitasen I. and under Amenemhâît II. (Bourlant, Les Tombeaux d'Assonán, in the Recueil de Travanz, vol. x. pp. 189, 190), as well as of several other princes whose tombs have come down to us in a less perfect state of preservation.

<sup>&</sup>lt;sup>2</sup> We ought, probably, to connect the Zaûtaqîr, mentioned in two inscriptions collected by Golesischer (Resultats épigraphiques d'une excursion au Ouady Hammamat, pl. ii., No. 4, pl. iii., No. 3, and translated by Maspeno, Surquelques inscriptions du temps d'Amenomhâit I. au Ouady Hammamat, p. 10, et seq.; cf. p. 464 of the present work), with the principality of Koptos.

The most important of the princes of Thinis under the XII<sup>n</sup> dynasty is Antûf, who is mentioned on Stele U 26 in the Louvre (GAYET, Stèles de la XII<sup>e</sup> dynastie, pls. xiv.-xxii.).

<sup>&</sup>lt;sup>4</sup> Zobůi, the lordship of Aphroditopolis Parva, is known to us, in so far as this period is concerned, from a stole in the Museum at Gizeh, probably of the time of Amenonhâît III.; it is consecrated to a wakit of the Prince of Zobûi (Mariette, Catalogue Général, p. 192, No. 687).

So far, we know of only two members of the new line of the lords of Shit—Hapizaufi I., who was a contemporary of Usirtasen I., and Hapizaufi II.—whose tombs, described by Grappin. The Inscriptions of Shit and Der-Rifeh, pls. i.-x., xx., contain some religious texts of great interest but no historical details.

<sup>\*</sup> The tomb of Khnumnofir, son of Mazi, has been noted by GRIFFITH, The Inscriptions of Sint

the ascendency which their neighbours of Saut had lost. The Hermopolitan nunces dated at least from the time of the VIth dynasty, and they had passed dely through the troublous times which followed the death of Papi II.1. A branch of their family possessed the nome of the Hare, while another coverned that of the Gazelle.2 The lords of the nome of the Hare esponsed the Theban cause, and were reckoned among the most faithful vassals of the sovereigns of the south: one of them, Thothotpu, caused a statue of himself. worthy of a Pharaoh,3 to be erected in his loyal town of Hermopolis, and their burying-places at el-Bersheh bear witness to their power no less than to their taste in art.4 During the troubles which put an end to the 11 dynasty, a certain Khuûmhotpû, who was connected in some unknown manner with the lords of the nome of the Gazelle, entered the Theban service and accompanied Amenembaît I. on his campaigns into Nubia. He obtained, as a reward of faithfulness, Monait-Khulur and the district of Khunt-Horû,- "the Horizon of Horus,"-on the east bank of the Nile. On becoming possessed of the western bank also, he entrusted the government of the district which he was giving up to his eldest son, Nakhiti I.; but, the latter having died without heirs, Usirtasen I granted to Biqit, the sister of Nakhiti, the rink and prerogative of a reigning princess. Bigit married Nuhri, one of the princes of Hermopolis, and brought with her as her dowry the fieldom of the Gazelle, thus doubling the possessions of her husband's house hotpu II., the eldest of the children born of this union, was, while still yomo, appointed Governor of Monâit-kluitui, and this title appears to have be ome an appanage of his heir-apparent, just as the title of "Prince of h aishû" was, from the XIXth dynasty onwards, the special designation of the in to the throne. The marriage of Khnumhotpû II, with the youthful Khiti the honess of the nome of the Jackal, rendered him master of one of the most attile provinces of Middle Egypt. The power of this family was further uemented under Nakhiti II., son of Khnumhotpu II. and Khiti. Nakhiti, time of the name of the Jackal in right of his mother, and lord of that

of the Cazelle after the death of his father, received from Usirtasen II. ti administration of fifteen southern nomes, from Aphroditopolis to Thebes.1 The , is all we know of his history, but it is probable that his descendants retained the same power and position for several generations. The career of these dignitaries depended greatly on the Pharaohs with whom they were contemporary: they accompanied the royal troops on their campaigns, and with the spoil which they collected on such occasions they built temples or erected tomb for themselves. The tombs of the princes of the nome of the Gazelle are disposed along the right bank of the Nile, and the most ancient are exactly opposite Minich. It is at Zawyct el-Meiyetîn and at Kom-el-Ahmar, nearly facing Hibonů, their capital, that we find the burying-places of those who lived under the VIn dynasty. The custom of taking the dead across the Nile had existed for centuries, from the time when the Egyptians first cut their tombs in the eastern range; it still continues to the present day, and part of the population of Minich are now buried, year after year, in the places which their remote ancestors had chosen as the site of their "eternal houses" The cemetery lies peacefully in the centre of the sandy plain at the foot of the hills; a grove of palms, like a curtain drawn along the river sile, partially conceals it; a Coptic convent and a few Mahommedan hermits attract around them the tombs of their respective followers, Christian or Mussulm or The tock-hown tombs of the XIIth dynasty succeed each other in one load irregular line along the cliffs of Beni-Hasan, and the traveller on the Nile sees their entrances continuously coming into sight and disappearing as he goes up or descends the river. These tombs are entered by a square aperture, very in height and width according to the size of the chapel. Two only, those of Amoni-Amenemhâit and of Khnûmhotpû II., have a columned façade, of who b all the members-pillars, bases, entablatures-have been cut in the s lid. rock: the polygonal shafts of the façade look like a bad imitation of; ancient Doric. Inclined planes or flights of steps, like those at Elephantine formerly led from the plain up to the terrace.3 Only a few traces of these exist at the present day, and the visitor has to climb the sandy slope as best he can: wherever he enters, the walls present to his view inscriptions of immense extent, as well as civil, sopulchral, military, and historical scenes. These are not incised like those of the Memphite mastabas, but are painted in fresco on

<sup>&</sup>lt;sup>1</sup> The history of the principalities of the Have and of the Gazelle has been put together ! sovereigns.¹ Amoni and Khîti, who were, it appears, the warriors of their race have everywhere recounted the episodes of their military career, the movements of their troops, their hand-to-hand fights, and the fortresses to which they land siege.² These scions of the house of the Gazelle and of the Hare, who share, with Pharaoh himself the possession of the soil of Egypt, were no mere princely ciphers: they had a tenacious spirit, a warlike disposition, an insatiable desire for enlarging their borders, together with sufficient ability to realize their aims by court intrigues or advantageous marriage alliances. We can easily picture from their history what Egyptian feudalism really was, what were its component elements, what were the resources it had at its disposal, and we may well be astonished when we consider the power and tact which the Pharaohs must have displayed in keeping such vassals in check during two centuries.

Amenemhaît I. had abandoned Thebes as a residence in favour of Heracleopolis and Memphis, and had made it over to some personage who probably belonged to the royal household. The nome of Uisit had relapsed into the condition of a simple fief, and if we are as yet unable to establish the series of the princes who there succeeded each other contemporaneously with the Pharaohs, we at least know that all those whose names have come down to us played an important part in the history of their times. Montûnsîsû, whose stele was engraved in the XXIVth year of Amenemhaît I., and who died in the joint reign of this Pharaoh and his son Usirtasen I., had taken his share in most of the wars conducted against neighbouring peoples,—the Anitiû of Nuba, the Monîtû of Sinai, and the "Lords of the Sands:" he had dismantled their cities and razed their fortresses.8 The principality retained no doubt the same boundaries which it had acquired under the first Antûfs, but Thebes itself grew daily larger, and gained in importance in proportion as its trontiers extended southward. It had become, after the conquests of Usirtasen III., the very centre of the Egyptian world-a centre from which the power of the Pharaoh could equally well extend in a northerly direction towards the Sinaite l'eninsula and Libya, or towards the Red Sea and the "humiliated Kûsh" in the south. The influence of its lords increased accordingly: under Amenen-

<sup>&</sup>lt;sup>1</sup> The inscription of Khuumhotpu was copied for the first time by Burron, Ex cripta Hieroglyphevi, pls. axiii, axiv. The tomb was described by Champolalon (Monuments de l'Egypte et de la Valo. vol. ii. pp. 385-425), and many of the scenes were reproduced with much accuracy in the plates to his givent work, as well as in that of Rosellini. We find it reproduced in its entirety in Leristes. Penka ii. 123-130, and in Ni whi erry, Benk-Hassen, vol. i. pls. axii.-axxviii.

<sup>&</sup>lt;sup>2</sup> The tomb of Amoni-Amenembâît has been described with great minuteness by Cuantation, Monuments de l'Égypte et de la Nubie, vol. ii. pp. 425-431, and by Nawmeney, Beni-Hasan, vol. pls. iii.-xxxi.; that of Prince Khîti has also been described in the younger Champolhon's Mon l'Égypte et de la Nubie, vol. ii. pp. 331-358, and in Newderney, Beni Hasan, vol. ii. pp. 51-62, pls. ix. x

historians as of Theban origin. His accession entailed no change in the Egyptian constitution; it merely consolidated the Theban supremacy, and gave it a recognized position. Thebes became henceforth the head of the entire country: doubtless the kings did not at once forsake Heracleopolis and the Fayûm, but they made merely passing visits to these royal residences at considerable intervals, and after a few generations even these were given up. Most of these sovereigns resided and built their Pyramids at Thebes, and the administration of the kingdom became centralized there. The actual capital of a king was determined not so much by the locality from whence he ruled, as by the place where he reposed after death. Thebes was the virtual capital of Egypt from the moment that its masters fixed on it as their burying-place.

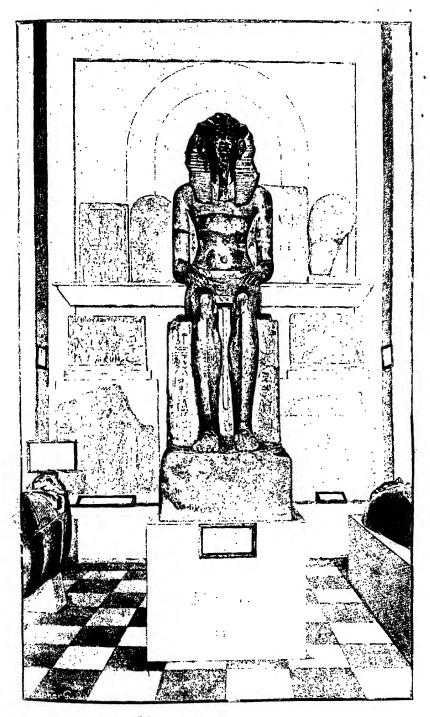

Uncertainty again shrouds the history of the country after Sovkhotpů 1.: not that monuments are lacking or names of kings, but the records of the many Sovkhotpůs and Nosirhotpůs found in a dozen places in the valley, furnish às yet no authentic means of ascertaining in what order to classify them. The XIII<sup>th</sup> dynasty contained, so it is said, sixty kings, who reigned for a period of over 453 years.<sup>3</sup> The succession did not always take place in the direct line from father to son: several times, when interrupted by default of male heirs, it was renewed without any disturbance, thanks to the transmission of royal rights to their children by princesses, even when their husbands did not belong to the reigning family. Monthotpů, the father of Sovkhotpů III., was an ordinary priest, and his name is constantly quoted by his son; but solan blood flowed in the veins of his mother, and procured for him the crown. The father of his successor, Nosirhotpů II., did not belong to the reigning branch, or was only distantly connected with it, but his mother Kamâit was the daughter of Pharaoh, and that was sufficient to make her son of royal ;

¹ Prof. Petric has found Papyri of Sovkhotpå Lat Hawara (Petric, Illahun, Kahun and Gurob, pan)

<sup>&</sup>lt;sup>2</sup> We know of the pyramid of Sovkhûmsauf and of his wife, Queen Nûbkhâs, at Thebes, from the testimony of the Abbott Papyrus (pl. iii. il. 1-7, pl. vi. il. 2, 3; Birch-Chabas, Itude sur le Papyrus Abbott in the Revue Archeologique, 1st scries, vol. xvi. pp. 269-271; Chabas, Milanges Equiphologique, 3rd series, vol. i. pp. 63, 63, 63, 101; Manhao, Une equalte judiciaire a Thebes, pp. 18, 19, 11, 73), and of the Salt Papyrus (Chabas, Milanges Equiphologiques, 3rd series, vol. ii. p. 1, ct seq.). The excavations conducted by Mr. de Morgan have shown that Aûtûabrî I. Horû caused himself to be interred on the plateau of Dahshur, near Memphis.

<sup>&</sup>lt;sup>3</sup> This is the number given in one of the lists of Manetho, in Müller-Didor, Fragmenta Historicorum Generum, vol in pp. 565. Lepsius's theory, according to which the shepherds overrun Elypt from the end of the XII<sup>th</sup> dynasty and tolerated the existence of two vassal dynastics, the XIII and XIV<sup>th</sup> (Bunder, Zyptens Stelle in der Weltgeschichte, vol. iii. p. 3, et seq.), was disputed and refuted by E. de Rougé as soon as it appeared (Examen Critique de Courrage de M. le Cheralier de Bunsen, in p. 52, et seq.); we find the theory again in the works of some contemporary Egyptology to but the majority of those who continued to support it have since abandoned their position, eq. Naville, Bubastis, p. 15, et seq.

The genealogy of Sovichotoù III. Sakhmûaztoûirî was made out by Brugsen, Geschichte Egyptens, p. 180, and completed by Wiedi Mann, Egyptische Geschichte, suppl., pp. 29, 30, from a number of scarabso more recently collected by Petrie in Historical Scarabs, Nos. 290-292, and from several inscriptions in the Louvre, especially Inscription C S, reproduced in Prisse D'Avenni Monuments Lyptiens, pl. viii.; and in Pierrit, Recueil d'inscriptions inculies, vol. ii. p. 107.

Drawn by Fancher-Gudin.

rank. With careful investigation, we should probably find traces of several revolutions which changed the legitimate order of succession without, however. entailing a change of dynasty. The Nofirhotpus and Sovkhotpus continued both at home and abroad the work so ably begun by the Amenemhâits and the Usintasens. They devoted all their efforts to beautifying the principal towns of Egypt, and caused important works to be carried on in most of themlat Karnak, in the great temple of Amon, at Luxor, at Bubastis, at Tanis, at Tell-Mokhdam,6 and in the sanctuary of Abydos. At the latter place, Khâsoshûshrî Notirhotpû restored to Khontamentît considerable possessions which the god had lost; 7 Nozirri 8 sent thither one of his officers to restore the edifice built by Ûsirtasen I.; Sovkûmsaûf II. dedicated his own statue in this temple,9 and private individuals, following the example set them by their sovereigns, yied with each other in their gifts of votive stelle.10 The pyramids of this period were of moderate size, and those princes who abandoned the custom of building them were content like Aûtûabrî I. Horû with a modest tomb, close to the gigantic pyramids of their ancestors.11 In style the statues of this epoch show a certain inferiority when compared with the beautiful

<sup>1</sup> The genealogy of Noriirhotpů II. has been obtained, like that of Sovkhotpů, from serrabs recently brought together in Petell's Historical Scarabs, Nos. 293-298, and by the inscriptions at Konesso (Lepsus, Denkm., ii. 151 f.) at Schél (Mariette, Monuments divers, pl. 1xx. 3), and at Aswán (Lepsus, Denkm., ii. 151 e). His immediate successors, Schâthorrî and Sovkhotpů IV., and later, Sovkhotpů V., are mentioned as royal princes in these inscriptions (Breesen, Geschichte Legyptens, p. 180).

<sup>2</sup> Table of offerings of Sonkhabri Amoni-Antúf-Amenemhût found at Karnak (Makii 171, Karnal, pls. ix, x., and pp. 45, 46), now at Gizch (Virly, Notice des principaux Monuments, 1893, p. 39, No. 123); statues of various Sovkhotpus (Makii.rrs, Karnak, pl. viii. k-m, and pp. 44, 45); cartouche block of Nofirhotpu II. and Sovkhotpu Khûnofirrî (Marii.rrs, Karnak, pl. viii. n-o, and p. 45)

<sup>3</sup> Architrave with the name of Soykhotpu II. (Gelbaut, Fouilles de Lougeor, in the Bulletin de l'Inst. Lypptien, 2nd ser., vol. x. pp. 335, 336; cf. Viery, Notice des princ. Monuments, p. 11, No. 136)

- An architrave with the name of Sakhemkhûtoûirî Sovkhotpû I. (Naville, Babastis, vol. pl. axxii. G-I), showing that this prince must have constructed a hall of large size in the temple at Bubastis (Naville, Bubastis, vol. i. p. 15). Naville thinks that a statue from Bubastis, in the Museum at Geneva, belonged to a king of the XIII<sup>th</sup> dynasty before it was appropriated by It mises II (Naville, Bubastis, vol. i. pl. xiv.).
- Statues of Mumashad (Burton, Exerpta Hieroglyphica, pl. xxx. 1, 7; Mariette, Lettre a M le Vicomie de Rouge sur les fouilles de Tanis, pp. 5-7, and Deuxième Lettre, pp. 4, 5; Fragments et Documents relatife aux fouilles de Tanis, in the Recueil de Travaux, vol. ix. p. 14; Banville-Rougé, Albam photographique de la Mission de M. de Rouge, No. 114, and Inscriptions recueillies en Égypte, pl. 1xxvi Petrit, Tanis, i. pl. iii. 17 B, and pp. 8, 9); statues of Sovkhotpü Khûnolirrî in the Louvre (A 16, 17, ef E. de Rougé, Notice Sommaire des Monuments, 1880, p. 16; Petrite, Tanis, i. p. 8) and at Tanis (E. and J. de Rougé, Inscriptions recueillies en Égypte, pl. 1xxvi.; Petrite, Tanis, i. pl. iii. 16 A-II) statues of Sovkhotpü Khûkhopirrî (Mariette, Deuxième Lettre, p. 4) and of Monthotpù, son of Sovkhotpü Sakkmūaztoūirî (Brugesch, Geschichte Egyptens, p. 182), obelisk of Nahsi (Peritte, Tanis, i. pl. iii. 19 A-I), and p. 8; Naville, Le Roi Nehasi, in the Recueil de Travaux, vol. xv. p. 99).

  11 Tomb of Aûtûabrî I. Horû, discovered at Dahshûr by M. de Morgan in April, 1894.

down to us, a few examples of really fine treatment. The colossal

work of the XII<sup>th</sup> dynasty: the proportions of the human figure are not, so good, the modelling of the limbs is not so vigorous, the rendering of the features lacks individuality; the sculptors exhibit a tendency, which had been growing since the time of the Usirtasens, to represent all their sitters with the same smiling, commonplace type of countenance. There are, however, among the statues of kings and private individuals which have come

statue of Sovkhotpů IV., which is now in the Louvre side by side with an ordinary-sized figure of the same Pharach, must have had a good effect when placed at the entrance to the temple at Tanis: 1 his chest is thrown well forward, his head is creet, and we feel impressed by that noble dignity which the Memphite sculptors knew how to give to the bearing and features of the diorite Khephren enthroned at Gizeh. The sitting Mirmashau of Tanis lacks neither energy nor majesty, and the Sovkûmsaûf of Abydos, in spite of the roughness of its execution, decidedly holds its own among the other Pharaolis. The statuettes found in the tombs, and the smaller objects discovered in the ruins, are neither less earefully nor less successfully treated. The little scribe at Gizeh, in the attitude of walking, is a chef d'œurre of delicacy and grace, and might be attributed to one of the best schools of the XIIth dynasty, did not the inscriptions obligo us to relegate it to the Theban art of the XIII1th,2 The heavy and commonplace figure of the magnate now in the Vienna Museum is treated with a rather coarse realism, but exhibits nevertheless most skilful tooling. It is not exclusively at Thebes, or at Tanis, or in any of

STATUE OF HARSEL IN THE VIENNA MUSICULA

the other great cities of Egypt, that we meet with excellent examples of work, or that we can prove that flourishing schools of sculpture existed at this period; probably there is scarcely any small town which would not furnish us at the present day, if careful excavation were carried out, with some monument or object worthy of being placed in a museum. During the XIII<sup>th</sup> dynasty both art and everything else in Egypt were fairly prosperous. Nothing attained a very high standard, but, on the other hand, nothing

fell below a certain level of respectable mediocrity. Wealth exercised, however, an injurious influence upon artistic taste. The funerary statue, for instance, which Aûtûabrî I. Horû ordered for himself was of ebony, and seems to have been inlaid originally with gold, whereas Kheops and Khephren were content to have theirs of alabaster and diorite.

During this dynasty we hear nothing of the inhabitants of the Sinaitic Pennsula to the east, or of the Libyans to the west: it was in the south,

STATEL OF SOURHOLPS IN

in Ethiopia, that the Pharaohs expended all their surplus energy. The most important of them, Sovkhotpå 1., had continued to register the height of the Nile on the rock, of Semnel, but after his time we are unable to say where the Nilometer was moved to, 1 or. indeed, who displaced it. The middle basin of the river as far as Gebel-Barkal was soon incorporated with Egypt, and the population became quickly assimilated. The colonization of the larger islands of Say and Argo took place first, as their isolation protected them from sudden attacks: certain princes of the XIIIth dynasty built temples there, and erected their statues within them, just as they would have done in any of the most peaceful districts of the Said or the Delta. Argo is still at the present day one of the largest of these Nubian islands:2 it is said to be 121 mires in length, and about 21 m width towards the middle. It is partly wooded, and vegetation grows there with tropical luxuriance; erceping plants climb

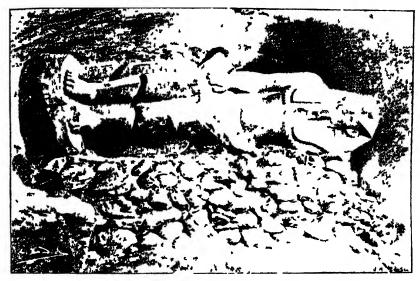

from tree to tree, and form an almost impenetrable undergrowth, which swarms with game secure from the sportsman. A score of villages are dotted about in the clearings, and are surrounded by carefully cultivated fields, in which durra predominates. An unknown Pharaoh of the XIII<sup>10</sup> dynasty built, near to the principal village, a temple of considerable size; it covered an area, whose limits may still easily be traced, of 171 feet wide by

<sup>1</sup> From Dahshur, now at Gwel; it has been published in Morgan's Dahshur.

<sup>&</sup>lt;sup>2</sup> The description of Argo and its ruins is borrowed from Callland, Voyage à Merce, vol. i., pp. 1-7.

<sup>&</sup>lt;sup>3</sup> Drawn by Boudier, from the sketch by Lepsius (Denkm., it. 120 h-i; cf. the inscription, ibid. 150 i). the head was "quite mutilated and separated from the bust" (Caillaid, Voyage à Merot, vol. n. p. 5).

292 long from east to west. The main body of the building was of studstone probably brought from the quarries of Tombos: it has been putilessly be stroyed piecomeal by the inhabitants, and only a few insignificant in term into a which some lines of hieroglyphs may still be deciphered, remain in the small statue of black grainto of good workmanship is still standing in the midst of the ruins. It represents Soykhotpů III. sitting, with his hands resting on his knees; the head, which has been mutilated, hes beside the body the same king erected colossal statues of himself at Tanis Bubastis, and at

insignificant part in shaping the destinies of the country. By what combination of circumstances its princes succeeded in raising themselves to the throne of the Pharaohs, we know not: they numbered, so it was said seventy-five kings, who reigned four hundred and eighty-four years, and whose mutilated names darken the pages of the Turin Papyrus. The majority of them did little more than appear upon the throne, some reigning three years, others two, others a year or scarcely more than a few months: far from being a regularly constituted line of sovereigns, they appear rather to have been a series of Pretenders, mutually jealous of and deposing one another. The feudal lords who had been so powerful under the Usirtasens had lost none of their prestige under the Sovkhotpus: and the rivalries of usurpers of this kind, who seized the crown without being strong enough to keep it, may perhaps explain the long sequence of shadowy Pharaohs with curtailed reigns who constitute the XIVth dynasty. They did not withdraw from Nubia, of that fact we are certain: but what did they achieve in the north and north-east of the empire? The nomad tribes were showing signs of restlessness on the frontier, the peoples of the Tigris and Euphrates were already pushing the vanguards of their armies into Central Syria. While Egypt had been bringing the valley of the Nile and the eastern corner of Airica into subjection, Chaldra had imposed both her language and her laws upon the whole of that part of Western Asia which separated her from Egypt: the time was approaching when these two great civilized powers of the ancient world would meet each other face to face and come into fince collision.

ages; then Anshar and Kishar were produced after them. Days were added to days, and years were heaped upon years: Anu, Inlil, and Ea were born in their turn, for Anshar and Kishar had given them birth."1 As the generation, emanated one from the other, their vitality increased, and the personality of each became more clearly defined; the last generation included none but beings of an original character and clearly marked individuality. Anu, the sunlit sky by day, the starlit firmament by night; Inlil-Bel, the king of the earth; Ea, the sovereign of the waters and the personification of wisdom.2 Each of them duplicated himself, Anu into Anat, Bel into Belit, Ea into Damkina, and united himself to the spouse whom he had deduced from himself. Other divinities sprang from these fruitful pairs, and the impulse once given, the world was rapidly peopled by their descendants. Sin, Shamash, and Ramman, who presided respectively over the moon, the sun, and the air, were all three of equal rank; next came the lords of the planets, Ninib. Merodagh, Nergal, the warrior-goddess Ishtar, and Nebo; then a whole army of lesser deities, who ranged themselves around Anu as round a supreme master. Tiâmat, finding her domain becoming more and more restricted owing to the activity of the others, desired to raise battalion against battalion, and set herself to create unceasingly; but her offspring, made in her own image, appeared like those incongruous phantoms which men see in dreams, and which are made up of members borrowed from a score of different animals.

text, and has been translated in a variety of different ways. It seems to contain a comparison between Apsû and Mummu-Tâmat on the one hand, and the reeds and clumps of rushes so common in Chaldea on the other; the two divinities remain inert and unfruitful, like water-plants which have not yet manifested their exuberant growth.

1 Tablet I., Il 7-15. The ends of nearly all these lines are mutilated; the principal parts of the text only have been restored with certainty, by Fr. Lenormant (Les Origines de l'Histour, vol. 1. p. 496), from the well-known passage in Damascius (Ruelle's edition, p. 322); Etra αν τριτήν εκ το αντων, Κισσωρή και 'Ασσωρίν εξ δυ γενέσθαι τρείς, 'Ανύν και 'Ιλλινον και 'Αδν. The identification of 'Ιλλινον with Inlit, pronounced Illil by the Assyrians, is due to Jensen (De Invantamentorum Sumerro Assyriorum, serici quæ divitur Shurbu Tabulû VI., in the Zeitschrift für Keilforschung, vol. 1 p. 611, note 1, and Die Kosmologic der Babylonier, p. 271).

2 The first fragments of the Chaldwan account of the Creation were discovered by G. Smith, who described them in the Daily Telegraph (of March 1, 1875), and published them in the Tran actions of the Society of Biblical Archaelogy (On some fragments of the Chaldaan Account of the Creation, vol. iv. pp. 363, 364, and six plates), and translated in his Chaldwan account of Genesis (1st edit. pp. 61-100) all the fragments with which he was acquainted; other fragments have since beneal heeted, but unfortunately not enough to enable us to entirely reconstitute the legend. It cover d at least six tablets, possibly more. Portions of it have been translated after Smith, by Tallot (116 Revolt in Heaven, in the Trans. of the Society of Biblical Acchaeology, vol. iv. pp. 349-362, The Fraht between Bel and the Dragon, and The Chaldwan Account of the Creation, in the Trans., vol. v. pp. 1-21, 426-140; et. Records of the Past, 1st series, vol. vii. 123, et seq.; vol. iv. p. 135, et seq.), by Opp 1 (Fragments cosmogoniques, in Li drain, Histoire d'Israel, vol. i. pp. 411-122), by Lenormant (Chapter) de l'Histoire, vol. 1. pp. 494-505, 507-517), by Schrader (Die Keilinschriften und das Alte Testano d. 2nd cdit., pp. 1-17), by Sayce (Leligion of the Ancient Babylonium, pp. 377-390, and Records of the Past, 2nd series, vol. i. pp. 122-146), by Jensen (Die Kosmologie der Babylonier, pp. 261-561), 1. Wincklor (Keilinschriftliche Textbuch, pp. 88-97), by Zimmern (H. Gunken, Schöpfung und Chat. pp. 101-119), and lastly by Delitzsch (Das Bahylonische Weltschöpfungs pos, in Abhandlungen der it. Sachsischen Gesellschaft der Wissenschaften, vol. xvii). Since G. Smith wrote The Chaldren Accord (pp. 101-107), a fragment of a different version has been considered to be a part of the dogma of the Creation, as it was put forth at Kntha.

They appeared in the form of bulls with human heads, of horses with the nouts of dogs, of dogs with quadruple bodies springing from a single fish hil. Some of them had the beak of an casle or a hawk, others, four wines

and two faces, others, the legs and horns of a goat, others, again, the hind quarters of a horse and the whole body of a man.1 Trâmat furnished them with tellible weapons, placed them under the command of her husband Kingu, and set out to war ag unst the gods 2

At first they knew not whom to send against her. Anshar despatched his on and, but Anu was afraid, and mide no attempt to oppose her sent La, but Ea, like Anu, giew pale with fear, and did not venture to attick Merodach, the son of Ea, was the only one who believed himself strong enough to conquer her The gods, summoned to a solemn banquet in the palace of Anshar, unanimously chose him to be then champion, and proclamed him king. "Thou, thou at "A glorious among the great gods, thy will is second to none, thy bidding is

the word of thy mouth shall endure, and thy commandment shall not meet with opposition. None of the gods shall transgress thy law; but where, ever a sanctuary of the gods is decorated, the place where they shall give their oracles shall be thy place.1 Marduk, it is thou who art our avenger We bestow on thee the attributes of a king; the whole of all that exists, thou hast it, and everywhere thy word shall be exalted. Thy weapons shall not be turned aside, they shall strike thy enemy. O master, who trusts in thee. spare thou his life; but the god who hath done evil, pour out his life like water." They clad their champion in a garment, and thus addressed him: "Thy will, master, shall be that of the gods. Speak the word, 'Let it be so,' it shall be so. Thus open thy mouth, this garment shall disappear; say unto it, 'Return,' and the garment shall be there." He spoke with his lips, the garment disappeared; he said unto it, "Return," and the garment was restored.2 Morodach having been once convinced by this evidence that he had the power of doing everything and of undoing everything at his pleasure, the gods handed to him the sceptre, the throne, the crown, the insignm of supreme rule, and greeted him with their acclamations: "Be king!-(io! Cut short the life of Tiâmat, and let the wind carry her blood to the hidden extremities of the universe." 8 He equipped himself carefully for the struggle. "He made a bow and placed his mark upon it;" he had a spear brought to him and fitted a point to it; the god lifted the lance, brandshed it in his right hand, then hung the bow and quiver at his side. He placed a thunderbolt before him, filled his body with a devouring flame, then made a net in which to catch the anarchic Tiamat; he placed the four winds in such a way that she could not escape, south and north, east and west, and with his own hand he brought them the net, the gift of his father Apu. lle created the hurricane, the evil wind, the storm, the tempest, the for winds, the seven winds, the waterspout, the wind that is second to none then he let loose the winds he had created, all seven of them, in order to bewilder the anarchic Tiâmat by charging behind her. And the master of the waterspout raised his mighty weapon, he mounted his chariot, a work without

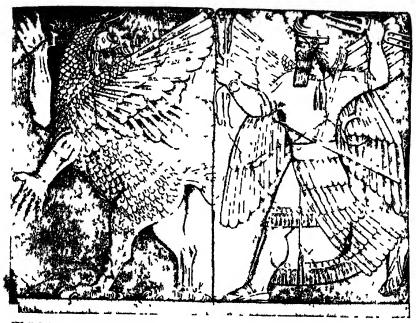

<sup>&</sup>lt;sup>1</sup> The meaning is uncertain. The sentence seems to convey that henceforth Meredach would be at home in all temples that were constructed in honour of the other gods.

<sup>&</sup>lt;sup>2</sup> Tablet IV., II. 1-26; cf. SAYOR, The Assyrian Story of the Creation, in the Records of the Parl 2nd series, pp. 136, 137, Jensen, Die Kosmologie der Babylonier, pp. 278-281, and Delitzsch, Phys Babylonieche Weltschöpfungsepos, pp. 103, 104.

<sup>&</sup>lt;sup>a</sup> Sayce was the first, I believe (The Assyrian Story of the Creation, in the Records of the Past. 2nd series, vol. i. p. 141, note 2), to cite, in connection with this mysterious order, the passire in which Berossus tells (Fr. Lenormant, Essai de Commentaire des fragments cosmogoniques de Bries, pp. 9, 12) how the gods created men from a little clay, moistened with the blood of the god Belos. Here there seems to be a fear lost the blood of Timmat, mingling with the mud, should produce a crep of monsters similar to those which the goddess had already created; the blood, if carried to the north, into the domain of the night, would there lose its creative power, or the monsters who might appling from it would at any rate remain strangers to the world of gods and men.

<sup>4 &</sup>quot;Literally, "he made his weapon known;" perhaps it would be better to interpret it, "and he made it known that the bow would henceforth be his distinctive weapon."

its equal, formidable; he installed himself therein, tied the four reins to the ide, and darted forth, pitiless, torrent-like, swift." He passed through the cried ranks of the monsters and penetrated as far as Tiâmat, and provoked here with his cries. "Thou hast rebelled against the sovereignty of the gods, thou hast plotted evil against them, and hast desired that my fathers should taste of thy malevolence; therefore thy host shall be reduced to slavery, thy weapons shall be torn from thee. Come, then, thou and I must give battle to one

BMC-MERODACH, ARMID WITH THE THUNDINGOLD, ICENTRALITY WITH THE TUMESTORS TRANS

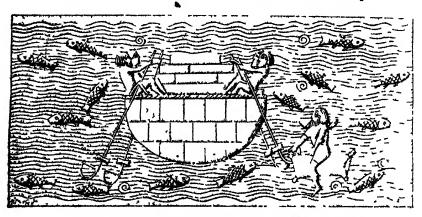

another!' Tiâmat, when she heard him, flew into a fury, she became mad with rage; then Tiâmat howled, she raised herself savagely to her full height, and planted her feet firmly on the earth. She pronounced an incantation, recited her formula, and called to her aid the gods of the combat, both them and their weapons. They drew near one to another, Tiâmat and Marduk, wisest of the gods; they flung themselves into the combat, they met one another in the struggle. Then the master unfolded his net and seized her; he caused the hurricane which waited behind him to pass in front of him, and, when Tiâmat opened her mouth to swallow him, he thrust the hurricane into it so that the monster could not close her jawa again. The mighty wind

filled her paunch, her breast swelled, her maw was split Marduk gave straight thrust with his lance, burst open the paunch, pierced the interior, torce the breast, then bound the monster and deprived her of life. When he had vanquished Tiamat, who had been their leader, her army was disbanded, he host was scattered, and the gods, her allies, who had marched beside her, trembled, were scared, and fled "1 He seized hold of them, and of Kingu their chief, and brought them bound in chains before the throne of his father

He had saved the gods from ruin, but this was the least part of his

A RUFA LADIN WITH STONES AND MANNED BY A CREW OF FOUR MIN 2

task; he had still to sweep out of space the huge carease which encumbered it and to separate its ill-assorted elements, and arrange them afresh for the benefit of the conquerors. "He returned to Trâmat whom he had bound in charks He placed his foot upon her, with his unerring knife he cut into the upper part of her; then he cut the blood-vessels, and caused the blood to be carried by the north wind to the hidden places. And the gods saw his face, they rejoiced, they gave themselves up to gladness, and sent him a present, a tribute of peace, then he recovered his calm, he contemplated the corpse, raised it and wrought marvels. He split it in two as one does a fish for drying; "s then he hung up one of the halves on high, which became the heavens; the other half he spread out under his feet to form the earth, and made the universe such as men have since known it. As in Egypt, the world was a kind of enclosed chamber

under the rule of particular gods.1 Near the foot of the mountain, the edge of the so-called boat curve abruptly outwards, and surround the earth with a continuous wall of uniform height having no opening.2 accumulated in the hollow thus formed, as in a ditch; it was a narrow and 'mysterious sea, an ocean stream, which no living man might cross save with permission from on high, and whose waves rigorously separated the domain of men from the regions reserved to the gods.3 The heavens rose above the "mountain of the world" like a boldly formed dome, the circumference of which rested on the top of the wall in the same way as the upper structures of a house test on its foundations.4 Merodach wrought it out of a hard resisting metal which shone brilliantly during the day in the rays of the sun, and at night appeared only as a dark blue surface, strewn irregularly with luminous stars. He left it quite solid in the southern regions, but tunnelled it in the north. by contriving within it a huge cavern which communicated with external space by means of two doors placed at the east and the west.5 The sun came forth each morning by the first of these doors; he mounted to the zenith, following the internal base of the cupola from cast to south; then he slowly descended again to the western door, and re-entered the tunnel in the firmament, where he spent the night.6 Merodach regulated the course of the whole universe on the movements of the sun. He instituted the year and divided it into twelve months. To each month he assigned three decans, each of whom exercised his

<sup>2</sup> FR. LENORMANT, Let Magie chez les Chaldeens, p. 143. The texts call this curved edge shapub of shubuk shamu, the embankment of the heavens, the rampart of earth, on which the edge of the heavens rested (Jensen, Die Kosmologie der Babylomer, pp. 37-42).

The texts frequently mention these ishid shami, foundations of the heavens (Jensey, Du Kemologie der Babylomer, pp. 9, 10); but instead of distinguishing them from the embankment of the heavens, shapul. shami, as Jensen does (Die Kosmologie der Babylomier, pp. 40, 41), I am inclined to believe that the two are identical (of Fr. Levormant, Le Magie chez les Chaldens, p. 143).
Jensen (Die Kosmologie, p. 10) has made a collection of the texts which speak of the interest.

• It is generally admitted that the Chaldmans believed that the sun passed over the world in the daytime, and underneath it during the night. The general resemblance of their theory of the universe to the Egyptian theory leads me to believe that they, no less than the Egyptians ( ) pp. 18, 19 of the present work), for a long time believed that the sun analymous revolved round the earth in a horizontal plane.

<sup>&</sup>lt;sup>1</sup> Cf. p. 128 of the present work. In regard to the hibrât arbai or nibiti, consult Jensen (the Kosmologie, pp. 163-170) We shall see later on (p. 596) the meaning attached to this term in the royal titles. It seems to me that the hibrât tarbai represent four houses, and is an astronomical astrological expression used in relation to the geographical knowledge or the history of the time.

<sup>&</sup>lt;sup>2</sup> The waters which surrounded the earth were called abzû, apsû, like the primordial waters with which they were sometimes contused (Fr. Lindmann, La Magie chez les Chaldeens, p. 143, Jinan, Die Kosmologie der Babylonier, pp 213-253; Sance, The Religion of the Ancient Babylonians, pp 116, 117, 374, 375)

Jensen (Die Kosmologie, p. 10) has made a collection of the texts which speak of the interest of the heavens (Kirib shami) and of their aspect. The expressions which have induced many Assyriologists to conclude that the heavens were divided into different parts subject to different got (Saves, The Religion of the Ancient Babyloniaus, pp. 189-191; A. Jeremas, Die Babyloniaus Assyrischen Vorsteilungen vom Leben nach dem Tode, pp 59, 60) may be explained without necessarily having recourse to this hypothesis; the "heaven of Anu," for instance, is an expression which ment of affirms Anu's sovereignty in the heavens, and is only a more elegant way of designating the heavens by the name of the god who rules them (Jensen, Die Kosmologie, pp. 11, 12). The gates of heaven are mentioned in the account of the Creation (Tablet V., 1, 9).

influence successively for a period of ten days; he then placed the procession of the days under the authority of Nibiru, in order that none of them should wander from his track and be lost. "He lighted the moon that she might rule the night, and made her a star of night that she might indicate the days: 2 'From month to month, without ceasing, shape thy disk, and at the beginning of the month kindle thyself in the evening, lighting up thy horns so as to make the heavens distinguishable; on the seventh day, show to me thy disk; and on the fifteenth, let thy two halves be full from month to month." He cleared a path for the planets, and four of them he entrusted to four gods; the fifth, our Jupiter, he reserved for himself, and appointed him to be shepherd of this celestial flock; in order that all the gods might have their image visible in the sky, he mapped out on the vault of heaven groups of stars which he allotted to them, and which seemed to men like representations of real or fabulous beings, fishes with the heads of rams, lions, bulls, goats and scorpions.

The heavens having been put in order, he set about peopling the earth, and the gods, who had so far passively and perhaps powerlessly watched him at his work, at length made up their minds to assist him. They covered the soil with verdure, and all collectively "made living beings of many kinds. The cattle of the fields, the wild beasts of the fields, the reptiles of the fields, they fashioned them and made of them creatures of life." According to one legend, these first animals had hardly left the hands of their creators, when, not being able to withstand the glare of the light, they fell dead one after the other. Then Merodach, seeing that the earth was again becoming desolate, and that fertility was of no use to any one, begged his father Ea to cut off his heat and mix clay with the blood which welled from the trunk, then from this clay to fashion new beasts and men, to whom the virtues of this divine blood would give the necessary strength to enable them to resist the air and light.

<sup>&</sup>lt;sup>1</sup> Nibiru, the ferryman, is our planet Jupiter (J18818, Der Kakkab Mischri der Antares, in the leatschrift für Assyriologie, vol. i. p. 265, noto 3; and Die Kosmologie der Babylomer, pp. 128, 129)

This obscure phrase seems to be explained, if we remember that the Chaldwan, like the Egyptian day, dated from the rising of one moon to the rising of the following moon; for in-tance, from six elock one evening to about six elock the next evening. The moon, the star of night, thus marks the appearance of each day and "indicates the days."

The word here translated by "disk" is literally the royal cap, decorated with horns, "Agu," which Sin, the moon-god, wears on his head. I have been obliged to translate the text rather freely, so as to make the meaning clear to the modern reader.

The arrangement of the heavens by Merodach is described at the end of the fourth and beginning of the fifth tablets (Jensen, Die Kosmologie der Babylonier, pp. 288-291; Saven, The Assyrian Story of the Creation, in the Creation, in the Creation of the Past, 2nd series, vol. i. pp. 112-141) The text, originally somewhat obscure, is so me the Creation of the animals and then of man is related on the sevent tablet, and on a tablet the creation of the animals and then of man is related on the sevent tablet, and on a tablet

The creation of the animals and then of man is related on the seventh tablet, and on a tablet the place of which, in the series, is still undetermined (G. Suith, The Chaldwan Account of Genesis, pp. 75-80; Sayon, The Religion of the Ancient Bubylonians, pp. 389, 390, and The Assyrian Story of the Creation, in the Records of the Past, 2nd series, vol. i. p. 145; Jensen, Die Kosmelogie, pp. 290-292).

Berossus had recorded this legend (Fr. Lendrant, Essai de Commentaire, pp. 8, 9, 12), which

At first they led a somewhat wretched existence, and "lived without rule after the manner of beasts. But, in the first year, appeared a monster endowed with \* human reason named Quances, who rose from out of the Erythraan sea, at the point where it borders Babylonia. He had the whole body of a fish, but above ·his fish's head he had another head which was that of a man, and human feet emerged from beneath his fish's tail; he had a human voice, and his image is preserved to this day. He passed the day in the midst of men without taking any food; he taught them the use of letters, sciences and arts of all kinds, the rules for the founding of cities, and the construction of temples, the principles of law and of surveying; he showed them how to sow and reap; he gave them all that contributes to the comforts of life. Since that time nothing excellent has been invented. At sunset this monster Oannes plunged back into the sea. and remained all night beneath the waves, for he was amphibious. He wrote a book on the origin of things and of civilization, which he gave to men." 1 These are a few of the fables which were current among the races of the Lower Euphrates with regard to the first beginnings of the universe. That they possessed many other legends of which we now know nothing is certain, but either they have perished for ever, or the works in which they were recorded still await discovery, it may be under the ruins of a palace or in the cup boards of some museum.3 They do not seem to have conceived the possibility of an absolute creation, by means of which the gods, or one of them, should have evolved out of nothing all that exists: the creation was for them merely the setting in motion of pre-existing elements, and the creator only an organizer of the various materials floating in chaos. Popular fancy

seems to be a clumsy combination of two traditions relating to the elecation of min (Sayer, The Religion of the Ancient Bubylonians, pp. 370, 371). In regard to Ea, and the manner in which he made men from clay, cf. Fr Lenguant, Les Origines de l'Histoire, vol. i. pp. 45-47; Junes, Du Kosmologie der Bubylonier, pp. 293-295; Sayer, The Religion of the Ancient Bubylonians, pp. 141, 142.

Different etymologies have been suggested for this name; the one most generally accepted is that proposed by Lenormant, according to which Cannes is the Hollenised form of Eakhan. I'u glanna, Ea the fish (Fi. Lenormant, Les Origines de l'Histoire, vol. i. p. 585). Jensen has drawn attention to the fact that the word khan or ghanna has not, up to the present, been found in any tax (Jinein, Die Kosnologie der Babylonier, pp. 322, 323); the name Cannes remains, therefore, so far, unexplained. Hommel has shown elsewhere (Die Semitischen Völker und Sprachen, vol. i. p. 488, note; that the allusion to the myth of Cannes, referred to some years ago by Sayce (Babylonian Literature, p. 25; cf. Records of the Past, 1st sories, vol. xi. p. 155), is not really to be found in the original text

<sup>&</sup>lt;sup>2</sup> Berossus, fragment ix., in Fr. Lenormant, Essai de Commentaire sur les fragments cosmogonique de Bérose, p. 182, et seq.

As to these variations in the traditions, see the observations made by Smith in The Chaldaan Account of Genesis, p. 101, et seq, and the very exhaustive chapter on Cosmogonies and Astro-theology in Saven's Religion of the Ancient Babylonians, p. 367, et seq.

Diodorus Siculus had already noticed this (ii. 30), or rather the writers of the Alexandriue period from whom he obtained his information had done so: την μέν τοῦ κόσμου φύσιν ἀἰδιόν φατιν είναι κοὶ μητε ἐξ ἀρχῆς γένεσιν ἐσχηκέναι, μήθ ὅστερον φθορὰν ἐπιδέξεσθαι. The Chaldson account of 11. creation, as given above on p. 537, et seq., of the present work, confirms the words of the Grack historian.

in different towns varied the names of the creators and the methods employed by them; as centuries passed on, a pile of vague, confused, and contradictory

traditions were amassed, no one of which was held to be quite satisfactory, though all found partisans to support them. Just as in Egypt, the theologians of local priesthoods endeavoured to classify them and bring them into a kind of harmony: many they rejected and others they recast in order to better reconcile their statements: they arranged them in systems, from which they undertook to unravel, under inspiration from on high, the true history of the universe. That which I have tried to set forth above is very ancient, if, as is said to be the case it was in existence two or even three thousand years before our era; but the versions of it which we possess were drawn up much later, perhaps not till about the VIIth century B.C.1 It had been accepted by the inhabitants of Babylon because it flattered their religious vanity by attributing the credit of having evolved order out of chaos to Merodach, the protector of their city.2 He it was whom the Assyrian scribes had raised to a position of honour at the court of the

last kings of Nineveh: 4 it was Merodach's name which Berossus inscribed at the beginning of his book, when he set about relating to the Greeks the origin of the world according to the Chaldeans, and the dawn of Babylonian civilization.

Like the Egyptian civilization, it had had its birth between the sea and

<sup>1</sup> The question as to whether the text was originally written in Sumerian or in the Semitic tongue has frequently been discussed (cide the bibliography in Bezold's Kurzgefusster Ucberblick über die Babylonisch-Assyrische Literatur, p. 175); the form in which we have it at present is not very old, and does not date much further back than the reign of Assurbanipal (SAYOR, The Religion of the Ancient Babylonians, p. 386, 393), if it is not even contemporary with that monarch (Bezold, Kurzgefusster Ucberblick, p. 175). According to Sayon (op. cit., pp. 373, 374, 377, 378) the first version would date back beyond the XX<sup>th</sup> century, to the reign of Khammurabi; according to Jensen (Die Kosmologie der Babylonier, pp. 319, 320), beyond the XXX<sup>th</sup> century before our era.

Sayee (The Religion of the Ancient Babylonians, pp. 378-391-393) thinks that the myth originated at Eridu, on the shores of the Persian Gulf, and afterwards received its present form at Babylon, where the local schools of theology adapted it to the god Merodach.

Drawn by Faucher-Gudin, from an Assyrian bas-relief from Nimrud (LAYAND, The Monuments

of Nineveh, 2nd series, pl. 6, No. 1).

The tablets in what it is preserved for us come partly from the library of Assurbanipal at Nineveh, partly from that of the temple of Nebo at Borsippa; these latter are more recent than the others, and seem to have been written during the period of the Persian supremacy (SAYCE, The Assyrian Story of the Creation, in the Records of the Past, 2nd series, vol. i. p. 142, note 3).

the dry land on a low, marshy, alluvial soil, flooded annually by the rive; which traverse it, devastated at long intervals by tidal waves of extraordinary violence.1 The Euphrates and the Tigris cannot be regarded as mysterious streams like the Nile, whose source so long defied exploration that people were tempted to place it beyond the regions inhabited by man,2 The former rise in Armenia, on the slopes of the Niphates, one of the chains of mountains which lie between the Black Sea and Mesopotamia, and the only range which at certain points reaches the line of eternal snow. At first they flow parallel to one another, the Euphrates from east to west as far as Malatiyeh, the Tigris from the west "towards the east in the direction of Assyria." Beyond Malatiyeh, the Euphrates bends abruptly to the south-west and makes its way across the Taurus as though desirous of reaching the Medi terranean by the shortest route,8 but it soon alters its intention, and makes for the south-east in search of the Persian Gulf. The Tigris runs in an oblique direction towards the south from the point where the mountains open out, and gradually approaches the Euphrates. Near Bagdad the two rivers are only a few leagues apart. However, they do not yet blend their waters; after proceeding side by side for some twenty or thirty miles, they again separate and only finally unite at a point some eighty leagues lower down. At the beginning of our geological period their course was not such a long one. The sea then penetrated as far as lat. 33°, and was only arrested by the last undulations of the great plateau of secondary formation, which descend from the mountain group of Armenia: the two rivers entered the sea at a distance of about twenty leagues apart, falling into a gulf bounded on the east by the last spurs of the mountains of Iran, on the west by the sandy heights which border the margin of the Arabian Desert.4 They filled up this gulf with their alluvial deposit. aided by the Adhem, the Diyaleh, the Kerkha, the Karun, and other rivers. which at the end of long independent courses became tributaries of the Tigus The present beds of the two rivers, connected by numerous canals, at length meet near the village of Kornah and form one single river, the Shatt-el-Auab.

A local legend preserved by Ainsworth, in his Researches in Assyria, Dabylonia, and Chaldau, attributes the destruction of the ancient Bussorah to a sories of mundations and tempests.

<sup>&</sup>lt;sup>2</sup> For a detailed description of the course of the Tigris and Euphrates, see Édisée Rialus, Geographa universelle, vol ix p. 377, et seq. The Euphrates was called in Assyrian Purattu, the river of liver, "the great water," being an adaptation of the Sumerian Pura-nunu; the Tigris was Diglat or Idglit (Fr. Dilitz-un, Wolug das Panadiest pp. 169-173). The classic etymology which attributed to this last name the meaning of arrow, so called in consequence of the producious rapidity of the current (Strado, xi. 14, 8; Pliny, Hist. Nat., vi. 127; Quintus Currics, iv. 9, 6), is of Persian origin.

Those are the precise words used by Pomponius Mela, De Situ Orbis, iii. 8: "Occidentam petit, ni Taurus obstet, in nostra maria venturus."

<sup>&</sup>lt;sup>4</sup> This fact has been established by Ross and Lynch in two articles in the Journal of the Royal Geographical Society, vol. ix. pp. 446, 472. The Chaldmans and Assyrians called the gulf into which the two rivers debouched, Nar Marratum, or "salt river," a name which they extended to the Chaldman Sea, i.e. to the whole Persian Gulf (Fa. Delitzsch, Wo lag das Paradies? pp. 180-182).

which carries their waters to the sea. The mud with which they are charged is deposited when it reaches their mouth, and accumulates rapidly; it is said that the coast advances about a mile every seventy years.1 In its upper reaches the Euphrates collects a number of small affluents, the most important of which, the Kara-Su, has often been confounded with it.2 Near the middle of its course, the Sadjur on the right bank carries into it the waters of the Taurus and the Amanus,3 on the left bank the Balikh and the Khabur 4 contribute those of the Karadja-Dagh; from the mouth of the Khabur to the sea the Euphrates receives no further affluent. The Tigris is fed on the left by the Bitlis-Khai, the two Zabs, the Adhem, and the Diyâleh. The Euphrates is navigable from Sumeisat, the Tigris from Mossul,0 both of them almost as soon as they leave the mountains. They are subject to annual floods, which occur when the winter snow melts on the higher ranges of Armenia. The Tigris, which rises from the southern slope of the Niphates and has the more direct course, is the first to overflow its banks, which it does at the beginning of March, and reaches its greatest height about the 10th or 12th of May. The Euphrates rises in the middle of March, and does not attain its highest level till the close of May. From June onwards it falls with increasing rapidity; by September all the water which has not been absorbed by the soil has returned to the river-bed. The inundation does not possess the same importance

4 In Assyrian, Sagura, Saguri (Schraden, K. dinschriften und Geschichtsforschung, p. 220)

'The Kentrites of Xenophon (Analysis, iv. 2, 1).

In Assyrian, Turnat, the Tornadotus of Pliny (Hist. Nat., vi. 132), already named Δαίλαs by the

1 de ek geographers (Kiepent, lahrbu h der Alten Geographie, p. 137, note 1).

<sup>1</sup> Loftus (Travels and Researches in Chaldra and Susiana, p. 282) estimated, about the middle of the present century, the progress of alluvial deposit at about one English mile in every seventy years; H. Rawlinson (Journal of the Royal Geographical Society, vol XXVII, p. 186) considers that the progress must have been more considerable in ance at times, and estimates it at an English mile in thirty years. Kiepert (Lehrbuch der Alten Geographic, p. 138, note 2) thinks, taking the above estimate as a basis, that in the sixth century before our era the tone-shore came from about ten to twelve German miles (47 to 56 English) higher up than the present fore-shore. G. Rawlinson (The Fire Great Monarchies, 2nd edit., vol. i. pp. 4, 5) estimates on his part that between the thirtieth and twentieth centuries i.e., a period in which he places the establishment of the first Chaldram Empire, the fore-shore was more than 120 miles above the mouth of Shatt-el-Anab, to the north of the present village of konada.

2 This is the Arzania of the cuncitorm texts, a name which, in its Hellensed form of Arsmires, has been transferred by the classical geographers and historians to the other arm of the Euphrates, the Murad-Su (Fa, Delitzs ii), Wo lag das Paradies i pp. 182, 183).

<sup>4</sup> The Balikh is called in Assyrian Balikhi, Βάλιχα, Βίλοχος, Behos (Aumianes Mais Leenes, annie. 5, 7). The Khabur has not changed its name since ancient times; it is fed on the right by the Khamaish (Fr. Delatzsen, Wolag das Paradies' p. 183). The Greek form of the name is Χαβωρας, 'Αβόρρας.

The upper Zab, the Lycos of the Greeks, is in Assyrian Zabu Elu; the lower, the Kipros, is the Zabu Shupalu. The name "Zabatos" is found in Herodotus (v. 52), applied to the two rivers (Killelur, Lehrbuch der Alten Geographie, p. 136, note 3).

The Radanu of the Assyrians, the Physicos of Xenophon (Anabasis, n. t. 25): the name is still preserved in that of one of the towns watered by this river, Radhan (Fr. Delitzsen, Wo lag das Paradies? p. 185).

CHENEY, The Expedition of the Survey of the rivers Exphrates and Tigris, vol. i. pp. 11. to; at was at Samosata that the Emperor Julian had part of the fleet built which he took with ham or his disastrous expedition against the Persians. The Tigris is navigable from Durbekir during the whole pened of inundation (Lorres, Travels and Researches in Chaldwa and Susiana, p. 3)

for the regions covered by it, that the rise of the Nile does for Egypt. It fact, it does more harm than good, and the river-side population have always worked hard to protect themselves from it and to keep it away from their lands rather than facilitate its access to them; they regard it as a sort of necessary evil to which they resign themselves, while trying to minimize its effects.

The first races to colonize this country of rivers, or at any rate the first of which we can find traces, seem to have belonged to three different types. The most important were the Semites, who spoke a dialect akin to Aramaic, Hebrew, and Phenician. It was for a long time supposed that they came down from the north, and traces of their occupation have been pointed out in Armenia in the vicinity of Ararat, or halfway down the course of the Tigris, at the foot of the Gordyaean mountains.<sup>2</sup> It has recently been suggested that we ought rather to seek for their place of origin in Southern Arabia, and this view is gaining ground an ong the learned.<sup>3</sup> Side by side with these Semites, the monuments give evidence of a race of ill-defined character, which some have sought, without much success, to connect with the tribes of the Ural 4 or Altai; these people are for the present provisionally called Sumerians.<sup>5</sup> They came, it would appear, from some northern country; they brought with them from their original home a curious system of writing, which, modified, transformed, and adopted by ten different nations, has preserved for us all that we know in

¹ The traveller Olivier noticed this, and writes as follows: "The land there is rather less fertile [than in Egypt], because it does not receive the alluvial deposits of the rivers with the same regularity as that of the Delta. It is necessary to irrigate it in order to render it productive, and to protect it sedulously from the inundations which are too destructive in their action and too irregular" (\*loyage dans l'Empire Othoman, l'I gypte et la Perse, An 12, vol. ii. p. 423).

This is the opinion expressed by Renan (Histoire generale des langues semitiques, 2nd edit, p. 29), where a reference will be found to the authors who have adopted this view: since Renan. J. Guidi (Della Sede primitera dei Papoli Semitici, in the Memorie della R. Accademia dei Lincei, 3nd series, vol. iii.), Fr. Lenormant (Les Origines de l'Histoire, vol. ii. p. 196), Homma I (La Patre originaire des Sémites, in the Atti del IV. Congresso Internazionale degli Orientalisti, pp. 217, 218: Die Namen der Sängethiere, p. 496, et seq.; Die Semitischen Völker und Sprachen, pp. 7, 11, 12, 59 63, 95, et seq.) have written in support of the northern origin of the Semites.

<sup>\*</sup> SAYCI, Assyrian Grammar for Comparative Purposes, 1st edit, p. 13; SPRENGER, Leben and Lehre des Muhammad, vol. i. p. 241, et seq.; and Alle Geographie Arabiens, pp. 293-295, especially the now on p. 294; E. SCHRADER, Die Abstammung der Chaldreer und die Ursitze der Semilen, in the Zeischrift der D. M. Gesellchaft, vol. xxvii. p. 397, et soq.; Tiele, Bahylonisch-Assyrische Geschichte, pp. 106, 107; Winchler, Geschichte Israels, vol. i. p. 136.

<sup>&</sup>lt;sup>4</sup> Fr. Lenormant has energetically defended this hypothesis in the majority of his works: it is set forth at some length in his work on La Langue primitive de la Chaldee. Hommel, on the other hand, maintains and strives to demonstrate scientifically the relationship of the non-Semitic tongue with Turkish (Geschichte Babyloniens und Assyriens, pp. 125, 214, et seq.).

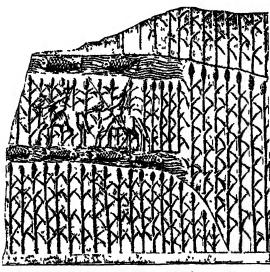

The name Accadian, proposed by H. Rawlinson and by Hincks, and adopted by Sayce, seems to have given way to Sumerian, the title put forward by Oppert. The existence of the Sumerian of Sumero-Accadian has been contested by Halevy in a number of noteworthy works: Recherclus critiques sur l'Origine de la Civilisation Babylonienne, 8vo, 1876 (which appeared in the Journal Asiatique, 1874-76); Étude sur les documents philologiques assyriens, 1878; Les Nouvelles Inscriptions chaldennes et la question de Sumer et d'Arcad, 1832; Observations sur les noms de nombre Inscriptions chaldennes et la question de Sumer et d'Arcad, 1832; Observations eur les noms de nombre Inscriptions (1883 (articles collected from the Metanyes de Critique et d'Histoire relatifs aux peuples sémitiques, 8vo, Paris, 1884). Documents réligieux de l'Assyrie et de la Babylonie (8vo, Paris, 1888); Aperçu Grammatical de

regard to the majority of the empires which rose and fell in Western Asia before the Persian conquest. Semite or Sumerian, it is still doubtful which preceded the other at the mouths of the Euphrates. The Sumerians, who were for a time all-powerful in the centuries before the dawn of history, had already mingled closely with the Semites when we first hear of them. Their language gave way to the Semitic, and tended gradually to become a language of ceremony and ritual, which was at last learnt less for everyday use, than for the drawing up of certain royal inscriptions, or for the interpretation of very ancient texts of a legal or sacred character Their religion became as-imilated to the religion, and their gods identified with the gods, of the Semites. The process of fusion commenced at such an early date, that nothing has really come down to us from the time when the two races were strangers to each other. We are, therefore, unable to say with certainty how much each borrowed from the other, what each gave, or relinquished of its individual instincts We must take and judge them as they come before us, as and customs. forming one single nation, imbued with the same ideas, influenced in all their acts by the same civilization, and possessed of such strongly marked characteristics that only in the last days of their existence do we find any appreciable change. In the course of the ages they had to submit to the invasions and domination of some dozen different races, of whom some-Assyrians and Chaldreans—were descended from a Semitic stock, while the others—Elamite, Cossanns, Persians, Macedonians, and Parthians-either were not connected with them by any tie of blood, or traced their origin in some distant manner to the Sumerian branch. They got quickly rid of a portion of these superfluous elements, and absorbed or assimilated the rest; like the Egyptians, they see have been one of those races which, once established, were meana to of ever undergoing modification, and remained unchanged from one end of their existence to the other.

Their country must have presented at the beginning very much the same aspect of disorder and neglect which it offers to modern eyes. It was a flat

PAllographic Assyro-Babylonienne (in the Actes du 6th fave appeared in the interval. M. Halevy pp. 535-568), and in a number of other articles which have appeared in the interval. M. Halevy wishes to recognize in the so-called Sumurian documents the Semitic tongue of the ordinary wishes to recognize in the so-called Sumurian documents the Semitic tongue of the ordinary wishes to recognize in the priestly syllabic character subject to certain rules; this would be increptions, but written in a priestly syllabic character subject to certain rules; this would be married and expression of ruther an allogram. M. Halevy won over Messis. Guyard and Pognon practically a cryptogram, or rather an allogram. M. Halevy won over Messis. Guyard and Pognon in France, Delitzsch and a part of the Delitzsch school in Germany, to his view of the facts. The interversy, which has been carried on on both subs with a somewhat unnecessary vehous acceptable agus; it has been simplified quite recently by Delitzsch's return to the Sumerian theory (Probabling of the Schriftssystème, 1897. Without it viewing the arguments in detail, and Probabling full justice to the protound learning displayed by M. Halevy, I feel forced to de learning the full justice to the protound learning displayed by M. Halevy, I feel forced to de learning the first this critical in these matters, but that they do not warrant us in rejecting as untonable the hypothesis, to difference in idiom "(Babylonisch-Assyrische Geschichte, p. 67).

interminable moorland stretching away to the horizon, there to begin again seemingly more limitless than ever, with no rise or fall in the ground to break the dull monotony; clumps of palm trees and slender mimosas, intersected by lines of water gleaming in the distance, then long patches of wormwood and mallow, endless vistas of burnt-up plain, more palms and more mimosas, make up the picture of the land, whose uniform soil consists of rich, stiff, heavy clay, split up by the heat of the sun into a network of deep narrow fissures, from which the

GIGANIIC CHALDMAN RFEDS.

shrubs and wild herbs shoot forth each year in spring-time By an almost imperceptable slope it falls gently away from north to south towards the Persian Gulf, from east to west towards the Arabian plateau. The Euphrates flows through it with unstable and changing course, between shifting binks which it shapes and re shapes from season to season The slightest impulse of its current encroaches on them, breaks through them, and makes openings for streamlets, the majority

of which are clogged up and obliterated by the washing away of their margins, almost as rapidly as they are formed. Others grow wider and longer, and, sending out branches, are transformed into permanent canals or regular rivers, navigable at certain seasons. They meet on the left bank detached offshoots of the Tigris, and after wandering capriciously in the space between the two rivers, at last rejoin their parent stream: such are the Shatt-el-Hai and the Shatt-en-Nil. The overflowing waters on the right bank, owing to the fall of the land, run towards the low limestone hills which shut in the basin of the Euphrates in the direction of the desert; they are arrested at the foot of these hills, and are diverted on to the low-lying ground, where they lose themselves in the morasses, or hollow out a series of lakes along its borders, the largest of which, Bahr-i-Nedjif, is shut in on three sides by steep cliffs, and rises or falls periodically with the floods. A broad canal, which takes its origin in the direction of Hit at the beginning of the alluvial plain, hears with it the overflow, and, skirting the lowest terraces of the Arabian thain, runs almost

<sup>&</sup>lt;sup>1</sup> Drawn by Faucher-Gudin, from an Assyrian bas-relief of the palace of Nimrûd (LAYAED, Tho Monuments of Nineveh. 2nd series, pl. xxvir.).

parallel to the Euphrates. In proportion as the canal proceeds southward the ground sinks still lower, and becomes saturated with the overflowing waters, until, the banks gradually disappearing, the whole neighbourhood is converted into a morass. The Euphrates and its branches do not at all times succeed in reaching the sea: 2 they are lost for the most part in vast lagoons to which the tide comes up, and in its ebb bears their waters away with it. Reeds grow there luxuriantly in enormous beds, and reach sometimes a height of from

THE MARSHES ABOUT THE CONTLUENCE OF THE MICKING AND IL-11

thuteen to sixteen feet, banks of black and putted mud emerge amidst the given graph, and give off deadly emanations. Winter is scarcely felt here snow is unknown, hoar-frost is raiely seen, but sometimes in the morning a thin film of ice covers the maishes, to disappear under the first rays of the sun. For six weeks in November and December there is much rain; after this period there are only occasional showers, occurring at longer and longer

<sup>1</sup> the arm of the Euphrates which skirts the chain in this way is called Pallacopis or, according to others, Pallacotias (Apprais, Bellow, lib in 153, Directs edition) this taim, if it is authentic, would allow us to identify the causal mentioned by classical writers with the New Pallaket of the batylonian inscriptions (Deleaters, Les Praisaux Hydrauliques en Babylonie, p. 17)

Classical writers monition this fact more than once, for instance Arran (Inclusio, vii 7) in the inf Alexander, and Polybius (in 10) in that of his successors. Pluny (Hit Nat, vi 27) attribut site disappearance of the river to irrigation works carried out by the inhabitants of Uruk, 'In the life Euphratem preclusere Orchem, et accole agrees irrigantes, account per Tigram defeatured in

<sup>4</sup> Dr. wn by Faucher-Gudin, from a sketch by J Dilliant 4 Suze Issi-Iss Jun d I utles, p 93

<sup>&#</sup>x27;I offus (Travels and Researches in Chaldra, pp 73, 71, 146 117) attributes the lew in it in the internature during the inter to the wind blowing over a soil impregnated with subject with the save "in a band of impregnated with subject."

intervals until May, when they entirely cease, and the summer sets in, to last until the following November. There are almost six continuous months of depressing and moist heat, which overcomes both men and animals and makes them incapable of any constant effort. Sometimes a south or east wind suddenly arises, and bearing with it across the fields and canals whirlwinds of sand, burns up in its passage the little verdure which the sun had spared Swarms of locusts follow in its train, and complete the work of devastation. A sound as of distant rain is at first heard, increasing in intensity as the creatures approach. Soon their thickly concentrated battalions fill the heavens on all sides, thying with slow and uniform motion at a great height. They at length alight, cover everything, devour everything, and, propagating their species, die within a few days: nothing, not a blade of vegetation, remains on the region where they alighted.

Notwithstanding these drawbacks, the country was not lacking in resources. The soil was almost as fertile as the loam of Egypt, and, like the latter, rewarded a hundredfold the labour of the inhabitants.3 Among the wild herbage which spreads over the country in the spring, and clothes it for a brief season with flowers, it was found that some plants, with a little culture, could be rendered useful to men and beasts.4 There were ten or twelve different species of pulse to choose from-beans, lentils, chick-peas, vetches, kidney beans, onions. cucumbers, egg-plants, "gombo," and pumpkins. From the seed of the sesame an oil was expressed which served for food, while the castor-oil plant furnished that required for lighting. The safflower and henna supplied the women with dyes for the stuffs which they manufactured from hemp and flax. Aquatic plants were more numerous than on the banks of the Nile, but they did not occupy such an important place among food-stuffs. The "lily bread ' of the Pharaohs would have seemed meagre fare to people accustomed from early times to wheaten bread. Wheat and barley are considered to be indigenous on the plains of the Euphrates; it was supposed to be here that they

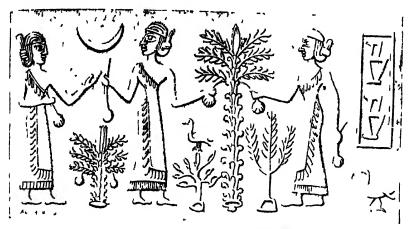

<sup>&</sup>lt;sup>1</sup> Loftus (Tracels and Researches in Chalden, p. 9, note) says that he himself had witnessed in the neighbourhood of Bagdad during the daytime birds perched on the palm trees in an exhausted condition, and panting with open beaks. The inhabitants of Bagdad during the summer passes their nights on the housetops, and the hours of day in passages within, expressly constructed to protect their from the heat (Olivier, Voyage dans l'Empire Othoman, vol. ii. pp. 381, 382, 392, 393).

As to the locusts, see Olivier (op. cit., vol. ii. pp. 424, 425; iii. 411), who was on two occasions a witness of their invasions. It is not, properly speaking, a locust, but a cricket, the Accident peregrinum, frequently met with in Egypt, Syria, and Arabia.

Divier, who was a physician and naturalist, and had visited Egypt as well as Mesopotamia. thought that Babylonia was somewhat less fortile than Egypt (op. cit., vol. ii. p. 423). Loftus, who was neither, and had not visited Egypt, declares, on the contrary, that the banks of the Euphrate are no less productive than those of the Nile (Tracels and Researches in Chaldwa, p. 14).

<sup>&</sup>lt;sup>4</sup> The flora of Mesopotamis is described briefly by Herrer, Chaldes, pp. 180-182; cf. Ohvier account of it (op. cit., vol. ii. pp. 416, et seq., and 443, et seq.).

e first cultivated in Western Asia, and that they spread from hence to Sylia Lypt, and the whole of Europe. The soil there is so favourable to the growth, cercals, that it yields usually two hundredfold, and in places of exceptional fertility three hundredfold. The leaves of the wheat and barley have a width of four digits. As for the millet and sesame, which in altitude are as great as trees, I will not state their height, although I know it from experience, being convinced that those who have not lived in Babylonia would regard my

THE GATHERING OF THE STATULE OF THE MALE PALM TRILL

statement with incredulity." 8 Herodotus in his enthusiasm exaggerated the matter, or perhaps, as a general rule, he selected as examples the exceptional instances which had been mentioned to him: at present wheat and barley give a yield to the husbandman of some thirty or forty fold. The date-palm meets all the other needs of the population; they make from it a kind of bread, wine, vinegar, honey, cakes, and numerous kinds of stuffs; the smiths use the stones of its fruit for charcoal; these same stones, broken and micerated,

I dive traditions collected by Berossus confirm this (fingm 1 in Fr I evenual, I set I commenter sur les fragments cosmogeniques de Berose, p. 6), and the testimony of Olivier is usually cited is falling in with that of the Chaldman writer. Obvier is considered, indeed, to have discovered wild creak in Mesopotanias. He only says, however (Foyaqe dans l'Empire Otheman, vol 11 p. 100), that on the backs of the Euphrates above Anali he had met with "when balle all it is left in a kind of 1 win from the context it clearly follows that these were plants which had revited to a wild state in stances of which have been observed several times in Mesopotania. A de Cuidolle alim tel the Mesopotamian origin of the various species of wheat and bailey (Origine des plantes edit is pp. 354, 361; of. Babylonian and Oriental Record, vol 11 p. 200)

The last (Historia, Personant viii. 7) and that of the geographer Strabs (xvi 1 742 vieu, Vogage and l'Empire Othoman, etc., vol. 11. p. 100

are given as a fattening food to cattle and sheep." Such a useful tree was tended with a loving care, the vicissitudes in its growth were observed, and its reproduction was facilitated by the process of shaking the flowers of the national palm over those of the female: the gods themselves had taught this artificant, men, and they were frequently represented with a bunch of flowers in the right hand, in the attitude assumed by a peasant in fertilizing a palm tree. Fruit trees were everywhere mingled with ornamental trees—the fig, apple, almond, walnut, apricot, pistachio, vine, with the plane tree, cypress, tamarisk, and acacia; in the prosperous period of the country the plain of the Euphrates was a great orchard which extended uninterruptedly from the plateau of Mesopotamia to the shores of the Persian Gulf.

The flora would not have been so abundant if the fauna had been sufficient for the supply of a large population. A considerable proportion of the tribes on the Lower Euphrates lived for a long time on fish only. They consumed them either fresh, salted, or smoked: they dried them in the sun, crushed them in a mortar, strained the pulp through linen, and worked it up into a kind of bread or into cakes. The barbel and carp attained a great size in these sluggish waters, and if the Chaldwans, like the Arabs who have succeeded them in these regions, clearly preferred these fish above others, they did not despise at the same time such less delicate species as the cel, murena, silurus, and even that singular gurnard whose habits are an object of wonder to our naturalists. This fish spends its existence usually in the water, but a life in the open an has no terrors for it: it leaps out on the bank, climbs trees without much difficulty, finds a congenial habitat on the banks of mud exposed by the falling tide, and basks there in the sun, prepared to vanish in the ooze in the twinkling of an eye if some approaching bird should catch sight of it

<sup>&</sup>lt;sup>1</sup> STRABO, NYL i 14: cf. THEOPHRASTUS, Hist. Plant., ii 2; PLINY, Hist. Nat, Niii. 4. Even to this day the inhabitants use the pilm tree and its various parts in a similar way (A. Ru u, Voque an raines de Babylone, p. 154, French translation by Raimond, formerly French Consul at Biglad, wi has added to the information supplied by the English author).

<sup>&</sup>lt;sup>2</sup> E. B Tylor was the first to put forward the view that the Chaldmans were acquainted with the artificial fortilization of the palm tree from the earliest times (The Fertilization of Inte-Palms, in the Academy, June 8, 1886, p. 396, and in Nature, 1890, p. 283; The Winged Figures of the Assyrma and other Annual Monuments, in the Proceedings, vol. xii, 1890, pp. 383, 393; cf. Bonavia, Did the Assyrma know the Sexes of the Inte-Pulme? in the Babylonian and Oriental Record, vol. iv. pp. 64-69, 89-9a)

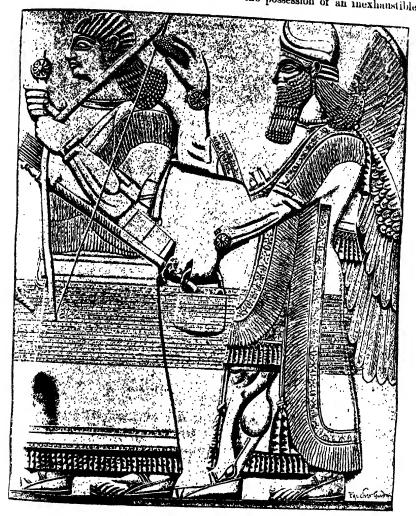

<sup>&</sup>lt;sup>3</sup> This was still its condition when the Roman legions, in their last campaign under Julian, my (1) it, in the IV<sup>th</sup> century of our era: "In his regionibus agri sunt plures consitivines varioque pome tangemere, ubi oriri arbores adsuctes palmarum, per spatia ampla adusque Mesenem et mare pertinagnum, instar ingentium nemorum" (Ammanus Marc., lib xxiv 3, 12).

<sup>4</sup> Hofer has collected all the information we possess on the existing fauna of the country of P. Tigns and Euphrates (Chaldee, pp. 182, 186), and his work is the only one we have upon the subj. As to the animals represented and named on the monuments, see Fr. Delitzsen, Assyrische Stud. I. Assyrische Thiermann; and W. Houghton, On the Mammalia of the Assyrian Sculptures, in Transactions of the Bibl. Arch. Soc., vol. v. pp. 33-64, 319-388.

With regard to the wild hog or wild boar, and the names of those animals in the unif i inscriptions, see Itsis, Das Wildschuein in den Assyrisch Babylonischen Inschrift i n il leitschrift für 188/1100que, vol 1 pp 306-312

2 Drawn by I tucher Gudin, from an Asserman bestelled from Kouyunjik (Layand Th. M. at a for Minerch, 2nd series, bl. >>)

The horse is denoted in the Assyrian texts by a group of signs which me in 'the as it List" and the camel by other signs in which the character for "as" also appears. The meth I rendering these two names show that the subjects of them were unknown in the earliest times a specific for their introduction is uncertain. A charact drawn by hoises appears on the "State of the Vultures". Camels are mentioned among the booty obtained from the Bedomin of the description.

For in ideal picture of what may have been the beginnings of that envilvation, see Diffit Die Entstehung des altest n Shrijtsystems, p 211, et seq. I will not enter into the question a whether it did or did not come by sea to the mouths of the Luphiates and Tigits. The legand it it is h-god Oannes (Berosses, frag. 1), which seems to concern some indication on the subject ( † 1 Lenormant, Lesas sur un document mathematique, pp. 123-135, and Essas de Commentaire, pp. 2-0

here divided into two groups: one in the south, in the neighbourhood of the sea; the other in a northern direction, in the region where the Euphrates and Figris are separated from each other by merely a narrow strip of land. The authern group consisted of seven, of which Eridu lay nearest to the coast. This town stood on the left bank of the Euphrates, at a point which is now, called Abu-Shahrein.2 A little to the west, on the opposite bank, but at some

THE SOW AND HER LITTER MAKING THEIR WAY THROUGH A BED OF REEDS,3

distance from the stream, the mound of Mugheir marks the site of Uru, the most important, if not the oldest, of the southern cities.4 Lagash occupied the

where this idea is developed for the first time), is merely a mythological tradition, from which it

would be wrong a deduce historical conclusions (Tiele, Babylonisch-Assyrische Geschichte, p. 101).

The majorit of the commonly accepted identifications of the ancient names with the modern sites were due to the first Assyriologists—Hincks, Oppert, H. Rawlinson. As these identifications are scattered among books not easily procured, I contine my references to works in which Assyriologists of the second generation have collected them, and completed them by further research, especially to that of Fr. Delitzscu, Wo lag das Paradies? and to that of Hommel, Geschichte Balgloniens und Assyriens, pp. 195-234, which contain such information in a convenient form.

<sup>2</sup> Eridu, shortened into Ritu (Smith, Early History of Babylonia, in the Transactions of the Bibl. Arch. Soc., vol. i. p. 29), possibly the Rata of Ptolemy (Orrew, Expedition on Mesopotamic, vol. i p. 269), in the non-Semitic language Nun and Eridugga (FR. Delitzsen, Wo lag das Paradies? PP. 227-238). Its ruins have been described by Taylor (Notes on Abu-Shahrein and Tel-el-Lahm, in the Journal of the Royal Asiatic Soc., vol. xiv. p. 412, ct seq.).

Drawn by Faucher-Gudin, from a bas-relief from Kouyunjik (LAYARD, The Monuments of Nimerch, 2nd series, pl. 12, No. 1).

' Urum, Uru, which signifies "the town" par excellence (Fn. Delitzscu, Wo lag das Paradies! Pp. 226, 227), is possibly the Ur of the Chaldees in the Bible (Genesis xi. 28; Nehemiah ix. 7), but this identification is not quite certain, and many authorities hesitate to adopt it (HALEY), Melanges d'Epigraphie et d'Archéologie sémitiques, pp. 72-86), in spite of the authority of Rawlinson. Opposit, who at first read the name Kalunu, to find in it the Caluch of Scripture (Expedicin Mes potamie, vol. i. p. 258), finally accepted the opinion of Rawlinson (Inscriptions de Dour-Sarlayan, pp. 3, 9, note), also Schrader Die Keilinschriften und das Alte Testament, 1st edit., pp. 383, 381.

name Mugheir (more correctly Muquyyer), which it bears to-day, signifies "the bitumineus," bitumen, and is explained by the employment of bitumen as cement in some of the stre tures found here.

site of the modern Telloh to the north of Eridu, not far from the Shatt-el-II<sub>di</sub>, 1 Nisin<sup>2</sup> and Mar,<sup>3</sup> Larsam<sup>4</sup> and Uruk,<sup>5</sup> occupied positions at short distance a from each other on the marshy ground which extends between the Euphrate and the Shatt-en-Nîl. The inscriptions mention here and there other less important places, of which the ruins have not yet been discovered—Zirlah and Shurippak, places of embarkation at the mouth of the Euphrates for the passage of the Persian Gulf; and the island of Dilmun, situated some forty leagues to the south in the centre of the Salt Sea,—"Nar-Marratum." The northern group comprised Nipur, the "incomparable;" Barsip, on the branch which flows parallel to the Euphrates and falls into the Bahr-f-Nedjîf; Babylon, the "gate of the god," the "residence of life," the only metropolis of the Euphrates region of which posterity never lost a reminiscence; Kishu, 10 Kuta, 11 Agade, 12 and lastly the two Sipparas, 13 that of Shamash and that of Anunit. The earliest

<sup>1</sup> The name was read at first Sirtella, Sirpurla, Sirgulla: the form Lagash was discovered by Pinches (Guide to the Konyanjik Gallery, p. 7; and Lagash, not Zirgulla, Zirpourla, Sirpulla, in the Bubylonian and Oriental Record, vol. iii. p. 24).

<sup>2</sup> Nisin, Nishin or Ishin (Bezold, in the Zeitschrift für Assyriologie, vol. iv. p. 430), identified by G. Smith (Early History of Babylonia, in the Transactions of the Bibl. Arch. Soc., vol. i pp. 29, 30) with Karrak, is Djokha (Peters, Notes on Delitzsch's Geschichte in the Zeitschrift für Assyriologie, vol. vi. p. 337), in the land Gishbin (Schill, Notes d'epigraphic dans le Reoneil, t. xviii.

Mir is the present Tell-Edo (FR. Dringsen, Wolag das Paradies? p. 223).

4 Larsam was called in Sumerian Babbar unn, "the dwelling of the sun"; it is the Senkereh of to-day.

' Uruk was called Unug, Unu, in the ancient language; it became later, in the Bible, Each Genesis x. 10, 'Oρεχ, LXX.'), Araka and Orchoe among the Greeks (Strabo, xvi. 1; Proflux, v. 20). It is now Worka, of which the ruins have been described by Loprus, Travels and Researches in Chaldra and Susiana, p. 159, et seq.

\* Zirlaba, Zarilab, is in the non-Semitic language Kulunu, "dwelling of the seed;" this fact allows us to identify it with the Calneh or Kalanneh of Genesis x. 10, in opposition to Talmudical radition, according to which it would be the same as Nipur, Niffor (Neubaura, Geographic du Talmud, p. 346, note 6). The identification of Zirlab-Kulunu with Zerghul (Opper, Lipudition of Metopotamic, vol. i. pp. 269, 270) is no longer generally accepted (Tiele, Babylohisch-Asgrische Ceschichte, p. 86). The texts bearing on Shurippak, Shuruppak, were collected by G. Smith (The Eleventh Tablet of the Islandar Lagends, in the Transactions of the Bibl. Arch. Soc., vol. in a p. 589); they do not furnish means for identifying the site of the city.

The site of Dilmun is fixed by Opport (Le Siège primitif des Assyriens et des Phenicaux, in the Journal Asiatique, 1880, vol. xv. pp. 90-92, 349, 350) and by Rawlinson (in the Journal of the Royal Asiat. Soc., 1880, vol. xii. p. 201, et seq.) at Tylos, the largest of the Bahrein islands, now Samak Bahrein, where Captan Durand found remains of Babylonian occupation, among them an inverging of the R. Asiat. Soc., 1880, pp. 192, et seq.). Fr. Delitzseh would identify it with an island, now disappeared, mar the mouth of the Shatt-cl-Arab (Wo lag das Paradies pp. 229, 230). Dilmun is called Nituk in Sumerian (Opplict—Menart, Inscription de Khorsabad, p. 116).

Nipur, Nippur, in Sumerian Inlil, is Niffer, near the Shatt-en-Nil, on the border of the Affect

Barsip, Borsippa, the second Babylon (Fr. Delitzsch, Wo lag das Paradies? pp. 216, 217). 15 Birs-Nimrud (Opplet, Expedition on Mesopolumic, vol. i. p. 200, et seq.).

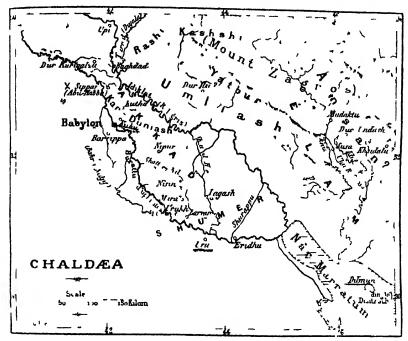

10 Kishu is the present El-Offaimir (Hommil, Die Semitischen Völker, pp. 233, 235, et seq.).

11 Kutu, Kuta, in non-Semitic speech Gudua, is the modern Tell-Ibrahim.

18 Agade, or Agane, has been identified with one of the two towns of which Sippara is made at (FR. Delitzen, Wo lag das Paradies? pp 209-212; Fr. Levormant, Les Premières Civilisation vol. ii. p. 195), more especially with that which was called Anunit Sippara (Hommer, Geschichte Baby loniers and Asyriers, p. 201); the reading Agadi, Agade, was especially assumed to lead to its identification with the Accad of Genesis x. 10 (cf (I. Smyrn, Asyrian Discoveries, p. 225, note 1) and with the Akkad of native tradition. This opinion has been generally abandoned by Assyriologists (Interest. Münderen, Geschichte Babyloniers und Assyriers, 2nd clit., p. 78; Lehmann, Schamaschschumlen Künig von Babylonien, p. 73), and Agane has not yet found a site. Was it only a name for Babylonier.

14 Sippara of Shamash and Sippara of Anunit are usually identified with the Sepharvaim of the

chaldman civilization was confined almost entirely to the two banks or the hower Euphrates: except at its northern boundary, it did not reach the Tight and did not cross this river. Separated from the rest of the world—on the cast, by the marshes which border the river in its lower course, on the north by the badly watered and sparsely inhabited table-land of Mesopotamia, on the west by the Arabian desert—it was able to develop its civilization, as Egypt had

dage, in an isolated area, and to follow out its destiny in peace. The only point from which it might anticipate serious danger was on the east, whence the Kashshi and the Elamites, organized into military states, incessantly hardssed it year after year by their attacks. The Kashshi were scarcely better than half-civilized mountain hordes, but the Elamites were advanced in enviloration, and their capital, Susa, vied with the richest cities of the Euphrates, I in and Babylon, in antiquity and magnificence. There was nothing serious to tear from the Guti, on the branch of the Tigris to the north-east, or from the Shuti to the north of these; they were merely maranding tribes, and, however troublesome they might be to their neighbours in their devastating incursions they could not compromise the existence of the country, or bring it into

b (2 Kings xvii, 24, 31), but the identification has been rejected by Halbyy, Not's fight in, 11/2 undrift fur Assyriologic, vol in pp 401, 402, and by Jussis, Die Kosmologie, p 4 7 1 und inscovered by Horney Russian in the two mounds of Abu Habbe and Den while a 1 at d and other by the cod of one and perhaps two uncient carals (Recent Described) functions of the Ribl. Arch. Soc., vol. xm pp 172 (5)

subjection. It would appear that the Chaldwans had already begun to encrowupon these tribes and to establish colonies among them—El-Ashshur on the
banks of the Tigris, Harran on the furthest point of the Mesopotamian plain
towards the sources of the Balikh. Beyond these were vague and unknown
regions—Tidanum, Martu, the sea of the setting sun, the vast territories of
Milukhkha and Magan. Egypt, from the time they were acquainted with its
existence, was a semi-fabulous country at the ends of the earth.

How long did it take to bring this people out of savagery, and to build up so many flourishing cities? The learned did not readily resign themselves to a confession of ignorance on the subject. As they had depicted the primordial chaos, the birth of the gods, and their struggles over the creation, so they related unhesitatingly everything which had happened since the creation of mankind, and they laid claim to being able to calculate the number of centuries which lay between their own day and the origin of things. The tradition to which most credence was attached in the Greek period at Babylon, that which has been preserved for us in the histories of Berossus, asserts that there was a somewhat long interval between the manifestation of Oannes and the foundation of a dynasty. "The first king was Alôros of Babylon, a Chaldwan of whom nothing is related except that he was chosen by the divinity himself to be a shepherd of the people. He reigned for ten sari, amounting in all to 36,000 years; for the saros is 3600 years, the ner 600 years, and the soss 60 years

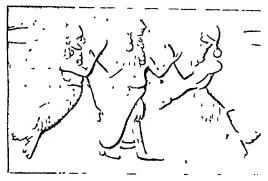

<sup>1</sup> Tidanum is the country of the Lebanon (Hommel, Geschichte Babyloniens and Assyrians, p. 321).

<sup>2</sup> Martu is the general name of the Syro-Phonician country in the non-Semitic speech (Fig. Delitizen, Wo lag das Paradies? p. 271), usually read Akharru in Semitic, but for which the Tell of Amarna tablets indicate the reading Amurru (Bezold-Budge, The Tell of-Amarna Tablets in the British Museum, pl. alvii., note 2). The names of the Kushshi, the Elamites, and their neighbours will be explained elsewhere, when these people enter actively into this history.

The question concerning Milukhkha and Magan has exercised Assyriologists for twenty years The prevailing opinion appears to be that which identifies Magan with the Sinaitic Pennaula, and Milukhkha with the country to the north of Magan as far as the Wady Arish and the Mediterrane er (Fr. Lenoumant, Les Noms de l'Airain et de Cuivre dans les deux langues des Inscriptions cunétorme de la Chaldée et de l'Assyrie, in the Transactions of the Bibl. Arch. Soc., vol. vi pp. 347-353, 399, 402. Tiei v., Is Sumer en Akkad het zelfde als Makan en Mêlûkha? in the Comptes rendus of the Academy of Amsterdam, 2nd series, part xii.; Delatter, Kequisse de Géog. Assyrienne, pp. 53, 55; L' 1su Orient. dans les Inscrip. Assyr , pp. 149, 167; AMIAUD, Sirpourla d'après les inscriptions de la collection de Sarzec, pp. 11-13; SAYOE, Patriarchal Palestine, pp. 57, 58, 61); others maintain, not the theory of Dehtzsch (Wo lag das Paradies? pp. 129-131, 137-140), according to whom Magan and Milukhkha are synonyms for Shumir and Akkad, and consequently two of the great divisions of Babylonia, but an analogous hypothesis, in which they are regarded as districts to the west of the Euphrates, either in Chaldrean regions or on the margin of the desert, or even in the desert itself towards the Small Poninsula (Homes L, Ges. Babyl. und Assyriens, pp. 234, 235; Jensen, Die Insch. der Könige von Lagde. in the Keilinschriftliche Bibliothek, vol. iii., 1st part, p. 53). What we know of the texts induces me, iii common with H. Rawlinson (The Islands of Bahrein, in the Journal of the Asiatio Society, vol. 211 p. 212, et seq.), to place these countries on the shores of the Persian Gulf, between the mouth of the Euphrates and the Bahrein i-lands; possibly the Make and the Melangita of classical historians and geographers (cf. Sprenger, Die Alle Geographie Arabiens, pp. 121-126, 261) were the descendants of the people of Magan (Makan) and Milukhkha (Melugga), who had been driven towards she entrance to the Persian Gulf by some such event as the increase in these regions of the Kashdi (Chaldseans) The names emigrated to the western parts of Arabia and to the Sinaitic Peninsula in after-times, the name of India passed to America in the XVIth century of our era.

After the death of Alôros, his son Alaparos ruled for three sari, after which Amillaros, of the city of Pantibibla, reigned thirteen sari. It was under him that there issued from the Red Sea a second Annedôtos, resembling Olomos, in his semi-divine shape, half man and half fish. After him Ammenon, also from Pantibibla, a Chaldman, ruled for a term of twelve sari; under him, they say, the mysterious Oannes appeared. Afterwards Amelagaros of Pantibibla governed for eighteen sari; then Davos, the shepherd from Pantibibla, reigned

ten sari: under him there issued from the Red Sea a tourth Annedôtos, who had a form similar to the others, heing made up of man and fish. After him Evedoranchos of Pantibibla reigned for eighteen sari; in his time there issued yet another monster, named Anôdaphos, from the sea. These various monsters developed carefully

TWO FISH-LIKE DEITIES OF THE CHAID PAYS.5

and in detail that which Oannes had set forth in a brief way. Then Amempsinos of Larancha, a Chaldwan, reigned ten sari; and Obartes, also a Chaldwan, of Larancha, eight sari. Finally, on the death of Obartes, his son Xisuthros held the sceptre for eighteen sari. It was under him that the great deluge took place. Thus ten kings are to be reckoned in all, and the duration of their combined reigns amounts to one hundred and twenty sari." From the beginning of the world to the Deluge they reckoned

Pantibible has been identified with Sepharvann and Sippara, on account of the play upon the Hebrew word Sepher (book), which is thought to be in Sippara, and the Greek name no ining the town of all the books. Fr Lenormant (La Langue primitive de la Chaldee, pp. 311, 342) latterly ir posed Uruk; Delitzsch (Wo lag das Parados, p. 221) prefers Larak; but we really do not know the Assyrian term which corresponds with the Pantibible of Berossus.

<sup>1</sup> Otherwise Almelon.

Otherwise Megalaros.

<sup>&#</sup>x27;Otherwise Daones, Daos

Drawn by Faucher-Gudin, from an integlio in the British Museum (Lajard, Introduction elevale du Culte public et des mysteres de Mithra en Orient et en Occident, pl. h . No. 1).

I enormant (La Langue primitive do la Chalder, p. 342) proposes to substitute Surapeha in 11 c of Larancha, and to recognize in the Greek name the town of Shurappak, Shurappak.

A consistion of Lenormant for Otartes, in order to find in it the name Ubaratutu, who, in the count of the Deluge, is made the father of Xisuthros; the variant Ardates is explained, according to a Smith (The Eleventh Tablet of the Islabar Legend, in the Transactions of the Biblet is a p. 532), by the reading Arda tota, Arad-tota, from the signs which enter into it. I take the Islabar Legend, in the Semitic form Kidun-Marduk (Sulin, I) is a label of the Islabar Legend, in the Transactions, vol. iii. pp. 532, 533), of which the tradition recorded by Berrary bears to the tradition recorded by Berrary bears.

Otherwise Sisithes.

691,200 years, of which 259,200 had passed before the coming of Aloros, and the remaining 432,000 were generously distributed between this prince and his immediate successors: the Greek and Latin writers had certainly a fine occasion for amusement over these fabulous numbers of years which the Chaldwans assigned to the lives and reigns of their first kings.

Men in the mean time became wicked; they lost the habit of offering sacrifices to the gods, and the gods, justly indignant at this negligence, resolved to be avenged. Now, Shamashnapishtim was reigning at this time in Shurippak, the "town of the ship:" he and all his family were saved, and he related afterwards to one of his descendants how Ea had snatched him from the disaster which fell upon his people. "Shurippak, the city which thou thyself knowest, is situated on the bank of the Euphrates; it was already an ancient town when the hearts of the gods who resided in it impelled them to bring the deluge upon it—the great gods as many as they are; their father Anu, their counsellor Bel the warrior, their throne-bearer Ninib, their prince Innugi. The master of wisdom, Ea, took his seat with them," and, moved with pity, was anxious to warn Shamashnapishtim, his servant, of the peril which threatened

<sup>1</sup> CICERO, De Divinatione, i. 19.

<sup>&</sup>lt;sup>2</sup> The account of Berossus implies this as a cause of the Deluge, since he mentions the injunction imposed upon the survivors by a mysterious voice to be henceforward respectful towards the gods, teoreβεῖτ (Birnossus, fragm. 15, edit. Lenormant, Essai de Commentairs, p. 259) The Chaldran account considers the Deluge to have been sent as a punishment upon men for their sins against the gods, since it represents towards the end (cf. p. 571 of this History) Ea as reproaching Bel for having confounded the innocent and the guilty in one punishment (cf. Delitzsuh, Wo lag das Paradies pp. 145, 146).

The name of this individual has been read in various ways: Shamashnapishtim, "sun of life" (HALPE, in SCHRADER, Die Keilinschriften d. A. Test., 2nd edit p. 65); Sitnapishtim (JENNEN, Die Kosmologie der Bubylonier, pp. 384, 385; Delitzsch, Wörterbuch, p. 334, rom. 4; A. Jereman, Izdubur-Nimood, pp. 28, 52, noto 72), "the saved;" Pirnapishtim (Zemmen, Babylonische Busypsalmen, p. 68, note 1; A. Jereman, Die Babylonisch-Assyrischen Vorstellungen des Lebens nach dem Tode, p. 82). In one passage at least we find, in place of Shamashnapishtim, the name or epithet of Adrachasis, or by inversion Khasisadra, which appears to signify "the very shrewd," and is explained by the skill with which he interpreted the oracle of Ea (Jensen, Die Kosmologie der Babylonier, pp. 385, 386). Khasisadra is most probably the form which the Grocks have trunscribed by Xisuthros, Sistifies.

threatened with death, proceeds to rejoin his ancestor Shamashnapishtim to demand from him the secret of immortality, and the latter tells him the manner in which he escaped from the waters; he had saved his his only at the expense of the destruction of men. The text of it was published by Smith (in the Transactions of the Bibl. Arch. Soc., vol. iii. pp. 534-567), by Haupt, fragment by fragment (Dua Babylouische Nimrodepos, pp. 95-132), and then restored consecutively (pp. 133-119). The studies of which it is the object would make a complete library. The principal translitions are those of Smith (Transactions, vol. iii. pp. 534-567, afterwards in The Chaldwan Account of Genesis, 1876, pp. 263-272), of Oppert (Fragments de Cosmogonie Chaldenne, in Lebrain, Historie Isroel, 1879, vol. i. pp. 422-433, and Le Poème Chaldwan du Deluge, 1885), of Lenorman's (Lorigines de l'Histoire, 1880, vol. i. pp. 601-618), of Haupt (in Schrader, Die Keilinschriften und dea A. Test., 1883, pp. 55-79), of Jenson (Die Kosmologie der Babylonier, 1890, pp. 365-416), of A. Jeremias (Izdubar-Nimrod, 1891, pp. 32-30), of Sauveplane (Une Epopée Babyloniere, Istubar Gilgumès, pp. 128-151), and of Zimmern (H. Gunnel, Schöpfung und Chaos, pp. 423-428).

Innugi appears to be one of the earth-gods (JENSEN, Die Kosmologie der Babylonier, p. 389).

<sup>&</sup>quot; HALPT, Das Babylonische Nimrodepos, p. 131, 11. 11-19.

him; but it was a very serious affair to betray to a mortal a secret of laver, and as he did not venture to do so in a direct manner, his inventive model suggested to him an artifice. He confided to a hedge of reeds the resolution, that had been adopted: "Hedge, hedge, wall, wall! Hearken, hedge, and understand well, wall! Man of Shurippak, son of Ubaratutu, construct a wooden house, build a ship, abandon thy goods, seek

life; throw away thy possessions, save thy life, and place in the vessel all the life. The ship which thou shalt let its proportions be exactly measured, let its dimensions and shape be well arranged, then launch it in the sea." 9 Shamashnapishtim heard the address to the field of reeds. or perhaps the reeds repeated i: to him. "I understood it, and [ said to my master Ea: 'The command, O my master, which thou hast thus enunciated, I myself will respect it, and I will execute it: but what shall I say to the town, the people and the elders?" Ea

opened his mouth and spake; he

ONE OF THE TABLETS OF THE DELLGE SIRILS

said to his servant: "Answer thus and say to them: Because Bel hates me, I will no longer dwell in your town, and upon the land of Bel I will no longer lay my head, but I will go upon the sca, and will dwell with Ea my master. Now Bel will make rain to fall upon you, upon the swarm of birds and the multitude of fishes, upon all the animals of the field, and upon all the crops; but Ea will give you a sign: the god who rules the rain will cause to fall upon you, on a certain evening, an abundant rain. When the dawn of the next day appears, the deluge

The sense of this passage is far from being certain; I have followed the interpretation proposed, with some variations, by Pinches (Additions and Corrections, in the Leitschrift für Keilforschung, v. 1 : p. 318), by Haupt (Collation der Isalubar-Legenden, in the Beitrage für Assyriologie, vol. 1 p. 12 in t.), and by Jenson (Die Kosmologie der Bubylonier, pp. 391-393). The stratigem at one read the linkopy of King Midas, and the talking reeds which know the secret of his 1885. If In the version of Berossus, it is Krews who plays the part here assigned to La III to a uthers.

will begin, which will cover the earth and drown all living things." Shamashnapishtim repeated the warning to the people, but the people refused to believe it, and turned him into ridicule. The work went rapidly forward: the hull was a hundred and forty cubits long, the deck one hundred and forty broad: all the joints were caulked with pitch and bitumen. A solemn festival was observed at its completion, and the embarkation began.2 "All that f possessed I filled the ship with it, all that I had of silver, I filled it with it: all that I had of gold I filled it with it, all that I had of the seed of life of every kind I filled it with it; I caused all my family and my servants to go up into it: beasts of the field, wild beasts of the field, I caused them to go up all together. Shamash had given me a sign: 'When the god who rules the rain. in the evening shall cause an abundant rain to fall, enter into the ship and close thy door.' The sign was revealed: the god who rules the rain caused to fall one night an abundant rain. The day, I feared its dawning: I feared to see the daylight; I entered into the ship and I shut the door; that the ship might be guided, I handed over to Buzur-Bel, the pilot,3 the great ark and its fortunes." 4

"As soon as the morning became clear, a black cloud arose from the foundations of heaven.<sup>6</sup> Ramman growled in its bosom; Nebo and Marduk ran before it—ran like two throne-bearers over hill and dale. Nera the Great tore up the stake to which the ark was moored.<sup>6</sup> Ninib came up quickly; he began the attack; the Anunnaki raised their torches and made the earth to tremble at their brilliancy; the tempest of Ramman scaled the heaven, changed all the light to darkness, flooded the earth like a lake.<sup>7</sup> For a whole day the

- <sup>1</sup> Haupt, Das Babylonische Nimrodepos, pp. 135, 136, 11. 32-51. The end of the text is mutilated. I have restored the general sense of it from the course of the narrative.
- <sup>2</sup> Haurt (op. cit., pp. 136, 137, ll. 51-80). The text is again mutilated, and does not furnish chough information to follow in every detail the building of the ark. From what we can understind, the vessel of Shamashnapishtim was a kind of immense kelek, decked, but without masts or my ging of any sort. The text identifies the festival celebrated by the hero before the embarkation with the festival Akitu of Merodach, at Bubylon, during which "Nebo, the powerful son, sailed from Borsupt to Babylon in the bark of the river Asmu, of beauty" (Pouron, Les Inscriptions Bubyloniames du Waity-Brissa, pp. 73, 80, 94, 95, 113, 114). The embarkation of Nebo and his voyage on the stream had probably inspired the information according to which the embarkation of Shamashn quishum was made the occasion of a festival Akitu, celebrated at Shurippak; the time of the Babylonian testival was probably thought to coincide with the anniversary of the Deluge.
- It has been, and may still be, read Buzur-Shadi-rabi, or Buzur-Kuigal (HAUPT, in Schradier, Die Keilinschriften und das A. Test., 2nd edit., pp. 58, 72; LENGRMANT, Les Origines de l'Histone, vol. i. p. 609), by substituting for the name of the god Bel one of his most common epithets: the meaning is Protege of Bel, or of the Great mountain god of the earth (cf. pp. 513, 544 of this History)
  - 4 Hat Pr., Das Babylonische Nimrodepos, pp. 137, 138, Il. 52-96.
  - 5 Upon the foundations of heaven, see p. 511 of this History.
  - 6 The meaning is not clear, and the translations differ much at this point.
- The progress of the tempest is described as the attack of the gods, who had resolved on the destruction of men. Ramman is the thunder which growls in the cloud; Nebe, Meredach, Nera the Great (Nergal), and Ninib, denote the different phases of the hurricane from the moment when the wind gets up until it is at its height; the Anumaki represent the lightning which flushes because the heaven.

the tempest rushed upon men like the shock of an army, brother no lingle backed brother, men recognized each other no more. In heaven, the line afraid of the deluge; they betook themselves to flight, they clambered to the firmament of Anu; the gods, howling like dogs, cowered upon the pump to the share wailed like a woman.

n travail, she cried out, the lidy of life, the goddess with the beautiful voice: 'The pist returns to clay, because I have prophesied evil before the gods! Prophesying evil before the gods, I have counsiled the attack to bring my men to nothing; and these to whom I myself have given

the hatchway and the light fell upon my face; I sank down, I cowered, I weit and my tears ran down my cheeks when I beheld the world all terror and dil sea. At the end of twelve days, a point of land stood up from the waters, the ship touched the land of Nisir: the mountain of Nisir stopped the ship and permitted it to float no longer. One day, two days, the mountain of Nisi , stopped the ship and permitted it to float no longer. Three days, four days, the mountain of Nisir stopped the ship and permitted it to float no longer. Five days, six days, the mountain of Nisir stopped the ship and permitted it to float no longer. The seventh day, at dawn, I took out a dove and let it go: the dove went, turned about, and as there was no place to alight upon. came back. I took out a swallow and let it go: the swallow went, turned about, and as there was no place to alight upon, came back. I took out a raven and let it go: the raven went, and saw that the water had abated, and came near the ship flapping its wings, croaking, and returned no more"2 Shamashnapishtim escaped from the deluge, but he did not know whether the divine wrath was appeased, or what would be done with him when it became known that he still lived. He resolved to conciliate the gods by expiatory ceremonies "I sent forth the inhabitants of the ark towards the four winds, I made an offering, I poured out a propitiatory libation on the summit of the mountain. I set up seven and seven vessels, and I placed there some sweetsmelling rushes, some cedar-wood, and storax."8 He thereupon re-entered the ship to await there the effect of his sacrifice.

The gods, who no longer hoped for such a wind-fall, accepted the sacrifice with a wondering joy. "The gods sniffed up the odour, the gods sniffed up the excellent odour, the gods gathered like flies above the offering. When Ishtar, the mistress of life, came in her turn, she held up the great amulet which Anu had made for her." She was still furious against those

which it ought to be translated, "The field makes nothing more than one with the mountain;" that is to say, "mountains and fields are no longer distinguishable one from another." I have merely substituted for mountain the version wood, piece of land covered with trees, which Jonson has suggested (Die Kosmologie der Babylonier, pp. 433, 434).

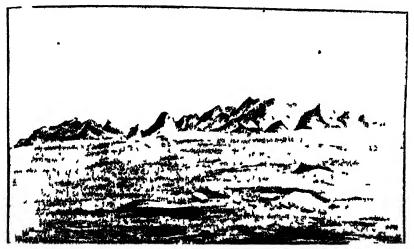

The mountain of Nisir is replaced in the version of Berossus (Lenormant, Essai sur les fragment cosmogoniques, p. 259) by the Gordyscan mountains of classical geography; a passage of As-ut-nazir-pal informs us that it was situated between the Tigris and the Great Zab, according to Delitzsch (Wo lag dus Paradies? p. 105) between 35° and 36° N. latitude. The Assyrian-speaking people interpreted the name as Salvation, and a play upon words probably decided the placing upon 1's slopes the locality where those saved from the deluge landed on the absting of the water-fr. Lenormant (Les Origines de l'Histoire, vol. ii. p. 64) proposes to identify it with the peak Rowani is

<sup>&</sup>lt;sup>2</sup> HAUPF, Das Bubylonische Nimrodepos, pp. 140, 141, 1l. 128-155.

his resolve." Bel was pacified at the words of Ea: "he went up into the interior of the ship; he took hold of my hand and made me go up, even nu. he made my wife go up, and he pushed her to my side; he turned our faces towards him, he placed himself between us, and blessed us: 'Up to this time Shamashnapishtim was a man: henceforward let Shamashnapishtim and his wife be reverenced like us, the gods, and let Shamashnapishtim dwell after off, at the mouth of the seas, and he carried us away and placed us afar off, at the mouth of the seas." Another form of the legend relates that by an order of the god, Xisuthros, before embarking, had buried in the town of Sippura all the books in which his ancestors had set forth the sacred sciences-books of oracles and omens, "in which were recorded the beginning, the middle, and the end. When he had disappeared, those of his companions who remained on board, seeing that he did not return, went out and set off in search of him, calling him by name. He did not show himself to them, but a voice from heaven enjoined upon them to be devout towards the gods, to return to Babylon and dig up the books in order that they might be handed down to future generations; the voice also informed them that the country in which they were was Armenia. They offered sacrifice in turn, they regained their country on foot, they dug up the books of Sippara and wrote many more; afterwards they refounded Babylon."2 It was even maintained in the time of the Seleucidæ, that a portion of the ark existed on one of the summits of the Gordyæan mountains.3 Pilgrimages were made to it, and the faithful scraped off the bitumen which covered it, to make out of it amulets of sovereign virtue against evil spells.4

The chronicle of these fabulous times placed, soon after the abating of . the waters, the foundation of a new dynasty, as extraordinary or almost as extraordinary in character as that before the flood. According to Berossus

<sup>&</sup>lt;sup>1</sup> HAUPT, Das Babylonische Nimrodepos, pp. 141, 143, 11. 165-205.

<sup>&</sup>lt;sup>2</sup> Bleosus, fragm. xv., xvi. (F.B. Lenommant, Essai de Commentaire, pp. 257-259, 337, 338). Guyard has pointed out survivals of the personality of Xisuthros in the Khidr of the Arabian legend of Alexander, and in the life of Moses in the Koran (Bulletin de la Religion Assyro-Babylonieme, in the Revue de l'Histoire des Religions, vol. i. pp. 344, 345); of. A. Jeremias, Die Babylonisch-Assyrischen Vorstellungen vom Leben nach dem Tode, p. 81, note 1; M. Lidbarski, Wer ist Chadiri in the Zeitschrift für Assyriologie, vol. iv. pp. 104-116.

Behoest's, fragm. xv. (Fr. Lenormant, Essai de Commentaire, pp. 259, 335, 336). The legend about the remains of the ark has passed into Jewish tradition concerning the Deluge (Fr. Lenormant, Lea Origins de Phistoire, vol. ii. pp. 3-6). Nicholas of Damascus relates, like Berossus, that they we still to be seen on the top of Mount Buris (Fragm. Hist. Grecorum, edit. Mülles-Didor, vol. ii. p. 110 fragm. 76). From that time they have been continuously seen, sometimes on one peak and sometimes on another. In the last contury they were pointed out to Chardin (Voyages en Perse, vol. 12 pp. 2, 3; 4, 1: 6, 1), and the memory of them has not died out in our own century (Macronal at Kinneis, Travels in Asia Ninor, Armenia, and Kurdistan, p. 453). Discoveries of charcoal at bitumen, such as those made at Gebel Judt, upon one of the mountains identified with Naturobably explain many of these local traditions (G. Smth, Assyrian Discoveries, p. 108).

<sup>&</sup>lt;sup>4</sup> Fr. Lenormant recognized and mentioned one of these amulets in his Cutalogue de la Collect. <sup>14</sup> de M. le buron de Behr, Ant. N° 80.

11 was of Chaldsean origin, and comprised eighty-six kings, who bore rule baring 34,080 years; the first two, Evechous and Khomasbelos, reigned 2100 and 2700 years, while the later reigns did not exceed the ordinary limits of human life. An attempt was afterwards made to harmonize them with probability: the number of kings was reduced to six, and their combined reigns to 225 years.1 This attempt arose from a misapprehension of their true character; names and deeds, everything connected with them belongs to myth and fiction only, and is irreducible to history proper. They supplied to priests and poets material for scores of different stories, of which several have come down to us in fragments. Some are short, and serve as preambles to prayers or magical formulas; others are of some length, and may pass for real epics. The gods intervene in them, and along with kings play an important part. It is Nera, for instance, the lord of the plague, who declares war against mankind in order to punish them for having despised the authority of Anu. He makes Babylon to feel his wrath first: "The children of Babel, they were as birds, and the bird-catcher, thou wert he! thou takest them in the net, thou enclosest them, thou decimatest them-hero Nera!" One after the other he attacks the mother cities of the Euphrates and obliges them to render homage to him -even Uruk, "the dwelling of Anu and Ishtar-the town of the priestesses, of the almehs, and the sacred courtesans;" then he turns upon the foreign nations and carries his ravages as far as Phœnicia.2 In other fragments, the hero Etana makes an attempt to raise himself to heaven, and the eagle, his companion, flies away with him, without, however, being able to bring the enterprise to discressful issue.3 Nimrod and his exploits are known to us from the Bible. "He was a mighty hunter before the Lord: wherefore it is said, Even as Nimrod the mighty hunter before the Lord. And the beginning of his kingdom was Babel, and Erech, and Accad, and Calneh, in the land of Shinar." Almost all the characteristics which are attributed by Hebrew tradition to

Berossus, fragm. xi., Fragm. Historicorum Grecorum, edit. Müller-Dipor, vol. ii. p. 503.

Numerous fragments of this kind of mythological epic were discovered and partly translated by G. Smith (The Chaldwan Account of Genesis, pp. 123-136; cf W. Bloscawin]. The Plaque Legends of Chaldwa, in the Babylonian and Oriental Record, vol. 1 pp. 11-14). They were published and the whole translated by E. J. Harres, Die Babylonischen Legenden von Llana, etc., in the Beiträge zur legendenje, vol. ii. pp. 425-437.

For the legend of Etana, see below, pp. 698-700 of this History.

Genesis x. 9, 10. Among the Jews and Mussulmans a complete cycle of legends have developed around Nimrod. He built the Tower of Babel Josi phrs. Ant. Jud., hb. i. 4, § 2); he threw Abraham into a flery furnagement he tried to mount to heaven on the back of an engle (Koran, Sana, axiv. 2) Yakon i, Lex. Georgia sub coos Niffer). Sayee (Nimrod and the Assyrian Inscriptions, in the Tree soctions of the Bibl. Arch. Soc., vol. ii, pp. 248, 219) and Grivel (Rerue de la Suisse catholique. An establish and Transactions, vol. iii, pp. 136-144) saw in Nimrod an heroic form of Mero kell, the label of the majority of living Assyriologists prefer to follow Smith's example (He thall example of the Deluge, in the Transactions of the Bibl. Arch. Soc., vol. i. p. 200., and heaven the literatures, pp. 165-167), and identify him with the hero Gilgames

Nimrod we find in Gilgames, King of Uruk and descendant of the Shamasus napishtim who had witnessed the deluge. Several copies of a poem, in which an unknown scribe had celebrated his exploits, existed about the middle of the VIIth century before our era in the Royal Library at Nineveh; they had been transcribed by order of Assurbanipal from a more ancient copy, and the fragments of them which have come down to us, in spite of their lacuna. enable us to restore the original text, if not in its entirety, at least in regard to the succession of events.2 They were divided into twelve episodes corr. sponding with the twelve divisions of the year, and the ancient Babylonian author was guided in his choice of these divisions by something more than mere chance. Gilgames, at first an ordinary mortal under the patronage of the gods, had himself become a god and son of the goddess Aruru: 3 "he had seen the abyss, he had learned everything that is kept secret and hidden, he had even made known to men what had taken place before the deluge." 1 The sun, who had protected him in his human condition, had placed him beside himself on the judgment-seat, and delegated to him authority to pronounce decisions from which there was no appeal: he was, as it were, a sun on a small scale, before whom the kings, princes, and great ones of the earth humbly

The name of this hero is composed of three signs, which Smith provisionally rendered I study—a reading which, modified into Gishdhubur, Gistubar, is still retained by many Assymbout There have been proposed one after another the renderings Dhubar, Namradu (Suren, The Phoenth Tablet of the Izdubar Legands, in the Transactions of the Buble Arch Soc., vol. in p. 558). An annual Numarad, Namrasit, all of which exhibit in the name of the bero that of Nimrod. Pinches dose over in 1890, what appears to be the true signification of the three signs, Gilgamesh, Gilgames (I of Gistubar, in the Babylonian and Oriental Record, vol. iv. p. 264); Sayco (The Hero of the Chabletae Epic, in the Academy, 1890, No. 966, p. 421) and Oppert (Le Persée Chabletae, in the Record I sayle ologie, vol. ii. pp. 121–123) have compared this name with that of Gilgames, a Babylonian ham, of whom Ælian (Hist. Anim., xii. 21) has preserved the memory. A. Jeromius (Izdubar-Anmoder, Another) continued to reject both the reading and the identification.

The fragments known up to the present have been put together, arranged, and published by Haupt, Das Babylonische Nimrodepos, Leipzig, 1881-1892, and in the Beiliage zur Assyrologia, well pp. 48-79, 94-152. A list of the principal works dealing with them will be found in Begain Kurzgefasster Ueberblick, pp. 171, 173. A resumé has been given of them, accompanied with putfol translations, by A. Jerenias, Izdubar-Nimrod, 1891; and a complete French translation by Sauverlane, Une Epopée Bubylonienne, Istubar-Gilgamès, 1894: I have confined myself almost entirely to the arrangement suggested by Haupt and Jeromias. A fragment of the catalogue of the mythological works in the Library of Nineveh, discovered by Pinches and published by Sayet in Suntra's The Chaldran Account of Genesis, 2nd edit, p. 10, et seq.), puts alongside the title of our poem the name of a certain Sinliquantai, who is considered to have been its author (Fig. Levol. 1181). Les Origines de l'Histoire, vol. ii. pp. 9, 10, note); it is perhaps meroly the name of one of the rhapsodists who recited it in public (A. Jerenias, Izdubar-Nimrod, p. 13; cf. Haupt, Collation | Izdubar-Legenden, in the Beiträge sur Assyriologie, vol. i. p. 102, note 2).

<sup>\*</sup> Haupt, Das Babylonische Nimrodepos, p. 8, 1. 30. The position occupied by the goldless Analis otherwise unknown: we ought perhaps to regard her as a form of Beltis, Bilitilian, the lady of the golds (Jensen, Die Kasmologie der Babylonier, p. 291, note 1). It is possible that Gilgams is for his father Shamash, the sun-god, who protected him in all the difficulties of his career (G. Sault The Chaldwan Account of Genesis, p. 174).

<sup>. 4 1</sup>st Tablet, II. 1-6; cf. HAUPT, Das Babyl. Nimrodepos, pp. 1, 6, 79, and the Beitrum Assyriologie, vol. i. pp. 102, 103, 318. The fragment quoted certainly belonged to the beginning the poem, and contained a summary of all the exploits attributed to our hero.

owed their heads.1 The scribes had, therefore, some authority for treating the events of his life after the model of the year, and for expressing them in welve chants, which answered to the annual course

the sun through the twelve months.2

The whole story is essentially an account of as struggles with Ishtar, and the first pages eveal him as already at issue with the goddess. llis portrait, such as the monuments have piesaved it for us, is singularly unlike the ordinary type: one would be inclined to regard at as remesenting an individual of a different race, survival of some very ancient nation which had held rule on the plains of the Euphrates before the arrival of the Sumerian or Semitic? tubes His figure is tall, broad, muscular to in istonishing degree, and expresses at once vigour and activity; his head is massive, bony, ilmost square, with a somewhat flattened face, a raige nose, and prominent cheek-bones, the whole fried by an abundance of hair, and a thick be ned symmetrically curled. All the young men of link, the well-protected, were captivated by the prodigious strength and beauty of the hero, the clders of the city betook themselves to

relegated them. "He has no longer a rival in their hearts, but thy subjects are led to battle, and Gilgames does not send one child back to his father Night and day they cry after him: 'It is he the shepherd of Uruk, the well protected. he is its shepherd and master, he the powerful, the perfect and the wise." 2 Even the women did not escape the general enthusiasm: "he leaves not a single virgin to her mother, a single daughter to a warrior, a single wife to her master. Ishtar heard their complaint, the gods heard it, and crical with a loud voice to Aruru: 'It is thou, Aruru, who hast given him birth. create for him now his fellow, that he may be able to meet him on a day when it pleaseth him, in order that they may fight with each other and Uruk may be delivered.' When Aruru heard them, she created in her heart a man of Anu. Aruru washed her hands, took a bit of clay, cast it upon the earth, knewled it and created Eabani, the warrior, the exalted scion, the man of Ninth." whose whole body is covered with hair, whose tresses are as long as those of a woman; the locks of his hair bristle on his head like those on the corn-god, he is clad in a vestment like that of the god of the fields; he browses with the gazelles, he quenches his thirst with the beasts of the field, he sports with the beasts of the waters." 4 Frequent representations of Eabani are found upon the monuments; he has the horns of a goat, the legs and tail of a bull. He possessed not only the strength of a brute, but his intelligence also embraced all things, the past and the future: he would probably have triumphed over Gilgames if Shamash had not succeeded in attaching them to one another by an indissoluble tie of friendship. The difficulty was to draw those two future friends together, and to bring them face to face without their coming to blows:

\* Uruk superi is hardly met with anywhere else than in the poem of Gilgames. The expression seems to signify "Uruk, the well-protected" (A. Jeremias, Izdubar-Nimrod, p. 9); it is similar to the phrase used by Arab writers to designate Cano, Kuhirah-el-Mahrussah.

<sup>3</sup> Ninib possesses, among other titles, that of the god of labourers: the "man of Ninib" is, therefore, properly speaking, a peasant, a man of the fields (A. Jehemias, op. cit, p. 16, note 16).

4 HAUPT, I)as Babyl. Nimrodepos, pp. 8, 9, 11. 27-41.

<sup>&</sup>lt;sup>2</sup> HAUPT, Das Babylonische Nimrodepos, p. 8, ll. 21–26; cf. p. 79, ll. 10–16. The text is multi de i and can be approximately rendered only. Smith (Assyrian Discoveries, pp. 168, 169) thought at first that the poem began by an account of a siego of Uruk, by the doliverance of the town by Gils mas and by the sudden elevation of Gilgames to the royal dignity; he recognized afterwards his mistake (The Chaldwan Account of Genesis, pp. 183–185), and adopted, as far as the fragments of the first tablets are concerned, the arrangement now commonly accepted by Assyriologists (A. Jiel Miss. Ledubar-Nimrod, p. 14, et seq.; Satyleplane, Une Épopée Babylonienne, p. 4, et seq.).

Smith was the first, I believe, to compare his form to that of a satyr or faun (The Chald in Account of Genesis, p. 196); this comparison is rendered more probable by the fact that the model inhabitants of Chaldwa believe in the existence of similar monsters (Rich, Voyage and raine de Babylone, trans. by Raymond, pp. 75, 76, 79, 210). A. Jehentas (Die Babylonisch-Asyrischer Vorstellungen rom Leben nach dem Tode, p. 83, note 4) places Eabani alongside Priapus, who is generally a god of the fields, and a civer soothsayer. Following out these ideas, we might continue our Eabani with the Græco-Roman Protous, who pastures the flocks of the sec, and whom it was necessary to pursue and seize by force or cunning words to compel him to give oncell predictions.

he god sent his courier Saidu, the hunter, to study the habits of the morster, and to find out the necessary means to persuade him to come down peace be to Uruk. "Saidu, the hunter, proceeded to meet Labani near the entiture of he watering-place. One day, two days, three days, Erbani met him at the entrance of the watering-place. He perceived Saidu, and his countenance lukened: he entered the enclosure, he became sad, he grouned, he cried with a loud voice, his heart was heavy, his features were distorted, sobs burst from his breast. The hunter saw from a distance that his face was inflamed with anger," 1 and judging it more prudent not to persevere further in his enterprise,

GITCAMES LIGHTS, ON THE PELL MITH A BITT ON THE RIGHT WITH LABANTS

returned to impart to the god what he had observed "I was afraid,' said he, in finishing his narrative, "and I did not approach him. He had filled up the pit which I had dug to trap him, he broke the nets which I had spread, he delivered from my hands the cattle and the beasts of the field, he did not allow me to search the country through." Shamish thought that where the strongest man might fail by the employment of force, a woman might possibly succeed by the attractions of pleasure, he commanded Saidu to go quickly to Uluk and there to choose from among the priestesses of Ishtan one of the most beautiful.4 The hunter presented himself before Gilgames, recounted to him his adventures, and sought his permission to take away with him one of the

sacred courtesans. "Go, my hunter, take the priestess; when the beasts come to the watering-place, let her display her beauty; he will see her, he will approach her, and his beasts that troop around him will be scattered." The hunter went, he took with him the priestess, he took the straight road; the third day they arrived at the fatal plain. The hunter and the priestess sat down to rest; one day, two days, they sat at the entrance of the watering-place from whose waters Eabani drank along with the animals, where he sported with the beasts of the water.<sup>2</sup>

"When Eabani arrived, he who dwells in the mountains, and who browses upon the grass like the gazelles, who drinks with the animals, who sports with the beasts of the water, the priestess saw the satyr." She was afraid and blushed, but the hunter recalled her to her duty. "It is he, priestess. Undo thy garment, show him thy form, that he may be taken with thy beauty: be not ashamed, but deprive him of his soul. He perceives thee, he is rushing towards thee, arrange thy garmont; he is coming upon thee, receive him with every art of woman; his beasts which troop around him will be scattered, and he will press thee to his breast." The priestess did as she was commanded; she received him with every art of woman, and he pressed her to his breast. Six days and seven nights, Eabani remained near the priestess, his well-beloved. When he got tired of pleasure he turned his face towards his cattle, and he saw that the gazelles had turned aside and that the beasts of the field had fled far from him. Eabani was alarmed, he fell into a swoon, his knees became stiff because his cattle had fled from him. While he lay as if dead, he heard the voice of the priestess: he recovered his senses, he came to himself full of love; he seated himself at the feet of the priestess, he looked into her face, and while the priestess spoke his ears listened. For it was to him the priestess spoke-to him, Eabani. "Thou who art superb, Eabani, as a god, why dost thou tive among the beasts of the field? Come. I will conduct thee to Uruk the well-protected, to the glorious house, the dwelling of Anu and Ishtar -to the place where is Gilgames, whose strength is supreme, and who, like a Urus, excels the heroes in strength." While she thus spoke to him, he hung upon her words, he the wise of heart, he realized by anticipation a friend. Eabani said to the priestess: "Let us go, priestess; lead me to the glorious and holy abode of Anu and Ishtar—to the place where is Gilgames, whose strength 15

<sup>&</sup>lt;sup>1</sup> As far as can be guessed from the narrative, interrupted as it is by so many lacung, the power of Eabani over the beasts of the field seems to have depended on his continence. From the moment in which he yields to his passions the beasts fly from him as they would do from an ordinary mortal, there is then no other resource for him but to leave the solitudes to live among men in towns. The explains the means devised by Shamash against him: of, in the Arubian Nights the story of Shelabeddia.

<sup>&</sup>lt;sup>2</sup> HAUPT, Das Babylonische Nimrodepos, p. 10, l. 40; p. 11, l. 1.

upreme, and who, like a Urus, prevails over the heroes by his strength. I vill fight with him and manifest to him my power; I will send forth a panther gainst Uruk, and he must struggle with it." The priestess conducted her isoner to Uruk, but the city at that moment was celebrating the festival Tammuz, and Gilgames did not care to interrupt the solemnities in order to face the tasks to which Eabani had invited him: what was the ase of such trials since the gods themselves had deigned to point out to him in a dream the line of conduct he was to pursue, and had taken up the cause of their children. Shamash, in fact, began the instruction of the monster, and sketched an alluring picture of the life which awaited him if he would agree not to return to his mountain home. Not only would the priestess belong to him for ever, having none other than him for husband, but Gilgames would shower upon him riches and honours. "He will give thee wherein to sleep a great bed cunningly wrought; he will seat thee on his divan, he will give thee a place on his left hand, and the princes of the earth shall kiss thy feet, the people of Uruk shall grovel on the ground before thee."2 It was by such flatteries and promises for the future that Gilgames gained the affection of his servant Eabani, whom he loved for ever.

Shamash had reasons for being urgent. Khumbaba, King of Elam, had invaded the country of the Euphrates, destroyed the temples, and substituted for the national worship the cult of foreign deities; <sup>3</sup> the two heroes in concert could alone check his advance, and kill him. They collected their troops, set out on the march, having learned from a female magician that the enemy had concerted himself in a sacred grove. They entered it in disguise, "and stopped in rapture for a moment before the codar trees; they contemplated the height of them; they contemplated the thickness of them; the place where Khumbaba was accustomed to walk up and down with rapid strides, alleys were made in it, paths kept up with great care. They saw at length the hill of cedars, the abode of the gods, the sanctuary of Irnini, and before the hill, a magnificent

<sup>&#</sup>x27; HALPT, Das Babylonische Nimrodepos, p. 11, l. 2; p. 13, l 2 1 have seftened down a good deal the account of the seduction, which is described with a sincerity and precision truly pointive.

<sup>·</sup> HALPT, op cit., p. 15, ll. 36-39.

Khumbaba contains the name of the Elamite god, Khumba, which enters into the composition of Lames of towns, like Til-Khumbi; or into those of princes, as Khumbangash, khumbasundasi, Khumbasidir (G. Smyrn, Chaldwan Account of Genesis, p. 185). The comparison between Khumbabi and Combabos (Fr. Lenormann, Les Origines de l'Histoire, vol. i. p. 240), the hero of a singul is cond, current in the second century of our era (De Ded Syrid, §§ 17-27), does not seem to be admissible, at least;—the present. The names agree well in sound, but, as Opport has red the admissible, at least;—the present. The names agree well in sound, but, as Opport has red that it is no event in side history of Combabos finds a counterpart in anything we know a that it is in ababa up to the present (Fragments cosmogoniques, in Ledbann, Histoire de l'I mid, vol. 1, p. 1-3).

cedar, and pleasant grateful shade." 1 They surprised Khumbaba at the moment when he was about to take his outdoor exercise, cut off his head, and came back in triumph to Uruk.2 "Gilgames brightened his weapons, he polished his weapons He put aside his war-harness, he put on his white garments, he adorned himself with the royal insignia, and bound on the diadem: Gilgames put his tiara on his head, and bound on his diadem." 8 Ishtar saw him thus adorned, and the same passion consumed her which inflames mortals.4 "To the love of Gilgames she raised her eyes, the mighty Ishtar, and she said, 'Come, Gilgames, be my hus band, thou! Thy love, give it to me, as a gift to me, and thou shalt be my spouse. and I shall be thy wife. I will place thee in a chariot of lapis and gold, with golden wheels and mountings of onyx: thou shalt be drawn in it by great lions, and thou shalt enter our house with the odorous incense of cedar-wood. When thou shalt have entered our house, all the country by the sea shall embrace thy feet, kings shall bow down before thee, the nobles and the great ones, the gitts of the mountains and of the plain they will bring to thee as tribute. Thy oxen shall prosper, thy sheep shall be doubly fruitful, thy mules shall spontaneously come under the yoke, thy chariot-horse shall be strong and shall galop, thy bull under the yoke shall have no rival." Gilgames repels this unexpected declaration with a mixed feeling of contempt and apprehension: he abuses the goddes. and insolently questions her as to what has become of her mortal husbands during her long divine life. "Tammuz, the spouse of thy youth, thou hast condemned him to weep from year to year.6 Allala, the spotted sparrow-hawk, thou lovedst him, afterward thou didst strike him and break his wing: he continues in the wood and cries: 'O, my wings!'7 Thou didst afterwards love a lion of mature strength, and then didst cause him to be rent by blows, seven at a time.8 Thou

1 HAUIT, Das Babylouische Nimrodepos, p. 24, ll. 1-8.

\* HAUPT, op cit, p. 42, ll. 1-6.

' HAUPT, op. cit., pp. 12, 43, 11, 7-21.

The text gives happi (HAUPT, Das Babylonische Nimrodepos, pp. 44, 1. 50), and the legent evidently refers to a bird whose cry resembles the word meaning "my wings." The spotted span hawk utters a cry which may be strictly understood and interpreted in this way.

<sup>&</sup>lt;sup>2</sup> G. SWITH (The Chalds an Account of Genera, pp 184, 185) places at this juncture tall, interior accession to the throne; this is not confirmed by the fragments of the text known up to the present, and it is not even certain that the poem relates anywhere the exaltation and coronation of the here. It would appear even that Gilgames is recognized from the beginning as King of Uruk, the well-protected.

Islan's doclaration to Gilgames and the hero's reply have been frequently translated and summarised since the discovery of the poem. Smith thought to connect this episode with the "Descent of Islan to Hades" (The Chaldwan Account of Genesis, p. 228), which we shall meet with further on in this History, but his opinion is no longer accepted. The "Descent of Islan" in its present condition is the beginning of a magical formula: It has nothing to do with the acts of Gilgams.

Tammuz-Adoms is the only one known to us among this long list of the lovers of the godde. The others must have been fairly celebrated among the Chaldwans, since the few words devoted to each is sufficient to recall them to the memory of the reader, but we have not as yet found anythin bearing upon their adventures (cf. Savor, The Religion of the Ancient Babylonians, p. 245, ct seq in the table of the ancient Chaldwo-Assyrian classics, which had been copied out by a Ninexistribe for the use of Assurbanipal, the title of the poems is wanting (Savee-Shith, The Chaldwan Account of the Deluge, p. x., et seq ).

This is evidently the origin of our fable of the "Amorous Lion" (Fontaine's Fables, bk. iv. fable 1

vedst also a stallion magnificent in the battle; thou didst devote him to death by the goad and whip; thou didst compel him to galop for ten leagues, the delst devote him to exhaustion and thirst, thou didst devote to tears his mothe. S.lili. Thou didst also love the shepherd Tabulu, who lavished incessantly upon thee the smoke of sacrifices, and daily slaughtered goats to thee; thou didst tuke him and turn him into a leopard; his own servants went in pursuit of him, and his dogs followed his trail.1 Thou didst love Ishullanu, thy father's gardener, who ceaselessly brought thee presents of fruit, and decorated every day thy table. Thou raisedst thine eyes to him, thou seizedst him: 'My Ishullanu, we shall eat melons, then shalt thou stretch forth thy hand and remove that which separates us.' Ishullanu said to thee: 'I, what dost thou require from me? O my mother, prepare no food for me, I myself will not eat: anything I should eat would be for me a misfortune and a curse, and my body would be stricken by a mortal coldness.' Then thou didst hear him and didst become angry, thou didst strike him, thou didst transform him into a dwarf, thou didst set him up on the middle of a couch; he could not rise up, he could not get down from where he was. Thou lovest me now, afterwards thou wilt strike me as thou didst these."2

"When Ishtar heard him, she fell into a fury, she ascended to heaven. The mighty Ishtar presented herself before her father Ann, before her mother Anatu she presented herself, and said: 'My father, Gilgames has despised me. Gilgames has enumerated my unfaithfulnesses, my unfaithfulnesses and my ignominies.' Anu opened his mouth and spake to the mighty Ishtar: 'Canst thou not remain quiet now that Gilgames has enumerated to thee thy unfaithfulnesses, thy unfaithfulnesses and ignominies?'" But she refused to allow the outrage to go unpunished. She desired her father to make a celestial urus who would execute her vengeance on the hero; and, as he hesitated, she threatened to destroy every living thing in the entire universe by suspending the impulses of desire, and the effect of love. Anu finally gives way to her rage: he creates a frightful urus, whose ravages soon rendered uninhabitable the neighbourhood of Uruk the well-protected. The two heroes, Gilgames and Eabani, touched by the miseries and terror of the people, set out on the chase, and hastened to rouse the beast from its lair on the banks of the Euphrates in

The changing of a lover, by the goddess or sorceress who loves him, into a beast, occurs pretty frequently in Oriontal tales (cf. in the Arabian Nights the adventure of King Bedr with Quer Label), as to the man changed by Ishtar into a brute, which she caused to be torn by his own hounds, we may compare the classic story of Artemis surprised at her bath by Action.

HALLET, Das Babylonische Nimrodepas, pp. 11, 15, 11. 16-79; cf. Saxon, The Religion of the Ancient Babylonians, pp. 246-248. As to the mistorium of Ishullanu, we may compare the start in the Archien Nights of the Fisherman and the Genie shut up in the leaden bottle. The king of a Block Islands was tensformed into a statue from the waist to the feet by the sorceres, whom he is man ed and afterwards offended; he remained lying on a bed, from which he could not g t down and the unfaithful one came daily to whip him

<sup>&#</sup>x27; HAUPT, op. cit., p. 45, 11. 80-91.

the marshes, to which it resorted after each murderous onslaught. A troop of third hundred valiant warriors penetrated into the thickets in three lines to drive the animal towards the heroes. The beast with head lowered charged them; but Eabani seized it with one hand by the right horn, and with the other by the tail, and forced it to rear. Gilgames at the same instant, seizing it by the leg, plunged his dagger into its heart. The beast being despatched, they celebrated their victory by a sacrifice of thanksgiving, and poured out a libation to Shamash, whose protection had not failed them in this last danger Ishtar, her projects of vengeance having been defeated, "ascended the rampaits of Uruk the well-protected. She sent forth a loud cry, she hurled forth a

GILGANLS AND EABANI FIGHTING WITH MONSTERS!

malediction: 'Cursed be Gilgames, who has insulted me, and who has killed the celestial urus' Eabam heard these words of Ish tar, he tore a limb from the celestial urus and threw it in the face of the goddess: 'Thou also I will conquer, and I will treat

thee like him: I will fasten the curse upon thy sides.' Ishtar assembled her priestesses, her female votaries, her frenzied women, and together they intoned a dirgo over the limb of the celestial urus. Gilgames assembled all the turners in ivory, and the workmen were astonished at the enormous size of the horns: they were worth thirty minse of lapis, their diameter was a half-cubit, and both of them could contain six measures of oil." He dedicated them to Shamash, and suspended them on the corners of the altar; then he washed his hands in the Euphrates, re-entered Uruk, and passed through the streets in triumph. A riotous banquet ended the day, but on that very night Eabani felt himself haunted by an inexplicable and baleful dream, and fortune abandoned the two heroes. Gilgames had cried in the intoxication of success to the women of Uruk: "Who shines forth among the valiant? Who is glorious above all men? Gilgames shines forth among the valiant, Gilgames is glorious above all men." Ishtar made him feel her vengeance in the destruction of that beauty of which he was so proud; she

<sup>&</sup>lt;sup>1</sup> Drawn by Faucher Gudin, from a Chaldson intaglio in the New York Museum (MDNANI, Recherches sur la Glyptique orientale, vol. 1 pl. 1, No. 1). The original is about an inch and a him in height.

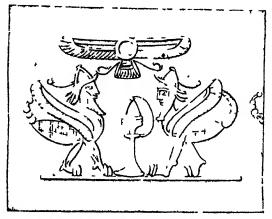

<sup>\*</sup> HAUPT, Das Babylonische Nimrodepos, pp. 48-94, 11. 174-191.

<sup>&</sup>lt;sup>2</sup> HAUPT, op. cit., p. 49, 11. 200-203.

overed him with leprosy from head to foot, and made him an object of horror o his friends of the previous day. A life of pain and a frightful death—he lone could escape them who dared to go to the confines of the world in quest of the Fountain of Youth and the Tree of Life which were said to be there hidden; that the road was rough, unknown, beset by dangers, and no one of those who had ventured upon it had ever returned. Gilgames resolved to brave every parall rather than submit to his fate, and proposed this fresh adventure to his triend Eabani, who, notwithstanding his sad forebodings, consented to accompany him. They killed a tiger on the way, but Eabani was mortally wounded

in a struggle in which they engaged in the neighbour-hood of Nipur, and breathed his last after an agony of twelve days' duration.

"Gilgames wept bitterly over his friend Eabani, grovelling on the bare earth." The selfish fear of death struggled in his spirit with regret at having lost so dear a companion, a tried friend in so many encounters. "I do not wish to die like Eabani."

THE SCORPION-MEN OF THE MOUNTAINS OF WISHI

sorrow has entered my heart, the fear of death has taken possession of me, and I am overcome. But I will go with rapid steps to the strong Shamashnapishtim, son of Ubaratutu, to learn from him how to become immortal." He leaves the plain of the Euphrates, he plunges boldly into the desert, he loses himself for a whole day amid frightful solutudes. "I reached at nightfall a ravine in the mountain, I beheld lions and trembled, but I raised my face towards the moon-god, and I prayed: my supplication ascended even to the father of the gods, and he extended over me his protection." A vision from on high revealed to him the road he was to take. With axe and dagger in hand, he reached the entrance of a dark

On the ideas among the Babylonians as to the Fountain of Youth and the Tree of Infe, see A JULIANAS, Die Babylonisch-Asyrischen Vorstellungen vom Leben nach dem Tode, pp 50-50 Utildea is certainly one of the centres from which they have been spread over the world

Children is certainly one of the centres from which they have been spread over the world.

Drawn by Faucher-Gudin, from an Assyrian integlio (Lavre, Introduction a l'etule de l'impulie et des Mystères de Methra en Orant et en Occident, pl. xxvii. 11). There are several die rises estations of the same subject in Manart, Recherches sur la Glyptique orantale, vii i 194 18

passage leading into the mountain of Mashu,1 "whose gate is guarded day and night by supernatural beings. The scorpion-men, of whom the stature extends upwards as far as the supports of heaven, and of whom the breasts descend us low as Hades, guard the door. The torror which they inspire strikes down like a thunderbolt; their look kills, their splendour confounds and overturns the mountains; they watch over the sun at his rising and setting. Gilgames perceived them, and his features were distorted with fear and horror; their savage appearance disturbed his mind. The scorpion-man said to his wife: 'He who comes towards us, his body is marked by the gods.' The scorpion-woman replied to him: 'In his mind he is a god, in his mortal covering he is a man.' The scorpion-man spoke and said: 'It is as the father of the gods has commanded, he has travelled over distant regions before joining us, thee and me." dilgames learns that the guardians are not evilly disposed towards him, and becomes reassured, tells them his misfortunes and implores permission to pass beyond them so as to reach "Shamashnapishtim, his father. who was translated to the gods, and who has at his disposal both life and death." 4 The scorpion-man in vain shows to him the perils before him, of which the horrible darkness enveloping the Mashu mountains is not the least: Gilgames proceeds through the depths of the darkness for long hours, and afterwards comes out in the neighbourhood of a marvellous forest upon the shore of the ocean which encircles the world. One tree especially excites his wonder: "As soon as he sees it he runs towards it. Its fruits are so many precions stones, its boughs are splendid to look upon, for the branches are weighed down with lapis, and their fruits are superb." When his astonishment had calmed down, Gilgames begins to grieve, and to curse the ocean which stays his steps. "Sabitu, the virgin who is seated on the throne of the seas," perceiving him from a distance, retires at first to her castle, and barricades herself within it. He calls out to her from the strand, implores and threatens her in turn, adjures her to help him in his voyage. "If it can be done, I will cross the sea; if it cannot be done, I will lay me down on the land to die." The goddess is at length touched by his tears. "Gilgames, there has never been a passage hither, and no one from time immemorial has been able to cross the sea. Shamash the valiant crossed the sea; after Shamash, who can cross it?

<sup>&</sup>lt;sup>1</sup> The land of Mashu is the land to the west of the Euphrates, coterminous on one part with the northern regions of the Red Sea, on the other with the Persian Gulf (G. Smru, The Chaldent Account of Genesis, p 262); the name appears to be preserved in that of the classic Meane, and possibly in the land of Massa of the Hebrews (Delitzsch, Wolug dus Paradies 7 pp. 242, 243)

<sup>&</sup>lt;sup>2</sup> We must not forget that Gilgames is covered with leprosy; this is the disease with which the Chaldman gods mark their enemies when they wish to punish them in a severe fashion.

<sup>&</sup>lt;sup>2</sup> Haupt, Das Babylonische Nimrodepos, p. 60, Il. 1-21.

<sup>4</sup> HAULT, op. cit., p. 61, 11. 3-5.

the crossing is troublesome, the way difficult, perilous the Water of Death, hich, like a bolt, is drawn between thee and thy aim. Even if, Galgones, thou didst cross the sea, what wouldest thou do on arriving at the Water of reath?" Arad-Ea,¹ Shamashnapishtim's mariner, can alone bring the enterprise in a happy ending: "if it is possible, thou shalt cross the sea with him; if it, not possible, thou shalt retrace thy steps." Arad-Ea and the hero took ship: forty days' tempestuous cruising brought them to the Waters of Death, which with a supreme effort they passed. Beyond these they rested on their oars and loosed their girdles: the happy island rose up before them, and Shamash-

napishtim stood upon the shore, ready to answer the questions of his grandson.<sup>2</sup>

None but a god dare enter his mysterious paradisc: the bark bearing an ordinary mortal must stop at some distance from the shore, and the conversation is carried on from on board.

GILGAMES AND ARAD-LA MANIGATING THEIR NINGEL

tilgames narrates once more the story of his life, and makes known the object of his visit; Shamashnapishtim answers him storcally that death tollows from an inexorable law, to which it is better to submit with a good grace. "However long the time we shall build houses, however long the time we shall put our scale to contracts, however long the time brothers shall quarrel with each other, however long the time there shall be hostility between kings, however long the time rivers shall overflow their banks, we shall not be able to portray any image of death. When the spurits salute a min at his birth, then the genii of the earth, the great gods, Mainitu the moulder of destinies, all of them together assign a fate to him, they determine for him his life and death; but the day of his death remains unknown to him." Gilgames thinks, doubtless, that his forefather is amusing

<sup>&</sup>lt;sup>1</sup> The name has been successively read Urkhamsi (G Sutti, Children tecount, in the Transactic is Bibl Arch Soc, vol. 11 p. 215), Urbel (Fr. Levounda, Les Premieres Cuellisations, vol. 11 p. 0, 31), Urbel (Offler, Fragments de Cosmogonie chaldenne, in Leid via, Historie d'Israel, vol. 1, p. 11), the last reading adopted, which is still uncertain, is Arad-E1, the servant of Le, or Amil-E1, the near of Ea.

This narrative covers tablets in and a, which are both too much mutilited to allow of a continuous translation. Translations of several passages are to be found in G. Smith (The Cl. d leveral ant of tienesis, pp. 241-262), in H. Jer mas (Izdubar-Nimrod, pp. 25-31), and in Surveptime level Bahybuienne, Istubar-Gilgames, pp. 86-115).

Drawn by Faucher-Gudin, from a Chaldwan intaglio in the British Museum (Minn here the un la Glyptique orientale, pl. 11., No. 4, and pp. 99, 100. et Indahn, Introduction elected du Mathra, pl. 1v., No. 8). The original measures a little over an inch.

HALPI, Das Babylonische Nimrodepos, p 66, Il. 26-39.

himself at his expense in preaching resignation, seeing that he himself had been able to escape this destiny. "I look upon thee, Shamashnapishtim, and . thy appearance has not changed: thou art like me and not different, thou art like me and I am like thee. Thou wouldest be strong enough of heart to enter upon a combat, to judge by thy appearance; tell me, then, how thou hast obtained this existence among the gods to which thou hast aspired?"1 Shamashnapishtim yields to his wish, if only to show him how abnormal his own case was, and indicate the merits which had marked him out for a destiny superior to that of the common herd of humanity. He describes the deluge to him, and relates how he was able to escape from it by the favour of Ea, and how by that of Bel he was made while living a member of the army of the gods.2 "'And now,' he adds, 'as far as thou art concerned, which one of the Gods will bestow upon thee the strength to obtain the life which thou seekest? Come, go to sleep!' Six days and seven nights he is as a man whose strength appears suspended, for sleep has fallen upon him like a blast of wind, Shamashuapishtim spoke to his wife: 'Behold this man who asks for life. and upon whom sleep has fallen like a blast of wind.' The wife answers Shamashuapishtim, the man of distant lands: 'Cast a spell upon him. this man, and he will eat of the magic broth; and the road by which he has come, he will retrace it in health of body; and the great gate through which he has come forth, he will return by it to his country.' Shamash napishtim spoke to his wife: 'The misfortunes of this man distress thee. very well, cook the broth, and place it by his head.' And while Gilgames still slept on board his vessel, the material for the broth was gathered; on the second day it was picked, on the third it was steeped, on the fourth Shamashnapishtim prepared his pot, on the fifth he put into it 'Senility,' on the sixth the broth was cooked, on the seventh he cast his spell suddenly on his man, and the latter consumed the broth. Then Gilgames spoke to Shamashnapishtim, the inhabitant of distant lands: 'I hesitated, slumber laid hold of me; thou hast cast a spell upon me, thou hast given me the broth." 8 The effect would not have been lasting, if other ceremonics had not followed in addition to this spell from the sorcerer's kitchen: Gilgames after this preparation could now land upon the shore of the happy island and purify himself there. Shamashnapishtim confided this business to he mariner Arad-Ea: "'The man whom thou hast brought, his body is covered with ulcers, the leprous scabs have spoiled the beauty of his body. Take him,

ow in the water, let him get rid of his scabs, and let the sea bear them away that at length his body may appear healthy. He will then change the net which binds his brows, and the loin-cloth which hides his nakedness: until a returns to his country, until he reaches the end of his journey, let him by no means put off the loin-cloth, however ragged; then only shall he have always a clean one. Then Arad-Ea took him and conducted him to the place of partification: he washed his ulcers white as snow in the water, he got rid of his scabs, and the sea carried them away, so that at length his body appeared healthy. He changed the fillet which bound his brows, the loin-cloth which hid his nakedness: until he should reach the end of his journey, he was not to put off the loin-cloth, however ragged; then alone was he to have a clean one." The cure effected, Gilgames goes again on board his bark, and returns to the place

Shamashnapishtim would not send his descendant back to the land of the living without making him a princely present. "His wife spoke to him, to him Shamashnapishtim, the inhabitant of distant lands: 'Gilgames has come, he is comforted, he is cured; what wilt thou give to him, now that he is about, to return to his country?' He took the oars, Gilgames, he brought the bark near the shore, and Shamashnapishtim spoke to him, to Gilgames: 'Gilgames, thou art going from here comforted; what shall I give thee, now that thou art about to return to thy country? I am about to reveal to thee, Gilgames, a secret, and the judgment of the gods I am about to tell it thee. There is a plant similar to the hawthorn in its flower, and whose thorns prick like the viper. If thy hand can lay hold of that plant without being torn, break from it a branch, and bear it with thee; it will secure for thee an eternal youth.'2 Gilgames gathers the branch, and in his joy plans with Arad-Ea future enterprises: 'Arad-Ea, this plant is the plant of renovation, by which a man obtains life; I will bear it with me to Uruk the well-protected, I will cultivate a bush from it, I will cut some of it, and its name shall be, "the old man becomes young by it;" I will eat of it, and I shall repossess the vigour of my youth." Ife reckoned without the gods, whose jealous minds will not allow men to participate in their privileges. The first place on which they set foot on shore, "he perceited a well of fresh water, went down to it, and whilst he was drawing water, a support came out of it, and snatched from him the plant, yea—the serpent rushed

where Shamashnapishtim was awaiting him.

WART, Das Babylonische Nimrodepes, pp. 115, 146, Il. 219-271. Of, in Levilicus (Nin. 6, Nv. 8, 10), the mjunction given to the curved person to change his old clothes for clean lineu; the legislation bearing on leprosy was probably common to all the Oriental world.

out and bore away the plant, and while escaping uttered a malediction. That 'day Gilgames sat down, he wept, and his tears streamed down his cheeks; he said · to the mariner Arad-Ea: 'What is the use, Arad-Ea, of my renewed strength: what is the use of my heart's rejoicing in my return to life? It is not mysolf . I have served; it is this earthly lion I have served. Hardly twenty leagues on the road, and he for himself alone has already taken possession of the plant. As I opened the well, the plant was lost to me, and the genius of the fountain took possession of it: who am I that I should tear it from him?""1 re-embarks in sadness, he re-enters Uruk the well-protected, and at length begins to think of celebrating the funeral solemnities of Eabani, to whom he was not able to show respect at the time of his death.2 He supervises them, fulfils the rites, intones the final chant: "The temples, thou shalt enter them no more; the white vestments, thou shalt no longer put them on: the sweet-smelling ointments, thou shalt no longer anoint thyself with them to envelop thee with their perfume. Thou shalt no longer press thy bow to the ground to bend it, but those that the bow has wounded shall surround thee: thou no longer holdest thy sceptre in thy hand, but spectres fascinate thee. thou no longer adornest thy feet with rings, thou no longer givest forth a sound upon the earth. Thy wife whom thou lovedst thou embracest her no more; thy wife whom thou hatedst thou beatest her no more. Thy daughter whom thou levedst then embracest her no more; thy daughter whom thou hatedst, thou beatest her no more. The resounding earth lies heavy upon thee, she who is dark, she who is dark, Ninazu the mother, she who is dark, whose side is not veiled with splendid vestments, whose bosom, like a newborn animal, is not covered.8 Eabani has descended from the earth to Hades: it is not the messenger of Nergal the implacable who has snatched him away, it is not the plague which has carried him off, it is not consumption that has carried him off, it is the earth which has carried him off; it is not the field of battle which has carried him off, it is the earth which has carried him off!"4 Gilgames dragged himself along from temple to temple, repeating his complaint before Bel and before Sin, and at length threw himself at the feet of the god of the Dead, Nergal: "'Burst open the sepulchral cavern, open the

Soc., vol. iv. pp. 270–286), and more completely by Haupt (Die zwölfte Tafel des Babylonischen Nimrodepos, in the Beiträge zur Assyriah vol. i. pp. 48–79).

<sup>&</sup>lt;sup>3</sup> Hater, Die zwilfte Tafel des Babylonischen Nimrodepos, p. 57, ll. 11-30; cf. p. 49, ll. 32-15, er l. p. 59, ll. 16-22. The toxt is mutilated, and cannot be entirely restored, in spite of the repetition of the same phrases in different places. The lacunge do not, however, prevent its being intelligible, and the translation reproduces the sense and drift, if not the literal expression.

HAUPT, Die zwölfte Tufel, p. 59, 11. 23-26; cf. p. 55, 11. 1-4, and p. 61. 11. 17-19.

round, that the spirit of Eabani may issue from the soil like a blast of wind. As soon as Nergal the valiant heard him, he burst open the sepulchral vault, he opened the earth, he caused the spirit of Eabani to issue from the earth like .. blast of wind." Gilgames interrogates him, and asks him with anxiety what the state of the dead may be: "'Tell, my friend, tell, my friend, open the earth and what thou seest tell it.'- 'I cannot tell it thee, my friend, I cannot ' tell it thee; if I should open the earth before thee, if I were to tell to thee that which I have seen, terror would overthrow thee, thou wouldest faint away, thou wouldest weep.'-- 'Terror will overthrow me, I shall faint away, I shall weep, but tell it to me." 2 And the ghost depicts for him the sorrows of the abode and the miscries of the shades. Those only enjoy some happiness who have tillen with arms in their hands, and who have been solemnly buried after the tight; the manes neglected by their relatives succumb to hunger and thirst. "On a sleeping couch he lies, drinking pure water, he who has been killed in battle. 'Thou hast seen him?'-'I have seen him; his father and his mother support his head, and his wife bends over him wailing.' 'But he whose body menains forgotten in the fields,-thou hast seen him?'-'I have seen him; his soil has no rest at all in the earth.' 'He whose soul no one cares for,-thou, hast seen him?'- I have seen him; the dregs of the cup, the remains of a most, that which is thrown among the refuse of the street, that is what he has to nourish him." 8

This poem did not proceed in its entirety, or at one time, from the imagination of a single individual. Each episode of it answers to some separate legend concerning Gilgames, or the origin of Uruk the well-protected; the greater part preserves under a later form an air of extreme antiquity, and, if the events dealt with have not a precise bearing on the life of a king, they paint in a lively way the vicissitudes of the life of the people. These lions, leopard, or greantic uruses with which Gilgames and his faithful Eabani carry on so fierce a warfare, are not, as is sometimes said, mythological animals. Similar monsters, it was believed, appeared from time to time in the marshes of Chaldea, and gave proof of their existence to the inhabitants of neighbouring

villages by such ravages as real lions and tigers commit in India or the · Suhara. It was the duty of chiefs on the border lands of the Euphine as on the banks of the Nile, as among all peoples still sunk in semi-barbanesm. to go forth to the attack of these beasts single-handed, and to sacrifice themselves one after the other, until one of them more fortunate or stronger than the rest should triumph over these mischievous brutes. The kings of Babylon and Ninevel in later times converted into a pleasure that which had been an official duty of their early predecessors: Gilgames had not yet arrived at that stage, and the seriousness, not to speak of the fear, with which he entered on the fight with such beasts, is an evidence of the early date of the portions of his history which are concerned with his hunting exploits. The scenes are represented on the seals of princes who reigned prior to the year 3000 B.C., and the work of the ancient engraver harmonizes so perfectly with the description of the comparatively modern scribe that it seems like an anticipated illustration of the latter; the engravings represent so persistently and with so little variation the images of the monsters, and those of Gilgames and his faithful Eabani, that the corresponding episodes in the poem must have already , existed as we know them, if not in form, at least in their main drift. Other portions of the poem are more recent, and it would seem that the expedition against Khumbaba contains allusions to the Elamite 2 invasions from which Chaldrea had suffered so much towards the XX<sup>th</sup> century before our era The traditions which we possess of the times following the Deluge, embody, like the adventures of Gilgames, very ancient elements, which the scribes or narrators wove together in a more or less skilful manner around the name of some king or divinity. The fabulous chronicle of the cities of the Euphrates existed, therefore, in a piecemeal condition-in the memory of the people or in the books of the priests-before even their primitive history began; the learned who collected it later on had only to select some of the materials with. which it furnished them, in order to form out of them a connected narrative, in which the earliest ages were distinguished from the most recent only in the assumption of more frequent and more direct interpositions of the powers of heaven in the affairs of men. Every city had naturally its own version,

<sup>&</sup>lt;sup>1</sup> For instance, the seal of King Shargani-shar-ali (Menant, Recherches sur la Glyptique orientele, vol i. p. 73; Catalogue de la Collection de Clercy, vol. i. pl. v. 46), that of a scribe attached to be Bingani-shar-ali (Menant, op. cit., vol. i. pp. 75, 76), and several others described by Menantele carefully reproduced in his Recherches, vol. i. p. 77, ct seq.

<sup>&</sup>lt;sup>2</sup> Smith thought he could restore from the poem a part of Chaldrean history: he supposed Library in Smirred to have been, about 2250, the liberator of Bubylon, oppressed by Elam, and the date of foundation of a great Babylonian empire to have coincided with his victory over the Elamites (\*\* Chaldrean Account of Genesis, pp. 188–190, 207). The annals of Assurbanipal (G. Smill, The Heavy of Assurbanipal, pp. 234–236, 250, 251) show us, in fact, that an Elamite king, Kudurnankhundi pillaged Uruk about 2280 n.c., and had transported to Susa a statue of the goddess Ishtar.

which its own protecting deties, its heroes and princes, played the most portant parts. That of Babylon threwall the rest into the shade, not that it is superior to them, but because this city had speedily become strong enough a resert its political supremacy over the whole region of the Luphrates. Its tibes were accustomed to see their master treat the loads of other towns is subjects or vassals. They funcied that this must have always been the case, and that from its origin Babylon had been recognized as the queen city to

which its contemporaries iendered homago. They made its in hydrial annuls the framewisk for the history of the entire country, and from the succession of its princely families on the throne, diverse as they were in origin, they constructed a complete canon of the kings of Chaldwa

But the manner of grouping the names and of dividing the divisites varied according to the period in which the lists were drawn up, and at the presint time we are in possession of it least two systems which the Babylonian historians at-

GI AMIS SHITCOHS WITH A 110N 1

tempted to construct Berossus, who communicated one of them to the teachs about the beginning of the II<sup>11</sup> century Le, would not admit more than eight dynasties in the period of thirty-six thousand years between the Deluge and the Persian invasion. The lists, which he had copied from enginals in the cunciform character, have suffered severely at the hands of his abbreviators, who omitted the majority of the names which seemed to mem very barbarous in form, while those who copied these albieviated list—ve made such further have with them that they are now for the most pure mintelligible. Modern criticism has frequently attempted to restore-

VIIth	,,	8 Assyrians,	121 "	746-625 "
$VIII^{tb}$	,,	6 Chaldreans,	87	625-538

It was not without reason that Berossus and his authorities had put the sum total of reigns at thirty-six thousand years; this number falls in with a certain astrological period, during which the gods had granted to the Chaldeans glovy, prosperity, and independence, and whose termination coincided with the capture of Babylon by Cyrus.<sup>2</sup> Others before them had employed the same artifice, but they reckoned ten dynasties in the place of the eight accepted by Berossus:

<sup>1</sup> After the example of G. B. Nubuhr (Kleine Schriften, vol. i. pp. 191-196), Gut-schmid admitted here, as Oppert did (Rapport adverse au Ministre de l'Instruction Publique, pp. 27, 28), 45 Assyrians, he based his view on Herodotus (i. 115), in which it is said that the Assyrians held sway in Asia for 520 years, until its conquest by the Medes. Upon the improbability of this opinion, see Schrader's domonstration (Kallimchriften und Geschichtsforschung, p. 460, et seq.).

<sup>2</sup> The existence of this astronomical or astrological scheme on which Berossus founded his chronology, was pointed out by Brandis (Rerum Assyriurum tempora emendata, p. 17), afterwards by Gutschund (Zu den Fragmenten des Berosos und Klesias, in the Rheinisches Museum, vol. viii, 1833, p. 255, cf. Kleine Schriffen, vol. ii. p. 101); it is now generally accepted.

The Assyrian word was at first read Sisku (The Struggle of the Nations; cf. pp. 111-112).

4 The first document having claim to the title of Royal Canon was found among the tablets the British Museum, and was published by G. Smith (On Fragments of an Inscription greing part of the Chronology from which the Canon of Berossus was copied, in the Transactions of the Bibl. Arch. Sw. vol. ni. pp. 361-379). The others were successively discovered by Pinches (Note on a non Irst of Larly Babylonian Kings, in the Proceedings of the same Society, 1880-81, pp. 20-22, 7 fee. In Institution Kings of the Second Period, in the Proceedings, vol. vi. pp. 193-204, and vol. in pp. 65-71); some erronous readings in them have been corrected by Fr. Delitzsch (Assyrish Inscillent, in the Berichte of the Academy of Sciences in Saxony, 1893, vol. ii. pp. 183-193), and che exact edition has been published by Knudtzon (Assyrische Gebete an den Sonnengett, vol. i. p. 19 Smith's list is the fragment of a chronole in which the VI<sup>th</sup>, VII<sup>th</sup>, and VIII<sup>th</sup> dynasties only almost complete. One of Pinches's lists consists merely of a number of royal names not arrund in any consistent order, and containing their non-Semitic as well as their Semitic forms of other two lists are actual canons, giving the names of the kings and the years of their restriction profortunately they are much mutilated, and the lacunce in them cannot yet be filled up. All of the

Attempts have been made to bring the two lists into harmony, with arying results; in my opinion, a waste of time and labour.2 For ever, omparatively recent periods of their history, the Chaldreans, like the Experience, had to depend upon a collection of certain abbreviated, incoherent, and often contradictory documents, from which they found it difficult to nake a choice: they could not, therefore, always come to an agreement when they wished to determine how many dynastics had succeeded each other during these doubtful epochs, how many kings were included in each dynasty, and what length of reign was to be assigned to each king. We do not know the motives which influenced Berossus in his preference of one tiadition over others; perhaps he had no choice in the matter, and that of which he constituted himself the interpreter was the only one which In any case, the tradition he followed forms a system was then known. which we cannot modify without misinterpreting the intention of those who dien it up or who have handed it down to us. We must accept or reject it just as it is, in its entirety and without alteration: to attempt to adapt it to the testimony of the monuments would be equivalent to the creation of a new system, and not to the correction simply of the old one. The right course is to put it aside for the moment, and confine ourselves to the original lists whose fragments have come down to us: they do not furnish us, it is time, with a history of Chaldeen such as it unfolded itself from age to age, but they teach us what the later Chaldwans knew, or thought they knew, of that history. Still it is wise to treat them with some reserve, and not to lorget that it they agree with each other in the main, they differ frequently in details. Thus the small dynasties, which are called the VIth and VIIth, include the some number of kings on both the tablets which establish their existence,

have been translated by SANCE, The Dynastic Tablets and Chronicles of the Bubyloniums, in the Records of the Past, 2nd series, vol. ii pp. 1-21, 32-36

The first attempts in this direction were naturally made by Smith and Pinches (Transa trons boll 11ch, Soc, vol. in p. 361, et. seq., Proceedings, vol. in p. 20, et. seq., et. o7, et. seq., vol. vii. 1 et. et. seq., and p. 193, et. seq.); ethers have since tried to combine all excitorion of the lists with all or a portion of the canon of Berossus, eq. Homnel (Die Seintesden Voll e. vol. et. p. p. 22-31, 483, 484, Zur Althabylonischen Chromodom, in the Zeitscheit für Kedscheitlers hung, et. et. p. 32-44. Geschichte Bubylonischen und Assyrieus, pp. 165-176) Delutzeh (Die Sprüche de Korryleis), in the et. et. p. 19-21, id., et. seq.), Schride: (Die Kedinschriftliche Bubylensche Konryleis), in the et. et. p. leinkliche der Berliner Abademie, 1887, vol. xxxx pp. 579-608, and vol. xlvi. pp. 947-951)

See for these differences, Oppert (La Von Identite de Pint et de Lylathyhalarar, in the her of Asyriologie, vol. 1 pp. 169, 170 note), Tiele (Labylones h-Asyrische Geschicht) pp. 169, 112), Winckler (Untersuchungen zur Altorentaleschen Geschichte, pp. 3-6)

the text and translation were given by Pinches (The Bubylenium Kings of the Second P. 1 in the Proceedings of the Bible Arch Second vi. pp. 196, 197, and col. in. of the tiblet) in 1 is 5 ath (On Fragmatic of an Inscription, in the Transactions, vol. in, pp. 574–576). Six 110 the translation only (The Dynastic Laties, in the Records of the Past, 2nd seconds in 17–1 Upon the differences between the two lists, see, for the latest treatment 1 the 1 ct. Wix 113 Untersuchungen zur Altonomalischen Geschiehte, p. 14

but the number of years assigned to the names of the kings and the total years of each dynasty vary a little from one another:—

17 years = 3 months : 3 kings	20 years 3 months 3 kings

Is the difference in the calculations the fault of the scribes, who, in mechanically copying and recopying, ended by fatally altering the figures? Or is it to be explained by some circumstance of which we are ignorant—an association on the throne, of which the duration is at one time neglected with regard to one of the co-regents, and at another time with regard to the other or was it owing to a question of legitimacy, by which, according to the decision arrived at, a reign was prolonged or abbreviated? Cotemporaneous monuments will some day, perhaps, enable us to solve the problem which the later Chaldwans did not succeed in clearing up. While awaiting the means to restore a rigorously exact chronology, we must be content with the approximate information furnished by the tablets as to the succession of the Babylonian kings.

Actual history occupied but a small space in the lists—barely twenty centuries out of a whole of three hundred and sixty: beyond the historic period the imagination was given a free rein, and the few facts which were known disappeared almost completely under the accumulation of mythical narratives and popular stories. It was not that the documents were entirely wanting, for the Chaldæans took a great interest in their past history, and made a diligent search for any memorials of it. Each time they succeed in disinterring an inscription from the ruins of a town, they were accustomed to make several copies of it, and to deposit them among the archives, when they would be open to the examination of their archæologists. When

<sup>&</sup>lt;sup>1</sup> We have a considerable number of examples of copies of ancient texts made in this mum. For instance, the dedication of a temple at Uruk by King Singashid, copied by the scribe Nabuliatsunkbi, son of Miziral ("the Egyptian"), for the temple of Ezida (Pincina, Singashid's Grithe Temple E-ana, in the Babylonian and Oriental Record, vol. i. pp. 8-11); the legendary history

nce undertook the rebuilding of a temple, he always made construction n let the first courses of the ancient structure in order to recover the decover ants which preserved the memory of its foundation: if he discovered them in conded on the new cylinders, in which he boasted of his own work, the name t the first builder, and sometimes the number of your which hid elipsed since its erection.1 We act in a similar way to-day, and our excavations, like those of the Chaldwans, end in singularly disconnected results: the materials which the earth yields for the reconstruction of the first centuries consist almost entirely of mutilated records of local dynasties, isolated names of sovereigns, dedications of temples to gods, on sites no longer identifiable, of whose nature we know nothing, and too brief allusions to conquests or victories over vaguely designated nations.2 The population was dense and life u tive in the plains of the Lower Euphrates. The cities in this region formed at then origin so many individual and, for the most part, petty states, whose kings and patron gods claimed to be independent of all the neighbouring kings and gods one city, one god, one lord—this was the rule here as in the amount tendal districts from which the nomes of Egypt arose.3 The strongest of these runcipalities imposed its laws upon the weakest, formed into unions of two cr three under a single ruler, they came to constitute a dozen kingdoms of ilmost equal strength on the banks of the Luphrates 1. On the north we are acquainted with those of Agade, Bibylon, Kuta, Khaisag-Kalama, and that of Kishu which comprised a part of Mesopotimia and possibly the distant forties of

<sup>11</sup> gress of decipherment.

Harran: 1 petty as these States were, their rulers attempted to conceal their weakness by assuming such titles as "Kings of the Four Houses of the World," "Kings of the Universe," "Kings of Shumir and Akkad." Northern Babylonia seems to have possessed a supremacy amongst them. We are probably wise in not giving too much credit to the fragmentary tablet which assigns to it a dynasty of kings, of which we have no confirmatory infor mation from other sources—Amilgula, Shamashnazir, Amilsin, and several others: 3 this list, however, places among these phantom rulers one individual at least, Shargina-Sharrukin, who has left us material evidences of his existence. This Sargon the Elder, whose complete name is Shargani-shar-aligns.

<sup>1</sup> The existence in ancient times of the kingdom of Kish, Kishu, suggested by Jensen (*Inschrijten Schamaschschumukins*, in the *Keilschriftliche Bibliothek*, vol. iii¹. p. 202, noto), has been demonstrated by Hilprecht (*The Babylonian Expedition of the University of Pennsylvania*, vol. i, pp. 23, 24).

The official names of these kingdoms are recorded in the preamble of the kings of Chalden, and afterwards in that of the kings of Assyria. The latter were regularly entitled Shar Kibrat arbai. King of the Four Houses of the World (cf. pp. 543, 514 of this History), Shar Kishshati, King of the Universe. Winckler has put forth the view that these epithets had each of them an application to a small state already independent (Sumer und Akkad, in the Mitt. des Ak. Orientalischen Vereins in Berlin, vol. i. pp. 9-11, 14). For example, having supposed that the Kingdom of the Four Houses had Babylon as its centre (Sumer und Akkad, pp. 9-11), he transferred the seat of it to Kuta (Unters. zur Alt. Chs., pp. 76, 78, 83; Ges. Bub. und Ass., p. 31); he identifies, somewhat hestatingly, that of Kisshati with El-Ashshur (Sumer und Akkad, p. 11); afterwards with Harrau (Ges. Bub. und Assyr., p. 31, n. 2). This opinion has been vigorously contested by Lehmann, Schamaschschumukin, König von Bub., p. 71, ct. eq.

<sup>2</sup> See Pinches, Notes on a New List of Early Bubylonian Kings, in the Proceedings of the Bibl. Arch. Noc., vol. iii, pp. 37, 38, where it is said that these are the kings which came after the Delugabut that their enumeration is not in the order of succession. The names are given both in these

Semitic and non-Semitic forms. I have adopted the former.

4 Shargina was rendered Sharrukin in the Assyrian period. Sharrukin, Sharukin, appears to have signified "[God] has instituted him king" (Schrader, Die Assyrisch-Babylonischen K dinschriften, p. 159, et seq.; cf. Wincklen, Die Keilschriftexte Sargons, p. xiv.), and to have been interpreted sometimes "the lawful king" by the Assyrians themselves. The identity of Shargam shar-ali of Agade with Shargina-Sharrukin, proposed by Pinches (On Babylonian Art, in the Proceedings of the Bibl. Arch. Soc., vol. vi. pp. 11-11, 107, 108), The Early Babylonian King-List, in the Proceedings, vol. vii. pp. 66-71), disputed by Memant (The Inscription of Surgon, in the Proceedings, vol. vi. pp. 88-92), by Oppert (Quelques Remarques justificatives, in the Zeitschrift für Assyriologie, vol. iii. p. 131, and La plus ancienne inscription semitique jusqu'ici connue, in the Rocu d'Assyrologie, vol. iii. p. 21, et seq.), and since by others, appears to have led to false conclusionfrom the form in which it is presented in the inscriptions. Shargani was considered to have been only a faulty reading of the more complete name, Shargani-shar-luh according to Menant (op. cit., pp. 90-92), Shar[Bin]gani-shar-imsi (Oppert in Menant, La Collection de Clercq, p. 50, No. 16). Sharguni-shar-ali (Oppert, Quelques Remarques, in the Zeitschrift für Assyriologie, vol. iii. p. 124), Shargani-shar-makhazi (Winckleu, Untersuchungen, p. 79, note 4), Bingani-shar-iris (Oppler, La pluancumu Inscrip., in the Revue d'Assyriologie, vol. iv. p. 22). Hommel (Geschichte, p. 302) translated Shargam-shar-ali by Shargani, king of the city, and a recently discovered variant inclined Father School (Inscription de Naramein, in the Recueil, vol. xv. pp. 62-64) to believe that Hommel was right, and consequently that the king was really called Shargani, and not Shargani-shar-all Hommel's hypothesis (Geschichte, p. 307, et seq.), according to which there would have been in the ancient Chaldman empire two Sargons-Sargon the father of Naramsin, towards 3800 B.C., and Sargon-Shargani of Agade, about 2000 B.C.- has been rejected by other Assyriologists.

If is first title is "Shargani-shar-ali, King of Agade," but his name has been found in the ruins of Sippara (Pixelles, On Babylonian Art, in the Proceedings, vol. vi. p. 11); Nabonidos called him "King of Babylon" (Rawilly-ox, W. A. Inc., vol. i. pl. 69, col. ii. l. 30), and the chronological list mention his palace in that city (Suthi, On Fragments of an Inscription, in the Transactions, vol. iii. pp. 367, 368, 374-376). The American expedition of Dr. Peters discovered at Nipur inscriptions which prove that he ruled over that town (Hilperent, Babyl. Exped. of Univ. of Pennsylvania, vol. pp. 15, 16, pls. 1-3; of. Scheil, Nouvella Inscription de Naramsin, in the Recueil, vol. xv. pp. 62-61)

was the son of a certain Ittibel, who does not appear to have been king! At first his possessions were confined to the city of Agade and some undetermined portions of the environs of Babylon, but he soon succeeded in annexing Babylon itself, Sippara, Kishu, Uluk, Kuta, and Nipur. the contemporary records attests his conquest of Elam, Guti, and even of the far-off land of Syria, which was already known to him under the name of Amuru.2 His activity as builder was in no way behind his warlike zeal. He built Ekur, the sanctuary of Bel in Nipur, and the great temple Eulbar in Agade, in honour of Anunit, the goddess presiding over the morning star.3 He erected in Babylon a palace which afterwards became a royal burying-place.1 He founded a new capital. a city which he peopled with families brought from Kishu and Babylon for , long time after his day it bore the name which he bestowed upon it, Dui-Sharrukin 5 This sums up all the positive knowledge we have about him, and the later Chaldmans seem not to have been much better informed than ourselves. , They filled up the lacunæ of his history with legends. As he seemed to them to have appeared suddenly on the scene, without any apparent connection with the king who precoded him, they assumed that he was a usurper of unknown origin, irregularly introduced by the favour of the gods into the liwful series of kings. An inscription engraved, it was said, on one of his statues, and afterwards, about the VIIIth century BC, copied and deposited in the library of Nineveh, related at length the circumstances of his mysterious birth.6 "Shariukin, the mighty king, the king of Agade, am I. Wy mother was a princess; my father, I did not know him; the brother

The conquest of Kishu is mentioned in the astrological texts (Rewlinson, W. A. Ins. vol. iv. pl. 24, cel. i. ll. 8-10. cf. Hittischi, op. cel. vel. i. pp. 25, 26), as well as that of the "Lour Houses of the World" (Rawityson, B. 1. Ins. vol. iv. pl. 26, col. i. ll. 6, 14, cf. Suth, I tely History in the I insuctions, vol. i. pp. 18, 49), which title utilibutes to him, at least in the view of tl. s. inless cf. A surfampal, universal dominion (I thearn, Schames bechannel in. p. 94). As Annusin. in it is need to be so of Shargam, assumed the same titles on his onlying monuments, we may like that he inherited them from his father, and provisionally accept the evidence of the isticl. i. ell. x. (Rawityson, W. A. Inse, vol. i. pl. No. 7, ll. 2. 1).

of my father lived in the mountains. My town was Azupirâni, which is situated on the bank of the Euphrates. My mother, the princess, conceived me, and secretly gave birth to me: she placed me in a basket of reeds, she shut up the mouth of it with bitumen, she abandoned me to the river, which did not overwhelm me. The river bore me; it brought me to Akki, the . drawer of water. Akki, the drawer of water, received me in the goodness of his heart; Akki, the drawer of water, made me a gardener. As gardener. the goddess Ishtar loved me, and during forty-four years I held royal sway: I commanded the Black Heads, and ruled them." This is no unusual origin for the founders of empires and dynasties; witness the cases of Cyrus and Romulus,2 Sargon, like Moses, and many other heroes of history or fable. is exposed to the waters: he owes his safety to a poor fellah who works his shadouf on the batks of the Euphrates to water the fields, and he passes his infancy in obscurity, if not in misery. Having reached the age of manhood. Ishtar falls in love with him as she did with his fellow-craftsman, the gardener Ishullanu,3 and he becomes king, we know not by what means. The same inscription which reveals the romance of his youth, recounts the successes of his manhood, and boasts of the uniformly victorious issue of his warlike exploits Owing to lacuna, the end of the account is in the main wanting, and we are thus prevented from following the development of his career, but other documents come to the rescue and claim to furnish its most important vicissitudes. He had reduced the cities of the Lower Euphrates, the island of Dilmun, Dmilu, Flam, the country of Kazalla; be had invaded Syria, conquered Phoenica, crossed the arm of the sea which separates Cyprus from the coast, and only returned to his palace after an absence of three years, and after having erected his statues on the Syrian coast. He had hardly settled down to rest

<sup>&</sup>lt;sup>1</sup> The phrase "Black Heads," nishi salmat kakkati, has been taken in an ethnological sense is designating one of the races of Chaldiea, the Semitic (Hound, Gesch. Babyl and Assyrians, p. 211 note 2); other Assyriologists consider it as denoting mankind in general (Ponnos, Eliscription de Bacian, pp. 27, 28; Schriber, in the Zitschrift für Assyriologie, vol. i. p. 320). The latter no mine soms the more probable.

<sup>-</sup> Smith (Larly Hist. of Bubylonia, in the Transactions, vol. i. p. 47) had already compared the intency of Sarpon with that of Moses; the comparison with Cyrus, Bacchus, and Romulus was made by Talbot (A Fragment of Assyrian Mythology, in the Transactions, vol. i. pp. 272-277). Traditions of the same kind are frequent in history of tolk-fales.

<sup>\*</sup> See above, p. 581 of this History, for the treatment inflicted by Ishtar on Ishullanu.

Durilu was on the frontier of Elam (Delites u, Wolag das Paradies P. 230), sent of a petty proceedity, one of whose princes, Mutabil, is known to us (Fr. Lendruan r, Choix de Textes encetorues, p. 7, No. 5) in the time anterior to Khammurabi (Hommle, Geoch Babyl, und Assyrieus, p. 225, note 1). The more or less comprehensible parts of the tablet relating the life of Surgon step at thus point.

<sup>&</sup>lt;sup>5</sup> Kazalla was ruled over by a king with a Somitio name, Kashtubila; the site is unknown. If we must really read Kazalla (Hownin, Gesch. Bub und Assyriens, pp. 306, 326) and not Susulla (Anixi o, The Inscriptions of Telloh, in the Records of the Past, 2nd series, vol. ii. p. 80; cf. Helder, Déconvertes en Chaldée, p. x.), or Subgalla, Mugalla, Musalla (Jensen, Inschripten der Könige und Statthalter von Lagasch, in the Kelbehriftliche Bibliothek, vol. iii. 1st part, p. 34), the name cited on the Statue B de Gudéa (col. vi. 11. 5, 6), Kazalla would be a district in Syria.

when a rebellion broke out suddenly; the chiefs of Chaldra formed a league against him, and blockaded him in Agade: Ishtar, exceptionally futbill to the end, obtains for him the victory, and he comes out of a crisis, in which he might have been utterly ruined, with a more secure position than even. All these events are regarded as having occurred sometime about 3800 B c. at a period when the VIth dynasty was flourishing in Egypt. Some of them have been proved to be true by recent discoveries, and the rest are not at all improbable in themselves, though the work in which they are recorded is a later astrological treatise.2 The writer was anxious to prove, by examples drawn from the chronicles, the use of portents of victory or defeat. of civic peace or rebellion-portents which he deduced from the configuration of the heavens on the various days of the month: by going back as far as Sargon of Agadô for his instances, he must have at once increased the respect for himself on account of his knowledge of antiquity, and the difficulty which the common herd must have felt in verifying his assertions. His zeal in collecting examples was probably stimulated by the fact that some of the exploits which he attributes to the ancient Sargon had been recently accomplished by a king of the same name: the brilliant career of Sargon of Agadé would seem to have been in his estimation something like an anticipation of the still more glorious life of the Sargon of Nineveh.8 What better proof of the high veneration in which the learned men of Assyria held the memory of the ancient Chaldwan conqueror?

Naturnsin, who succeeded Sargon about 3750 B.C., inherited his authority, and to some extent his renown. The astrological tablets assert that he attacked

<sup>1</sup> The date 3800 n.e. for the reign of Sargon has been deduced approximately from the date which the uscription of Nahonidos (see note 4 below) furnishes for the reign of Nahaman.

<sup>2</sup> The pussages in this treatise bearing on Saigen and Noransin, collected and published to the first time by G. Smith (On the Early Hest. in the Transactions, vol. 1 pp. 47-51) have even spreaduced by Ménant (Babylone et la Chalder, pp. 100-103), by Hommel (Gesch Babylone is syrens, pp. 301, 306, 310), and by Winckler (in the Keilschriftliche Babliothek, vol. mt. pp. 402-407)

Honmel (Geschichte, p. 307) believes that the life of our Sirgon was modelled, not on the Assirian Sargon, but on a second Sargon, whom he places about 2000 ne (cf. p. 26, 100, 1, of this History). Tielo (Babyl.-Assyr. Gesch., p. 115) refuses to accept the hypothesis, but his objections are not weighty, in my opinion; Hilprecht (Babyl Exp. Lair of Penus, vol. 1, p. 21, et seq.) and Sayee (Patracekal Palestine, pp. 53-61) accepted the authenticity of the facts in their details, and the recent discoveries have shown that they were right in so doing. There is a distint resembling between the life of the legendary Sargon and the account of the victories of Bainses II. ending (Heronottes, ii. 100) in a conspiracy on his return.

The date of Naramsin is given us by the cylinder of Nabondos, who is cited lower down. It was discovered by Pinches (Some Recent Discoveries, in the Proceedings of the Bibl. Arch Soc., vol. v. p. 8, 9, 12). Its authenticity is maintained by Oppert (Journal Assatique, 1883, vol. v. p. 8 % to satisfic (Iter Nabonideylinder V. R. 6% in the Zeitschrift für Keilforschung, vol. in pp. 337 p. 1 field (Geschichte, p. 114), by Honniel (Geschichte, pp. 166, 167, 309, 310), who felt at rithest dion (in Die Semilischen Veller, pp. 317, et seq. 487, 489), by Delitzsch Mundter 6 p. 4 a colit, pp. 72, 73); it has been called in question, with hestation, by Ed Meere (i. here there vol. i. pp. 161, 162), and more boldly by Winckler (Untervalungen, pp. 44, 45 c. c. b. et a. pp. 7, 38). There is at present no senous reason to question its accuracy, at least to present in instructive repugnance of modern critics to consider as legitimate, dates which citry them back to the roat than they are accustomed to go.

the city of Apirak, on the borders of Elam, killed the king, Rishramman, and led the people away into slavery. He conquered at least part, if not the whole of Elam, and one of the few monuments which have come down to us was raised at Sippara in commemoration of his prowess against the mountaineers of the Zagros. He is represented on it overpowering their chief: his warriors follow after him and charge up the hill, carrying everything before their steady onslaught.1 Another of his warlike expeditions is said to have had as its field of operations a district of Magan, which, in the view of the writer. undoubtedly represented the Sinaitic Peninsula and perhaps Egypt.2 expedition against Magan no doubt took place, and one of the few monuments of Naramsin which have reached us refers to it.8 Other inscriptions tell us incidentally that Naramsin reigned over the "four Houses of the world," Babylon, Sippara, Nipur, and Lagash,4 Like his father, he had worked at the building of the Ekur of Nipur and the Eulbar of Agade; 6 he erected, moreover, at his own cost, the temple of the Sun at Sippara.6 The latter passed through many and varied vicissitudes. Restored, enlarged, ruined on several occasions, the date of its construction and the name of its founder were lost in the course of ages. The last independent King of Babylon, Nabonaîd [Nabonidos], at length discovered the cylinders in which Naramsin, son of Sargon, had signified to posterity all that he had done towards the erection of a temple worthy of the deity to the god of Sippara: "for three thousand two hundred years not one of the kings had been able to find them." We have no means of judging what these edifices were like for which the Chaldmans themselves showed such veneration; they have entirely disappeared, or, if anything remains of them, the excavations hitherto

<sup>2</sup> RAWLINSON, W. A Insc., vol. iv. pl. 34, col. ii. Il. 10-18.

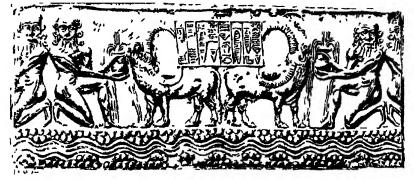

This is an alabaster vase with the name of Naramsin, lost in the Tigris; the inscription was first translated by Oppert (Expedition in Mesopotamie, vol. i. p. 273, vol. ii. p. 327; cf. Rawlinson, W. A. Insc., vol. i. pl. 3, No. 7). There is some doubt as to whether the translation should run, "Vasc, body from Magan" (Opperr, Die Französischen Ausgrabungen, in Verhandlungen of the IV<sup>th</sup> Omental Cangress, vol. ii. p. 245), or "Conqueror of the land of Magan" (Opperr, La plus ancienne inscription semulique, in the herus d'Assyriologie, vol. iii. p. 20), or "Vase of polished work from Magan" (Howmel, Geschichte, pp. 278, 279, 308, 309, and note 1). The first reading was "Conqueror of Aprak and Magan" (Smyrit, Early Hist., in the Transactions, vol. i. p. 52; Ménany, Babylone et Chalde, p. 103; Tille, Geschichte, p. 115).

<sup>&#</sup>x27;On the lost alabaster vase he is "king of the four Houses," and on a cylinder of Nabondo . "King of Babylon;" Sippara belonged to him, for he constructed a temple there, and Dr. Peters has brought to light in his excavations inscriptions which show that he owned the city of Napor (Hillertener, Babyl. Exped. of the Univ. of Pennsylvania, vol. i. pp. 18, 19, pl. 3, No. 4).

MILTRECHT, op. cit., vol. 1. pl. 4, and 2nd part, pp. 19-23; RAWLINSON, W. A. Insc., vol. i. pl. 69, col. ii. Il. 29-31; cf. Pliblik, Inschriften Nabonids, in the Keilschriftliche Bibliothek, vol. iii. 2nd part, p. 85, and Thureau-Dangin, Les Tablettes de Sargon l'Ancien, in the Comptes-rendue, 1896, p. 360.

<sup>&</sup>lt;sup>6</sup> RAWLINSON, W. A. Insc., vol. v. pl. 64, col. ii. II. 57-60; cf. Pinches, Some Recent Discoveries, in the Proceedings of the Bibl. Arch. Soc., vol. v. pp. 8, 9, 12. The text giving us this information is that in which Nabonidos affirms that Naramsin, son of Sargon of Agadê, had founded the temple of the Sun at Sippara, 3200 years before himself, which would give us 3750 n.o. for the reign of Naramsin.

carried out have not revealed it. Many small objects, however, which have accidentally escaped destruction give us a fair idea of the artists who have in Babylon at this time, and of their skill in handling the graving-tool and chisel. An alabaster vase with the name of Naramsin, and a mace-head of exquisitely veined marble, dedicated by Shargani-shar-ali to the sun-god of Sippara are valued only on account of the beauty of the material and the rarrity of the inscription; but a porphyry cylinder, which belonged to Ibnishar, scribe of the above-named Shargani, must be ranked among the masterpieces of Oriental engraving. It represents the hero Gilgames, kneeling and holding with both hands a spherically shaped vase, from which flow two copious jets forming a stream running through the country; an ox. armed with a pair of gigantic

THE STAL OF SHALGANISHAR-ALLS GRIGAMIS WALLES THE CHISSIAL ON

Consent-shaped horns, throws back its head to eatch one of the jets as it fills. Everything in this little specimen is equally worthy of admiration—the purity of outline, the skilful and delicate cutting of the intaglio, the fidelity of the a tion, and the accuracy of form. A fragment of a bas-relief of the reign of Nuamsin shows that the sculptors were not a bit behind the engravers of gone. This consists now only of a single figure, a god, who is standing on the inplic, we ming a conical head-dress and clothed in a harry garment which leaves his light arm free. The legs are wanting, the left arm and the han are for the most part broken away, while the features have also suffered; its distinguishing characteristic is a subtlety of workmanship which is backing in the artistic products of a later age. The outline stands out from the background with a tire delicacy, the details of the muscles being in no sense exaggerated; were not for the costume and pointed beard, one would fancy it a specific of the

Egyptian work of the best Memphite period. One is almost tempted to believe in the truth of the tradition which ascribes to Naramsin the conquest of Egypt.

or of the neighbouring countries: the conquered might in this case have furnished patterns for the conqueror.

Did Sargon and Naramsin live at so carly a date as that assigned to them by Nabonidos? The scribes who assisted the kings of the second Babylonian empire in their archaological researches had perhaps insufficient reasons for placing the date of these kings so far back in the misty past: should evidence of a serious character constrain us to attribute to them a later origin, we ought not to be surprised. In the mean time our best course is to accept the opinion of the Chaldaans, and to leave Sargon and Na ramsin in the century assigned to them by Nabonidos, although from this point they look down as from a high eminence upon all the rest of Chaldean antiquity. Excavations have brought to light several personages of a similar date, whether a little earlier, or a little later: Bingani-shar

BY9-BILLEI ON VVHVAIA'S

ali, Man-ish-turba, and especially Alusharshid, who lived at Kishu and Nipur, and gained victories over Elam. After this glimpse of light on these shadowy kings darkness once more closes in upon us, and conceals from us the majority of the sovereigns who ruled afterwards in Babylon. The facts and names which can be referred with certainty to the following centuries belong not to Babylon, but to the southern States, Lagash, Uruk, Utu. Nishin, and Larsam. The national writers had neglected these principalities;

deities of the other divisions of the city.<sup>3</sup> The princes were first called kings, but atterwards vicegerents—patesi—when they came under the suzciainty of a more powerful king, the King of Uruk or of Babylon <sup>4</sup>

The earlier history of this remarkable town is made up of the scantimemors of its rulers, together with those of the princes of Gishban "the land of the Bow," of which Ishin seems to have been the principal town. A very ancient document states, that, at the instigation of Inhi, the god of Nipur, the local deities, Ningirsu and Kirsig, set up a boundary between the two cities. In the course of time, Meshilim, a king of kisha, which, before the rise of Agadê, was the chief town in those parts, extended his dominion over Lagash and elected his stell at its border; Ush, vicegeral of Gishban, however, removed it, and had to suffer defeat before he would recognize the new order of things. After the lapse of some years of which we possess no records, we find the mention of a certain Urukagera who assumes the title of king: he restored or enlarged several temples, and

sons.1 They often entrusted to their children or their sons-in-law the government of the small towns which together made up the city: these represented so many temporary fiefs, of which the holders were distinguished by the utb of "vicegerents." This dismemberment of the supreme authority in the mterest of princes, who believed for the most part that they had stronger claims to the throne than its occupant, was attended with dangers to peace and to the permanence of the dynasty. The texts furnish us with evidence of the existence of at least half a dozen descendants of Akurgal -luminatuma I., Intemena, his grandson Inaunatuma II., all of whom seem to have been vigorous rulers who energetically maintained the supremacy of their city over the neighbouring estates. Inannatuma I., however, proved no match in the end against Urlamma, the vicegerent of Gishban, and lost part, at least, of the territory acquired by Idingiranagin, but his son Intemena defeated Urlamma on the banks of the Lumasirta Canal, and, having killed or deposed him, gave the vicegerency of Gishban to a certain Ili, priest of Ninab, who remained his loyal vassal to the end of his days. With his aid Internena restored the stelae and walls which had been destroyed during the war; he also cleared out the old canals and dug new ones, the most important of which was apparently an arm of the Shatt-el-Hai, and ran from the Euphrates to the Tigris, through the very centre of the domains of Ghirsn.8

Other kings and vicegerents of doubtful sequence were followed lastly by I rhau and his son Gudea.<sup>4</sup> These were all piously devoted to Ningirsu in general, and in particular to the patron of their choice from among the divinities of the country--Papsukal, Dunziranna, and Ninàgal. They restored and emiched the temples of these gods: they dedicated to them statues or oblation vases for the welfare of themselves and their families. It would seem, if we are to trust the accounts which they give of themselves, that their lives were passed in profound peace, without other care than that of fulfilling their duties to heaven and its ministers. Their actual condition, if we could examine it, would doubtless appear less agreeable and especially less equable; revolutions in the palace would not be wanting, nor struggles with the other peoples of Chaldaea, with Susiana and even more distant nations. When Agadê rose into power in Northern Babylonia, they fell under its rule, and one of them, Lugal-

ushum-gal, acknowledged himself a dependant of Sargon. On the declin of Agadê, and when that city was superseded by Uru in the hogemony of Babylonia proper, the vicegerents of Lagash were transferred with the other great towns to the jurisdiction of Uru, and flourished under flowspremacy of the new dynasty. Gudea, son of Urbau, who, if not the most

powerful of its princes, is at least the sovereign of whom we possess the greatest number of monuments, captured the town of Anshan in Elam, and this is probably not the only cunpaign in which he took part,' for he speaks of his success in an incidental manner, and as if he were in a hurry to pass to more interesting subjects. That which seemed to him important in his reign, and which especially called forth the recognition of posterity, was the number of his prous foundations, distinguished as they were by beauty and magnificence. The gods them selves had inspired him in his devout undertakings, and had even revealed to him the plans which he was to carry out An old man of venerable aspect appeared to him in a vision, and commanded him to build a temple is not know with whom he had to do, Nina hi mother informed him that it was his brother, the god

Ningirsu. This having been made clear, a young

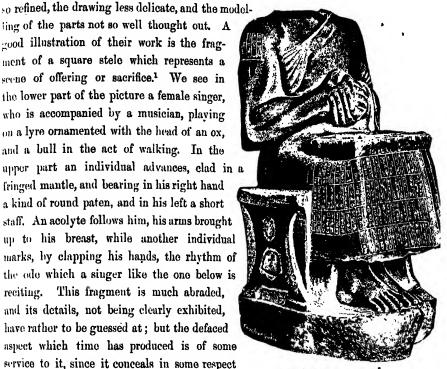

woman furnished with style and writing tablet was presented to him -Nisabi, the sister of Nina; she made a drawing in his presence, and put before him the complete model of a building. He set to work on it con amore, and sent for materials to the most distant countries—to Magan, Amanus, the Lebanon, and into the mountains which separate the valley of the Upper Tigris from that of the Euphrates—The sanctuaries which he decorated, and of which he telt so proud, are to-day mere heaps of bricks, now returned to their original clay, but many of the objects which he placed in them, and especially the statues, have

traversed the centuries without serious damage before finding a resting-place in the Louyre. The sculptors of Lagash, after the time of Idingiranagin, had been instructed in a good school, and had learned their business. Their has-reliefs are not so good as those of Naramsin; the execution of them is not

ling of the parts not so well thought out. A good illustration of their work is the fragment of a square stele which represents a scene of offering or sacrifice.1 We see in the lower part of the picture a female singer. who is accompanied by a musician, playing on a lyre ornamented with the head of an ox, and a bull in the act of walking. In the upper part an individual advances, clad in a fringed mantle, and bearing in his right hand a kind of round paten, and in his left a short staff. An acolyte follows him, his arms brought up to his breast, while another individual marks, by clapping his hands, the rhythm of the ode which a singer like the one below is This fragment is much abraded. reciting. and its details, not being clearly exhibited, have rather to be guessed at; but the defaced aspect which time has produced is of some service to it, since it conceals in some respect the radeness of its workmanship. The statues,

SITTING STATUE OF GUDEA.2

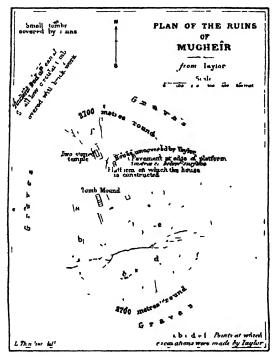

on the other hand, bear evidence of a precision of chiselling and a skill beyond question. Not that there are no faults to be found in the work." They are squat, thick, and heavy in form, and seem oppressed by the weight of the woollen covering with which the Chaldcans enveloped themselves; when viewed closely, they excite at once the wonder and repulsion of an eye accustomed to the delicate grace, and at times somewhat slender form, which usually characterized the good statues of the ancient and middle empire of Egypt. But when we have got over the effect of first impressions, we can but admire

Inscription B, II. 64-69; cf. AMIAUD, The Inscriptions of Telloh, in the Records of the Past, 2nd series, vol. ii. p. 82; and Heuzey-Sarzie, Decouvertes en Chaldee, p. xi.; and Jensen, Inschriften. in the Keilschriftliche Bibliothek, vol. iii. part 1, p. 39.

Drawn by Faucher-Gudin (HEUZLY-SARZEC, Families on Chaldee, pl. 20).

Heuzey-Sarzec, Decourertes, pls. 9-20. Perrot-Chiff & Histoire de l'Art, vol. ii. pp. 592-599, have pointed out both their merits and defects; cf. Oppur, Die Französischen Ausgrahungen in Chaldien, in the Verhandlungen of the IV Oriental Congress, vol. ii. pp. 236-238; and P. Renes, Uner altehaldaische Kunst, in the Zeitschrift pur Assyriologie, vol. ii. pp. 25-35.

the audacity with which the artists attacked their material. This is of hard dolerite, effering great resistance to the tool—harder, perhaps, than the diorite out of which the Memphite sculptor had to cut his Khephren: they succeeded in mastering it, and in handling it as freely as if it were a block of limestone on marble. The surface of the breast and back, the muscular development of the shoulders and arms, the details of the hands and feet, all the nude portions.

are treated at once with boldness and attention to minutiæ rarely met with in similar works. The pose is lacking in variety; the individual, whether male or fomale, is sometimes represented standing and sometimes sitting on a low seat, the legs brought together. the bust rising squarely from the hips, the hands crossed upon the breast, m a posture of submission or respectful adoration. The mantle passes over the left shoulder, leaving the right free, and is fastened on the right breast, the drapery dis playing awkward and inartisticfolds: the latter widens in

the form of a funnel from top to bottom, being bell-shaped around the lower part of the body, and barely leaves the ankles exposed. All the large statues to be seen at the Louvre have lost their heads; fortunately we possess a tew separate heads. Some are completely shaven, others wear a kind of turban affording shade to the forehead and eyes; among them all we see the same qualities and defects which we find in the bodies: a hardness of expression, heaviness, absence of vivacity, and yet withal a vigour of reproduction and in accurate knowledge of human anatomy. These are instances of what could be accomplished in a city of secondary rank; better things were doubtless produced in the great cities, such as Uru and Babylon. Chaldwan art, as we

Besides the reproduction on p. 613 of the present work, another of almost the same tent but without the turban head-diess, may be seen in Halfly-Sanzre, Decouvertes on Chalde 1. 12, No. 2.

the able to catch a glimpse of it in the monuments of Lagish, had neither

the old can documents bearing on the anatte two and it bull in, and the

it the riches of Central and Southern Arabia, gold, precious stones, gums, and odoriferous resins for the exigencies of worship. Another route, marked out to wells, traversed the desert to the land of the semi-fabulous Mâshu, and fresc thence perhaps penetrated as far as Southern Syria and the Sinaitic Pennsul.—Mâg in and Milukhkha on the shores of the Red Sea: 1 this was not the easie 1

but it was the most direct route for those bound for Africa, and products of Egypt were no doubt carried along it in order to reach in the shortest time the markets of Uru. The Euphrates now runs nearly five miles to the north of the town, but in ancent times it was not so distint. but passed almost by its gates. The cedars, cypresses, and pines of Amanus and the Lebanon, the limestones, marbles, and hard stones of Upper Syria, were brought down to it by boat; and probably also metals-non,

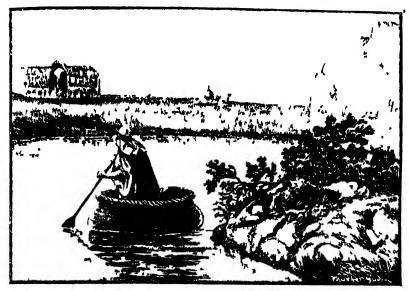

copper, and lead <sup>2</sup>—from the regions bordering the Black Sca. The Shatt cl-Haî, moreover, poured its waters into the Euphrates almost opposite the city and opened up to it commercial relations with the Upper and Middle Tigns <sup>3</sup> And this was not all; whilst some of its boatmen used its canals and rivers as highways, another section made their way to the waters of the Persian Gulf and

of their construction (Die Semitischen Völker, pp. 203–211; Geschichte, pp. 212–218) The information here given as to the commerce of Uru is taken from the inscriptions of Gudea, the sphere of activity of the vassal state must correspond with sufficient exactifude with that of the successive kingdom. The passages may be found collected together by Amaud (Sirpurla, pp. 13–15), Hamial (Geschichte, pp. 325–329), Terrien de Lacouperie (An Unknown King of Lagash, in the Babyl is and Oruntal Record, vol. 1v. pp. 193–208)

On these two routes, cf. Delattre, L'Asie Occidentale dans les Inscriptions Assyrience, pp. 193 1 11 2 It follows from the inscriptions of Gudes that the cedars and other building timbul require for the timples came from the Amanus (Statue B, col. v. 1, 28, et seq.; Amanu, The Inscription of Telloh, in the Records of the Past, 2nd series, vol. ii. p. 79), and the length of the beams proves they must have come by water, in the form of rafts. The mountains of Phosmicia, the Lebanon and Anti-Liebanon, furnished the various kinds of stone employed for the facing of the walls, or in the framework of the doors (id., col. vi. 11, 5-20; cf. Heterra-Sarzeo, Decouvertes, pp. 1x-x1.)

If the mountains of Tilla (AMAUD, Inscriptions of Tellah, in the Records of the Pest, 2nd serie vol. 11. p 80, note 1) may be placed near the town of Tela, or the mountains which separate the Upper Tignis from the Middle Euphrates, it was by means of the Shatt-el-Haf that the timber of this region mentioned on Statue B of Guidea, col. v. 1, 53, et seq., must have been brought down

haded with the ports on its coast. Eridu, the only city which could have brief their access to the sea, was a town given up to religion, and exit dealy for its temples and its gods. It was not long before it fell unled he influence of its powerful neighbour, becoming the first port of call for the scales proceeding up the Euphrates. In the time of the Greeks and Romans

AN ARAB CPOSSING THE TREES IN A "KIEA"

the Chaldwans were accustomed to navigate the Tigris either in round flat-bottomed boats, of little draught—"kufas," in fact—or on rafts placed upon inflated skins, exactly similar in appearance and construction to the "keleks" of our own day.<sup>8</sup> These keleks were as much at home on the sea as upon the river, and they may still be found in the Persian Gulf engaged in the coasting trade. Doubtless many of these were included among the vessels of lain mentioned in the texts, but there were also among the latter these long large

<sup>1</sup> See the plan of Eridu on p 614 of the present work Sayee (R lep nor fth A contilly) wins, [1 1.4, 135) thinks that Eridu must have been a frequented port in early children times. If this yie the case, it must have cered to be so in the period under discussion as it employs in manifement place in the inscriptions of Guden (I read » of I accuse in I will all once i king of I ight, with a Babylonian and Oruntal Record, volume p 200)

Drawn by Faucher Gudin, from a sketch by Chenter, Inglinates I glillen, vol 1 p (40). The description of boots used on the Light has been very tuilfully given by Hered tus (1 194). I die or basket, is the term used to designate them (Chenter, Inglinates I speciality), of p. 542 of the present work. The "keleks" were employed in particul expedite 1 in Hist. Nat., vi. 34) or for trading purposes (Periplus mairs Lightest, § 27, in Western 1 in Hist. rowing-boats with curved stem and stern, Egyptian in their appearance, which are to be found roughly incised on some ancient cylinders.1 These primitive fleets were not disposed to risk the navigation of the open sea. They preferred to proceed slowly along the shore, hugging it in all cases, except when it was necessary to reach some group of neighbouring islands; many days of navigation were thus required to make a passage which one of our smallest sail-boats would effect in a few hours, and at the end of their longest voyages they were not very distant from their point of departure. It would be a great mistake to suppose them capable of sailing round Arabia and of fetching blocks of stone by sea from the Sinaitic Peninsula; such an expedition, which would have been dangerous even for Greek or Roman galleys, would have been simply impossible for them.2 If they ever crossed the Strait of Ormuzd, it was an exceptional thing, their ordinary voyages being confined within the limits of the gull. The merchants of Uru were accustomed to visit regularly the island of Dilmun. the land of Magan, the countries of Milukhkha and Gubin; from these places they brought cargoes of diorite for their sculptors, building-timber for their architects, perfumes and metals transported from Yemen by land, and possibly pearls from the Bahrein Islands. They encountered serious rivalry from the sailors of Dilmun and Magan, whose maritime tribes were then as now accustomed to scour the seas.3 The risk was great for those who set out on such expeditions, perhaps never to return, but the profit was considerable. Uru, enriched by its commerce, was soon in a position to subjugate the petty neighbouring states-Uruk, Larsam, Lagash, and Nipur. Its territory formed a ' fairly extended sovereignty, whose lords entitled themselves kings of Shumir and Akkad, and ruled over all Southern Chaldma for many conturies.4

<sup>&</sup>lt;sup>1</sup> Minant, Recherches sur la Glyptique orientale, vol. i. pp. 99, 100, pl. ii. 4.

<sup>&</sup>lt;sup>2</sup> This is, however, the opinion of many Assyriologists—Oppert (Die Franzüsischen Ausgrahungen in Chalda a, in the Abhandlungen des Vien Orientalisten-Congresses, Semit. Sect., p. 238), Winckler (tieschichte, pp. 43, 44, 327, 328), supported by Brindley and Boscawen (Journ. of Trans. Victoria Inst., vol. xxvi. pp. 283, et seq.). Others, following Perrot (Comptes rendus de l'Académic des Instriptions, 1882, and Histoire de l'Art, vol. ii. p. 588, note 2), have disputed this opinion—for instance, Hommel (Die Smitischen Völker, pp. 217, 218, 459, 460, and Geschichte, pp. 234, 235).

The vessels of Dilmun, Magun, and Milukhkha are mentioned alongside those of Uru (RAMLINSON, W. A. Insc., vol. ii. pl. 46, col. i. ll. 5-7; Lienormant, Études Accadiennes, vol. iii. p. 190).

<sup>&</sup>lt;sup>4</sup> The signification of the expression "Shumir and Akkad" has not yet been clearly established. These two words, which enter into the titles of so many Chaldran and Assyrian princes, have been the subject of hypotheses too numerous to summarise. Pognon was the first to show that the denoted two districts of the territory subject to the kings of Babylon—Akkad, on the confines of Assyria, and Shumir, whose site is unknown (L'Inscription de Bavian, pp. 125-131), and since the Assyriologists are agreed that Akkad signifies especially Upper and Shumir Lower Chaldra Winckler tried recently to prove that before they were extended to cover all Chaldras, Shumir and Akkad, or, in non-Semitic speech, Kiengi-Urdu, had had a more restricted application to a kingdon of Southern Chaldras, of which Uru was the capital (Sumer und Akkad, in the Mitteilungen de Akademisch-Orientalischen Vereins, vol. i. pp. 6-14; Untersuchungen, p. 65, et seq.; Geschichte, pp. 19 20, 23-25, etc.). Lehmann has called this opinion in question (Schamaschschumukin, König — Babylonien, p. 68, et seq.), and the matter remains doubtful.

Several of these kings, the Lugalkigubnidudu and the Iugulli disconnection of the some monuments have been preserved to us, seem to have a night of their influence beyond these limits prior to the time of the light he lider, and we can date the earliest of them with tolerally probability. Urban reigned some time about 2000 Ber like wis in neighborhood, and material traces of his activity are to be found everywhere throughout the country. The temple of the Sun at Lusum, the imple of Nina in Uruk, and the temples of Inlilla and Nightla in Nipur

father: he completed the sanctuary of the moon-god, and constructed buildings in Uruk, Lagash, and Kutha.1 There is no indication in the inscriptions of his having been engaged in any civil struggle or in war with a foreign nation; we should make a serious mistake, however, if we concluded from this silence that peace was not disturbed in his time. The tie which bound together the petty states of which Uru was composed was of the slightest. The sovereign could barely claim as his own more than the capital and the district surrounding it; , the other cities recognized his authority, paid him tribute, did homage to him in religious matters, and doubtless rendered him military service also, but each one of them nevertheless maintained its particular constitution and obeyed its hereditary lords. These lords, it is true, lost their title of king, which now belonged exclusively to their suzerain, and each one had to be content in his district with the simple designation of "vicegerent;" but having once fulfilled their feudal obligations, they had absolute power over their ancient domains, and were able to transmit to their progeny the inheritance they had received from their fathers. Gudea probably, and most certainly his successors, ruled in this way over Lagash, as a fief depending on the crown of Uru.2 After the manner of the Egyptian barons, the vassals of the kings of Chaldra submitted to the control of their suzerain without resenting his authority as long as they felt the curbing influence of a strong hand: but on the least sign of feebleness in their master they reasserted themselves, and endeavoured to recover their independence. A reign of any length was sure to be disturbed by rebellions sometimes difficult to repress: if we are ignorant of any such, it is owing to the fact that inscriptions hitherto discovered are found upon objects upon which an account of a battle would hardly find a fitting place, such as bricks from a

The completion of the temple of Uru, indicated by the passage already cited from the cylinder of Nabonidos (Rawlinson, W. A. Insc., vol. i. pl. 68, No. i. col. i. ll. 5-27), is confirmed by the discovery at Mugheir of ruins containing the name of Dungi (W. A. Insc., vol. i. pl. 2, No. ii. l. 2); constructions in the temple of Uruk (W. A. Insc., vol. i. pl. 2, No. 3); construction of the temple of Namar at Girsu, on a black stone found at Tell-id (W. A. Insc., vol. i. pl. 2, Nos. 2, 4); constructions in the temple of Norgal at Kutha, from a copy made from the original document in the time of the second Babyloman Empire (Pinches, Guide to the Nimrud Central Salon, p. 69; Winchler, Numer and Akkad, in the Mitt. des Ak. Orientalischen Vereins, vol. i. pp. 11, 16, No. 1; Aniaud, L'Inscription assyriance de Doungi, in the Zeitschrift für Assyriologie, vol. iii. pp. 91, 95). These documents have been collected and translated by Smith (Early Hist. of Babylonia, in the Transactions of Birli Arch. Soc., vol. i. pp. 36, 37), and by Winckler (Inschriften, in the Kellschriftliche Bibliothek, vol. in. pl. 1, pp. 80-83). Hommel (Geschichte, p. 337) believes that the authoritie of Dunga extended to Nineveh; Aniaud has shown (L'Inscript. de Dounghi, in the Zeitschrift für Assyr., vol. iii. pp. 91, 05) that the document upon which Hommel relies applies to a quarter of Lagash called Nina, and not to Ninevech or Assyria.

<sup>&</sup>lt;sup>2</sup> Cf. p. 613 of the present work. Alongside the princes of Lagash we can cite Khashkhami prince of the town of Ishkunsin under Urbau (Rawlinson, W. A. Insc., vol. i. pl. 1, No. 10), Killul Guzafal, son of Urbabi, prince of Kutha (W. A. Insc., vol. iv. pl. 35, No. 2; of Amiaud, L'Insc. II. d Gudes, in the Zeitschrift für Assyriologie, vol. ii. pp. 291-293), and Urananbad, son of Lugalsharkhi, prince of Nipur (Minamt, Cat. Coll. de Clercq, vol. 1, pl. x. No. 86; cf. Amiaud, L'Insc. H. de Gudet pp. 295, 296), under Dungi; cf. the cylinder of the latter, p. 623 of the present work.

, mple, votive cones or cylinders of terra-cotta, amulets or private seals. We are still in ignorance as to Dungi's successors, and the number of years uring which this first dynasty was able to prolong its existence. We can but that its empire broke up by disintegration after a period of no long luration. Its cities for the most part became emancipated, and their rulers prorlaimed themselves kings once more.1 We see that the kingdom of Amnanu, for instance, was established on the left bank of the Euphrates, with I'mk as its capital, and that three successive sovereigns at least -of whom Singashid seems to have been the most active-were able to hold their own there. Uru had still, however, sufficient prestige and wealth to make it the actual metropolis of the entire country. No one could become the legitimate lord of Shumir and Accad 8 before he had been solemnly enthroned in the temple at Uru. For many centuries every ambitious kinglet in turn contended for its possession and made it his residence. The first of these, about 2500 B.C. were the lords of Nishin, Libitanunit, Gamiladar, Incdin, Bursin I., and Ismidagan: 4 afterwards, about 2100 B.c., Gungunum of Nipur made himself master of it. The descendants of Gungunum, amongst others Bursin II. Girilsîn, Inêsin, reigned gloriously for a few years. Their records show that they conquered not only a part of Elam, but part of Syria.6 They were dispossessed in their turn by a family belonging to Lârsam, whose two chief representatives, as far as we know, were Nurramman and his son Sinidinnam (about 2300 B.C.). Naturally enough, Sinidinnam was a builder or repairer of temples, but he added to such work the clearing of the Shatt-el-Haî and the exervation of a new canal giving a more direct communication between the Shatt and the Tigris, and in thus controlling the water-system of the country became worthy of being considered one of the benefactors of Chaldwa.7

Assyr., p 44, exceq.), Hommel (Geschichte, p 338, et seq.).

The inscriptions of Singushid, Singamil, and Bilbanakhi have been collect d by Wankler (Inschriften, in the Kellschriftliche Bibliothek, vol. in. pl. 1, pp. 82-85).

We have here the mere dust of history, rather than history itself: here an isolated individual makes his appearance in the record of his name, to vanish when we attempt to lay hold of him; there, the stem of a dynasty which break, abruptly off, pompous preambles, devout formulas, dedications of object's or buildings, here and there the account of some battle, or the indication of some Yoreign country with which relations of friendship or commerce were maintained -these are the scanty materials out of which to construct a connected narrative. Egypt has not much more to offer us in regard to many of her Pharaohs, but we have in her case at least the ascertained framework of her dynasties, in which each fact and each new name falls eventually, and after some uncertainty, into its proper place. The main outlines of the picture are drawn with sufficient exactitude to require no readjustment, the groups are for the most part in their fitting positions, the blank spaces or positions not properly occupied are gradually restricted, and filled in from day to day; the expected moment is in sight when, the arrangement of the whole being accomplished, it will be necessary only to fill in the details. In the case of Chaldra the framework itself is wanting, and expedients must be resorted to in order to classify the elements entering into its composition. Naramsin is in his proper place, or nearly so; but as for Gudea, what interval separates him from Naramain, and at what distance from Gudea are we to place the kings of Uru? The beginnings of Chaldaea have merely a provisional history: the facts in it are cortain, but the connection of the facts with one another is too often a matter of speculation The arrangement which is put forward at present can be regarded only is probable, but it would be difficult to propose a better until the excavations have furnished us with fresh material; it must be accepted merely as an attempt, without pledging to it our confidence on the one hand, or regarding it with scepticism on the other.

Nile, by the magnificence of their ruins, which are witnesses, even after centuries of neglect, to the activity of a powerful and industrious people: on the contrary, they are merely heaps of rubbish in which no architectural outline can be distinguished—mounds of stiff and greyish clay, cracked by the sun, washed into deep crevasses by the rain, and bearing no apparent traces of the handiwork of man. In the estimation of the Chaldwan architects, stone was a material of secondary consideration: as it was necessary to bring it from a great distance and at considerable expense, they used it very sparingly, and then merely for lintels, uprights, thresholds, for hinges on which to hang

their doors, for dressings in some of their state apartments, in cornices or sculptured friezes on the external walls of their buildings; and even then its employment suggested rather that of a band of embroidery carefully disposed on some garment to relieve the plainness of the material. Crude brick,

Drawn by Fauser-Gudin, from the seal of two "vicegerents" of Nipur (cf. Minane, Catalogue de la Collision de M. de Clercy, vol. i. pl. x., No. 86; cf. p. 618, note 2, of the present volume). The interpresent which is of sapphirine chalcedony, measures 13 inch in height. The Latid vignette, which is by Faucher-Gudin, represents the figure of a priest or seribe as redocated by M. Heuzey for the latid vignette, which is Exhibition of 1883 (cf. Heuzey, Les Origines orientales de l'ar', vol. i. frontispices and al

burnt brick, enamelled brick, but always and everywhere brick was the principal element in their construction. The soil of the marshes or of the plains, separated from the pebbles and foreign substances which it contained, mixed with grass or chopped straw, moistened with water, and assiduously

trodden underfoot, furnished the ancient builders with materials of incredible tena-This was moulded into thin square bricks, eight inches to a foot across, and three to four inches thick. but rarely larger: they were stamped on the flat side, by means of an incised wooden block, with the name of the reigning sovereign, and were then dried in the sun.2 A layer of fine mortar or of bitumen was sometimes spread between the courses. or handfuls of reeds would be strewn at intervals be-

tween the brickwork to increase the cohesion: more frequently the crude bricks were piled one upon another, and their natural softness and moisture brought about their rapid agglutination.<sup>3</sup> As the building proceeded, the weight of the courses served to increase still further the adherence of the layers.

<sup>&</sup>lt;sup>1</sup> For the different sorts of building materials in uso among the Chaldwans from carlast antiquity, see Perror-Chiplez, *Histoire de l'Art dans l'Antiquité*, vol. ii. pp. 113-125

The making of bricks for the Assyrian monuments of the time of the Saigonids has been minutely described by Place, Ninive et Plasyrie, vol 1, pp. 211-214. The methods of procedure were exactly the same as those used under the carliest king known, as has been proved by the examination of the bricks taken from the monuments of Uru and Lagash.

<sup>&</sup>quot;Bowarich," borne by several ancient mounds in Chaldea, significs, properly speaking, a nut of reeds (Loptes, Trovels and Researches in Chaldea and Susiana, p. 168); it is applied only to such buildings as are apparently constructed with alternate layers of brick and dried reeds. The propertion of these layers differs in certain localities: in the ruins of the ancient temple of Bolos of Babylon, now called the "Mujelibeh," the lines of straw and reeds run uninterruptedly between each course of bricks (Ker Portfu, Travels, vol. ii. p. 311); in the ruins of Akkerkuf, they only occur at wider intervals—according to Niebuhr and Ives, every seventh or eighth course; according to Raymond, every seventh course, or sometimes every fifth or sixth course, but in these cases the layer of reeds becomes 3½ to 3½ inches wide (Rich, Voyage aux ruines de Babylone, Raymond's translation, p. 96, et seq.; Ker Porter, Travels, vol. ii. p. 278). H. Rawlinson thinks, on the other hand, that all the monuments in which we find layers of straw and reeds between the bind courses belong to the Parthian period (in G. Rawlinson's Herodotus, 2nd edit., vol. i. p. 2 note 4).

the walls soon became consolidated into a compact mass, in which the horizontal strata were distinguishable only by the varied tints of the clay used to make the different relays of bricks. Monuments constructed of such a plastic material required constant attention and frequent repairs, to keep them in good condition: after a few years of neglect they became quite disfigured, the houses

uffered a partial dissolution in every storm, the streets were covered with a coating of fine mud, and the general outline of the buildings and babitations grew bluired and defaced. Whilst in Egypt the main features of the towns are still traceable above ground, and are so well preserved in places that, while excavating them, we are carand away from the present into the world of the past, the Chalda an cities, on the continy, are so overthrown and seem to have returned so

A CHAIDWAN SPANIED BRICK

thoroughly to the dust from which their founders raised them, that the most purcent research and the most enlightened imagination can only imperiently reconstitute their arrangement

The towns were not enclosed within those square or rectangular enclosures with which the engineers of the Pharobs fortified their strongholds. The ground-plan of Uru was an oval, that of Laisim formed almost a circle upon the soil, while Uruk and Eridu resembled in shape a soit of inequalar trapezium. The curtain of the citadel looked down on the plain from a great height, so that the defenders were almost out of reach of the urous or slings of the besiegers, the remains of the rimputs at Uruk at the present day are still forty to hity teet high, and twenty or more feet in

thickness at the top. Narrow turrets projected at intervals of every fifty for t along the face of the wall: the excavations have not been sufficiently pursued to permit of our seeing what system of defence was applied to the entranges. The area described by these cities was often very large, but the population in them was distributed very unequally; the temples in the different quarters formed centres around which were clustered the dwellings of the inhabitants. sometimes densely packed, and elsewhere thinly scattered. The largest and richest of these temples was usually reserved for the principal deity, whose edifices were being continually decorated by the ruling princes, and the extent of whose ruins still attracts the traveller. The walls, constructed and repaired with bricks stamped with the names of lords of the locality, contain in themselves alone an almost complete history. Did Urbau, we may ask, found the ziggurat of Nannar in Uru? We meet with his bricks at the base of the most ancient portions of the building,2 and we moreover learn, from cylinders unearthed not far from it, that "for Nannar, the powerful bull of Anu, the son of Bel, his King, Urbau, the brave hero, King of Uru, had built E-Timila, his favourite temple."3 The bricks of his son Dungi are found mixed with his own,4 while here and there other bricks belonging to subsequent kings, with cylinders, cones, and minor objects, strewn between the courses, mark restorations at various later periods. What is true of one Chaldwan city is equally true of all of them, and the dynasties of Uruk and of Lagash, like those of Uru, can be reconstructed from the revelations of their brickwork.6 The lords of heaven promised to the lords of the earth, as a reward of their piety, both glory and wealth in this life, and an eternal fame after death: they have, indeed, kept their word. The majority of the earliest Chaldwan heroes would be unknown to us, were it not for the witness of the ruined sanctuaries which they built, and that which they did in the service of their heavenly patrons

<sup>1</sup> Lorrus, Travels and Researches in Chaldrea and Susiana, p. 166.

<sup>\*</sup> Brick brought from Mugheit, now in the British Museum; published in RAWLINSON, Cumiform Inscriptions of Western Asia, vol. i. pl. 1, No. i.; cf. Oppert, Expedition on Mesopotamies, vol. 1, pp. 260, 261.

Terra-cotta cylinder from a mound situated south of the ruins of the great temple; published in Rawlinson, Can. Ins. W. As., vol. i. pl. 1, No. i. 4. E-timila seems to signify "the house of the lofty foundations;" under Dungi, the temple took the name of E-Kharsag, "the house of the mountain (of the gods)" (Rawlinson, Cun. Ins. W. As., vol. i. pl. 2, No. ii. 2), and later, the of E-shir-gal, "house of the great radiance" (Rawlinson, Cun. Ins. W. As., vol. iv. pl. ... No. 6, 1. 9).

<sup>\*</sup> Brick from Mughefr, now in the British Museum; published in RAWLINSON, Cun. Ins. W. As; vol. i. pl. 2, No. ii. 1; cf. (PPLET, Expedition on Mesopotamie, vol. i. pp. 260, 261.

Bricks of Amarsin (RAWLINSON, Cun. Ins. W. As., vol. i. pl. 5, No. xix) and of Sinidams (id., pl. 5, No. xx), cylinder of Nurramman (ib., pl. 2, No. iv.), all found at Mugher.

See the documents in the originals in Rawlinson, Cun. Ins. W. As., vol. i. pl. 2, No. vii., at in Fr. Lenormant, Études Accadiennes, vol. ii, pp. 324, 325, published in the Gorman translation the first part of vol. iii. of the Keilschriftliche Bibliothek; for the kings of Lagach by Jin., Inschriften der Könige und Statthalter von Lagasch, p. 10, et seq.; for the kings of Uruk by Winglift, Inschriften von Königen von Sumer und Akkad, pp. 82-85.

has alone preserved their names from oblivion. Their most extravagant devotion, however, cost them less money and effort than that of the Pharmohs their contemporaries. While the latter had to bring from a distance, even from the remotest parts of the desert, the different kinds of stone which they considered worthy to form part of the decoration of the houses of their gods, the Chaldman kings gathered up outside their very doors the principal material for their buildings: should they require any other accessories, they could obtain, at the worst, hard stone for their statues and thresholds in Magan and Wilukhkha, and beams of cedar and cypress in the forests of the Amanus and the Upper Tigris.1 Under these conditions a temple was soon erected, and its construction did not demand centuries of continuous labour, like the great limestone and granite sanctuaries of Egypt: the same ruler who laid the first brick, almost always placed the final one, and succeeding generations had only to keep the building in ordinary repair, without altering its original plan. The work of construction was in almost every case carried out all at one time, designed and finished from the drawings of one architect, and bears traces but rarely of those deviations from the earlier plans which sometimes make the comprehension of the Theban temples so difficult a matter: if the state of decay of certain parts, or more often inadequate excavation, frequently prevent us from appreciating their details, we can at least reinstate their general outline with tolerable accuracy.

While the Egyptian temple was spread superficially over a large area, the Chaldwan temple strove to attain as high an elevation as possible. The "raggurats," whose angular profile is a special characteristic of the landscapes of the Euphrates, were composed of several immense cubes, piled up on one another, and diminishing in size up to the small shrine by which they were crowned and wherein the god himself was supposed to dwell. There are two principal types of these riggurats. In the first, for which the builders of Lower Chaldwa showed a marked preference, the vertical axis, common to all the superimposed stories, did not pass through the centre of the rectangle which served as the

<sup>1 (</sup>f. pp. 610, 614 of this History. Guden had cedar (trinna) brought from the Amanus (Inscription de la Statue B, col. v. ll. 28-32, in Hillzin-Sanzro Découvertes en Chaldée, pl. 17; Amand, The In criptions of Telloh, in the Records of the Past, 2nd series, vol. ii. p. 79, also in the Decouvertes en Chaldée, p. ix.; and Jensen, Inschriften der Könige und Statthalter von Lagusch, pp. 32-35), and derete from the country of Magan (Inscription de la Statue D du Loure, col. v. l. 13, v. l. l; cl. Amand, The Inscriptions of Telloh, vol. i. p. 91, also Découvertes en Chaldee, p. xix.; and Jensen la chriften der Könige und Statthalter von Lagasch, pp. 52-55).

The comparison between the Egyptian and Chaldrean temples has been drawn by the master-hand of Perror-Chipiez, Histoire de l'Art dans l'Antiquité, vol. ii. pp. 412-411; the objections which have been raised against their views by Homnel, Geschichte Babyloniens und Assyrians, p. 18, note, on connected with a peculiar conception held by the author with regard to Oriental history, and appear to me to be impossible of acceptation until we know more. Studies, recently undertaken with a view to discover if M. Homnel's ideas correspond with the facts, have fully convinced me that the Chaldrean "ziggurat" differed entirely from the pyramid, such as it existed in Egypt.

base of the whole building; it was carried back and placed near to one of the narrow ends of the base, so that the back elevation of the temple rose abruptly in steep narrow ledges above the plain, while the terraces of the front broadened out into wide platforms. The stories are composed of solid blocks of crude blick: up to the present, at least, no traces of internal chambers have been found.2 The chapel on the summit could not contain more than one apartment; an altar stood before the door, and access to it was obtained by a straight external staircase, interrupted at each terrace by a more or loss spacious landing.8 The second type of temple frequently found in Northern Chaldea was represented by a building on a square base with seven stories, all of equal height, connected by one or two lateral staircases, having on the summit, the pavilion of the god; 4 this is the "terraced tower" which excited the admiration of the Greeks at Babylon, and of which the temple of Bel was the most remarkable example. The ruins of it still exist, but it has been so frequently and so completely restored in the course of ages, that it is impossible to say how much now remains of the original construction. We know of several examples, however, of the other type of ziggurat—one at Uru,6 another at Eridu,7 a third at Uruk,8 without mentioning those which have not as yet been methodically explored. None of them rises directly from the surface of the ground, but they are all built on

<sup>1</sup> It is the Chaldzan temple on a rectangular plan which has been described in detail and restored by Perron-Chiplez, Histoire de l'Art dans l'Antiquite, vol. ii. pp. 385-389 and pl. ii

<sup>2</sup> Periot-Chipicz (Histoire de l'Art, vol 1i. p. 388 and note 3) admit that between the first and second story there was a sort of plinth seven feet in height which corresponded to the foundation platform below the first story. It appears to me, as it did to Loftus (Travels and Lieuardies in Chaldea and Susiana, p. 129), that the slope which now separates the two vertical masses of buck work "is accidental, and owes its existence to the destruction of the upper portion of the second story. Taylor mentions only two stories, and evidently considers the slope in question to be a bank of rubbish (Notes on the Ruins of Mageyer, in the Journal of the Royal Asiatic Society, vol. xv. pp. 261, 262).

<sup>2</sup> Perrot-Chipnez place the staircase leading from the ground-level to the terrace inside the building—"an arrangement which would have the advantage of not interfering with the outline of this immense platform, and would not detract from the strength and solidity of its appearance (Histoire de l'Ait, etc., vol. ii. pp. 386, 387); Reber (Ueber altchalddische Kunst, in the Kutschnit fur Asspriologie, vol. i. p. 175, 1°) proposes a different combination. At Uru, the whole stuirease projects in front of the platform and "leads up to the edge of the basement of the second story" (Tyrin, Notes on the Huins of Muqcyer, in the Journal of the Royal Asiatic Society, vol. xv. p. 261), then continues as an inclined plane from the edge of the first story to the terrace of the second (ad p. 262), forming one single staircase, perhaps of the same width as this second story, leading from the base to the summit of the building (Lorrus, Travels and Researches in Chaldae and Susana, p. 12")

This is the Chaldrean temple with a single staircase and on a square ground plan, such as it has been defined and restored by Perror-Chiefez, Histoire de PArt, etc., vol. ii. pp. 389-395, and plant

Hleodotus, i. 179-183; Diodorus, ii. 9; Strabo, xvi. 1, 5, pp. 737-739; Arbian, Analuses, vii. 17.

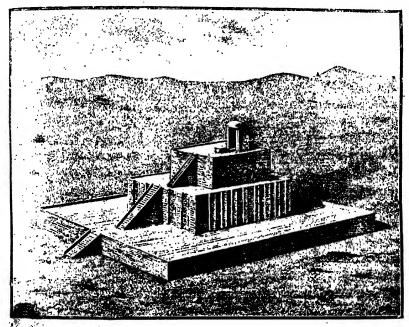

The ruins of the "ziggurat" of Uru have been described by Loptus, Travels and Researche, etc., pp. 127-134; and by Taylor, Notes on the Ruins of Muqueer, in the Journ. of the Assatto No. vol. xv. pp. 260-270.

We possess at present no other description of the ruins of Eridu than that by Taylor, Note: Abu-Shahrein and Tel-el-Lahm, in the Journ. of the Asiatic Soc., vol. xv. pp. 402-412.

• Loftus explored the ruins of Warka on two different occasions. The "ziggurat" of the tengl of the goddess Nana belonging to that city is now represented by the ruins which the natives of the country call Bowarieh (Travels and Researches, etc., pp. 167-170); cf. p. 624 of this History.

## THE ARRANGEMENT OF THE TEMPLE OF NANNAR AT URU. 629

raised platform, which consequently places the foundations of the temple nearly on a level with the roofs of the surrounding houses. The raised platform of the temple of Nannar at Uru still measures 20 feet in height, and its four angles are orientated exactly to the four cardinal points. Its façade was approached by an inclined plane, or by a flight of low steps, and the summit, which was surrounded by a low balustrade, was paved with enormous burút bricks. On this terrace, processions at solemn festivals would have ample space to perform their evolutions. The lower story of the temple occupies a

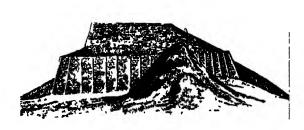

THE TEMPLE OF NANNAR AT URU, APPROXIMATELY RESTORED.

parallelogram of 198 feet in length by 173 feet in width, and rises about 27 feet in height.<sup>2</sup> The central mass of crude brick has preserved its casing of red tiles, cemented with bitumen, almost intact up to the top; it is strengthened by buttresses—nine on the longer and six on the shorter sides—projecting about a foot, which relieve its rather bare surface.<sup>3</sup> The second story rises to the height of only 20 feet above the first, and when intact could not

Drawn by Faucher-Gudin. The restoration differs from that proposed by Perrot-Chipiez, Histoire de l'Art dans l'Antiquité, vol. ii. pl. 386, and pl. ii.; and Fr. Reben, Ueber altehaldäische Kaust, in the Zeitschrift für Assyriologie, vol. i. p. 175, 18. I have made it by working out the discription taken down on the spot by Taxlon, Notes on the Ruins of Muqeyer, in the Journal of the Royal Asiatio Society, vol. xv. pp. 260-270; and by Loptus, Travels and Researches in Chaldren and Suchum, pp. 127-134.

The dimensional from Loftus (Travels and Researches in Chaldra and Susiana, p. 129)
TAYLOR, Notice the Ruins of Mugeyer, in the Journal of the Asiatic Society, vol. xv. p. 261.

have been more than 26 to 30 feet high. Many bricks bearing the stamp of Dungi are found among the materials used in the latest restoration, which took place about the VI<sup>th</sup> century before our era; they have a smooth surface, are broken here and there by air-holes, and their very simplicity seems to be witness to the fact that Nabonidos confined himself to the task of merely restoring things to the state in which the earlier kings of Uru had left them. Till within the last century, traces of a third story to this temple might have been

THE TEMPLE OF URU IN ITS PRESENT STATE, ACCORDING TO TAYLOR.4

distinguished; unlike the lower ones, it was not of solid brickwork, but contained at least one chamber: this was the Holy of Holies, the sanctuary of Nannar. The external walls were covered with pale blue enamelled tiles, having

a polished surface. The interior was panelled with cedar or cypress—rate woods procured as articles of commerce from the peoples of the North and West; this woodwork was inlaid in parts with thin leaves of gold, alternating with panels of mosaics composed of small pieces of white marble, alabaster, ony and agate, cut and polished. Here stood the statue of Nannar, one of those stiff and conventionalized figures in the traditional pose handed down from generation to generation, and which lingered even in the Chaldrean statues of Greek times. The spirit of the god dwelt within it in the same way as the double resided in the Egyptian idols, and from thence he watched over the restless movements of the people below, the noise of whose turnoil scarcely reached him at that elevation.

The gods of the Euphrates, like those of the Nile, constituted a countless multitude of visible and invisible beings, distributed into tribes and empires throughout all the regions of the universe. A particular function or occupation

<sup>&</sup>lt;sup>1</sup> At the present time 14 feet high, plus 5 feet of rubbish, 119 feet long, 75 feet wide (Lottie Trurcle and Revearches in Chaldza and Susiana, p. 129).

<sup>&</sup>lt;sup>2</sup> The cylinders of Nabonidos describing the restolation of the temple were found at the tangles of the second story by Taylou, Notes on the Ruins of Muqeyer, in the Journ. As. Soc., vol., pp. 263, 261; these are the cylinders published in Rawlinson, Cun. Ins. W. As., vol. i. pl. 68, No 1 69

confronted with his own portrait.1 There was no lack of good genii to combat this deformed and vicious band.2 They too were represented as monsters, but monsters of a fine and noble bearing,—griffins, winged lions, hon-headed men,

and more especially those splendid human-headed bulls, those 'lamassi" crowned with mitres, whose gigantic statues kept watch before the palace and temple gates.8 Between these two races hostility was constantly displayed: ustrained at one point, it broke out afresh at another, and the evil genii, invariably beaten, as invariably if fused to accept their defeat. Man, less securely armed against them than were the gods, was ever meeting with them. "Up there, they are howling, here they lie in wait, -they are great worms let loose by heaven-powerful ones. whose clamour rises above the city-who pour water in torrents from heaven, son, who have come out of the bosom of the earth - They twine around the high rafters, the great rafters, like a crown; -they take their way from house to house, -for the door cannot stop them,

nor bar the way, nor repulse them, -for they creep like a serpent under the door-they insinuate themselves like the air between the folding doors,—they separate the bride from the embraces of the bridegroom,-they snatch the child from between the knees of the man,—they entice the unwary from out of his fruitful house,—they are the threatening

nice which pursues him from behind." Their malice extended even to imals, "They force the raven to fly away on the wing, -and they make the

swallow to escape from its nest;—they cause the bull to flee, they cause the lamb to flee—they, the bad demons who lay snares."1

The most audacious among them did not fear at times to attack the god, of light; on one occasion, in the infancy of the world, they had sought to dispossess them and reign in their stead. Without any warning they had climbed the heavens, and fallen upon Sin, the moon-god; they had repulsed Shamash, the Sun, and Ramman, both of whom had come to the rescue; they had driven Ishtar and Anu from their thrones: the whole firma-

enemy!—Cause then the limbs of man, son of his god, to shine,—make him to be bright like the sky,-may he shine like the earth,-may he be bright like the interior of the heavens, -may the evil word be kept far from him," 1 and with it the malignant spirits. The very insistence with which help is claimed against the Anunnaki shows how much their power was dreaded. Chaldwan felt them everywhere about him, and could not move without incurring the danger of coming into contact with them. He did not fear them so much during the day, as the presence of the luminary deities in the heavens reassured him; but the night belonged to them, and he was open to their attacks. If he lingered in the country at dusk, they were there, under the hedges, behind walls and trunks of trees, ready to rush out upon him at every turn. If he ventured after sundown into the streets of his village or town, he again mot with them quarrelling with dogs over the offal on a rubbish heap, crouched in the slelter of a doorway, lying hidden in corners where the shadows were darkest. Even when barricaded within his house, under the immediate protection of his domestic idols, these genii still threatened him and left him not a moment's repose.2 The number of them was so great that he was unable to protect himself adequately from all of them: when he had disarmed the greater portion of them, there were always several remaining against whom he had forgotten to take necessary precautions. What must have been the total of the subordinate genii, when, towards the IXth century before our era, the official census of the invisible beings stated the number of the great gods in heaven and earth to be sixty-five thousand!

We are often much puzzled to say what these various divinities, whose names we decipher on the monuments, could possibly have represented. The sovereigns of Lagash addressed their prayers to Ningirsu, the valiant champion of Inlil; to Ninursag, the lady of the terrestrial mountain; to Ninsia, the loud of fate; to the King Ninagal; to Inzu, of whose real name no one has an idea; to Inanna, the queen of battles; to Pasag, to Galalim, to Dunshagana,

<sup>&</sup>lt;sup>1</sup> Rawlinson, Cun. Ins. W. As, vol. iv. pl. 14, No. 2, verso, Il. 6-28; cf. Fr. Fr. LLAGREANT, La Magic chez les Chaldens, pp. 37, et seq. The presence of the evil spirits everywhere is shown, among other magical formulas, by the incantation in RAWLINSON. Cun. Ins. W. As., vol. ii, pl. 18, where we find enumerated at length the places from which they are to be kept out. The magician closes the house to them, the hedge which surrounds the house, the yoke laid upon the exen, the temb, the prison, the well, the furnace, the shade, the vase for libation, the ravines, the valleys, the mountains, the door (cf. Sayer, The Religion of the Ancient Babylonums, pp. 446-448).

Assurnazirpal, King of Assyria, speaks in one of his inscriptions of these ixty-five thousand great gods of heaven and earth (SAYOR, The Religion of the Ancient Bubylonians, p. 216).

to Ninmar, to Ningishzida. Gudea raised temples to them in all the cities over which his authority extended, and he devoted to these pious foundations a yearly income out of his domain land or from the spoils of his wars. "Gudea.

the 'vicegerent' of Lagash, after having built the temple Ininnu for Ningirsu, constructed a treasury; a house decorated with sculptures, such as no 'vicegerent' had ever before constructed for Ningirsu; he constructed it for him, he wrote his name in it, he made in it all that was needful, and he executed faithfully all the words from the mouth of Ningirsu." 2 The dedication of these edifices was accompanied with solemn festivals, in which the whole population took an active part. "During seven years no grain was ground, and the maidservant was the equal of her mistress, the slave walked beside his master, and in my town the weak rested by the side of the strong." Henceforward Gudea watched scrupulously lest anything impure should enter and mar the sanctity of the place. Those we have enumenated were the ancient Sumerian divinities, but the characteristics of most of them would have been lost to us, had we not learned, by means of other documents, to what gods the Semites assimilated them.

gods who are better known and who are represented under a less barbarot. aspect. Ningirsu, the lord of the division of Lagash which was called Girsu, was identified with Ninib; Inlil is Bel, Ninursag is Beltis, Inzu is Sin, Inanna is Ishtar, and so on with the rest.<sup>4</sup> The cultus of each, too, was not a local cultus, confined to some obscure corner of the country; they all

<sup>&</sup>lt;sup>1</sup> The enumeration of these divinities is found, for example, in the inscription on the statue B of Guidea in the Louve (Hetzer-Sakzer, Defourerts en Chaldes, pls. 16-19., cl. Autre, Inscriptions of Telloh'An the Records of the Past, 2nd series, vol. 11. pp. 85, 86, and Decourters on Chaldes, pp. vii-xv; Jensi v, Inschriften der Konge und Statthalter von Lagasch, in the Kodschriftliche Behlicheheb, vol. ii. 1st part, pp. 46, 47). The transcriptions vary with different authors where Jensen rives Nimursag, Annaud reads Ningharsag; the Dunshag ma of these two authors becomes Shulshag ma for Leoac, Deux Inscriptions de Cudea, pateshe de Lagashe (v) the Interfit fur Assyrologie, vol. viii. pp. 10, 11), and elsewhere the goddess Gatumdug becomes without reason Gasig(I)-dug.

<sup>2</sup> Helzey-Sarvec, Decouveries en Chalde, pl. vi. 1. 70, col viii 1 9; cf Autyld, The Inscriptions of Telloh, in the Records of the Past, 2nd series, vol ii 82, 83, and in the Decouveries on Chaldes, pp. xi, xii.; Jensen, Insc. der Könige und Statth. von Lagasch, in the Keilschriftliche Bibliothek. vol. iii. 1st part, pp. 38, 39.

<sup>\*</sup> Drawn by Faucher-Gudin, from HECELL-SUBJEC, Deconicits on Chables, pl. 22, No. 5 The attribution of this figure to Ningurea is very probable, but not wholly certain.

<sup>\*</sup> Of. on this subject the memoir of AMIALD. Surpourla, d'après les Inscriptions, de la Collect on de Sarree, p. 15, et seq., where possible identifications of the names of Sumerian gods worshipped at Telloh, with those of Semitic gods, are given, but with a prudent reserve, and the chapter in Thatt-Glinnich, Geschichte der Religion im Altertum, vol. i. pp. 115-151.

were rulers over the whole of Chaldma, in the north as in the south, at Uruk. at Uru, at Larsam, at Nipur, even in Babylon itself. Inlil was the ruler of the earth and of Hades, Babbar was the sun, Inzu the moon, Inanna-Anunit the morning and evening star and the goddess of love,2 at a time when two distinct religions and two rival groups of gods existed side by side on the banks of the Euphrates. The Sumerian language is for us, at the present day, but a collection of strange names, of whose meaning and pronunciation we are often ignorant. We may well ask what beings and beliefs were originally hidden under these barbaric combinations of syllables which are constantly recurring in the inscriptions of the oldest dynasties, such as Pasag, Dunshagana, Dumuzi-Zuaba, and a score of others. The priests of subsequent times claimed to define exactly the attributes of each of them, and probably their statements are, in the main, correct. But it is impossible for us to gauge the motives which determined the assimilation of some of these divinities, the fashion in which it was carried out, the mutual concessions which Semite and Sumerian must have made before they could arrive at an understanding, and before the primitive characteristics of each deity were softened down or entirely effaced in the process. Many of these divine personages, such as Ea,8 Mcrodach,4 Ishtar,5 are so completely transformed, that we may well ask to which of the two peoples they owed their origin. The Semites finally gained the ascendency over their rivals, and the Sumerian gods from thenceforward preserved an independent existence only in connection with magic, divination, and the science of foretelling events, and also in the formulas of exorcists and physicians, to which the harshness of their names lent a greater weight. Elsewhere it was Bel and Sin, Shamash and Ramman, who were universally worshipped, but a Bel, a Sin, a Shamash, who still betrayed traces of their former connection with the Sumerian Inlil and Inzu, with Babbar and Mermer.<sup>6</sup> In whatever language,

<sup>\*</sup> I Fr. Levoruant, La Mugio chez les Chalderns, pp. 152-154 (where the name is read Mul-go instead of Mullil, a variant of Inhl); Saves, The Religion of the Ancient Babylonians, pp. 116-119.

<sup>&</sup>lt;sup>2</sup> For Anunt-Inanna, the Morning Star, and for the divinities confounded with her, see the researches of SAYCF, The Religion of the Ancient Babylonians, pp. 182-181.

<sup>&</sup>lt;sup>3</sup> Ea, the god of the abyss and of the primayal waters, is, according to Fr. Lenormant, Sumerian or Accadian (*La Magie ches les Chaldrens*, p. 148); Hommel (*Die Semitischen Völker*, p. 373) and Sayer (*The Religion of the Ancient Babylonians*, pp. 104, 105, 132-134) both share this view.

<sup>&</sup>lt;sup>4</sup> Sayce (The Religion of the Ancient Babylonians, p. 106) does not venture to pronounce whether the name of Marduk-Meiodach is Semitic or Sumerian; Hommel (Die Semitischen Völker, pp. 376, 377, and Geschichte Babyloniens und Assyriens, pp. 255, 256, 266) believes it to be Sumerian, as also do Jensen (Die Kosmologie der Babylonier, pp. 242, 243) and Lenormant (La Magie chez les Chaldéens, p. 121).

Ishtar is Sumerian or Accadian, according to Fr. Delitzsch in his early works (Die Chaldzische Genesis, p. 273), and Hommel (Die Semitischen Völker, p. 385, and Geschichte Babyloniens und Assyrien», pp. 257, 266) and Sayco (The Religion of the Ancient Babylonians, pp. 252-261).

On the identity of the Sumerian god whose name is read indifferently Merme, Meru, with the Semitic Ramman, cf. Fr. Lenormant, Les Noms de l'airain et du cuivre dans les deux langues des inscriptions cunciformes de la Chaldes et de l'Assyrie, in the Transactions of the Bibl. Arch. Soc., vol

however, they were addressed, by whatever name they were called upon, they did not fail to hear and grant a favourable reply to the appeals of the faithful.

Whether Sumerian or Semitic, the gods, like those of Egypt, were not abstract personages, guiding in a metaphysical fashion the forces of nature. Each of them contained in himself one of the principal elements of which our universe is composed,-earth, water, sky, sun, moon, and the stars which moved around the terrestrial mountain. The succession of natural phenomena with them was not the result of unalterable laws; it was due entirely to a series of voluntary acts, accomplished by beings of different grades of intelligence and nower. Every part of the great whole is represented by a god, a god who is a man, a Chaldwan, who, although of a finer and more lasting nature than other Chaldreans, possesses nevertheless the same instincts and is swayed by the same rassions. He is, as a rule, wanting in that somewhat lithe grace of form, and in that rather easy-going good-nature, which were the primary characteristics of the Egyptian gods: the Chaldman divinity has the broad shoulders, the thick-set figure and projecting muscles of the people over whom he rules; he has their hasty and violent temperament, their coarse sensuality, their cruel and warlike propensities, their boldness in conceiving undertakings, and their obstinate tenacity in carrying them out. Their goddesses are modelled on the type of the Chaldman women, or, more properly speaking, on that of their queens. The majority of them do not quit the harem, and have no other ambition than to become speedily the mother of a numerous offspring. Those who openly reject the rigid constraints of such a life, and who seek to share the rank of the gods, seem to lose all self-restraint when they put off the veil: like Ishtar, they exchange a life of severe chastity for the lowest debauchery, and they subject their followers to the same irregular life which they themselves have led. "Every woman born in the country must enter once during her life the enclosure of the temple of Aphroditê, must there sit down and

vii. p. 100, No. 1; PCGNON, L'Inscription de Merou-nerar I , roi d'Assyrie, pp. 22, 23; SAVOL, The Religion of the Ancient Bubylonians, p. 202.

The general outline of the Chaldan-Assyrian religions was completely reconstituted by the callier Assyriologists: it was fully traced out in the two memoirs of Hingas, On the Assyrian Mylhology (in the Memoirs of the Irish Academy, November, 1851, vol. win pp 405-422), and by H. Iwalinson, On the Religion of the Balylomans and Assyrians (in the Herodotus of G. Rawlinson, and citit, vol. i. pp. 480-527). It was considerably added to by the researches of Fr. Lenemant, in his Essai sur les fragments cosmogoniques de Récore, and above all ly his two works on La Magie oberles Chaldeins et Les Sources Accadiennes, and on La Divination et la sei me des présages. Since then, many errors have been corrected and many new facts pointed out by contemporary Assyriologist, although no one has as yet ventured to give a complete exposition of all that is known up to the present time about Chaldesan and A syrian mythology: we have to fall back upon the aboth the published by Fr. Lenormany, Hestoire Ancience des puples de l'Orant, 6th cdit, vol. vi.; by Millitte Ditterson, Geschichte Babyloniens and Assyrian, 2nd cdit., pp. 23-53; by En Milling Geschicht des Alt thums, vol. i. pp. 274-183, or the very instructive summary which has been recently given by the der Religion im Allertum bis auf Alexander den Grossen, vol. i. pp. 174-183.

unite herself to a stranger. Many who are wealthy are too proud to mix with the rest, and repair thither in closed chariots, followed by a considerable train of slaves. The greater number seat themselves on the sacred pavement, with a cold twisted about their heads,-and there is always a great crowd there, coming and going; the women being divided by ropes into long lanes, down which strangers pass to make their choice. A woman who has once taken her place here cannot return home until a stranger has thrown into her lap a silver coin, and has led her away with him beyond the limits of the sacred enclosure. As he throws the money he pronounces these words: 'May the goddess Mylitta make thee happy!'-Now, among the Assyrians, Aphroditê is called Mylitta. The silver coin may be of any value, but none may refuse it, that is forbidden by the law, for, once thrown, it is sacred. The woman follows the first man who throws her the money, and repels no one. When once she has accompanied him, and has thus satisfied the goddess, she returns to her home, and from thenceforth, however large the sum offered to her, she will yield to no onc. The women who are tall or beautiful soon return to their homes, but those who are ugly remain a long time before they are able to comply with the law; some of them are obliged to wait three or four years within the enclosure." This custom still existed in the Vth century before our era, and the Greeks who visited Babylon about that time found it still in full force

The gods, who had begun by being the actual material of the element which was their attribute, became successively the spirit of it, then its ruler.<sup>2</sup> They continued at first to reside in it, but in the course of time they were separated from it, and each was allowed to enter the domain of another, dwell in it, and even command it, as they could have done in their own, till finally the greater number of them were identified with the firmament. Bel, the lord of the earth, and Ea, the ruler of the waters, passed into the heavens, which did not belong to them, and took their places beside Anu: the pathways were pointed out which they had made for themselves across the celestial vault, in order to inspect their kingdoms from the exalted heights to which they had been raised; that of Bel was in the Tropic of Cancer, that of Ea in the Tropic of

<sup>&</sup>lt;sup>1</sup> Herodotus, i. 199, of Strabo, xvi. p. 1058, who probably has merely quoted this passage from Herodotus, or some writer who copied from Herodotus. We meet with a direct allusion to this same custom in the Bible, in the Book of Baruch: "The women also, with cords about them, sitting in the ways, burn bran for perfume; but if any of them, drawn by some that passeth by, he with him, she reproached her fellow, that she was not thought as worthy as herselt, nor her cord broken" (ch. vi. 43).

FR. LINGRMANT, La Magie chez les Chaldéens, p. 144, et seq., where the author shows how Ana Anu, after having at first been the Heaven itself, the starry vault stretched above the earth, became successively the Spirit of Heaven (Zi-ana), and finally the supreme ruler of the world: according to Lenormant, it was the Semites in particular who transformed the primitive spirit into an actual god-king.

Capricorn. They gathered around them all the divinities who could easily be abstracted from the function or object to which they were united, and they thus constituted a kind of divine aristocracy, comprising all the most powerful beings who guided the fortunes of the world. The number of them was considerable, for they reckoned seven supreme and magnificent gods, fifty great gods of heaven and earth, three hundred celestial spirits, and six hundred terrestrial spirits.2 Each of them deputed representatives here below, who received the homage of mankind for him, and signified to them his will. The god revealed himself in dreams to his seers and imparted to them the course of coming events,3 or, in some cases, inspired them suddenly and spoke by their mouth: their utterances, taken down and commented on by their assistants, were regarded as infallible oracles. But the number of mortal men possessing adequate powers, and gifted with sufficiently acate senses to bear without danger the near presence of a god, was necessarily limited; communications were, therefore, more often established by means of various objects, whose grosser substance lessened for human intelligence and flesh and blood the dangers of direct contact with an immortal. The statues hidden in the recesses of the temples or erected on the summits of the "ziggurats" became imbued, by virtue of their consecration, with the actual body of the god whom they represented, and whose name was written either on the base or garment of the statue.4 The sovereign who dedicated them, summoned them to speak in the days to come, and from thenceforth they spoke: when they were interrogated according to the rite instituted specially for each one, that part of the celestial soul, which by means of the prayers had been attracted to and held captive by the statue, could not refuse to reply.5 Were there for this purpose special

This number is that furnished by the tablet in the British Museum quoted by G SMITE, in his article in the North British Review, January, 1870, p. 309.

<sup>1</sup> The removal of Bel and Ea to he even and the placing of them beside Anu, already noticed by Schrader (Studien and Kritiken, 1871, p. 311), and the identification of the "Ways of Bel and Ea" with the Tropics, have been made the subjects of study, and the problems arising out of them have been made the Kosmologie der Babylonier, pp. 19-37.

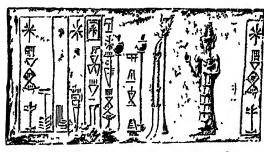

<sup>2</sup> Aprophetic dream is mentioned upon one of the statues of Telloh (Zimmins, Das Traumgesicht

Guden the Zeitschrift für Assyrologic, vol. in. pp. 232-235; cf. p. 610 of this History). In the records of Assurbanipal we find mention of several "secre" - shabru—one of whom predicts the general triumph of the king over his enemics (Cylinder of Rassam, col. iii. II. 118-127), and of whom another announces in the name of Ishtar the victory over the Elamites and encourages the Assyrian army to cross a torrent swollen by rains (id , col. v. ll. 97-103), while a third sees in a dream the defeat and death of the King of Elum (Cylinder B, col. v. 11, 49-76, in G. Surin, History of Assurbanipal, pp. 123-126). These "seers" are mentioned in the texts of Guden with the prophetesses "who tell the message" of the gods (Statue B du Lourre, in Hra zer-Santa & Louilles en Chaldee, pl. 16, col. iv. 11. 1-3; cf. AMIALD, The Inscriptions of Telloh, in the Records of the Past, 2nd scries, vol. i. p. 78.

In a formula drawn up against evil spirits, for the purpose of making talismanic figures for the protection of houses, it is said of Merodach that he "inhabits the image" - ashibu salam-which has been made of him by the magician (RAWLINSON, Cun. Ins. W. As., vol. iv. pl. 21, No. 1, ll. 40, 41; cf. Fr. LENORMANT, Études Accadiennes, vol. ii. pp. 272, 273; vol. iii. pp. 104-106).

This is what Gudes says, when, describing his own statue which he had placed in the temple of Telloh, he adds that "he gave the order to the statue: 'To the statue of my king, speak'!"
(AMAUD, in HEUREY, Million, Decouvertes en Chaldee, p. xii. ll. 21-25). The statue of the king, inspired

images, as in Egypt, which were cleverly contrived so as to emit sounds by the pulling of a string by the hidden prophet? Voices resounded at night in the darkness of the sanctuaries, and particularly when a king came there to prostrate himself for the purpose of learning the future: his rank alone, which raised him halfway to heaven, prepared him to receive the word from on high by the mouth of the image. More frequently a priest, accustomed from child-

THE ADORATION OF THE MACE AND THE WHIP.2

hood to the office, possessed the privilege of asking the desired questions and of interpreting to the faithful the various signs by means of which the divine will was made known. The spirit of the god inspired, moreover, whatever seemed good to him, and frequently entered

into objects where we should least have expected to find it. It animated stones, particularly such as fell from heaven; also trees, as, for example, the tree of Eridu which pronounced oracles; and, besides the battle-mace, with a granite head fixed on a wooden handle, the axe of Ramman, lances made on the model of Gilgames' fairy javelin, which came and went at its master's orders, without needing to be touched. Such objects, when it was once ascertained

by that of the god, would thenceforth speak when interrogated according to the formulance of, what is said of the dreine or royal statues dedicated in the temples of Egypt, pp. 119, 120 of this volume A number of oracles regularly obtained in the time of Asarbaddon and Assurbanabal have been published by KNUDIZON, Assyrische Gebete und den Sonnengett, 1893.

<sup>1</sup> For instance, the Assyrian King Assurbanipal hears at night, in the sanctuary of Ishta of Arbela, the voice of the goddess herself promising him help against Trumman, the King of Elam (Oylinder B, col. v. Il. 26-49, in (f. Smrn, History of Assurbanipal, pp. 120-123)

SAYOT, The Religion of the Ancient Babylonians, p. 110; on the possible presence of a second reco in one of the sanctuaries of Uru, or of a meteoric stone consecrated to the moon-god, Sin, of HOMMLI, Die Semitischen Volker und Sprachen, pp. 206, 207.

4 The tree of Eridu is described in Tablet K, iii. (RAWLINSON, Cun. Ins. W. As., vol. iv. pl 15) of the British Museum; cf. SAYER, Relig of Anc. Bubylonians, pp. 238-242, 471, ll 26-35, where it is identified with the Cosmic tree. I agree with Jensin, Dis Kosmologie, etc., p. 249, n. 1, that this tree give its oracles through the medium of a priest attached to its guardianship. The subject of the sacred trees in Egypt, and of the worship rendered to them, has been treated of in pp. 121, 122 of this volume.

In front of it, is not infrequently seen on Assyrian cylinders; cf. on the subject of this worship. Halve, Les Origines orientales de Ulit, vol. 1 pp. 193-198. It is possible that the enormous stouched of the mace of the vergerent Ningresumudu (Hevele, Reconstruction particle de la stile du voi Eanuadu, in the Comptes reades de Ulacadémic de Inscriptions, 1892, vol. xx. p. 270, and La Lance colossale d'Izloubar, that, 1893, vol xxi p 310) may be one of these divine maces worshipped on the temples. The whip, placed in the illustration by the side of the two maces, shared in the tenours which they received.

The battle-are set up on an alter to receive the offering of a priest or devotee had attention irst called it by A. DE LONGPLEILE, (Eurres, vol. i. pp. 170, 171, 218-221.

One of these bronze or copper lances, decorated with small bas-reliefs, was found by M. do

that they were imbued with the divine spirit, were placed upon the altar and worshipped with as much veneration as were the statues themselves. Annuals never became objects of habitual worship as in Egypt: some of them, however, such as the bull and lion, were closely allied to the gods, and birds unconsciously betrayed by their flight or cries the secrets of futurity. In addition to all these, each family possessed its household gods, to whom its members recited prayers and poured libations night and morning, and whose statues set up over the domestic hearth defended it from the snares of the evil one.2 The State religion, which all the inhabitants of the same city, from the king down to the lowest slave, were solemnly bound to observe, really represented to the Chaldrens but a tithe of their religious life: it included some dozen gods, no doubt the most important, but it more or less left out of account all the others, whose anger, if aroused by neglect, might become dangerous. The private devotion of individuals supplemented the State religion by furnishing worshippers for most of the neglected divinities, and thus compensated for what was lacking in the official public worship of the community.

If the idea of uniting all these divine beings into a single supreme one, who would combine within himself all their elements and the whole of their powers, ever for a moment crossed the mind of some Chaldean theologian, it never spread to the people as a whole Among all the thou-

unity.1 We meet indeed with many passages in which this or that divinity beasts of his power, eloquently depreciating that of his rivals, and ending his discourse with the injunction to worship him alone: " Man who shall come after, trust in Nebo, trust in no other god!"2 The very expressions which are used. commanding future races to abandon the rest of the immortals in favour of Nebo. prove that even those who prided themselves on being worshippers of one god realized how far they were from believing in the unity of God. They stronuously asserted that the idol of their choice was far superior to many others, but it never occurred to them to proclaim that he had absorbed them all into himself, and that he remained alone in his glory, contemplating the world, his creature. Side by side with those who expressed this belief in Nebo, an inhabitant of Babylon would say as much and more of Merodach, the patron of his birthplace, without, however, ceasing to believe in the actual independence and royalty of Nebo. "When thy power manifests itself, who can withdraw himself from it?—Thy word is a powerful not which thou spreadest in heaven and over the earth:-it falls upon the sea, and the sea retires,-it falls upon the plain, and the fields make great mourning,-it falls upon the upper waters of the Euphrates, and the word of Merodach stirs up the flood in them .- O Lord, thou art sovereign, who can resist thee? - Merodach, among the gods who bear a name, thou art sovereign."3 Merodach is for his worshippers the king of the gods, he is not the sole god. Each of the chief divinities received in a similar manner the assurance of his omnipotence, but, for all that, his most zealous followers never regarded them as the only God, beside whom there was none other, and whose existence and rule precluded those of any other. The simultaneous elevation of certain divinities to the supreme rank had a reactionary influence on the ideas held with regard to the nature of each. Anu, Bel, and Ea, not to mention others, had enjoyed at the outset but a limited and incomplete personality, confined to a single concept, and were regarded as possessing only such attributes as were indispensable to the exercise of their power within a prescribed sphere, whether in heaven, or on the earth, or in the waters; as each in his turn gained the ascendancy over his rivals, he became invested with the qualities which were

¹ The supreme god, whose existence the earlier Assyriologists thought they had discovered (H. RAWLINSON, On the Religion of the Babylonians and Assyrians, in the Revolute of G. RAWLINSON, 2nd cdit., vol i. p. 482, cf. G. RAWLINSON, The Five Great Monarchies, 2nd edit., vol.i. pp. 111, 115; Fr. Lenormany, Essai de Commentaire sur les fragments cosmogoniques de Berose, pp. 63, 64, Les Disus de Babylone et de l'Assyrie, pp. 4, 5), was as much a being of their own invention as the supreme god imagined by Egyptologists to occupy the highest position in the Egyptian Pantheon.

Inscription on the statue of the god Nebo, of the time of Rammanniran III., King of Assyria, now preserved in the British Museum (RAWLINSON, Cun. Ins. W. As., vol. i. pl. 35, No. ii. l. 12).

<sup>\*</sup> RAWLINSON, Cun. Ins. W. As., vol. iv. pl. 26, No. iv. pl. 11. 1-22: cf. the translations of this text given in French by Fr. Lenormant, La Magie chez les Chaldéens, p. 175, and Findes accadiennes, vol. ii. pp. 119-123, vol. iii. pp. 41-43; in German by Delitzsch-Murdter, Geschichte Babyloniens und Assyriens, 20d edit., p. 37; and in English by Savee, The Religion of the Ancient Babylonians, p. 497.

exercised by the others in their own domain. His personality became enlarged, and instead of remaining merely a god of heaven or earth or of the water, he became god of all three simultaneously. Anu reigned in the province of Bel or of Ea as he ruled in his own; Bel joined to his own authority that" of Anu and Ea; Ea treated Anu and Bel with the same absence of ceremony which they had shown to him, and added their supremacy to his own. The personality of each god was thenceforward composed of many divers elements. each preserved a nucleus of his original being, but superadded to this were the peculiar characteristics of all the gods above whom he had been successively raised. Anu took to himself somewhat of the temperaments of Bel and of Ea, and the latter in exchange borrowed from him many personal The same work of levelling which altered the characteristics of the Egyptian divinities, and transformed them little by little into local variants of Osiris and the Sun, went on as vigorously among the Chaldman gods: those who were incarnations of the earth, the waters, the stars, or the heavens, became thenceforth so nearly allied to each other that we us tempted to consider them as being doubles of a single god, worshipped under different names in different localities. Their primitive forms can only be clearly distinguished when they are stripped of the uniform in which they are all clothed.

The sky-gods and the earth-gods had been more numerous at the outset than they were subsequently. We recognize as such Anu, the immovable firmament, and the ancient Bel, the lord of men and of the soil on which they live, and into whose bosom they return after death; but there were others, who in historic times had partially or entirely lost their primitive character,—such as Nergal, Ninib, Dumuzi; or, among the goddesses, Damkina, Esharra, and even Ishtar herself, who, at the beginning of their existence, had represented

This conclusion, arrived at from the variety of functions attributed to Nergel, is completely thesetod by Jensen, Die Kosmologie, etc., pp. 181–181, recording to him Neigel was item to be given, what he undoubtedly was at a later period, the blazing and a verpowering summer or redday sun Minib and his double Ninguisu are gods of cultivation and tertility, on which then the gods carth, like their mother Esharra, the fraitful soil which produces have stand futtens the castle (Jensen, Die Kosmologie der Babylonier, pp. 61, 199), et. p. 570, note of this volume

<sup>\*</sup> Danuzi, Dunzi, the Tammuz of the Western Senates, was both god at the earth of the hying, and of the world of the dead, but by preference the god who council versation to grow, and who clothed the earth with verdure in the spring (Jana's, Die Kosmologie der Balyl nee, pp. 117-223, 227, 480)

<sup>&</sup>lt;sup>4</sup> Damkina, Davkina, the Δανκη of Greek transcriptions, is one if the few roddesses who was recognized almost unanimously by all Assyriologists who have interested themselves in the study of religion, as representing the Earth (Lindaux). La Maque che, let (1 it hens, pp. 115, 153, Hounit, Die Semitischen Volker, pp. 375, 376, Savet, The Religion of the function Labylonians pp. 139, 201, 265); her name of Damski is so compounded that it signifies literally 'the mistress of the earth.

For the attribute of divinity of the soil, which the golders I share undoubtedly personal, cf. what is said by Jensen, Kosmologie der Babylonier, pp. 195-201

This very ingenious theory of Title's is based upon the legend of the descent of Islatin into the infernal regions (Tille, La Décese Islatar surfout dans le mythe babylonien, in the 1cts 1 the 1 Ia International Congress of Orientalists, vol. 11, pp. 493, 506). It has been adopted by Saver, the Integion of the Ancient Babylonians, p. 251, and it has every appearance of probability, the sidereal character of Islatar would be from her union with Anumi.

only the earth, or one of its most striking aspects. For instance, Nergal and Ninib were the patrons of agriculture and protectors of the soil, Dumuzi was the ground in spring whose garment withered at the first appoach of summer. Damking was the leafy mould in union with fertilizing moisture. E-harra was the field whence sprang the crops, Ishtar was the clod which again grew green after the heat of the dog days and the winter frosts. All these beings had been forced to submit in a greater or less degree to the fate which among most primitive races awaits those older earth-gods, whose manifestations are usually too vague and shadowy to admit of their being grasped or represented by any precise imagery without limiting and curtailing their spheres. New deities had arisen of a more definite and tangible kind. and hence more easily understood, and having a real or supposed province which could be more easily realized, such as the sun, the moon, and the fixed or wandering stars. The moon is the measure of time; it determines the months, leads the course of the years, and the entire life of mankind and of great cities depends upon the regularity of its movements: the Chaldwans, therefore, made it, or rather the spirit which animated it, the father and king of the gods; but'its suzerainty was everywhere a conventional rather than an actual superiority, and the sun, which in theory was its vassal, attracted more worshippers than the pale and frigid luminary. Some adored the sun under its ordinary title of Shamash, corresponding to the Egyptian Ra; otherdesignated it as Merodach, Ninib, Nergal, Dumuzi, not to mention other less usual appellations. Nergal in the beginning had nothing in common with Ninib, and Merodach differed alike from Shamash, Ninib, Nergal, and Dumuzi; but the same movement which instigated the fusion of so many Egyptian divinities of diverse nature, led the gods of the Chaldreans to divest themselves little by little of their individuality and to lose themselves in the Each one at first became a complete sun, and united in himself all the innate virtues of the sun-its brilliancy and its dominion over the world, its gentle and beneficent heat, its fertilizing warmth, its goodness and justice, its emblematic character of truth and peace; besides the incontestable vices which darken certain phases of its being-the fierceness of its rays at midday and in summer, the inexorable strength of its will, its combative temperament, its irresistible harshness and cruelty. By degrees they lost this uniform character, and distributed the various attributes among themselves. If Shamash continued to be the sun in general, Ninib restricted himself, after the example of the Egyptian Harmakhis, to being merely the rising and setting sun,2 the

<sup>&</sup>lt;sup>1</sup> Shamash is, like Rå in Egyptian (cf. p. 88, noto 1, of this volume), the actual word which signifies "sun" in the ordinary language: it is transcribed Zaús (Hest chive, sub voce) by the Greeks.

<sup>2</sup> Lenormant attributed to him the character of "the nocturnal sun in the darkness, in the lower hemisphere" (Essai de Commentaire sur les Fragments Cosmogoniques de Berose, p. 118). Delitasch

sun on the two horizons. Nergal became the feverish and destructive summer Merodach was transformed into the youthful sun of spring, and culy morning;2 Dumuzi, like Merodach, became the sun before the summer : Then moral qualities naturally were affected by the process of restriction which had been applied to their physical being, and the external aspect now assigned to each in accordance with their several functions differed considerably from that formerly attributed to the unique type from which they had sprung. Numb was represented as valiant, bold, and combative; he was a solder who dreamed but of battle and great feats of arms.4 Neigal united a crafty flereness to his bravery: not content with being lord of battles, he became the pestilence which breaks out unexpectedly in a country, the death which comes like a thief, and carries off his prey before there is time to take up arms against Merodach united wisdom with courage and strength he attacked the wicked, protected the good, and used his power in the cause of order and justice.6 A very ancient legend, which was subsequently fully developed among the Canaanites, related the story of the unhappy passion of Ishtai for Dumuzi. The goddess broke out yearly into a fresh fienzy, but the tragic death of pictors to identify him with the sun in the south, the milday sun, who burns up and destroys everything (DILITZSCH-MUIDIII, Geschichte Bubyl und Assyriens, 2nd cht, p ) Amind, partially I turning to Le normant's opinion, thought that \inib was the sun hidden behind in I struggling with londs, in obscured sun, but obscured during the distance (Amain, Arpoulle Capies les recreptions d la collection de Sarzee, pp 18, 19) L'in illy, Jensen concludes the long dissert it in he has deveted to the sulject of this god (Di Kesmologie der Babylonier, pp 457 470) by de linn that "the morning sun on the housen, being similar in appearance to the setting sun on the horizon, was identified with it," in other words, that Vinib is the riging and setting sun, male use the Layption Harmakhis, "Harmakhufti," the Haus of the two horizons of the sky (cf. p. 1 8 cf flas yelume), to which conclusion Tiele idlicres implicitly (Geschickle der R le ponem Altertum vol 1 p 168)

1 The solar character of Norgal, at least in later times, is admitted, but with restrictions, by all Assymologists The evident connection between him and Nimb, of which we have it to (Linninger, Louis de Commentaire, etc., p. 123 et se j.), was the ground of Delitzsch's theory that he was likewise the burning and destructive sun (Del itself Meretier, Gesch Labyloniens, etc. 2nd e hit, p. 4), and 1490 of Jensen's analogous concept of a melday in I summer sun (Jessey, K smel \( \mu \), etc. \( \mu \) 184-485)

In Lenormant seems to have been the first to distinguish in Mer dich, lesit site and a thou planet Jupiter, a solar personago (Ics Primier e Civilisatione, vol in pp. 170-171, val I e Mine thet les Chaldeens, pp. 120, 121, 177) This notion, which has been a nertily elimited by most Assyriologists (see what is said by Sirce, The Religion of the Ament Lat of main 1p 35-101), has Spenial defined with greater exactitude by Jensen (Die K sin let  $e^{-1}r$  bale 11  $e^{-57}$ ,  $e^{-5}$  214, 250), who is inclined to see in Merodach both the morning sun and the spring our and this is the opin in held it present (Deliersen Merderr, Geschichte Bab und Assyrens, 2n le int , p 1)

the hero finally moderated the ardour of her devotion. She wept distractedly for him, went to beg the lords of the infernal regions for his return, and brought him back triumphantly to the earth: every year there was a repetition of the same passionate infatuation, suddenly interrupted by the same mourning. The earth was united to the young sun with every recurring spring, and under the influence of his caresses became covered with verdure; then followed autumn and winter, and the sun, grown old, sank into the tomb, from whence his mistress had to call him up, in order to plunge afresh with him by a common impulse into the joys and sorrows of another year.<sup>1</sup>

The differences between the gods were all the more accentuated, for the reason that many who had a common origin were often separated from one another by, relatively speaking, considerable distances. Having divided the earth's surface between them, they formed, as in Egypt, a complete feudal system, whose chiefs severally took up their residence in a particular city. Anu was worshipped in Uruk, Enlil-Bel reigned in Nipur, Eridu belonged to Ea, the lord of the waters. The moon-god, Sin, alone governed two large fiefs, Uru in the extreme south, and Harran towards the extreme north-west; Shamush had Larsam and one of the Sipparas for his dominion, and the other sun-gods were not less well provided for, Nergal possessing Kutha, Zamama having Kish, Ninib side by side with Bel reigning in Nipur, while Merodach ruled at Babylon.2 Each was absolute master in his own territory, and it is quite exceptional to find two of them co-regnant in one locality, as were Ninib and Bel at Nipur, or Ea and Ishtar in Uruk; not that they raised any opposition on principle to the presence of a stranger divinity in their dominions, but they welcomed them only under the titles of allies or subjects.3 Each, moreover, had fair play, and Nebo or Shamash, after having filled the rôle of sovereign at Borsippa or at Larsam, did not consider it derogatory to his dignity to accept a lower rank in Babylon or at Uru. Hence all the feudal gods played a double part, and had, as it were, a double civil portion—that of suzerain in one or two localities, and

There will be found in RAWLINSON, Cun. Ins. W. As., vol. iii. pl. 66, verso, col. 7, a list of the divinities, whose images, placed in the principal temples of Assyria, constituted the complete court, and so to speak the domestic entourage of the chief god (SAYOR, op. cit., pp. 218-220).

<sup>&</sup>lt;sup>1</sup> For the questions which arise from the exact philological relationship between Dumuzi and Tammuz, cf. Jlanda, Ueber canige sumero-akkadische und babylonisch-assyrische Gölternamen, in the Zeitschrift fur Assyriologie, vol. i. pp. 17-24. For the myth of Tammuz-Adonis and of Ishtar-Aphrodité, two special memoirs may be consulted; one by Fr. Lenormant (Il Mito di Adone-Tammus net documenti cunciformi, in the Atti del IV. Congresso Internazionale degli Orientalisti, pp. 143-173), and the other by Tiole (La Déesse Ishtar surtout dans le mythe babylonien, in the Actes du VI Congrès international des Orientalistes, vol. ii. pp. 493-506), whose respective conclusions do not àgree in detail. The account of the descent of Ishtar into the infernal regions will be found on pp. 693-696 of this volume.

<sup>\*</sup> Without having recourse to the original texts, the reader may find the localities belonging to each of the great divinities mentioned in Delitzscu, Wo lag das Paradies in Nipur, p. 221; Eridu, p. 228; Uru, p. 227; Larsam, p. 223; Sippara, p. 210; Kutha, p. 218; Kish, p. 219. The attribution of Harran to Siu, which is wanting in Delitzsch, is found in Saxon, The Religion of the Ancient Babylonians, pp. 163, 164.

that of vassals everywhere else—and this dual condition was the surest guarantee not only of their prosperity, but of their existence. Sin would have run great risk of sinking into oblivion if his resources had been confined to the subventions from his domain temples of Harran and Uru. Their impoverishment would in such case have brought about his complete failure: after having enjoyed an existence amid riches and splendour in the beginning of history, he would have ended his life in a condition of misery and obscurity. But the sanctuaries erected to him in the majority of the other cities, the honours which these bestowed upon him, and the offerings which they made to him, compensated him for the poverty and neglect which he experienced in his own domains; and he was thus able to maintain his divine dignity on a suitable footing. All the gods were, therefore, worshipped by the Chaldmans, and the only difference among them in this respect arose from the fact that some exalted one special deity above the others. The gods of the richest and most ancient principalities naturally enjoyed the greatest popularity. The greatness of Uru had been the source of Sin's prestige, and Morodach owed his prosperity to the supremacy which Bubylon had acquired over the districts of the north. Merodach was regarded as the son of Ea, as the star which had risen from the abyes to illuminate the world, and to confer upon mankind the decrees of eternal wixigm He was proclaimed as lord-"bilu"-par excellence, in comparison with whom all other lords sank into insignificance, and this title soon procured for him a second. which was no less widely recognized than the first: he was spoken of everywhere as the Bel of Babylon, Bel-Merodach-before whom Bel of Nipur was gradually thrown into the shade.1 The relations between these feudal deities were not always pacific: jealousies arose among them like those which disturbed the cities over which they ruled; they conspired against each other, and on occasions broke out into open warfare. Instead of forming a coalition against the evil genii who threatened their rule, and as a consequence tended to bring everything into jeopardy, they sometimes made alliances with these malign powers mutually betrayed each other. Their history, if we could recover it in its entirety, would be marked by as violent deeds as those which distinguished the prince and kings who worshipped them. Attempts were made, however, and that foo from an early date, to establish among them a hierarchy like that which existed among the great ones of the earth. The faithful, who, instead of praying to each one separately, preferred to address them all, invoked them always in the same order: they began with Anu, the heaven, and followed with

<sup>1</sup> The confusion of Merodach and Bel was noted by the first Assyriologists: they distinguish 1 letween Bel of Nipur, Bel-Nimur at (H. Rawlinson, On the Religion of the Babylonians, pp. 188-14).
G. Rawlinson, The Fire Great Monarchies, 2nd edit, vol. 1, pp. 117-119), and Bel of Babylon, et Bel-Merodach (H. Rawlinson, op. cit., pp. 515-517; G. Rawlinson, op. cit., pp. 134, 135) The manner in which these gods became assimilated has been studied by Fr. Landmann, Test Premarks Civilizations, vol. ii. p. 170, et seq.; and by Sance, Religion of the Ancient Babylonians, p. 85, et seq.

Bel, Ea, Sin, Shamash, and Ramman. They divided these six into two groups of three, one trio consisting of Anu, Bel, and Ea, the other of Sin, Shamash, and Kamman. All these deities were associated with Southern Chaldea, and the system which grouped them must have taken its rise in this region, probably at Uruk, whose patron Anu occupied the first rank among them.2 theologians who classified them in this manner seem never to have dreamt of explaining, like the authors of the Heliopolitan Ennead, the successive steps in their creation: these triads were not, moreover, copies of the luman family, consisting of a father and mother whose marriage brings into the world a new being. Others had already given an account of the origin of things, and of Merodach's struggles with chaos; 8 these theologians accepted the universe as it was, already made, and contented themselves with summing up its elements by enumerating the gods which actuated them.4 They assigned the first place to those elements which make the most forcible impression upon manbeginning with Anu, for the heaven was the god of their city; following with Bel of Nipur, the earth which from all antiquity has been associated with the heaven; and concluding with Ea of Eridu, the terrestrial waters and primordial Ocean whence Anu and Bel, together with all living creatures, had sprung-Ea being a god whom, had they not been guided by local vanity, they would have made sovereign lord of all. Anu owed his supremacy to an historical accident rather than a religious conception: he held his high position, not /y l. s own merits, but because the prevailing theology of an early period had been the work of his priesthood.5

The characters of the three personages who formed the supreme triad can be readily deduced from the nature of the elements which they represent. Anu is the heaven itself—"ana"—the immense vault which spreads itself above our heads, clear during the day when glorified by the sun, obscure and strown with innumerable star clusters during the night. Afterwards it becomes the

f This is the constant order in the inscriptions, for instance, of Nahonidos, and in those of Shalm meser II, and a summary of the legend of Gilgames shows that it obtained in ancient times (A. Jedulas, Izdubar-Nimrod, pp. 9, 10), with the customary interchanging of Ramman and Ishtar in the sixth place

<sup>&</sup>lt;sup>2</sup> H. Rawlinson was inclined to place the source of Chaldwan theology in Eridu; but Styce rightly remarks (*The Religion of the Ancient Babylonians*, p. 192) that the choice of Anu as head of the sequence suggests Uruk rather than Eridu.

<sup>&</sup>lt;sup>3</sup> Cf. pp. 537-545 of the present work for the Babylonian cosmogony, of which Mcrodack is the hero.

<sup>&</sup>lt;sup>4</sup> I know of Sayce only (The Religion of the Ancient Bubylonians, pp. 110, 111, 192, 193) who has endeavoured to explain the historical formation of the triads. They are considered by him as of Accadian origin, and probably began in an astronomical triad, composed of the moon-god, the sunged, and the evening star (op. cit., p. 110), Sin, Shamash, and Ishtar; alongside this elementary trinity, "the only authentic one to be found in the religious faith of primitive Chaldess," the Samtes may have placed the cosmogonical trinity of Anu, Bel, and Ea, formed by the reunion of the gods of Uruk, Nipur, and Eridu (op. cit., pp. 192, 193).

SAYCE, The Religion of the Ancient Babylonians, pp. 192-194.

Auu was at first considered as a god of the lower world, and identified with Dis or Pluto (II. BAWLINSON, On the Religion of the Babylonians and Assyrians, pp. 485-487; of. HINCKS, On the

spirit which animates the firmament,1 or the god which rules it:2 he resides in the north towards the pole, and the ordinary route chosen by him when inspecting his domain is that marked out by our ecliptic. He occupies the high regions of the universe, sheltered from winds and tempests, in an atmosphere always screne, and a light always brilliant. The terrestrial gods and those of middle-space take refuge in this "heaven of Anu," when the are threatened by any great danger, but they dare not penetrate its depths, and stop, shortly after passing its boundary, on the ledge which supports the vault. where they loll and howl like dogs. It is but rarely that it may be entered, and then only by the highly privileged-kings whose destiny marked them out for admittance, and heroes who have fallen valiantly on the field of battle. his remote position on unapproachable summits Anu seems to participate in the calm and immobility of his dwelling. If he is quick in forming an opinion and coming to a conclusion, he himself never puts into execution the plans which he has matured or the judgments which he has pronounced: he relieves himself of the trouble of acting, by assigning the duty to Bel-Merodach, Ea, or Ramman,6 and he often employs inferior genii to execute his will. "They are seven, the messengers of Anu their king; it is they who from town to town ruise the stormy wind; they are the south wind which drives mightily in the heavens; they are the destroying clouds which overturn the heavens; they are the rapid tempests which bring darkness in the midst of clear day, they roam here and there with the wicked wind and the ill-omened hurricane." Anu sends forth

Assyrian Mythology, pp. 406, 407; G. RAWLINSON, The Fire Great Monarchies, 2nd edit., vol. i. pp. 112, 115-117). His role was determined for the first time by Lenormant (La Magie chez les Chaldeens, pp. 106, 121, 112, 144, 115), who, after at first regarding him as the primordial chaos (Essai sui les frag. Cosmog. de Berose, pp. 64-66), "first material emanation from the divine existence," recogmired that Anu was identical with Anna, ana, the heaven, and combined the idea of firmament with that of the Time-god, apoleos, and the world, ado uos, to bring it into conformity with the conceptions contained in a passage of Damascius (De Priscipiis, § 125, ed. Ruelle, pp. 321, 322). The identity of Ann with the heaven, and consequently his character of Heaven-god, are now generally recognized (Hommel, Die Semitischen Völker und Sprachen, pp. 370-373; Saxce, Relig. Anc. Babyloniaus, pp. 186-19 JENSEN, Die Kosmologie der Babylonier, pp. 4, 11, 12, 274; MIRDIER-DELITZ-CH, Geschichte Bulyl. und Assyriens, 2nd edit., pp. 25, 26; Tirks, Assyr. Balyl. Geschichte, pp. 517, 521).

It is the Zi-ana, therefore, the "spirit of the heaven" of magneal conjugations, which they

compare with and oppose to the "spirit of the earth" (Lenonwant, La Magie che' le Chaldéens, pp. 139, 140, 144; Hommer, Die Semitischen Volker, pp. 363, 370; Saves, Relig. Auc. Babyl., pp. 186, 187).

2 He bears, indeed, the title Ann, the great one of the heaven, the great god (W. A. Insc., vol. v. pl 45, No. 2, 1. 22), who rules over the vault of the firmament.

' JENSEN, Die Kosmologie, p. 16, et seq.

As to the meaning of this expression, see Jrnsen, Die Kosmologie, pp. 11, 12, where it is shown that it does not designate one only of the many heavens among which the god- were considered as distributed (JEREMIAS, Die Bubyl.-Assyr. Vorstell. rom Leben nach dem Tode, pp. 59, 60).

Of, the description of the gods in the legend of the Deluge, p. 569 of the present volume.

In the account of the war raised by Tramat against the gods of light, he successively sends IL and Bel-Merodach against the powers of Chaos (cf. 539 of the present work). In the legend of the good Zu, it is to Ramman that Anu confides the task of recovering the tablets of destiny (J. Haman, Die Babyl. Legender, Etana, etc., in the Beiträge zur As-yriologie, vol. ii. pp. 409-112); ef 14. 666, 667 of the Stand work.

W. A. Inso, vol. iv. pl. 5, col. i. 11. 27-59; cf. Fr. Lenorman, Le Dieu Lune, in the tacette

21

all the gods as he pleases, recalls them again, and then, to make them his pliant instruments, enfecbles their personality, reducing it to nothing by absorbing it into his own. He blends himself with them, and their designations seem to be nothing more than doublets of his own: he is Anu the Lakhmu who appeared on the first days of creation; Anu Urash or Ninib is the sun-warrior of Nipur; and Anu is also the eagle Alala whom Ishtar enfeebled by her Anu regarded in this light ceases to be the god par excellence: he becomes the only chief god, and the idea of authority is so closely attached to his name that the latter alone is sufficient in common speech to render the idea of God.2 Bel would have been entirely thrown into the shade by him, as the earth-gods generally are by the sky-gods, if it had not been that he was confounded with his namesake Bel-Merodach of Babylon: to this alliance he owed to the end, the safety of his life, in presence of Anu.8 La was the most active and energetic member of the triad.4 As he represented the bottomless abyse, the dark waters which had filled the universe until the day of the creation, there had been attributed to him a complete knowledge of the past. present, and future, whose germs had lain within him, as in a womb. The attribute of supreme wisdom was revered in Ea, the lord of spells and charms, to which gods and men were alike subject: no strength could prevail against

Archeologique, 1878, p. 24, Études Accadiennes, vol. in. pp. 122, 123; HOWNII, Die Semilischen Völker, p. 307; SANOF, Religion of Ancient Babylonians, p. 163. DLLITZ-CII, Die Chalddische Genesis, p. 308, thinks that the seven bad genii are associated with the seven disastious days of the Child vo-

A tablet from the library of Assurbanipal (W. A. Insc., vol. iii. pl. 69, No. 1, verso) gives a list of twenty-one gods and goddesses identical with Anu, and with his feminine form Anat, in the role of father and mother of all things (JENSEN, Die Kosmologie, pp. 272-275); other texts show that the identifications were accepted by theologians, at least for some of these divinities, e.g. Uresh-Vamb (JENSLN, Die Kosmologie, pp. 136-139) and Lakhmu (SAXCE, Relig. of Ano. Babyl , pp. 191, 192)

This fact, noticed by the earliest Assyriologists, had suggested the idea that An. Ann. Ann. Ann. was the name of derty in the abstract, applied by abuse of language to a particular god (RAWINNOW, On the Relig. of Bubyl. and Assyrians, p. 486; cf. G. RAWLINNON, Five Great Monarchies, 2nd cdit, off i p. 115). Assyrologists have now reversed the notion, following Lincommant, La Magic, etc., pp. 114, 145.

<sup>4</sup> SAYOE, Religion of Ancient Babylonians, pp. 103, 104. <sup>5</sup> The name of this god was read "Nisrok" by Opport (Exped. en Mesopotamie, vol. ii. pp. 339, 340), "Nough" by Hincks and Lenormant (Premières Civilisations, vol. ii. pp. 130-132). The true reading is In, Ea, usually translated "house" (Lenormant, La Magis chez les Chaldens, pp. 145, 146), "water-house" (Hommel, Geschichte, p. 254); this is a popular interpretation which appears to have occurred to the Chaldmans from the values of the signs entering into the name of the god (Jensen, Kosmologie, p. 246, note). From the outset H. Rawlinson (Relig. of the Babyl. and Assyrians, pp. 492-195) recognized in Ea, which he read Hea, Hoa, the divinity presiding over the abyes of waters; he compared him with the serpent of Holy Scripture, in its relation to the Tree of Knowledge and the Tree of Lite, and deduced therefrom his character of lord of wisdom. His position as lord of the primordial waters, from which all things proceeded, clearly defined by Lenormant (La Magie ches les Chaldeens, pp. 145-147), is now fully recognized (Hommel, Die Semitischen Völker, pp. 373-375; DELITZSCH-MI HDTER, Geschichte, 2nd edit., p. 27; SAYOR, Relig. of the Auctint Babylonians, pp. 131-145; Tille, Bubyl.-Assyr. Geschichte, pp. 518-520). His name was transcribed 'Abs by Damascius (De l'rincipiis, § 125, ed. RUELLE, p. 322), a form which is not easily explained (JENSEN, Kosmologie, p. 271); the most probable hypothesis is that of Hommel (Geschichte, p. 251; who considers 'Ads as a shortened form of 'lads = Is, Es.

٠.

his strength, no voice against his voice: when once he opened his mouth to give a decision, his will became law, and no one might gainsay it. Alf a peril should arise against which the other gods found themselves impotent, they resorted to him immediately for help, which was never refused.\(^1\) He had saved Shamashnapishtim from the Deluge; 2 every day he freed his votaries from sickness and the thousand demons which were the causes of it.3 He was a potter, and had modelled men out of the clay of the plains.4 From him smiths and workers in gold obtained the art of rendering malleable and of fashioning the metals. Weavers and stone-cutters, gardeners, husbandmen, and sailors hailed him as their teacher and patron. From his incomparable knowledge the scribes derived theirs, and physicians and wizards invoked spirits in his name alone by the virtue of prayers which he had condescended to teach them.5

Subordinate to these limitless and vague beings, the theologians placed their second triad, made up of gods of restricted power and invariable form. They recognized in the unswerving regularity with which the moon waxed and waned, or with which the sun rose and set every day, a proof of their subjection to the control of a superior will, and they signalized this dependence by making them sons of one or other of the three great gods. Sin was the offspring of Bel,6 Shamash of Sin,7 Ramman of Anu.8 Sin was indebted for this primacy among the subordinate divinities to the preponderating influence

<sup>1</sup> For instance, in the story of the revolt of the Anunnaki (see p. 634 of the present work), Bel. on learning the progress of the enemy, sends his messenger Nusku to implore the aid of Er (W. A. Inse, vol. iv. pl. 5, col. ii, l. 36, et seq.); Ex sends off immediately his son Merodach, whose arrival brought victory to the gods of light (cf. Savel, Religion of the Ancient Babylonium, pp. 451-465; HALEVY, Documents de l'Assyrie et de la Babylonie, pp. 101, 102).

<sup>🧚</sup> Sea pp. 566, 567 of the present work for the account of a dream by which Ea warns Shamash-

naplabilin of the danger threatening him and humanity.

"He procures for men, by the intermediation of his son Merodach, the cure of headrehes and tevers from which they suffer (SAYCL, The Religion of the Ancient Bubylonians, pp. 160, 461, 170, 472).

<sup>\*</sup> JENSEN, Die Kosmologie der Babylonier, pp 293-295; cf. p. 695 of the present volume for in account of the creation of man, or rather of a divine messenger in the form of man,

<sup>&#</sup>x27;the variety of Ea's functions is proved by his titles in a tablet in the British Museum (W. A. Insc., vol. ii. pl. 55, l. 17, ct seq., and for a second tablet, pl. 58, No. v.). This tablet, however, is not complete, and the menuments reveal several more titles than are to be found la jį

<sup>&</sup>quot; His filiation is indicated clearly in the most ancient monuments from Ura; for instance, on a terra-cotta cone from the temple of Mugheir he is called "Nannar, the mighty built of Anu, the son of Inlil-Bel" (W. A. Insc., vol. i. pl. 1, No. iv. ll. 1-1; cf. No. v ).

Shamash was called "the seion of Nannar" in an in-cription of the King of Ur. Gungunum (see p. 619 of the present work), which came from the temple of Mugheir (W. A. Inc., vol. i. pl. 2, No vi. 1, 11, 1-3).

Tiglath-pileser I. Ramman "the valuant son of Anu." Anu and Ramman hell in common a very ancious ample in the town of Assur, where they were wershipped together. It was "(Stored by Tiglath-pileser I. (Prism, col. vir. II. 60-113); there was also a chapel there dedicated to Ramman alone (ibid., col. viii. ll. 1-16)

which Uru exercised over Southern Chaldea.1 Mar, where Ramman was the chief deity, never emerged from its obscurity, and Larsam acquired supremacy only many centuries after its neighbour, and did not succeed in maintaining it for any length of time.2 The god of the suzerain city necessarily took precedence of those of the vassal towns, and when once his superiority was admitted by the people, he was able to maintain his place in spite of all political revolutions. Sin 3 was called in Uru, "Uruki,"4 or "Nannar the glorious,"5 and his priests sometimes succeeded in identifying him with Anu. "Lord, prince of the gods, who alone in heaven and earth is exalted,-father Nunnar, lord of the hosts of heaven, prince of the gods,-father Nannar, lord, great Anu, prince of the gods,-father Nannar, lord, moon-god, prince of the gods,-father Nannar, lord of Uru, prince of the gods. . . .-Lord, thy deity fills the far-off heavens, like the vast sea, with reverential fear! Master of the earth, thou who fixest there the boundaries [of the towns] and assignest to them their names,-father, begetter of gods and men, who establishest for them dwellings and institutest for them that which is good, who proclaimest royalty and bestowest the exalted sceptre on those whose destiny was determined from distant times, -chief, mighty, whose heart is great, god whom no one can name, whose limbs are steadfast, whose knees never bend, who preparest the paths of thy brothers the gods. . . .- In heaven, who is supreme? As for thee, it is thou alone who art supreme !-- As for thee, thy decree is made known in heaven, and the Igigi bow their faces!-As for thee, thy decree is made known upon earth, and the spirits of the abyss kiss the dust!-As for thee, thy decree blows above like the wind, and stall and pasture become fertile!-As for thee, thy decree is accomplished upon earth below, and the grass and green things grow !-- A-

<sup>&</sup>lt;sup>2</sup> Upon the supremacy of Larsam, see p. 619 of this work.

The name of Sin has been read in Sumero-Accadian Enzuna, Zu-in-nu, Zuin (Lenoruan), In Magie chez les Chaldeins, pp. 16, 127; Hommel, Die Semitischen Volker, pp. 193, 194), which would be the origin of the current form Sin. Jensen disputes this etymology (Die Kosmologie der Babylonier, pp. 101, 102), also Winckler (Sumer und Ahkad in the Mitt. des Akade misch-Orientalischen Vereins zu Berlin, 1857, 1 p. 10) and Tiele (Babylonisch-Assyrische Gerech., p. 523) consider the ideogram employed in writing the name of the god to be of Semitic origin.

<sup>&</sup>lt;sup>4</sup> At first read Hurki (RAWLINSON, Relig. Babylonians and Assyrians, p. 501). The name of the god is attached to that of the town, and may signify "protector" (ibid., note 8), or "the god of the place of protection;" we cannot say which meaning is the right one (Hommer, Die Semitischen Völker, pp. 205, 206).

<sup>\*</sup> The name Namaru has been rendered in Greek Ndvapos, and has given rise to a legend which we know in its Persian form. Nicholas of Damascus (Frag. Ilist. Gracorum, ed. Mt LLEB-Diddid. 11. pp. 359-363) borrowed it from Ctosias. This story, of which the mythological import warecognized by Ch. Lenoimant (Chanouillet, Cat. Gen. des Camérs et Pierres gracée de la Bibliothèque Imp., p. 111), was referred to Nannaru-Sin by Fr. Lenoimant, Essai de Comment. sur Beion, pp. 96, 97, and his opinion has now been adopted by Assyriologists; cf. Sayce, Relig. Anc. Babylonium, pp. 157-159. A kindred form of the name is Nannak, Nanak, which has also pessed into Greek. Nanvaracés, and around which many legends giew, and were spread abread in Asia Minor in the Greeco-Roman period.

for thee, thy decree is seen in the cattle-folds and in the lairs of the wild beasts, and it multiplies living things!—As for thee, thy decree has called into being equity and justice, and the peoples have promulgated thy law!—As for thee, thy decree, neither in the fai off heaven, nor in the hidden depths of the earth, can any one recognize it! As for thee, thy decree, who can learn it, who can try conclusions with it?—O Loid, mighty in heaven, sovereign upon earth, among the gods thy brothers, thou hast no rival". Outside U1u and Harian, Sin did not obtain this rink of creator and

obeisance, his laws never waver, his decrees are never set at naught. "O Sun, when thou goest to rest in the middle of the heavens—may the bars of the bright heaven salute thee in peace, and may the gate of heaven bless thee!—May Misharu, thy well-beloved servant, guide aright thy progress, so that on Ebarra, the seat of thy rule, thy greatness may rise, and that A, thy cherished spouse, may receive thee joyfully! May thy glad heart find in her thy rest!—May the food of thy divinity be brought! to thee by her,—warrior, hero, sun, and may she increase thy vigour;—lord of Ebarra, when thou approachest, mayest thou direct thy course aright!—O Sun, urgo rightly thy way along the fixed road determined for thee,—O Sun, thou who art the judge of the land, and the arbiter of its laws!" 2

It would appear that the triad had begun by having in the third place a goddess, Ishtar of Dilbat. Ishtar is the evening star which precedes the appearance of the moon, and the morning star which heralds the approach of the sun: the brilliance of its light justifies the choice which made it an associate of the greater heavenly bodies. "In the days of the past . . . La charged Sin, Shamash, and Ishtar with the ruling of the firmament of heaven; he distributed among them, with Anu, the command of the army of heaven, and among these three gods, his children, he apportioned the day and the night, and compelled them to work ceaselessly." Ishtar was separated from her two companions, when the group of the planets was definitely organized and claimed the adoration of the devout; the theologians then put in her place an individual of a less original aspect, Ramman. Ramman embraced within him the elements of many very ancient genii, all of whom had been set over the atmosphere, and the phenomena which are daily displayed in it—wind,

<sup>&</sup>lt;sup>1</sup> This is a direct allusion to the sacrifice or libation which the sun received every evening in the temple of Sippar, Ebarra, or Ebabbara, on his going to rest.

<sup>\*</sup> SATCE, Religion of the Ancient Babylonians, pp. 110, 193; A. Jerratas, Izdubar-Nimrod, pp. 9, 10 in the inscription on the stele of Shalmaneser II, the second triad is composed of Sin, Shamash, and Ishtar (Rawlinson, W. A. Insc., vol. iii. pl. 7, col. i 11. 2, 3).

BAWLINSON, W. A. Insc., vol iv. pl. 5, col. i. 11. 52-79; cf. for the interpretation of the legend, SAYOE, Religion of the Ancient Babylonians, pp. 257, 258.

The name of the god of the atmosphere is a subject which has stried up the great at amount of dissension among Assyriologists; it has been read Iv or Ivu, afterwards Bin by Hincks (Assyria: Mythology, in the Memoirs of the Royal Irish Academy, vol xxiii. pp. 412, 413), Vulor Pul by Rawlinson (Relig. Babyl. and Assyrians, pp. 497, 498), Ao, Hou, by Opport (Rupport au Ministre de l'Instruction publique, p. 45, et seq.), Mer. Meru, Mermeru, by Pinches (The Bronze Gates discovered by M. Ranamin the Transactions of the Society of Biblical Architology, vol. vii. pp. 114, 115), and by Pegnon (Inscription de Mèrqu-Nèrar 1<sup>er</sup> roi d'Assyrie, pp. 22, 23), Immér, Immèrou, by Thurcau-Dangin (la lecture de l'idegramme Immer, dans le Journal Asiatique, 1895, vol. vi. pp. 385-393). The reading Rammanu, Ramman, deduced frem Ramamu, to bellow, to thunder, is now accepted, although Oppert recontly proposed to adopt generally Hadad (Adai-Nirar, in the Comptes rendue de l'Acad. des Belles-Lettres, 1893, vol. xxi. pp. 177-179), which is proved in particular instances. (Cf. Zech. xii. 11.—ED.)

rain, and thunder. These genii occupied an important place in the popular religion which had been cleverly formulated by the theologians of Junk, and there have come down to us many legends in which their incainations play a part. They are usually represented as enormous birds flocking on then swift wings from below the horizon, and breathing flame or torrents of water upon the countries over which they hovered. The most terrible of them was

Zu, who presided over tempests: he gathered the clouds together, causing them to burst in torients of rain or hail; he let loose the winds and lightnings, and nothing remained standing where he had passed 1 He had a numerous family: among them cross-breeds of extraordinary species which would puzzle a modern

naturalist, but were matters of course to the ancient priests. His mother Sins, lady of the rain and clouds, was a bird like himself, but Zu had as son a vigorous bull, which, pasturing in the meadows, scattered abundance and fertility around him. The captices of these strange beings, then malice, and their crafty attacks, often brought upon them vexatious misformes 4 Shutu, the south wind, one day beheld Adaps, one of the numerous offspring of La, fishing in order to provide food for his family In spite of his exalted origin, Adapa was no god, he did not pleases the gift of immortality, and he was not at liberty to appear in the presence

of Anu in heaven. He enjoyed, nevertheless, certain privileges, thanks to his familiar intercourse with his father Ea, and owing to his birth he was strong enough to repel the assaults of more than one deity. When, therefore, Shutu, falling upon him unexpectedly, had overthrown him. his anger knew no bounds: "'Shutu, thou hast overwhelmed me with thy hatred, great as it is, -I will break thy wings!' Having thus spoken with his mouth unto Shutu, Adapa broke his wings. For seven days,-Shutu breathed no longer upon the earth." Anu, being disturbed at this quiet, which seemed to him not very consonant with the meddling temperament of the wind, made inquiries as to its cause through his messenger Ilabrât. "His messenger Habrat answered him: 'My master,-Adapa, the son of Ea, has broken Shutu's wings.'-Anu, when he heard these words, cried out: 'Help!'" and he sent to Ea Barku, the genius of the lightning, with an order to bring the guilty one before him. Adapa was not quite at his ease, although he had right on his side; but Ea, the cleverest of the immortals, prescribed a line of conduct for him. He was to put on at once a garment of mourning, and to show himself along with the messenger at the gates of heaven. Having arrived there, he would not fail to meet the two divinities who guarded them,-Dumuzi and Gishzida: "'In whose honour this garb, in whose honour, Adapa, this garment of mourning?" 'On our earth two gods have disappeared-it is on this account I am as I am.'1 Dumuzi and Gishzida will look at each other,1 they will begin to lament, they will say a friendly word-to the god Anu for thee, they will render clear the countenance of Anu,-in thy favour. When thou shalt appear before the face of Anu, the food of death, it shall be offered to thee, do not cat it. The drink of death, it shall be offered to thee, drink A garment, it shall be offered to thee, put it on. Oil, it shall be offered to thee, anoint thyself with it. The command I have given thee observe it well." Everything takes place as Ea had foreseen. Dumuzi and Gishzida welcome the poor wretch, speak in his favour, and present him: "as he approached, Anu perceived him, and said to him: 'Come, Adapa, why didst thou break the wings of Shutu?' Adapa answered Anu: 'My lord,-for the household of my lord Ea, in the middle of the sea,-I was fishing, and the sea was all smooth.-Shutu breathed, he, he overthrew me, and I plunged into the adode of fish. Hence the anger of my heart,—that he might not begin

Dumuzi and Gishzida are the two gods whom Adapa indicates without naming them; insinuating that he has put on mourning on their account, Adapa is secure of gaining their sympathy, and of obtaining their intervention with the god Anu in his favour. As to Dumuzi, see pp. 645-648 of the present work; the part played by Gishzida, as well as the event noted in the text regarding him, is unknown.

again his acts of ill will,—I broke his wings." Whilst he pleaded his cause the furious heart of Anu became calm. The presence of a mortal in the halls of heaven was a kind of sacrilege, to be severely punished unless the god should determine its expiation by giving the philtre of immortality to the intruder. Anu decided on the latter course, and addressed Adapa: "'Why then, did Ea allow an unclean mortal to see—the interior of heaven and earth?' He handed him a cup, he himself reassured him.—'We, what shall we give him? The food of life—take some to him that he may eat.' The food of life, some

was taken to him, but he did not eat of it. The water of life, some was taken to him, but he drank not of it. A garment, it was taken to him, and he put it on. Oil, some was taken to him, and he anointed himself with it." Anu looked upon him; he lamented over him: ""Well, Adapa, why hast thou not caten—why hast thou not drunk? Thou shalt not now have eternal life." 'Ea, my lord,

THE BIRDS OF THE PETERST.

has commanded me: thou shalt not eat, thou shalt not drink." Adapa thus lost, by remembering too well the commands of his father, the opportunity which was offered to him of rising to the rank of the immortals; Anu sent him back to his home just as he had come, and Shutu had to put up with his broken wings.

Ramman absorbed one after the other all these genii of tempest and contention, and out of their combined characters his own personality of a hundred diverse aspects was built up. He was endowed with the capricious changing disposition of the element incarnate in him, and passed from tears to laughter, from anger to calm, with a promptitude which made him one of the most disconcerting deities. The tempest was his favourite rôle. Sometimes he would burst suddenly on the heavens at the head of a troop of savage subordinates, whose chiefs were known as Matu, the squall, and Barku, the lightning; sometimes these were only the various manifestations of his own nature, and it was he himself who was called Matu and Barku. He collected the clouds, sent forth the thunderbolt, shook the mountains, and "before his rage and violence, his bellowings, his thunder, the gods of heaven arose to the

Drawn by Faucher-Gudin, from a Chaldwan cylinder in the Museum of New York (Cissus, Cyprus, pl. xxxi., No. 5). Lenormant, in a long article, which he published under the pseudonyn of Mansell, fancied he recognized here the encounter between Sabitum and Gilgames (Un eq. i. d. l'epopés chaldwan in the Ga. ii. archéologique, 1879, pp. 114-119) on the shores of the Ocean, cf. pp. 584, 5865, and present volume.

On the origin of Ramman, and the diverse Sumerian and Semitic deities which he alse at see Saxes, The Religion of the Ancient Bubylenians, pp. 202–212; Tiele asserts that he was admitted to the honours of the great gods only about the XIV<sup>th</sup> or XIII<sup>th</sup> century, under the inducate of the Aramsans in Syria (Geschichte der Religion im Altertum, vol. i. p. 188–189).

firmament—the gods of the earth sank into the earth" in their terror.<sup>1</sup> The incomments, represent him as armed for battle with club, axe, or the two-bladed flaming sword which was usually employed to signify the thunderbolt.<sup>2</sup> As he destroyed everything in his blind rage, the kings of Chaldæa were accustomed

RAVIVAY ARMLD WITH AN ANE

to invoke him against their enemies, and to implore him to "hurl the hurricane upon the rebel peoples and the insubordinate nations." When his wrath was appeased, and he had returned to more gentle ways, his kindness knew no limits. From having been the waterspout which overthrew the forests, he became the gentle breeze which caresses and refreshes them: with his warm showers he fertilizes the fields; he lightens the air and tempers the summer heat. He causes the rivers to swell and overflow their banks; he pours out the waters over the fields, he makes channels for them, he directs them to every place where the need of water is felt. But his fiery temperament is stirred up by the slightest provocation, and then "his flaming sword scatters pestilence over the land: he destroys the har-

vest, brings the ingathering to nothing, tears up trees, and beats down and roots up the corn." In a word, the second triad formed a more homogeneous whole when Ishtar still belonged to it, and it is entirely owing to the presence of this goddess in it that we are

able to understand its plan and purpose; it was essentially astrological, and it was intended that none should be enrolled in it but the manifest leaders of the constellations. Ramman, on the contrary, had nothing to commend him for a position alongside the moon and sun; he was not a celestial body, he had no definitely shaped form, but resembled an aggregation of gods rather than a single deity. By the addition of Ramman to the triad, the void occasioned

<sup>&</sup>lt;sup>2</sup> Tiglath-pileser I., conqueror of the Kumun, made one of these swords, which he calls "a copper lightning flash," and he dedicated it, as a trophy of his victory, in a chapel built on the ruins of one of the vanquished cities (*Prism of Tiglath-pileser I.*, col. vi. ll. 15-21)

<sup>&</sup>lt;sup>2</sup> Cf. the curse pronounced by Tiglath-piloser I. at the end of his Prism (col. viii. Il. 83-88), in the name of Ramman, worshipped in the royal city of Ashshur.

<sup>&</sup>lt;sup>4</sup> The character of Ramman was fully defined in the works of the early Assyriologists (H. RAW-IAN-ON, On the Religion of the Bubylonians and Assyrians, pp. 497-500; Fr. Lenormant, Assai de commentaire sur Berose, pp. 93-95).

<sup>&</sup>lt;sup>5</sup> Drawn by Faucher-tiudin, from a sketch by Lorrus, Travels and Researches in Chaldza and Suriana, p. 258. The original, a small stele of terra-cotta, is in the British Museum. The date of this representation is uncertain. Ramman stands upon the mountain which supports the heaven.

by the removal of Ishtar was filled up in a blundering way. We must, how ever, admit that the theologians must have found it difficult to find any one better fitted for the purpose: when Venus was once set along with the rest of the planets, there was nothing left in the heavens which was sufficiently brilling.

to replace her worthily. The priests were compelled to take the most powerful deity they knew after the other five—the lord of the atmosphere and the thunder.<sup>1</sup>

The gods of the triads were married, but their goddesses for the most part had
neither the liberty nor the
important functions of the
Egyptian goddesses.<sup>2</sup> They
were content, in their modesty, to be collipsed behind
the personages of their husbands, and to spend their lives
in the shade, as the women
of Asiatic countries still do.
It would appear, moreover,
that there was no trouble

BANNAY, THE GOD OF TEMITAR AND THENDEL

taken about them until it was too late—when it was desired, for instance, to explain the affiliation of the immortals. Anu and Bel were backelors to start with. When it was determined to assign to them female companions, recourse

Their emburissment is shown in the way in which they have classed this god. In the criginal triad, Ishter, being the smallest of the three heavenly bides in durally took the third place. It diamans on the contrary, had natural affinities with the elemental group and belonged to And, Bell 1 existe than to Sin and Shamash. So we find him sometimes in the third place smartines in the first of the second triad, and thus post of commence is so intural to him, that Assyri legists have preserved it from the beginning, and describe the triad as composed, not of Sin, Shamash, and Rumman, but of Rumman, Sin, and Shamash (Rawins S, On the holyon of the Bidyl mais and a squams, pp. 482, 497), or even of Sin, Ramman, and Shamash (Hiveks, On the Assyries Mythology, in the Memeris of the Royal Irish Academy, vol axin 19 410-41)

The passive and almost impersonal character of the majority if the Bubyloman and Assyring oddesses is well known (Fr. 11801 ways, Front de comment our heres, p. 69). The majority must have been independent at the outset, in the summerior period, and wer mairied later on under the influence of Semitor dess (Sayor, help) of the Bubylomans pp. 110-112, 170, 179, 515, 516.

speaking, this is a dead on the speaking of Ramman, and in the absence of other information may help to sl with his god was represented in the flist millennium before our erashe has neither the com all heal lies not the long robe of the Ramman on p 662 of the present work.

was had to the procedure adopted by the Egyptians in a similar case: there was added to their names the distinctive suffix of the feminine gender, and in this manner two grammatical goddesses were formed, Anat and Belit, whose dispositions give some indications of this accidental birth.1 There was always a vague uncertainty about the parts they had to play, and their existence itself was hardly more than a seeming one. Anat sometimes represented a feminine heaven, and differed from Anu only in her sex.2 At times she was regarded as the antithesis of Anu, i.e. as the earth in contradistinction to the heaven.3 Belit, as far as we can distinguish her from other persons to whom the title "lady" was attributed, shared with Bel the rule over the earth and the regions of darkness where the dead were confined.4 The wife of Ea was distinguished by a name which was not derived from that of her husband, but she was not animated by a more intense vitality than Anat or Belit: she was called Damkina, the lady of the soil, and she personified in an almost passive manner the earth united to the water which fertilized it.5 The goddesses of the second triad were perhaps rather less artificial in their functions. Ningal, doubtless, who ruled along with Sin at Uru, was little more than an incarnate epithet. Her name means "the great lady," "the queen," and her person is the double of that of her husband; as he is the man-moon, she is the womanmoon, his beloved,7 and the mother of his children Shamash and Ishtar.8 But A or Sirrida enjoyed an indisputable authority alongside Shamash: she never lost sight of the fact that she had been a sun like Shamash, a disk-god before she was transformed into a goddess.9 Shamash, moreover, was surrounded by an actual harem, of which Sirrida was the acknowledged queen, as he himself

1 On the "grammatical" goddesses of Egypt, see pp. 105, 106 of the present work.

On the goddess A, Aa, Ai, called also Sirrida, Sirdu, and on its masculine form, see SAYCE. Relig. of the Anc. Babylonians, pp. 177-179. Pinches (The Divine Name A, in the Proceedings of the Bibl. Arch. Soc., 1885, pp. 27, 28) is inclined to attach the male form of this deity to the Ino, Inhveh of the Hebrews, but this view has not found favour among Assyriologists. The reading proposed by Oppert, "Malik," he would refer to the masculine doublet of the divinity (La Chronologie biblique, etc., p. 15, note 5, and Catalogue de la Collections de Clerce, vol. i. p. 57, note 1).

was its king, and among its members Gula, the great, and Anunit, the daughter of Sin, the morning star, found a place. Shala, the compassionate, was also included among them; she was subsequently bestowed upon Ramman." They were all goddesses of ancient lineage, and each had been previously worshipped on her own account when the Sumerian people held sway in Chaldara: as soon as the Semites gained the upper hand, the powers of these female deities became enfeebled, and they were distributed among the gods. There was but oue of them, Nana, the doublet of Ishtar, who had succeeded in preserving her liberty: when her companions had been reduced to comparative insignificance, she was still acknowledged as queen and mistress in her city of Eridu. The others, notwithstanding the enervating influence to which they were usually subject in the harem, experienced at times inclinations to break into rebellion, and more than one of them, shaking off the yoke of her lord, had proclaimed her independence: Anunit, for instance, tearing herself away from the arms of Shamash, had vindicated, as his sister and his equal, her claim to the half of his dominion. Sippara was a double city, or rather there were two neighbouring Sipparas, one distinguished as the city of the Sun, 'Sippara sha Shamash," while the other gave lustre to Anunit in assuming the designation of "Sippara sha Anunitum." Rightly interpreted, these family arrangements of the gods had but one reason for their existence—the necessity of explaining without coarseness those parental connections which the theological classification found it needful to establish between the deities constituting the two triads. In Chaldrea as in Egypt there was no inclination to represent the divine families as propagating their species otherwise than by the procedure observed in human families: the union of the goddesses with the gods thus legitimated their offspring

The triads were, therefore, nothing more than theological fictions. Each of them was really composed of six members, and it was thus really a council of twelve divinities which the priests of Uruk had instituted to attend to the affairs of the universe; with this qualification, that the feminine half of the assembly rarely asserted itself, and contributed but an insignificant part to

<sup>&</sup>lt;sup>1</sup> Malik, whence the name Malkatu, by which a bilingual fext renders the ideogram of the goddess \ (Fr. Lenormant, Essai de Comment sur Berose, pp. 97, 98). The complete form is "Malkatu sha shami," the queen of heaven, and in this capacity the goddess is usually identified with 1shtar is unabled, Die Göttin Ishtur, in the Leitschrift fur Assyr, vol. in. pp. 353-364, and vol. iv. pp. 74-76)

<sup>2</sup> On Gula, see Rawlinson, Relig. of Babylonians and Assgrians, pp 503, 504, Fr. Lenouver, op. ed., pp. 98, 99, 103.

Anunit was at first considered to be the female sun (RAWINSON, Relig of Babyl, and Assgrain, pp. 502, 503; G. RAWINSON, Fire Great Monarchies, 2nd edit, vol. 1 pp. 128, 129) or the moor (Fa. Lenormant, La Magie che: les Chaldeens, pp. 107, 121)—She is usually identified with 1-he who borrows from her the quality of maning star; et. p. 670 of the present volume.

<sup>\*</sup> Shala is the wife of Meredach and Pumuzi as well as of Rumman (SAYCI, Religion e) to example abylonians, pp. 209-211); her name, added to the epithet ummu, mother, is the orem of the constant of the Baylonians, p. 200-211); her name, added to the epithet ummu, mother, is the orem of the constant of the Baylonians, p. 200-211); her had by Hesselms and by the Linguisians of the Baylonians, p. 199, n. 8; Ph. 148 PUNI, is said de Commentaire sur les fragments cosmogoniques de Beiose, p. 95).

the common work. When once the great divisions had been arranged, and the principal functionaries designated, it was still necessary to work out the details, and to select agents to preserve an order among them. happens by chance in this world, and the most insignificant events are determined by previsional arrangements, and decisions arrived at a long time previously. The gods assembled every morning in a hall situated near the gates of the sun in the east, and there deliberated on the events of the day.1 The sagarious Ea submitted to them the fates which are about to be fulfilled. and caused a record of them to be made in the chamber of destiny on tablets which Shamash or Merodach carried with him to scatter everywhere on his way; but he who should be lucky enough to snatch these tablets from him would make himself master of the world for that day. This misfortune had arisen only once, at the beginning of the ages.2 Zu, the storm-bird, who lives with his wife and children on Mount Sabu under the protection of Bel. and who from this elevation pounces down upon the country to ravage it, once took it into his head to make himself equal to the supreme gods. He forced his way at an early hour into the chamber of destiny before the sun had risen: he perceived within it the royal insignia of Bel, "the mitre of his power, the garment of his divinity,—the fatul tablets of his divinity, Zu perceived them. He perceived the father of the gods, the god who is the tie between heaven and earth,4-and the desire of ruling took possession of his heart;-yea, Zu perceived the father of the gods, the god who is the tie between heaven and earth,-and the desire of ruling took possession of his heart,-'I will take the fatal tablets of the gods, I myself,—and the oracles of all the gods, it is I who will give them forth; -I will install myself on the throne, I will send forth decrees,—I will manage the whole of the Igigi.'5-And his heart plotted warfare;-lying in wait on the threshold of the hall, he watched for the dawn. -When Bel had poured out the shining waters,-had installed himself on the throne, and donned the crown, Zu took away the fatal tablets from his hand,he seized power, and the authority to give forth decrees,—the god Zu, he flew away and concealed himself in the mountains."8 Bel immediately cried out,

<sup>&</sup>lt;sup>1</sup> On the hall of destiny, and what takes place within it, see Jensen, Die Kosmologie, pp. 234-243.

The legend of the bird Zu was discovered, and the fragments of it translated for the first time, by G. Sulth, The Chaldran Account of Genesis, pp. 113-122; cf. Sarce, Babylonian Literature, p. 40. All that is at present known has been published by J. E. Harper, Die Babylonischen Legenden von Etana, etc., in the Beiträge zur Assyriologie, vol. ii. pp. 408-418.

<sup>&</sup>lt;sup>3</sup> The importance of Mount Sabu in mythology was pointed out by Fa. Delivered, Wo lay day Paradies? pp. 105, 106; he thought that its site was near the towns of Kish and Kharshagkalamma (ibid., p. 219), which appears to me improbable. I should be inclined to look for it rather at the extremities of the world, somewhere in the south, without flxing it more definitely.

On the meaning of this epithet as applied to solar delties, see p. 656, note 3, of the present work. The Igigi are the spirits of the heavens, in opposition to the Auunnaki; see p. 654 of the

J. F. Harper, Die Babylonischen Legenden von Etana, etc., p. 409, ll. 5-22.

he was inflamed with anger, and ravaged the world with the fire of his winth. "Anu opened his mouth, he spake,—he said to the gods his offspring:—'Who will conquer the god Zu?—He will make his name great in every land'—' Ranman, the supreme, the son of Anu, was called, and Anu'himself gave to him his orders;—yea, Ramman, the supreme, the son of Anu, was called, and Anu himself gave to him his orders.—'Go, my son Ramman, the valuant, sines nothing resists thy attack;—conquer Zu by thine arm, and thy name shall be great among the great gods,—among the gods, thy brothers, thou shalt have no equal: sanctuaries shall be built to thee, and if thou buildest for thy self

thy cities in the "four houses of the world,"—thy cities shall extend over all the terrestrial mountain! Be valiant, then, in the sight of the gods, and may thy name be strong.' Ramman answers, he addresses this speech to Anu his father:
—"Father, who will go to the inaccessible mountains? Who is the equal of Zu

SHAMANI FIGHTS WITH ZU AND THE STORM BUIDS

among the gods, thy off-pring? He has carried off in his hand the fital tablets,—he has seized power and authority to give forth decrees,—Zu there upon flew away and hid himself in his mountain.—Now, the word of his mouth is like that of the god who unites heaven and earth;—my power is no more than clay,—and all the gods must bow before him.'" Anu sent for the god Bara, the son of Ishtar, to help him, and exhorted him in the same language he had addressed to Ramman: Bara refused to attempt the enterprise. Shamash, called in his turn, at length consented to set out for Mouat sabu: he triumphed over the storm-bird, tore the fatal tablets from him, and brought him before Ea as a prisoner. The sun of the complete day, the sun in the full possession of his strength, could alone win back the attributes of power

I sterilly, "Construct thy cities in the four regions of the world (cf. pp. 513, 341 cf. the present with), and thy cities will extend to the mount an of the citth." Anawall appear to have promised to build entire which would recognize him as their pation, they cities will cover the entire citth.

which the morning sun had allowed himself to be despoiled of. From that time forth the privilege of delivering immortal decrees to mortals was never taken out of the hands of the gods of light.

Destinies once fixed on the earth became a law-"mamit"-a good or bad fate,1 from which no one could escape, but of which any one might learn the disposition beforehand if he were capable of interpreting the formulas of it in-cribed on the book of the sky. The stars, even those which were most distant from the earth, were not unconcerned in the events which took place upon it. They were so many living beings endowed with various characteristics. and their rays as they passed across the celestial spaces exercised from above an active control on everything they touched. Their influences became modified, increased or weakened according to the intensity with which they shed them, according to the respective places they occupied in the firmament. and according to the hour of the night and the month of the year in which they rose or set. Each division of time, each portion of space, each category of existences-and in each category each individual-was placed under their rule and was subject to their implacable tyranny. The infant was born their slave, and continued in this condition of slavery until his life's end: the star which was in the ascendant at the instant of his birth became his star, and ruled his destiny.2 The Chaldwans, like the Egyptians, fancied they discerned in the points of light which illuminate the nightly sky, the outline of a great number of various figures-men, animals, monsters, real and imaginary objects, a lance, a bow, a fish, a scorpion, ears of wheat, a bull, and a lion.3 The majority of these were spread out above their heads on the surface of the celestial vault; but twelve of these figures, distinguishable by their brilliancy, were arranged along the celestial horizon in the pathway of the sun, and watched over his daily course along the walls of the world. These divided this part of the sky into as many domains or "houses," in which they exercised absolute authority, and across which the god could not go without having previously obtained their consent, or having brought them into subjection beforehand. This arrangement is a reminiscence of the wars by which Bel

<sup>1</sup> On "mainit," destiny, and the golders personifying it in the Chaldwan Pantheon, see SA101, The Religion of the Ancient Bubylonians, pp. 305-309.

<sup>&</sup>lt;sup>2</sup> The questions relating to the influence of the stars upon human destiny, in Chaldran beliefs, were fully examined for the first time by Fr. Levorwant, La Divination et la Soince des présages chez les Chaldrans, pp. 5-14, 37-47

The identification of the Chaldwan constellations with those of Greec-Roman or modern times has not yet been satisfactorily made out; the stars seem to have been grouped by them, as by the Egyptians, in a manner different from that which obtains to-day. Several of the results obtained by Oppear (Tablettes Assyriances, in the Journal Asiatique, 1871, vol. xviii. pp. 443-453) and by Several (Astronomy and Astrology of the Babylonians, in the Transactions of the Babl. Arch. Soc., vol. iii. pp. 145-339) have been called in question by Jensen, Die Kosmologie der Babylonier, pp. 12-57, whose conclusions, however, have not been accepted by other Assyriologists.

Merodach, the divine bull, the god of Babylon, had succeeded in bringing order out of chaos: he had not only killed Tiamat, but he had overthrown and subjugated the monsters which led the armies of darkness. . He meets afresh, every year and every day, on the confines of heaven and earth, the scorpion men of his ancient enemy, the fish with heads of men or goats, and many more. The twelve constellations were combined into a zodiac, whose twelve signs, transmitted to the Greeks and modified by them, may still be read on our astronomical charts.1 The constellations, immovable, or actuated by a slow motion, in longitude only, contain the problems of the future, but they are not sufficient of themselves alone to furnish man with the solution of these problems. The heavenly bodies capable of explaining them, the real interpreters of destiny,2 were at first the two divinities who rule the empires of night and day-the moon and the sun; afterwards there took part in this work of explanation the five planets which we call Jupiter, Venus, Saturn,3 Mars, and Mercury, or rather the five gods who actuate them, and who have controlled their course from the moment of creation-Merodach, Ishtar, Ninib, Nergal, and Nebo.4 The planets seemed to traverse the heavens in every direction, to cross their own and each other's paths, and to approach the fixed -tars or recede from them; and the species of rhythmical dance in which they are carried unceasingly across the celestial spaces revealed to men, if they examined it attentively, the irresistible march of their own destinies, as surely as if they had made themselves master of the fatal tablets of Shamash, and could spell them out line by line.

The Chaldreans were disposed to regard the planets as perverse sheep who

<sup>&</sup>lt;sup>1</sup> The Chaldwan origin of the zodate had been made as little as possible of by Le (rouve (8) r conigine du Zodiaque gree, in the Œucres Choisies, 2nd series, vol. i. p. 158, et seq.), afterwards ey lidder (Ueber den Ursprung des Thierkreises, in the Mémoires of the Academy of Sciences of Berlin, 1838, pp. 1-21); their opinions ruled for a long time. The question was reopened by Lenermann (Essai de Commentaire de Berose, pp. 229-236; Les Pennières Civilisations, vol. i. pp. 67-73. On gipes de l'Histoire, vol. i. pp. 231-238, note), who has discovered the greater part of our zodacal signs in Chaldwa. His demonstration was completed by Jensen (Die Kosmelegie, pp. 67-95, 310-320, and 1 reprung des Thierkreises, in the Deutsche Revne, June, 1890), and the alcograms for the agus were becover the Espang (Astronomisches aus Bubylon, p. 170, et seq.).

Diddents Sig., ii. 30: οῦς ἐκεῦνοι κοινῷ μὲν ἐρμηνεῖς ὀνοιαζοντα. According to Junius, Die hosmologie, pp. 99, 100, the expression is of great antiquity; one of the Samerian names of the planets a "kinmi," which is considered as signifying the "messanger," the "interpreter" of the gods.

<sup>&</sup>lt;sup>2</sup> On the orthography of the name Kumanu, and its application to Saturn, see JUSEN, Die Nosmologie, pp. 111-116; on the identity of Kaimanu and the Hebrew Chum, see Opplar, Tablettes Assgriennes, in the Journal Asiatique, 6th series, vol. Null., 1871, p. 445.

They have been investigated by several students—by Fr Lenormant (Essai de Commentaire de Perose, p. 105, and pp. 370-376 in notes), Opport (Les Origines de l'Histoire), Sayce (Astronomy a to Istrology of the Babylonians, in the Praesactions of the Babl. Arch. Soc., vol. id. pp. 167-172), Jeasen Die Kommologie, pp. 95-133). The most probable identifications are those of Epping (Astronom Inc. Babylon, p. 7, et seq.) and Opport (Un Annuaire astronomique Babylonia, extracted from the Innual Asiatique, 1891, and reproduced with modifications in the Zeitschrift fur Assyriologie, vol. vi. p. 110-112), with with a Jensen reluctantly agrees (ibid., vol. v. pp. 125-123).

had escaped from the fold of the stars to wander wilfully in search of pasture.<sup>1</sup> At first they were considered to be so many sovereign deities, without other function than that of running through the heavens and furnishing there predictions of the future; afterwards two of them descended to the earth, and received upon it the homage of men <sup>2</sup>—Ishtar from the inhabitants of the city of Dilbat, and Nebo from those of Borsippa. Nebo <sup>3</sup> assumed the rôle of a soothsayer and a prophet. He knew and foresaw everything, and was

ISHTAR AS A WARRIOR-GODDESS.6

ready to give his advice upon any subject: he was the inventor of the method of making clay tablets, and of writing upon them. Ishtar was a combination of contradictory characteristics. In Southern Chalddea she was worshipped under the name of Nana, the supreme mistress. The

identity of this lady of the gods, "Bêlit-ilânit," the Evening Star, with Anunit the Morning Star, was at first ignored, and hence two distinct goddesses were formed from the twofold manifestation of a single deity: having at length discovered their error, the Chaldwans merged these two beings in one, and their names became merely two different designations for the same star under a twofold aspect. The double character, however, which had been attributed to them continued to be attached to the single personality. The Evening Star had symbolized the goddess of love, who attracted the sexes towards one another, and bound them together by the chain of desire; the Morning Star, on

Their generic name, road as "lubat," in Sumero-Accadian, "bibbu" in Semitic speech (Fr. Levormant, Essai de Commentaire de Bérose, pp. 370, 371), denoted a quadruped, the species of which Lenormant was not able to define; Jensen (Die Kosmologie, pp. 95-99) identified at with the sheep and the ram. At the end of the account of the creation, Meroduch-Jupiter is compared with a shepheld who feeds the flock of the gods on the pastures of heaven (cf. p. 515 of the present work)

<sup>&</sup>lt;sup>2</sup> The site of Dilbat is unknown: it has been sought in the neighbourhood of Kishu and Babylon (Delitzseh, Wo lag das Paradies? p 219); it is probable that it was in the submbs of Sippara. The name given to the guidess was transcribed Δελεφάτ (Hesyomus, sub soce), and signifies the herald the messenger of the day.

The role of Nebo was determined by the early As-yriologists (RAWLINSON, On the Religion of the Babylonians and Assyrians, pp. 523-526; Oppert, Expellition on Mesopotamie, vol. 11. p. 257; Levoumania Essai de Commentaire de Bernse, pp. 111-116). He owed his functions partly to his alliance with other gods (Sance, Religion of the Ancient Bubylonians, pp. 118, 119).

<sup>&</sup>lt;sup>4</sup> See the chapter devoted by Sayee to the consideration of Ishtar in his Religion of the Ancient Babylonians (IV. Tammuz and Ishtar, p. 221, et seq.), and the observations made by Jeremias on the subject in the sequel of his Izilubar-Nimrod (Ishtar-Astarte im Izilubar-Epos), pp. 56-66.

With regard to Nana, consult, with reserve, Fr. LENDRYANT, Essat de Commontaire de Bérose pp. 100-103, 378, 379, where the identity of Ishtar and Nana is still unrecognized.

Drawn by Faucher-Gudin, from a heliogravure in Menant's Recherches sur la Glyptique orientale, vol. i. pl. iv., No. 6.

the other hand, was regarded as the cold-blooded and cruel warrior who despised the pleasures of love and rejoiced in warfare: Ishtar thus combined in her person chastity and lasciviousness, kindness and ferocity, and a peaceful and wallike disposition, but this incongruity in her characteristics did not seem to disconcert the devotion of her worshippers. The three other planets would have had a wretched part to play in comparison with Nebo and Ishtar, if they had not been placed under new patronage. The secondary solar gods, Merodach, Ninib, and Nergal, led, if we examine their rôle carefully, but an incomplete existence: they were merely portions of the sun, while Shamash represented the entire orb. What became of them apart from the moment in the day and year in which they were actively engaged in their career? Where did they spend their nights, the hours during which Shamash had retired into the firmament, and lay hidden behind the mountains of the north? As in Egypt the Horuses identified at first with the sun became at length the rulers of the planets, so in Chaldan the three suns of Ninib, Merodach, and Nergal became respectively assimilated to Saturn, Jupiter, and Mars; 1 and this identification was all the more easy in the case of Saturn, as he had been considered from the beginning as a bull belonging to Shamash.2 Henceforward, therefore, there was a group of five powerful gods-distributed among N1 PO.3 the stars of heaven, and having abodes also in the cities of the earth-whose function it was to announce the destinies of the universe. Some, deceived by the size and brilliancy of Jupiter, gave the chief command to Merodach, and this opinion naturally found a welcome reception at Babylon, of which he was the feudal deity.4 Others, taking into account only the preponderating influence exercised by the planets over the fortunes of men, accorded the primacy to Ninib, placing Merodach next, followed respectively by Ishtar, Nergal, and Nebo.5 The five planets, like the six triads, were not long before they took to themselves consorts, if indeed they had not already been married

<sup>1</sup> dansa S, Die Kosmologie der Babylonier, pp. 139-141; Ishtar, Nebb, Sin, and Shamash being he evenly bodies, to begin with, and the other great gods, Anu, Bel, 1.4, and Ramman having their dats in the heavens, the Chaldavans were led by analogy to ascribe to the gods which represented the phases of the sun, Meroduch, Nimb, and Nergal, three stars bentting their importance, ic. three planets

<sup>2 &</sup>quot;Alap shamshi" in the astronomical tablets. Dioderus Siculus (ii. 30) shows that the Satur of the Greeks was a sun in the eyes of the Bibylonians: ίδια δέ τον ίπο των Έλληνων h. . οι ομαζόμενου επιφανέστοτον δε και π ειστα κοι μέγιστα προσημαινοντα καλούσιν "Ηλιον.

Drawn by Faucher-Gudin, from an Assyrian statue in alabaster in the British Miscoun

<sup>\*</sup> This is the order followed in the lists transcribed by JUNSUN, Die Kosmologie, Pp. 100, 104, and on and by certain texts, with some variation in the positions assigned to some of the planets and har for

<sup>\*</sup> This classification follows from the numerical powers assigned to the gods of the placets atablet E 170 in the British Museum, which come in for treatment at pp. 673, 671 of the present work.

before they were brought together in a collective whole. Ninib chose for wife. in the first place, Bau, the daughter of Anu, the mistress of Uru, highly venerated from the most remote times; 1 afterwards (fula, the queen of physicians, whose wisdom alleviated the ills of humanity, and who was one of the goddesses sometimes placed in the harem of Shamash himself.2 Merodach associated with him Zirbanit, the fruitful, who secures from generation to generation the permanence and increase of living beings.3 Nergal distributed his favours sometimes to Laz, and sometimes to Esharra, who was, like himself, warlike and always victorious in battle.5 Nebo provided himself with a mate in Tashmit,6 the great bride, or even in Ishtar herself.7 But Ishtar could not be content with a single husband: after she had lost Damuzi-Tammuz, the spouse of her youth. she gave herself freely to the impulses of her passions, distributing her favours to men as well as gods, and was sometimes subject to be repelled with contempt by the heroes upon whom she was inclined to bestow her love.8 The five planets came thus to be actually ten, and advantage was taken of these alliances to weave fresh schemes of affiliation: Nebo was proclaimed to be the son of Merodach and Zirbanit,9 Mcrodach the son of Ea,10 and Ninib the offspring of Bel and Esharra.11

There were two councils, one consisting of twelve members, the other of

<sup>&</sup>lt;sup>1</sup> Bau, read also "Gur," who occupies an important place in the Telloh inscriptions (Amara Sirponria, pp. 17, 18), was at the beginning the mother of Ea, and a personification of the dark waters and chaos (Howard, Die Semitischen Völker, pp. 379-382): it was not until late that it was determined to marry her to Nimb.

<sup>&</sup>lt;sup>2</sup> (full, "the great," must have been at the outset but a mere epithet applied to Bin, before ship came an independent incarnate goddess (Hown to, op. cit, p. 381, note); her rôle and that of Bin ren on parallel lines in the Babylonian texts (cf. Jewsen, Die Kosmologie, pp. 245, 246). The (Babylonisch-Assyrische Geschichte, pp. 529, 530) recognizes in her the eternal fire, the vital as well as the hurtful heat, the fever which kills.

The name of Zirbanit, Zirpanit, one of the Chaldrean deities whose importance was acknowledged by Assyrologists at an early date (Oppler, Expédition en Mesopotamie, vol. in p. 297; Rawitsses On the Religion of the Bulylonians, etc., pp. 517, 518), signifies "she who produces seed," "who produces posterity." She appears to have been connected with a very ancient goldess, Gasmu, "the wise," who was either the wife or daughter of Ea, and who seems to have been considered at the beginning as lady and voice of the Ocean (Sayer, Relig. of Anc. Bubylonians, pp. 110-112).

We know of Laz nothing more than the name: Hommel (Geschichte, p. 225) suggests with he sit tion that this goddess was of Cossean origin.

Esharra is in one aspect the earth (cf. pp. 615, 616 of the present volume), in another the goddess of war.

Tashmit, whose name was at first read Urmit or Varamit (RAWLINSON, Relig. of Babylonians and Assyrians, p. 525), is the goldess of letters, and always associated with Nebo in the formula at the end of each of the documents preserved in the library of Assurbanipal at Nineveh. She opened the eyes and cans of those who received instructions from her husband, or who read his books (Syyon, op. cit., p. 120).

<sup>7</sup> It was especially under the name of Nana that Ishtar was associated with Nebo in the temple of Borsippa (Tille, Benerhungen ueber E-sagila, etc., in the Z it. für Assyriologie, vol. ii. pp. 185-187)

<sup>\*</sup> Cf. pp. 579-581 of the present work, the adventure of Ishtar with Gilgames, in which the latter reproaches her for her long list of lovers.

SALOI, op. cit., p. 112, et seq, explains very ingeniously the intimate relations between Merodaen and Nebo, by the gradual absorption of Borsippa, of which city Nebo was the feudal deity, by Babyl n

<sup>10</sup> On the origin of this addition, see SAY(r, op. cit., pp. 101, 105, who attributes it to ver) ancient relations between the inhabitants of the two cities, possibly to a foundation made at Babylo by colonists from Erish, the city of Ea, in Southern Chaldren.

<sup>11</sup> Jinsen, Die Kosmologie der Babylonier, pp. 196, 197, 199.

ten; the former was composed of the most popular gods of Southern Chalden. representing the essential elements of the world, while the latter consist doct the great deities of Northern Chaldwa, whose function it was to regulate or make known the destinies of men. The authors of this system, who belonged to Southern Chaldwa, naturally gave the first position to their patron gods, and placed the twelvo above the ten. It is well known that Orientals display a . great respect for numbers, and attribute to them an almost irresistible power we can thus understand how it was that the Chaldwans applied them to designate their divine masters, and we may calculate from these numbers the estimation in which each of these masters was held.1 The goddesses had no value assigned to them in this celestial arithmetic, Ishtar excepted, who was not a mere duplication, more or less ingenious, of a previously existing deity, but possessed from the beginning an independent life, and could thus claim to be called goddess in her own right. The members of the two triads were arranged on a descending scale, Anu taking the highest place: the scale was considered to consist of a soss of sixty units in length, and each of the derties who tollowed Anu was placed ten of these units below his predecessor, Bel at 50 units, Ea at 40, Sin at 30, Shamash at 20, Ramman at 10 or 62 The gods of the planets were not arrangel in a regular series like those of the triads, but the numbers attached to them expressed their proportionate influence on terrestrial affairs; to Ninib was assigned the same number as had been given to Bel, 50, to Merodach perhaps 25, to Ishtar 15, to Nergal 12, and to Nebo 10. The various spirits were also fractionally estimated, but this as a class, and not as individuals: 3 the priests would not have known how to have solved the problem if they had been obliged to ascribe values to the infinity of existences.4 As the Heliopolitans were obliged to climinate from the Ennead many feudal divinities, so the Chalda ins had left out of account many of their sovereign deities, especially goddesse, Bau of Uru, Nana of Uruk, and Allat; or if they did introduce them into then calculations, it was by a subterfuge, by identifying them with other goddesses, to whom places had been already assigned; Ban being thus coupled with Gula,

<sup>&</sup>lt;sup>1</sup> The discovery of this fact is to be ascribed to Hineks (On the As given Mathele pp. in the Proceedings of the Royal Irish Acade n.j., v 1/88in p. 405, ct seq.), from the 1th 1 th 1 to 1 in the British Museum (Fr. Li Normann, Chair de Tert's Conceiformes, No. 28, pp. 92–94. Th. Diffizent, 4s given for solution, 1 is studied, 1 is studied, p. 39, B, No. 1).

<sup>&</sup>lt;sup>2</sup> The number given by tablet K 170 is 6, and properly belones to Ramann, the number 10 is odly to be assembed to the god of the, Nusku, who is semictimes contain to I with Rumann

<sup>\*</sup> FR LENORMANI, La Mague, etc., po 21, 30

As far as we can at present detumn, the mest menent sines established with the functory gods, whose values, to howing each other inequility, are not calculated on a athematical progression, but according to the empire if importance, which established to each planet. The regular series, that of the next gods he as a result of the temporal progression in the regular series, that of the next gods he as a result of the temporal progression, and trying the interval between the gods always at the series of what second capricious, and trying the interval between the gods always at the series of

Nanâ with Ishtar, and Allat with Ninlil-Beltis. If figures had been assigned to the latter proportionate to the importance of the parts they played, and the number of their votaries, how comes it that they were excluded from the cycle of the great gods? They were actually placed alongside rather than below the two councils, and without insistence upon the rank which they enjoyed in the hierarchy. But the confusion which soon arose among divinities of identical or analogous nature opened the way for inserting all the neglected personalities in the framework already prepared for them. A sky-god, like Dagan, would mingle naturally with Anu, and enjoy like honours with him.1 The gods of all ranks associated with the sun or fire, Nusku,2 Gibil,3 and Dumuzi, who had not been at first received among the privileged group, obtained a place there by virtue of their assimilation to Shamash, and his secondary forms, Bel-Merodach, Ninib, and Nergal. Ishtar absorbed all her companions, and her name put in the plural, Ishtarati, "the Ishtars," embraced all goddesses in general, just as the name Ilâni took in all the gods.4 Thanks to this compromise, the system flourished, and was widely accepted: local vanity was always able to find a means for placing in a prominent place within it the feudal deity, and for reconciling his pretensions to the highest rank with the order of precedence laid down by the theologians of Uruk. The local god was always the king of the gods, the father of the gods, he who was worshipped above the others in everyday life, and whose public cult constituted the religion of the State or city.

The temples were miniature reproductions of the arrangement of the universe.<sup>5</sup> The "ziggurat" represented in its form the mountain of the world,

The god whose name is written with two ideograms which can be read "Dagan," though the pronunciation of the word is not quite certain, was identified by early Assyriologists with the Dagon of the Philistines (Hereis, On Assyr. Mythology, in the Proceedings of the Royal Irish Academy, vol. Nam. pp. 109, 410; Office, Expellen Mesopot., vol. ii. p. 261; Fr. Lendmann, Essai de Communtaire, pp. 66-68), and pointed out as the Bel-Dagan in opposition to the Bel-Merodael. This opinion proyaged torsa long time (Menann, Le Mythe de Dagon, in the Revue de l'Hist, des Relig., vol. xi. pp. 295-301, and Rechrecks sur la Glyptique, vol. ii. pp. 49-51), and made Dagan the fish-god, the god of formative, Jensen (Die Kosmologie, pp. 449-456) has shown that he is a sky-god in origin, a secondary form of Anu, and consequently of the astrological Bel, considered as possessing a constellation in the sky.

<sup>&</sup>lt;sup>2</sup> Nusku has been identified with Gibil, the fire-god, by certain texts which put both of them in connection with Nebo. Nusku, according to Sayce (Relig of Anc. Babylonians, pp. 118, 119), was originally the god of the dawn, who became later the midday sun, the sun of the zenith (Difficultina) and Reschichte, 2nd edit., p. 33). In magnetal conjurations he plays the subordinate part of "messenger of the gods," and is there associated usually with Bel (W. A. Insc., vol. iv. pl. 5, col. ii. 11–32–51).

<sup>&</sup>lt;sup>3</sup> Gibil, Gibir, is the fire-god and flame-god (Fr. Lenormant, La Magic chez les Chabican, p. 169, et seq., in which the name is given as bil-gi; Hommin, Die Semitischen Völker, pp. 390-393), absorbed later by the sun (Sayer, Relig. of Anc. Babylonians, pp. 179-182).

For example, in the "Fasti" of Sargon (1.176) the scribe writes ilani u ishtarati ashibbuti Ashshur, "the gods and the Ishtars who inhabit Assyria."

<sup>&</sup>lt;sup>5</sup> This idea, analogous to that which had determined the distribution of the Egyptian temples, arose from the form of the mountain which the Chaldreans gave to their temples (Fr. Lenonmant, Essai de Commentaire, etc., p. 358, et seq.; Les Origines de l'Histoire, vol. ii. p. 123, et seq.), and from the name "Ekur," a common designation of temples and the earth (Jensen, Die Kosmologie

and the halls ranged at its feet resembled approximately the accessory parts of the world: the temple of Merodach at Babylon comprised them all up to the chambers of fate, where the sun received every morning the tablets of destiny.1 The name often indicated the nature of the patron deity or one of his attributes. the temple of Shamash at Larsam, for instance, was called E-Babbara, "the house of the sun," and that of Nebo at Borsippa, E-Zida, "the eternal house," No matter where the sanctuary of a specific god might be placed, it always bore the same name; Shamash, for example, dwelt at Sippara as at Larsam in an E-Babbara. In Chaldrea as in Egypt the king or chief of the State was the priest par excellence, and the title of "vicegerent," so frequent in the carly period, shows that the chief was regarded as representing the divinity among his own people; 2 but a priestly body, partly hereditary, partly selected, fulfilled for him his daily sacerdotal functions, and secured the regularity of the services. A chief priest-" ishshakku "-was at their head, and his principal duty was the pouring out of the libation. Each temple had its "ishshakku," but he who presided over the worship of the feudal deity took precedence of all the others in the city, as in the case of the chief priests of Bel-Merodach at Babylon, of Sin at Uru, and of Shamash at Larsam or Sippara.3 He presided over various categories of priests and priestesses whose titles and positions in the hierarchy are not well known. The "sangutu" appear to have occupied after him the most important place, as chamberlains attached to the house of the god, and as his To some of these was entrusted the management of the harem of the god, while others were overseers of the remaining departments of his palace.4 The "kîpu" and the "shatammu" were especially charged with the management of his financial interests, while the "pashishu" anointed with holy and perfumed oil his statues of stone, metal, or wood, the votive steke set up in the chapels, and the objects used in worship and sacrifice, such as the great basins. the "seas" of copper which contained the water employed in the ritual abbutions,

pp. 185-195); the form of a mountain which the "ziggurit" assumed it minded the Chaldeens of the triestrial mountain, with its zones or superimposed stories (cf. p. 513 of the present work)

<sup>&</sup>lt;sup>1</sup> This hall was described by Nebuchadrezzar II. (W. A. Iase, vol. 1, pl. 54, col. ii. Il. 54 to) and by Neriglissor (ibid., vol. i. pl. 67, ll. 35-37), in passages of which the real meaning was discovered by Juneau, Die Kosmologie der Babylonier, pp. 85, 86, 237, 238.

<sup>\*</sup> See p. 604 of the present work for what has been said about "vicegen nt."

The titles "ishshaku," "nishakku," which answer to the terms "patist" and "nues" of the non-Semitic languages of Chaldea, appear to come from the root "nushaku," to pour out a libition 'Saver, Religion of the Ancient Babylomans, p. 60, n. 1). The chief of ish-hakus was called ishshaku zuu, chief high priest

The "sangu" (plur. sangutu) is he who is "bound" to the rod (Saxri, op. cd., p. 61), kn swite accustomed to assume the title, e. j. Ashshurishishi (II. A. Insc., vol. ii. pl. 3, No. 6, ll. 1, ...) and Kurigalzu (ibid, vol. i. pl. 4, No. xiv. ll. 1, 2, 3). Take (Babyl-Assyrische Gische id. 1, p. ...) off) thinks that the "sangu" belonged to the same class as the "ishshakku."

HIDE R-SABZEO, Decourates en Chalde, pl. 2, No. 3; et. Y. Lu Gae, Ur-Ban, pale et Lu en, etho Zellschrift für Assyriologie, vol. vo. p. 150. Compare the "bussen see" et the temple of ferusalem (2 Kings xxv. 13; Jer. in. 17); the Babyloman term is "apsu," which is use used to

and the victims led to the altar.1 After these came a host of officials, butchers and their assistants, soothsayers, augurs, prophets,-in fact, all the attendants that the complicated rites, as numerous in Chaldrea as in Egypt,2 required. not to speak of the bands of women and men who honoured the god in meretricious rites.3 Occupation for this motley crowd was never lacking. Every day and almost every hour a fresh ceremony required the services of one or other member of the staff, from the monarch himself, or his deputy in the temple, down to the lowest sacristan. The 12th of the month Elul was set apart at Babylon for the worship of Bol and Beltis; the sovereign made a donation to them according as he was disposed, and then celebrated before them the customary sacrifices, and if he raised his hand to plead for any favour, he obtained it without fail. The 13th was dedicated to the moon, the supreme god; the 14th to Beltis and Nergal; the 15th to Shamash; the 16th was a fast in honour of Merodach and Zirbanit; the 17th was the annual festival of Nebo and Tashmit; the 18th was devoted to the laudation of Sin and Shamash; while the 19th was a "white day" for the great goddess Gula. The whole year was taken up in a way similar to this casual specimen from the calendar. The kings, in founding a temple, not only bestowed upon it the objects and furniture required for present exigencies, such as lambs and oven, birds, fish, bread, liquors, incense, and odoriferous essences; they assigned to it an annual income from the treasury, slaves, and cultivated lands; and their royal successors were accustomed to renew these gifts or increase them on every opportunity.5 Every victorious campaign brought him his share in the spoils and captives; every fortunate or unfortunate event which occurred in connection with the State or royal family meant an increase in the gifts to the god, as an act of thanksgiving on the one hand for the divine favour, or as

denote the abyse of the primordial waters. One text (W. A. Insc., vol. iv. pl. 23, No. 1), which Lenormant had interpreted as describing a descent of Ishtar to the lower regions (Ist Magie ches les Chajde ns, pp. 157-160), deals in fact with the setting up of a "bruson sea" upheld by bronze oxen (Sayen, Relig. of Anc. Babylonians, p. 63, n. 3).

<sup>1</sup> SAYCE, op. cit., pp. 61-63.

<sup>&</sup>lt;sup>2</sup> For the service of the Egyptian temples, see p. 125 of the present work.

<sup>&</sup>lt;sup>3</sup> On the priestesses of Ishtar at Uruk, and on the name given to them, cf. Jenemias, Ishtan Nimrod, pp. 50, 60. It will be remembered that it was through the seductions of one of these that Gilganies got a hold over Eabani (see pp. 577-579 of the present volume). Besides these priestesses of Ishtar we know of those of Anu and their male companions (Rawlinson, W. A. Inso., vol. ii. pl. 17, col. i. II, 11, 12).

<sup>&</sup>lt;sup>4</sup> The tablet from which this information is taken contains daily prescriptions for a supplementary month of the Chaldson year—the 2nd Elul—which were part of a complete calendar (W. A. Insc., vol. iv. pls. 32, 33; cf. Saves, Relig. of Anc. Babylomans, pp. 69-77).

The most ancient instances of these donations are furnished by inscriptions of the sovercigns of Lagash. Urninà (Helef 19-Sarzie, Découvertes en Chaldee, pl. 21, col. iii. il. 7-10; cf. Anialde. The Inscriptions of Tilloh, in the Records of the Past, 2nd series, vol. i. p. 65, and Découvertes of Chaldee, p. xxix.), Guden (Insc. de la Status E; cf. Anialde, pl. 11, col. ii. pp. 91-96, and Découvertes en Chaldee, pp. xxi-xxii., and Inscription de la Status G, col. iii.-vi., in Heuzhy-Sanzie, Découvertes en Chaldee, pl. 13, 3; cf. Anialde, Insc. of Illoh pp. 101, 102, and Zitschrift für Assyriologie, vol. iii. pp. 30, 31).

an offering on the other to appease the wrath of the god. Gold, silver, copper, lapis-lazuli, gems and precious woods, accumulated in the sacred treasury; fir 14. were added to fields, flocks to flocks, slaves to slaves; and the result of such increase would in a few generations have made the possessions of the god equal to those of the reigning sovereign, if the attacks of neighbouring peoples had not from time to time issued in the loss of a part of it, or if the king himself had not, under financial pressure, replenished his treasury at the expense of the priests. To prevent such usurpations as far as possible, maledictions were hurled at every one who should dare to lay a sacrilegious hand on the least object belonging to the divine domain; it was predicted of such "that he would be killed like an ox in the midst of his prosperity, and slaughtered like a wild urus in the fulness of his strength! . . . May his name be effaced from his stelle in the temple of his god! May his god see pitilessly the disaster of his country, may the god ravage his land with the waters of heaven, ravage it with the waters of the earth. May he be pursued as a nameless wretch, and his seed fall under servitude! May this man, like every one who acts adversely to his master, find nowhere a refuge, afar off, under the vault of the skies or in any abode of man whatsoever." 1 These threats, terrible as they were, did not succeed in deterring the daring, and the mighty men of the time were willing to brave them, when their interests prompted them. Gulkishar, Lord of the "land of the sea," had vowed a wheat-field to Ninà, his lady, near the town of Deri, on the Tigris. Seven hundred years later, in the reign of Belnadinabal, Ekarrakais. governor of Bitsinmagir, took possession of it, and added it to the provincial possessions, contrary to all equity. The priest of the goddess appealed to the king, and prostrating himself before the throne with many prayers and mystic formulas, begged for the restitution of the alienated land. Behadinabal acceded to the request, and renewed the imprecations which had been inserted on the original deed of gift: "If ever, in the course of days, the man of law, or the governor of a suzerain who will superintend the town of Bitsinmagir, fears the vengeance of the god Zikum or the goddess Nina, may then Zikum and Nina, the mistress of the goddesses, come to him with the benediction of the prince of the gods; may they grant to him the destiny of a happy life, and may they accord to him days of old age, and years of uprightness! But as for thee, who hast a mind to change this, step not across its limits.

Inscription of the Statue B de Gualea, in the Louvre, in Heller N-Sarzec, Decouvertes en C (18, 16, 17, 19, col. ix. II. 6-9, 15-26; see Anixi o's translation, The Inscription of Tell', and Records of the Past, 2nd sories, vol. ii. pp. 86, 87, and his Decouvertes en Chaldee, p. xx., disk ix, In chriften der Könige und Statishalter von Logasch, in the Keilschriftliche Bobliothek, vol. ii. 18, 19, 46-49.

do not covet the land: hate evil and love justice." If all sovereigns were not so accommodating in their benevolence as Belnadinabal, the piety of private individuals, stimulated by fear, would be enough to repair the loss, and frequent legacies would soon make up for the detriment caused to the temple possessions by the enemy's sword or the rapacity of an unscrupulous lord. The residue, after the vicissitudes of revolutions, was increased and diminished from time to time, to form at length in the city an indestructible fief whose administration was a function of the chief priest for life, and whose revenue furnished means in abundance for the personal exigencies of the gods as well as the support of his ministers.

This was nothing more than justice would prescribe. A loyal and universal faith would not only acknowledge the whole world to be the creation of the gods, but also their inalienable domain. It belonged to them at the beginning; every one in the State of which the god was the sovereign lord, all those, whether nobles or serfs, vicegerents or kings, who claimed to have any possession in it, were but ephemeral lease-holders of portions of which they fancied themselves the owners. Donations to the temples were, therefore, nothing more than voluntary restitutions, which the gods consented to accept graciously, deigning to be well pleased with the givers, when, after all, thay might have considered the gifts as merely displays of strict honesty, which merited neither recognition nor thanks. They allowed, however, the best part of their patrimony to remain in the hands of strangers, and they contented themselves with what the pretended generosity of the faithful might see fit to assign to them. Of their lands, some were directly cultivated by the priests themselves; others were leased to lay people of every rank, who took off the shoulders of the priesthood all the burden of managing them, while rendering at the same time the profit that accrued from them; others were let at a fixed rent according to contract. The tribute of dates, corn, and fruit, which was rendered to the temples to celebrate certain commemorative ceremonies in the honour of this or that deity, were fixed charges upon certain lands, which at length usually fell entirely into the hands of the priesthood as mortmain possessions. These were the sources of the fixed revenues of the gods, by means of which they and their people were able to live, if not luxuriously, at least in a manner befitting their dignity. The offerings and sacrifices were a kind of windfall, of which the quantity varied strangely with the seasons; at certain times few were received, while at other times there was a superabundance. The

<sup>&</sup>lt;sup>1</sup> HILPER CHT. Bubyl. greatest portion of them was consumed on the spot by the officials of the sanctuary; the part which could be preserved without injury was added to the produce of the domain, and constituted a kind of reserve for a rainy day, or was used to produce more of its kind. The priests made great profit out of corn and metals, and the skill with which they conducted commercial operations in silver was so notorious that no private person hesitated to entrust them with the management of his capital: they were the intermediaries between lenders and borrowers, and the commissions which they obtained in these transactions was not the smallest or the least certain of their profits. They maintained troops of slaves, labourers, gardeners, workmen, and even womensingers and sacred courtesans of which mention has been made above, all of whom either worked directly for them in their several trades, or were let out to those who needed their services. The god was not only the greatest cultivator in the State after the king, sometimes even excelling him in this respect, but he was also the most active manufacturer, and many of the utensils in daily use, as well as articles of luxury, proceeded from his workshops. His possessions secured for him a paramount authority in the city, and also an influence in the councils of the king: the priests who represented him on earth thus became mixed up in State affairs, and excrcised authority on his behalf in the same measure as the officers of the crown.2

He had, indeed, as much need of riches and renown as the least of his clients. As he was subject to all human failings, and experienced all the appetites of mankind, he had to be nourished, clothed, and amused, and this could be done only at great expense. The stone or wooden statues erected to him in the sanctuaries furnished him with bodies, which he animated with his breath, and accredited to his clients as the receivers of all things needful to him in his mysterious kingdom.<sup>3</sup> The images of the gods were clothed in vestments, they were anointed with odoriferous oils, covered with jewels, served with food and drink; and during these operations the divinities themselves, above in the heaven, or down in the abyss, or in the bosom of the earth, were arrayed in garments, their bodies were perfumed with unguents, and their appetites fully

The trace of Chaldwan animated and prophetic statues, as we might expect, is identical with the E-yp on, which thave briefly described on pp. 119, 120 of the present work.

satisfied: all that was further required for this purpose was the offering of sacrifices together with prayers and prescribed rites. The priest began by solemnly inviting the gods to the feast: as soon as they sniffed from afar the smell of the good cheer that awaited them, they ran "like a swarm of flies" and prepared themselves to partake of it. The supplications having been

A VOTARY ITD TO THE GOD TO RECLET THE REWARD OF THE SACRETICE.

heard, water was brought to the gods for the necessary ablutions before a repast.<sup>2</sup> "Wash thy hands,—may the gods thy brothers wash their hands!—From a clean dish cat a pure repast,—from a clean cup drink pure water." The statue, from the rigidity of the material out of which it was

carved, was at a loss how to profit by the exquisite things which had been lavished upon it: the difficulty was removed by the opening of its mouth at the moment of consecration, thus enabling it to partake of the good face to its satisfaction. The banquet lasted a long time, and consisted of every delicacy which the culinary skill of the time could prepare: the courses consisted of dates, wheaten flour, honey, butter, various kinds of wines, and fruits, together with roast and boiled meats. In the most ancient times it would appear that even human sacrifices were offered, but this custom was obsolete except on rare occasions, and lambs, oxen, sometimes swine's flesh, formed the

<sup>&</sup>lt;sup>1</sup> This is the simile used by the author of the poem of Gilgames to express the eagerness of the gods at the moment of Sh mashnapishtim's sacrifice (see p. 570 of the present work).

This operation, which was also resorted to in Egypt in the case of the statues of the gods and deceased persons, is clearly indicated in a text of the second Chaldwan empire published in W.A. Inc., vol. iv. pl. 25. The prest who consecrates an image makes clear in the flust place (col. iii. ll. 15, 16) that "its mouth not being open it can partake of no refreshment: it neither cats food nor drinks water." Thereupon he performs certain rites, which he doctares were celebrated, if not at that moment, at least for the first time by Ea himself: "Ea has brought thee to thy glorious place," to thy glorious place he has brought thee,—brought thee with his splendid hand,—brought also butter and honey; —he has poured consecrated under into thy mouth,—and by magic has opened thy mouth" (col. iv. ll. 49, 50). Henceforward the statue can cut and drink like an ordinary living being the ment and beverages offered to it during the sacrifice (J. C. Ball, Glimpses, etc., in the Proceedings of the Bibl. Arch. Soc., 1891-92, vol. xiv. pp. 160, 161).

usual elements of the sacrifice. The gods served as it alose from the distribution unctuous smoke, and fed on it with delight. When they had finished

then repast, the supplication of a favour was adroitly added, to which they gave a favourable hearing.<sup>3</sup> Services were frequent in the temples: there was one in the morning and another in the evening on ordinary days, in addition to those

victims flowed like water. Days of sorrow and mourning alternated with these days of joy, during which the people and the magnates gave themselves up to severe fasting and acts of penitence.1 The Chaldwans had a lively sense of human frailty, and of the risks entailed upon the sinner by disobedience to the gods. The dread of sinning haunted them during their whole life; they continually subjected the motives of their actions to a strict scrutiny, and once self-examination had revealed to them the shadow of an evil intent, they were accustomed to implore pardon for it in a humble manner. "Lord, my sins are many, great are my misdeeds!-O my god, my sins are many, great my misdeeds!-O my goddess, my sins are many, great my misdeeds!-I have committed faults and I knew them not; I have committed sin and I knew it not; I have fed upon misdeeds and I knew them not; I have walked in omissions and I knew them not.—The lord, in the anger of his heart, he has stricken me. -the god, in the wrath of his heart, has abandoned me,-Ishtar is enraged against me, and has treated me harshly !-- I make an effort, and no one offers me a hand,-I weep, and no one comes to me,-I cry aloud, and no one hears me :- I sink under affliction, I am overwhelmed, I can no longer raise up my head,—I turn to my merciful god to call upon him, and I groan! . . . Lord, reject not thy servant,-and if he is hurled into the roaring waters, stretch to him thy hand;—the sins I have committed, have mercy upon them,—the misdeeds I have committed, scatter them to the winds-and my numerous faults, tear them to pieces like a garment." Sin in the eyes of the Chaldeean was not, as with us, an infirmity of the soul; it assaulted the body like an actual virus, and the fear of physical suffering or death engendered by it, inspired these complaints with a note of sincerity which cannot be mistaken.8

Every individual is placed, from the moment of his birth, under the

en, Chalder, pl. 20 bis, 17 b; cf. Hevzey, Les Origines orientales de l'art, vol. i. pp. 192, 193; the original is in the Louvre. The scene depicted behind Shamash deals with a legend still unknown. A goddess, pursued by a genius with a double face, has taken refuge under a tree, which bows down to protect her; while the monster endeavours to break down the obstacle branch by branch, a god rises from the stem and hands to the goddess a stone-headed mace to protect her against her enemy.

On sin, and the feelings it inspired in the Chaldmans, see Zimmern, Bubylonische Busspudmen; also Delitzsch-Mürdter, Geschichte Bubyloniens und Assyriens, 2nd edit., pp. 38, 39; Ft. Lenormant, Ltudes Accadiennes, vol. iii. pp. 146-163; Howmen, Die Semitischen Volker, pp. 315-322.

protection of a god and goddess, of whom he is the servant, or rather the son, and whom he never addresses otherwise than as his god and his goddess. These deities accompany him night and day, not so much to protect him tron' visible dangers, as to guard him from the invisible beings which ceaselessly hover round him, and attack him on every side. It he is devout, piously disposed towards his divine patrons and the deities of his country, if he observes the prescribed rites, recites the prayers, performs the sacrifices-in a word, if he acts rightly-their aid is never lacking; they bestow upon him a numerous posterity, a happy old age, prolonged to the term fixed by tate, when he must resign himself to close his eyes for ever to the light of day. It, on the contrary, he is wicked, violent, one whose word cannot be trusted, "his god cuts him down like a reed," extirpates his race, shortens his days, delivers him over to demons who possess themselves of his body and afflict it with sicknesses before finally despatching him. Penitence is of avail against the evil of sin, and serves to re-establish a right course of life, but its efficacy is not permanent, and the moment at last arrives in which death, getting the upper hand, carries its victim away.2 The Chaldwans had not such clear ideas as to what awaited them in the other world as the Egyptians possessed; whilst the tomb, the muniny, the perpetuity of the funereal revenues, and the safety of the double. were the engrossing subjects in Egypt, the Chaldean texts are almost entirely silent as to the condition of the soul, and the living seem to have hal no further concern about the dead than to get rid of them as quickly and as completely as possible. They did not believe that everything was over at the last breath, but they did not on that account think that the late of that which survived was indissolubly associated with the perishable part, and that the disembodied soul was either annihilated or survived, according as the flesh in which it was sustained was annihilated or survived in the tomb. The soul was doubtless not utterly unconcerned about the late of the large it had quitted: its pains were intensified on being despoiled of its earthly case if the latter were mutilated, or left without sepulture, a prey to the fowls of the air." This feeling, however, was not sufficiently developed to create a desire tor escape from corruption entirely, and to cause a resort to the mummilying process of the Egyptians. The Chaldwans did not subject the body, therefore,

roof being arranged corbel-wise, and contained the remains of one or two bodies walled up within it.1 At other times it consisted merely of an earthen jar, in which the corpse had been inserted in a bent-up posture, or was composed of two enormous cylindrical jars, which, when united and cemented with bitumen, formed a kind of barrel around the body.2 Other tombs are represented by wretched structures, sometimes oval and sometimes round in shape, placed upon a brick base and covered by a flat or domed roof.3 The interior was not of large dimensions, and to enter it was necessary to stoop to a creeping posture. The occupant of the smallest chambers was content to have with him his linen, his ornaments, some bronze arrowheads. and metal or clay vessels. Others contained furniture which, though not as complete as that found in Egyptian sepulchres, must have ministered to all the needs of the spirit. The body was stretched, fully clothed, upon a mat impregnated with bitumen, the head supported by a cushion or flat brick, the arms laid across the breast, and the shroud adjusted by bands to the loins and legs. Sometimes the corpse was placed on its left side, with the legs slightly bent, and the right hand, extending over the left shoulder, was inserted into a vase, as if to convey the contents to the mouth. Clay jars and dishes, arranged around the body, contained the food and drink required for the dead man's daily fare-his favourite wine, dates, fish, fowl, game, occasionally also a boar's head—and even stone representations of provisions, which, like those of Egypt, were lasting substitutes for the reality. The dead man required weapons also to enable him to protect his food-store, and his lance, javelins and baton of office were placed alongside him, together with a cylinder hearing his name, which he had employed as his seal in his lifetime. Beside the body of a woman or young girl was arranged an abundance of spare ornaments, flowers, scent-bottles, combs, cosmetic pencils, and cakes of the black paste with which they were accustomed to paint the cycbrows and the edges of the cyclids.1

<sup>1</sup> Vaulted chambers are confined chiefly to the ancient cometeries of Uru at Mugheir; they are rather over six to seven feet long, with a breadth of five and a half feet. The walls are not quite perpendicular, but are somewhat splayed up to two-thirds of their height, where they begin to natiow into the vaulted roof (Taylor, Notes on the Ruins of Muqeyer, in the Journal of the Royal Asiatic Society, vol. xv. pp. 272, 273); cf. Permor-Chippez, Histoire de l'Art dans l'Antiquité, vol. a p. 371, et siq.

<sup>\*</sup> This kind of sepulchre is found both at Mugheir and Tell-el-Lahin (TAYLOR, Abu-Shahrei). etc., in the Journ, of the Royal Asiat Soc., vol. Av. 413, 411); cf. Planot-Chtri z, op. cit., vol. ii pp. 371, 372. The jars have a small opening at one end to allow of the escape of the decomposar

<sup>&</sup>lt;sup>3</sup> Taylon, Notes on the Ruins of Maqeyer, in the Journ. of the Royal Asiat. Soc., vol. xv. p. 260. This kind of tomb is found at a considerable depth; at Mugheir the majority of those discovered were six to eight feet below the surface (cf. PERROT-CHIPLE, op. cit., vol. ii. pp. 372, 373).

THE INTER OF THE I VE ON TAL 1501

Cremation seems in many cases to have been pick field to build in a tomb The funcial pile was constructed it some distinct from the town, on a specially reserved area in the middle of the mushes. The body wripped up in course matting, was placed upon a heap of aceds and rushes saturated with bitumen click will, corted with moist clay, was built around this to circumscrib the action of the flames and, the customary prayers having been recited the pile was set on fire, masses of fresh material, together with the funerary furniture and usual victicum, being added to the pyre. When the work of er mate n was considered to be complete the fire was extinguished, and an examination made of the residue. It frequently happened that only the most a cossible and most casily destroyed parts of the body had been attacked by the flunc and that there remained a black and distinued mass which the fire her not The previously prepared conting of mud was then made to furnish echy covering for the body, so as to conceil the sickening speciale from the view of the relatives and spectators. Sometimes, however the turnice neom plished its work satisfactorily, and there was nothing to be sen at the it but greisy ashes and series of cilcined bones. The remains were requently left where they were, and the tuneral pre be une then tomb They were, however, often collected in I disposed of in a manual which varied

with their more or less complete combustion. Bodies insufficiently burnt were interred in graves, or in public chapels; while the ashes of those fully cremated, together with the scraps of bones and the débris of the offerings, were placed in long urns. The heat had contorted the weapons and half melted the vessels of copper; and the deceased was thus obliged to be content with the fragments only of the things provided for him. These were, however, sufficient for the purpose, and his possessions, once put to the test of the flames, now accompanied him whither he went: water alone was lacking. but provision was made for this by the construction on the spot of cisterns For this purpose several cylinders of pottery, some twenty to collect it. inches broad, were inserted in the ground one above the other from a depth of from ten to twelve feet, and the last cylinder, reaching the level of the ground, was provided with a narrow neck, through which the rain-water or infiltrations from the river flowed into this novel cistern. Many examples of these are found in one and the same chamber,1 thus giving the soul an opportunity of finding water in one or other of them.2 The tombs at Uruk, arranged closely together with coterminous walls, and gradually covered by the sand or by the accumulation and débris of new tombs, came at length to form an actual In cities where space was less valuable, and where they were free mound. to extend, the tombs quickly disappeared without leaving any vestiges above the surface, and it would now be necessary to turn up a great deal of rubbish before discovering their remains. The Chaldaea of to-day presents the singular aspect of a country almost without cemeteries, and one would be inclined to think that its ancient inhabitants had taken pains to hide them. The sepulture of royal personages alone furnishes us with monuments of which we can determine the site. At Babylon these were found in the ancient palaces in which the living were no longer inclined to dwell: that of Shargina. for instance, furnished a burying-place for kings more than two thousand years after the death of its founder. The chronicles devoutly indicate the

<sup>&</sup>lt;sup>1</sup> The German expedition of 1886-87 found four of these reservoirs in a single chamber, and nine distributed in the chambers of a house entirely devoted to the burial of the dead (R. Koldi W.), Die Althabylonischen Grüber, in the Zeitschrift für Assyriologie, vol. ii. p. 415).

The mode of cromation, and the two corrections in Southern Chaldren, where it was practised, were discovered by the German expedition referred to in the preceding note, and fully described by Koldewey, op. cit., vol. ii. pp. 403-430.

<sup>&</sup>lt;sup>3</sup> Various explanations have been offered to account for this absence of tombs. Without mentioning the desperate attempt to get rid of the difficulty by the assumption that the dead bodies were east into the river (Placy, Ninite et l'Assyrie, vol. ii. p. 181), Lottus thinks that the Chaldwans and Assyrians were accustomed to send them to some sanctuary in Southern Chaldwan, especially of the and Uruk, whose vast cemeteries, he contends, would have absorbed during the centures the greater part of the Euphratean population (Tracels and Researches in Chaldwan and Susiana, p. 198, et seq.); his opinion has been adopted by some historians (Dellezsen-Mündter, Geschichte Babylomen and Assyrians, 2nd edit., pp. 59, 60; L. Mexer, Geschichte des Alberthums, vol. i. p. 181; and, as far only as the later period is concerned, by Hommiu, Geschichte Babylonians and Assyrians, p. 210)

THE ROYAL SEPULCHRES AND THE WORSHIP OF THE DEAD, 1689

spot where each monarch, when his earthly reign was over, found a last resting-place; and where, as the subject of a ceremonial worship similar to that of Egypt, his memory was preserved from the oblivion which had over-taken most of his illustrious subjects.

The dead man, or rather that part of him which survived—his "ekimmu '3 --dwelt in the tomb, and it was for his comfort that there were provided, at the time of sepulture or cremation, the provisions and clothing, the ornaments and weapons, of which he was considered to stand in need. Furnished with these necessities by his children and heirs, he preserved for the donors the same affection which he had felt for them in his lifetime, and gave evidence of it in every way he could, watching over their welfare, and protecting them from malign influences. If they abandoned or forgot him, he avenged himself for their neglect by returning to torment them in their homes, by letting sickness attack them, and by ruining them with his imprecations: he became thus no less hurtful than the "luminous ghost" of the Egyptians, and if he were accidentally deprived of sepulture, he would not be merely a plague to his relations, but a danger to the entire city.1 The dead, who were unable to earn an honest living, showed little pity to those who were in the same position as themselves: when a new-comer arrived among them without prayers, libations, or offerings, they declined to receive him, and would not give him so much as a piece of bread out of their meagre store. The spirit of the unburied dead man, having neither place of repose nor means of subsistence, wandered through the town and country, occupied with no other thought than that of attacking and robbing the living.5 He it was who, gliding into the house during the night, revealed himself to its inhabitants

<sup>2</sup> AMACD, Materiaux pour le Dat. Assyrien, in the Journal Asiatique, 1881, vol xvii. pp. 236, 237; in the text published by Pivenis, Texts in the Babylonian Wedge-Writin, autographed from the Original Documents, vol. i. p. 17, Assurbampel is represented as cled in a torn-grament, pouring ent a libation to the Manes of the kings, his predecessors, and scattering on the occasion his favours upon gods and men, and upon the living and the dead.

<sup>2</sup> The meaning of the word "ckimmu," "ikimmu," after having been mistaken by the early A symbologists, was rightly given by Astrato, Materiaux pour le Ducte moure, in the Journal Asiatopue, oth series, 1881, vol. xviii. p. 237. It is equivalent to the "ka" of the Feyptians, and represents probably the same conception, although it is never seen represented like the "ka" on the monuments of various ages; cf. pp. 108, 109 of the present work.

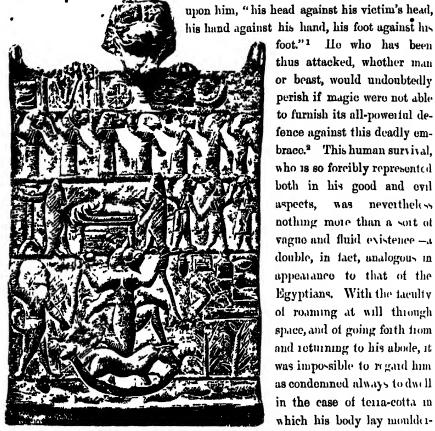

Among the evil beings against whom detence is needed by me ins of conjunctions, appears

iven who has not been buried in the earth" (SAXC), Relig. of the Bubylonians, p. 111)

<sup>1</sup> See on this subject the information contained in the fragment of the royal list decorred and published by G. Smith, On fragments of an Inscription giving part of the Chromology treat the Canon of Bironis was copied, in the Transactions of the Bibl. Irch See, vol. ii. pp. 361-319. Sives, Dynastic Tablets of the Babylonians (Records of the Past, 2nd series, vol. ii. p. 21), translates of 1n the palace of Sargon [his corpse] was burned . . . in the palace of Ku-Merodach [he was burned]" a passage which others refer to the record of interments.

He then becomes "the ckimm who attacks and lays hold of the living" (W. A. Ins. vol. iv. 11-16, No. 2, 1, 7, et seq.; Harr, Akkadische und Sumerische Kedschrifttexte, p. 82, 11, 7, 81 - 116 m et hot be confounded with "the utukku of the temb" (W. A. Inse, vol. ii. pl. 17, col. i. 1-5), that is to say, with the evil spirit who "enters into the cavity of the temb" (W. A. Inse, vol. ii. pl. 18, col. iii. 1-25) or "into its vaulted chambers" (ibid., 1-40).

with such a frightful visage as to drive them distracted with terror. Always on the watch, no sooner does he surprise one of his victims than he falls

into whose bosom this world of ours is plunged.1 This dark country is surrounded by seven high walls, and is approached through seven gates, cach of which is guarded by a pitiless warder. Two

great city," and Beltis-Allat, "the lady of the great land," whither everything which has breathed in this world descends after death. A legend relates that Allat, called in Sumerian Erishkigal, reigned alone in Hades, and was invited by the gods to a feast which they prepared in beaven. Owing to her hatred of the light, she sent a refusal by her messenger Namtar, who acquitted himself on this mission with such a bad grace, that Ann and Ea were incensed against his mistress, and commissioned Nergal to descend and chastise her; he went, and finding the gates of hell open, dragged the queen by her hair tion the throne, and was about to decapitate her, but she mollified him by her prayers,

MILTAL, THE GOD OF HADIS, IACK VIIII .

and saved her life by becoming his wife.3 The nature of Nergal fitted him well to play the part of a prince of the departed: for he was the destroying sun of summer, and the genius of postilence and battle. His functions, however, in heaven and earth took up so much of his time that he had little leisure to visit his nether kingdom, and he was consequently obliged to content himself with the rôle of providing subjects for it by despatching thither the thousands of recruits which he gathered daily from the abodes of men or from the field of

bylonions, in the Revue Semitique, vol 1, pp. 372-376

battle. Allat was the actual sovereign of the country. She was represented with the body of a woman, ill-formed and shaggy, the grinning muzzle of a lion. and the claws of a bird of prey. She brandished in each hand a large serpent\_ a real animated javelin, whose poisonous bite inflicted a fatal wound upon the enemy. Her children were two lions, which she is represented as suckling, and , she passed through her empire, not scated in the saddle, but standing upright or kneeling on the back of a horse, which seems oppressed by her weight. Sometimes she set out on an expedition upon the river which communicates with the countries of light, in order to meet the procession of newly arrived souls ceaselessly despatched to her: she embarked in this case upon an enchanted vessel, which made its way without sail or oars, its prow projecting like the beak of a bird, and its stern terminating in the head of an ox. She overcomes all resistance, and nothing can escape from her: the gods themselves can pass into her empire only on the condition of submitting to death like mortals, and of humbly avowing themselves her slaves.1

The warders at the gates despoiled the new-comers of everything which they had brought with them, and conducted them in a naked condition before Allat, who pronounced sentence upon them, and assigned to each his place in the nether world. The good or evil committed on earth by such souls was of little moment in determining the sentence: to secure the favour of the judge, it was of far greater importance to have exhibited devotion to the gods and to Allat herself, to have lavished sacrifices and offerings upon them and to have enriched their temples. The souls which could not justify themselves were subjected to horrible punishment: leprosy consumed them to the end of time, and the most painful maladies attacked them, to torture them ceaselessly without any hope of release. Those who were fortunate enough to be spared from her rage, dragged out a miserable and joyless existence. They were continually suffering from the pangs of thirst and hunger, and found nothing to satisfy their appetites but clay and dust. They shivered with cold, and they obtained no other garment to protect them than mantles of feathers—the great silent wings of the night-birds, invested with which they fluttered about and filled the air with their screams.2 This gloomy and cruel conception of ordinary life in this strange kingdom was still worse than the idea formed of the existence in the tomb to which it succeeded. In the cemetery the soul was, at least, alone with the dead body; in the house of Allat, on the contrary, it was lost as it were among spirits as much afflicted as itself, and among the genu

<sup>2</sup> This is the description of the dead given in the first lines of the "Descent of Ishter to the Infernal Regions," given on p. 693 of the present work; it is confirmed by the fragments of the last long of the poem of Gilgames, as given on pp. 588, 589 of this volume.

<sup>1</sup> The names of the deities presiding over the nether world, their attributes, the classes of secondary genit attached to them, and the functions of each class, are all dealt with in A. JERLMIA' excellent work, Die Babylonisch-Assyrischen Vorstellungen vom Leben nach dem Tode, pp. 66-75. The form and attributes of Allat are described from her portrait on p. 690 of the present work.

born of darkness. None of these genii had a simple form, or approached the human figure in shape; each individual was a hideous medley of human and animal parts, in which the most repellent features were artistically combined. Lions' heads stood out from the bodies of scorpion-tailed jackals, whose feet were armed with eagles' claws; and among such monsters the genii of pestilener, fever, and the south-west wind took the chief place. When once the dead lad become naturalized among this terrible population, they could not escape from their condition, unless by the exceptional mandate of the gods above. They possessed no recollection of what they had done upon earth. Domestic affection, friendships, and the memory of good offices rendered to one another,-all were effaced from their minds: nothing remained there but an inexpressible regret at having been exiled from the world of light, and an excruciating desire to reach it once more. The threshold of Allat's palace stood upon a spring which had the property of restoring to life all who bathed in it or drank of its waters: they gushed forth as soon as the stone was raised, but the earth-spirits guarded it with a jealous care, and kept at a distance all who attempted to appropriate a drop of it. They permitted access to it only by order of Ea himself, or one of the supreme gods, and even then with a rebellious heart at seeing their prey escape them. Ancient legends related how the shepherd Dumuzi, son of Ea and Damkina, having excited the love of Ishtar while he was pasturing his flocks under the mysterious tree of Eridu, which covers the earth with its shade, was chosen by the goddess from among all others to be the spouse of her youth, and how, being mortally wounded by a wild boar, he was east into the kingdom of Allat.1 One means remained by which he might be restored to the light of day: his wounds must be washed in the waters of the wonderful spring, and Ishtar resolved to go in quest of this marvellous liquid.' The undertaking was fraught with danger, for no one might travel to the informal regions without having previously gone through the extreme terrors of death, and even the gods themselves could not transgress this fatal law. "To the land without return, to the land which thou knowest-Ishtar, the daughter

<sup>1</sup> See pp. 647, 618 of the present volume for the legend of Dumuzi

<sup>2</sup> The text of the "Descent of Ishtar to the Infernal Regions" was discovered by Fox Tathor (Lions, of Royal Soc. of Literature, 2nd sens, vol. vni pp. 211-257, et. Journ. Ac. Soc., new series, vol. vv. pp. 25, 26, 27), afterwards published by Fr. Lendenni, Tablette cuncitorae du Musce leitannique (K. 162), in the Melanges d'Archéologie Egyptienne et. As, chere, vol. v. pp. 31-35; translated by him in the Essai de Commentaire, etc., de Bérose, pp. 157-510 etc. I de Premiens Condesations, vol. v. pp. 81-93; Choix de Textes Calegorines, No. 30, pp. 100-1050, attenwards by Fox I albot Lunself (The Legend of Ishtar descention to Hades, in Irans atmos of the Bibl. Since then the majority of Asymologists have bestowed pains on the interpretation for Chaldenns, in the Annales de Philosophie Chretienne, 1874, October (U Immertalité de l' in Chaldenns, in the Annales de Philosophie Chretienne, 1875, vol. viii. pp. 210-255, and l' in Chaldenns, in Ledinan, Histoire du pupils d'Israel, vol. vii. pp. 464-469). A. Junious (Di Melhologques, in Ledinan, Histoire du pupils d'Israel, vol. vii. pp. 464-469). A. Junious (Di Inchen nach dem Tode, pp. 4-45). I have followed almost exclusively the creation of Jeremian.

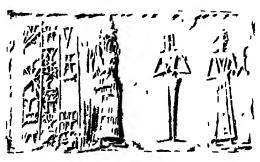

of Sin, turned her thoughts: she, the daughter of Sin, turned her thoughtsto the house of darkness, the abode of Irkalla—to the house from which he who enters can never emerge-to the path upon which he who goes shall never come back—to the house into which he who enters bids farewell to the light—the place where dust is nourishment and clay is food; the light is not seen, darkness is 'the dwelling, where the garments are the wings of birds-where dust accumulates on door and bolt." Ishtar arrives at the porch, she knocks at it, she addresses the guardian in an imperious voice: "'Guardian of the waters, open thy gate-open thy gate that I may enter, even I .- If thou openest not the door that I may enter, even I,-I will burst open the door, I will break the bars, I will break the threshold, I will burst in the panels, I will excite the dead that they may cut the living,-and the dead shall be more numerous than the living.'—The guardian opened his mouth and spake, he announced to the mighty Ishtar: 'Stop, O lady, and do not overturn the door until I go and apprise the Queen Allat of thy name.' Allat hesitates, and then gives him permission to receive the goldess: 'Go, guardian, open the gate to her--but treat her according to the ancient laws."

Mortals enter naked into the world, and naked must they leave it: and since I has decided to accept their lot, she too must be prepared to divest herself of her garments. "The guardian went, he opened his mouth: 'Enter, my lady, and may Kutha rejoice-may the palace and the land without return exult in thy presence!' He causes her to pass through the first gate, divests her, removes the great crown from her head:- Why, guardian, dost thou remove the great crown from my head?'- Enter, my ladv, such is the law of Allat.' The second gate, he causes her to pass through it, he divests her-removes the rings from her ears :- 'Why, guardian, dost thou remove the rings from my ears? '- 'Enter, my lady, such is the law of Allat.'" And from gate to gate he removes some ornament from the distressed lady—now her necklace with its attached amulets, now the tunic which covers her bosom, now her enamelled girdle, her bracelets, and the rings on her ankles: and at length, at the seventh gate, takes from her her last covering. When she at length arrives in the presence of Allat, she throws herself upon her in order to wrest from her in a terrible struggle the life of Dumuzi; but Allat sends for Namtar, her messenger of misfortune, to punish the rebellious Ishtar. "Strike her eyes with the affliction of the eyes-strike her loins with the affliction of the loins strike her feet with the affliction of the feet-strike her heart with the affliction of the heart-strike her head with the affliction of the head-strike violently at her, at her whole body!" While Ishtar was suffering the torments of the infernal regions, the world of the living was wearing mourning on account of In the absence of the goddess of love, the rites of love could no

longer be performed. The passions of animals and men were suspented. If she did not return quickly to the daylight, the races of men and animals would become extinct, the earth would become a desert, and the gods would have neither votaries nor offerings. "Papsukal, the servent of the great gods tor he tace before Shamash—clothed in mourning, filled with sorrow. Shamash went—he wept in the presence of Sin, his father,—and his terms flowed in the presence of Ea, the king—"Ishtar has gone down into the earth, and she has not come up again!—And ever since Ishtar has descended into the land without return... [the passions of men and beasts have been suspended].—the master goes to sleep while giving his command, the servant goes to sleep on his duty."

The resurrection of the goddess is the only remedy for such ills, but this is dependent upon the resurrection of Dumuzi. Ishtar will never consent to reappear in the world, if she cannot bring back her husband, with her. La the supreme god, the infallable executor of the drying will—he who alone can

modify the liws imposed upon ereation—at length decides to accord to her what she desires. "I i, in the wisdom of his heart, famed a male being—formed I ddushunamin, the servint of the gods—"to then, Uddushunamin, turn thy face towards the gate of the land without ictum;

ISHTAR DE I MITTO OF HELG CARMINE NIADIST

—the seven gates of the land without return—may they become open at the presence—may Allat behold thee, and rejone in the presence! When he it shall be calm, and her wiath appeared, chaim be in the name of the great cods—turn thy thoughts to the spring?—'May the spring, my lady, give me of its waters that I may drink of them?" All it broke out into a terribling when she saw herself obliged to yield to her rivil, 'she left her sides, she nawed her fingers," she broke out into curses against the messenger of misfor time—"'Thou hast expressed to me a wish which should not be made!—Fly I ddushunâmir, or I will shut thee up in the great prisen—the mud of the drains of the city shall be thy food—the gutters of the town shall be thy drink—the shadow of the walls shall be thy abote to

t Driwn by Fricher-Gudin from a Challem into hear the Hague Min unit (Metalling of the que des Cylendres orientaus, to let the 11 v., 20 On the calciling of memori of Nicotski, I a Decelet the section of Recue file is 1 to 6-43 Salomen Remach has leave to 1 that the all from is not the fature of the goddess which was a lored in the total.

-confinement and isolation shall weaken thy strength." 1 She is obliged to obey, notwithstanding; she calls her messenger Namtar and commands him to make all the preparations for resuscitating the goddess. It was necessary to break the threshold of the palace in order to get at the spring, and its waters would have their full effect only in presence of the Anunnas. "Namtar went, he rent open the eternal palace,-he twisted the uprights so that the stones of the threshold trembled;-he made the Anunnaki come forth, and seated them on thrones of gold,-he poured upon Ishtar the waters of life, and brought her away." She received again at each gate the articles of apparel she had abandoned in her passage across the seven circles of hell: as soon as she saw the daylight once more, it was revealed to her that the fate of her husband was henceforward in her own hands. Every year she must bathe him in pure water. and anoint him with the most precious perfumes, clothe him in a robe of mourning, and play to him sad airs upon a crystal flute, whilst her priestesses intoned their doleful chants, and tore their breasts in sorrow: his heart would then take fresh life, and his youth flourish once more, from springtime to springtime, as long as she should celebrate on his behalf the ceremonies already prescribed by the deities of the infernal world.

Damuzi was a god, the lover, moreover, of a goddess, and the deity succeeded where mortals failed.<sup>3</sup> Ea, Nebo, Gula, Ishtar, and their fellows possessed, no doubt, the faculty of recalling the dead to life, but they rarely made use of it on behalf of their creatures, and their most pious votaries pleaded in vain from temple to temple for the resurrection of their dead friends; they could never obtain the favour which had been granted by Allat to Dumuzi. When the dead body was once placed in the tomb, it rose up no more, it could no more be reinstated in the place in the household it had lost, it never could begin once more a new earthly existence. The necromancers, indeed, might snatch away death's prey for a few moments. The earth gaped at the words of their invocations, the soul burst forth like a puff of wind and answered gloomily the questions proposed to it; but when the charm was once broken, it had to retrace its steps to the country without return, to be plunged once more in

¹ It follows from this passage that Ishtar could be delivered only at the cost of another life: it was for this reason, doubtless, that Ea, instead of sending the ordinary messenger of the gods, created a special messenger. Allat, furious at the insignificance of the victum sent to her, contents herself with threatening Uddushanâmur with an ignominious treatment if he does not escape as quickly as possible.

<sup>&</sup>lt;sup>2</sup> Merodach is called "the merciful one who takes pleasure in raising the dead to life," and "the lord of the pure libation," the "merciful one who has power to give life" (A. Jerrwiss, Die Babyl-Assyr. Vorstell. vom Leben nuch dem Tode, p. 101; Jennen, Die Konnologie, pp. 296, 297). In Jeremias (op. cit., pp. 100, 101) may be found the list of the gods who up to the present are known to have had the power to resugnitate the dead; it is probable that this power belonged to all the gods and goddesses of the first rank.

darkness.¹ This prospect of a dreary and joyless eternity was not so terrifying to the Chaldwans as it was to the Egyptians. The few years of their earthly existence were of far more concern to them than the endless ages which were to begin their monotonous course on the morrow of their funeral. The sum of good and evil fortune assigned to them by destiny they preferred to spend continuously in the light of day on the fair plains of the Euphrates and Tigris: if they were to economize during this period with the view of laying up a posthumous treasure of felicity, their store would have no current value beyond the tomb, and would thus become so much waste. The gods, therefore, whom

they served faithfully would recoup them, here in their native city, with present prosperity, with health, riches, power, glory, and a numerous offspring, for the offerings of their devotion; while, if they irritated the deities by their shortcomings, they had nothing to expect but overwhelming

DUMERI REJUNINATION ON THE KALLS OF ISHTAR 2

calamities and sufferings. The gods would "cut them down like a reed," and their "names would be annihilated, their seed destroyed;—they would end their days in affliction and hunger,—their dead bodies would be at the mercy of chance, and would receive no sepulture." They were content to resign themselves, therefore, to the dreary lot of eternal misery which awaited them after death, provided they enjoyed in this world a long and prosperous existence. Some of them felt and rebelled against the injustice of the idea, which assigned one and the same fate, without discrimination, to the coward and the hero killed on the battle-field, to the tyrant and the mild ruler of his people, to the wicked and

the righteous. These therefore supposed that the gods would make distinctions, that they would separate such heroes from the common herd, welcome them in a fertile, sunlit island, separated from the abode of men by the waters of deaththe impassable river which leads to the house of Allat. The tree of dife flourished there, the spring of life poured forth there its revivifying waters: thither Ea transferred Xisuthros after the Deluge; Gilgames saw the shores of this island and returned from it, strong and healthy as in the days of his youth. The site of this region of delights was at first placed in the centre of the marshes of the Euphrates, where this river flows into the sea; afterwards when the country became better known, it was transferred beyond the ocean.1 In proportion as the limits of the Chaldean horizon were thrust further and further away by mercantile or warlike expeditions, this mysterious island was placed more and more to the east, afterwards to the north, and at length at a distance so great that it tended to vanish altogether. As a final resource, the gods of heaven themselves became the hosts, and welcomed into their own kingdom the purified souls of the heroes.

These souls were not so securely isolated from humanity that the inhabitants of the world were not at times tempted to rejoin them before their last hour had come. Just as Gilgames had dared of old the dangers of the desert and the ocean in order to discover the island of Khasisadra, so Etana darted through the air in order to ascend to the sky of Anu, to become incorporated while still living in the choir of the blessed.2 The legend gives an account of his friendship with the eagle of Shamash, and of the many favours he had obtained from and rendered to the bird. It happened at last, that his wife could not bring forth the son which lay in her womb; the hero, addressing himself to the eagle, asked from her the plant which alleviates the birth-pangs of women and facilitates their delivery. This was only to be found, however, in the heaven of Anu, and how could any one run the risk of mounting so high, without being destroyed on the way by the anger of the gods? The eagle takes pity upon the sorrow of his comrade, and resolves to attempt the enterprise with him. "'Friend,' she says, 'banish the cloud from thy face! Come, and I will carry thee to the heaven of the god Anu. Place thy breast against my breast-place thy two hands upon the pinions of my wings-place thy

The legend of Elant was discovered, and some fragments of it translated, by G. SMIH. The Chaldran Account of Genesis, pp. 138-144. All that is known of it has been collected, published, tauslated, and commented upon by E. J. Harrin, Die Babylonischen Legenden som Elana, etc., in the Beiträge zur Assyriologie, vol. ii. pp. 391-408, where will be found a summary of the analogies between this legend and others current infancient and modern nations; then by Morris Jastinow, A New Fragment of the Babylonian Elana Legend, in the Beiträge zur Assyriologie, vol. iii, pp. 363-385, who disproved the arrangement of the fragments which had been adopted by Harper.

side against my side.' He places his breast against the breast of the eagle, he places his two hands upon the pinions of the wings, he places his side against her side;—he adjusts himself firmly, and his weight was great." The Chaldwan

artists have more than once represented the departure of the hero. They exhibit him closely attached to the body of his ally, and holding her in a strong embrace. A first flight has already lifted them above the earth, and the shepherds scattered over the country are stupefied at the unaccustomed

I TANA CARRIID TO HEAVEN BY AN FACIL,1

sight: one announces the prodigy to another, while their dogs scated at their teet extend their muzzles as if in the act of howling with terror. "For the space of a double hour the eagle bore him-then the eagle spake to him, to him Etana: 'Behold, my friend, the earth what it is; regard the sea which the occan contains! See, the earth is no more than a mountain, and the sea is no more than a lake.' The space of a second double hour she bore him, then the eagle spake to him, to him Etana: 'Behold, my friend, the earth what it is; the sea appears as the girdle of the earth!' The space of a third double hour she hore him, then the eagle spake to him, to him Etana: 'See, my friend, the earth, what it is:--the sea is no more than the rivulet made by a gardener'" They at length arrive at the heaven of Anu, and rest there for a moment. Etana sees around him nothing but empty space-no living thing within itnot even a bird: he is struck with terror, but the eagle reassures him, and tells him to proceed on his way to the heaven of Ishtar. "Come, my friend, let me bear thee to Ishtar, -and I will place thee near Ishtar, the lady,-and at the feet of Ishtar, the lady, thou shalt throw thyself .- Place thy side against my side, place thy hands on the pinions of my wings.' The space of a double hour she bore him: 'Friend, behold the earth what it is .-- The face of the earth stretches out quite flat -and the sea is no greater than a mere.' The space of a second double hour she bore him: 'Friend, behold the earth what it is, -the earth is no more than a square plot in a garden, and the great sea is not greater. than a puddle of water." At the the third hour Etana lost courage, and cried, "Stop!" and the eagle immediately descended again; but, Etana's strength being exhausted, he let go his hold, and was dashed to pieces on the ground.

<sup>1</sup> Drawn by Faucher-Gudin, from a Chald can integlio, reproduced in Hallie Sanzie, Dec. merics a Chaldee, pl. 30 bis, No. 13; cf. Schlit, Note d'Epigraphie, in the Recuell, vol. Ma., p. 52

The eagle escaped unhurt this time, but she soon suffered a more painful death than that of Etana. She was at war with the serpent, though the records which we as yet possess do not vouchsafe the reason, when she discovered in the roots of a tree the nest in which her enemy concealed its brood. She immediately proposed to her young ones to pounce down upon the growing snakes; one of her eaglets, wiser than the rest, reminded her that they were under the protection of Shamash, the great righter of wrongs, and cautioned her against any transgression of the divine laws. The old eagle felt herself wiser than her son, and rebuked him after the manner of wise mothers: she carried away the serpent's young, and gave them as food to her own brood. The hissing serpent crawled as far as Shamash, crying for vengeance: "The evil she has done me, Shamash-behold it! Come to my help, Shamash! thy net is as wide as the earth -thy snares reach to the distant mountain-who can escape thy net?-The criminal Zu,1 Zu who was the first to act wickedly, did he escape it?" Shamash refused to interfere personally, but he pointed out to the serpent an artifice by which he might satisfy his vengeance as securely as if Shamash himself had accomplished it. "Set out upon the way, ascend the movutain,-and conceal thyself in a dead bull ;-make an incision in his inside -tear open his belly,-take up thy abode-establish thyself in his belly All the birds of the air will pounce upon it . . . - and the eagle herself will come with them, ignorant that thou art within it; -she will wish to possess herself of the flesh, she will come swiftly-she will think of nothing but the entrails within. As soon as she begins to attack the inside, soize her by her wings, beat down her wings, the pinions of her wings and her claws, tear her and throw her into a ravine of the mountain, that she may die there a death of hunger and thirst."

The serpent did as Shamash advised, and the birds of the air began to flock round the carease in which she was hidden. The eagle came with the rest, and at first kept aloof, looking for what should happen. When she saw that the birds flow away unharmed all fear left her. In vain did the wise eaglet warn her of the danger that was lurking within the prey; she mocked at him and his predictions, dug her beak into the carrion, and the serpent leaping out seized her by the wing. Then "the eagle her mouth opened, and spake unto the snake, 'Have mercy upon me, and according to thy pleasure a gift I will lavish upon thee!' The snake opened her mouth and spake unto the eagle, 'Did I release thee, Shamash would take part against me; and the doom would fall upon me, which now I fulfil upon thee.'

 $<sup>^1</sup>$  This is an allusion to the theft of the destiny tablets and the defeat of the bird Zu by Shamash , see p. 667 of the present work.

She tore out her wings, her feathers, her pinions; she tore her to pieces, she threw her into a cleft, and there she died a death of hunger and of thirst."

The gods allowed no living being to penetrate with impunity into their empire: he who was desirous of ascending thither, however brave he might be, could do so only by death. The mass of humanity had no pretensions to mount, so high. Their religion gave them the choice between a perpetual abode in the tomb, or confinement in the prison of Allat; if at times they strove to escape from these alternatives, and to picture otherwise their condition in the world beyond, their ideas as to the other life continued to remain vague, and never approached the minute precision of the Egyptian conception. The cares of the present life were too absorbing to allow them leisure to speculate upon the conditions of a future existence

## CHAPTER IX.

## CHALDÆAN CIVILIZATION.

Royalty - The constitution of the family and its property - Ch idman commerce and industry

THE Chaldran kings, unlike their contemporaries the Phanaolis, rarely put forward any pretensions to divinity. They contented themselves with occupying an intermediate position between their subjects and the gods, and for the purpose of incdiation they believed themselves to be endowed with powers not possessed by ordinary mortals. They sometimes designated themselves the sons of La,2 or of Ninsun,3 or some other derty, but this involved no belief in a divine parentage, and was incredy pious hyperbole; they entertuned no illusions with regard to any descent from a god or even from one of his doubles, but they desired to be recognized as his vicegorents here below, is his prophets, his well-beloved, his pistors, elected by him to rule his furnant flocks, or as priests devotedly attached to his service. While, one were, the ordinary priest chose for himself a single master to whom he

hingashid, King of Liuk, proclaims himself the son of this goddess (RAWINGO, C

<sup>&</sup>lt;sup>1</sup> Drawn by Boudier, from the sketch by loi its Iraid and he who have United and Sustana, p. 75. The nail serves to keep the figure fixed firmly in the earth. It is a reproduction of the Lionze figure in the Louvie, already published by Hinday-Sarge, Decouncies en Chall, pl. 28. No. 4

<sup>2</sup> This title is taken by the king Urban of Legish in Herek Saleic December on Civile 11 7, col 1 11 7, 8, cf Opiner, Les Inscriptions de fuléu in the Complex sendus de l'éculeure des Inscriptions et Billes-Lettres, 1882, p. 3) Annai p, the Inscriptions of Telloh, in the face is of the Past, 2nd sories, vol 1 p. 75, Jensen, Inschrifte was Konige und Statthalter von I 14th, in the heilschriftliche Bibliothek, vol 111 pp. 20, 21

devoted himself, the priest-king exercised universal sacordotal functions and duinted to be pontiff of all the national religions. His choice naturally was directed by preference to the patrons of his city, those who had raised his ancestors from the dust, and had exalted him to the supreme rank, but there were other divinities who claimed their share of his homage and expected of him a devotion suited to their importance.1 If he had attempted to carry out these duties personally in detail, he would have had to spend his whole life at the foot of the alter: even when he had delegated as many of them as he could to the regular elergy, there still remained sufficient to occupy a large part of his time. Every month, every day, brought its inevitable round of sacrifices, prayers, and processions.2 On the 1st of the second Elul, the King of Babylon had to present a gazelle without blemish to Sin; he then made an offering of his own choosing to Shamash, and cut the throats of his victims before the god. These ceremonies were repeated on the 2nd without any alteration, but from the 3rd to the 12th they took place during the night, before the statues of Merodach and Ishtar, in turn with those of Nebo and Tashmit, of Mullil and Ninlil, of Ramman and of Zirbanit; sometimes at the rising of a particular constellation—as, for instance, that of the Great Bear, or that of the sons of Ishtar; sometimes at the moment when the moon "raised above the earth her luminous crown." On such a date a penitential psalm or a litary was to be recited; at another time it was forbidden to eat of meat either cooked or smoked, to change the bodylinen, to wear white garments, to drink medicine, to sacrifice, to put forth an edict, or to drive out in a chariot.4 Not only at Babylon, but everywhere else, obedience to the religious rites weighed heavily on the local princes; at Uru, at Lagash, at Nipur, and in the ruling cities of Upper and Lower Chaldwa.

1s, vol 1 pl. 2, No. viii. 1, il 1, 2); cf. G. Suith, Early History of Bulylonia, in the Transactions of the Society of Biblical Archivology, vol. i. p. 11 (where the name of the godders, read Bolatsunat, in taken for that of a queen); Winckler, Inschriften von Königen von Sumer und Akkad, in the Keuschriftliche Bibliothek, vol in. 1st part, pp. 52-85.

Thus, only to mention one example, Khammurabi calls himself, in the second inscription of the Louvie, "Prophet of Anu, steward of Bel, favourite of Shamash, beloved shepherd of Meiodach" (Ménart, Une Nouvelle Inscription de Hammurabi, roi de Babylone, in the Recueil de Travaux, vol. ii. p. 79; ef. Fr. Dilitz-ch, Die Sprache der Kossder, p. 74). The preamble used by Gudea in the inscription of Statue D of the Louvie is more lengthy, but at presont too obscure to be translated at length (Hlczit-razze, Decouvertes en Chaldee, pl. 9, cols. i, ii.; cf. Ottent, Les Inscriptions de Gudea, in the Comples rendus de l'Académie des Inscriptions, 1882, pp. 28-40, 123-127; Amaun, The Inscriptions of Telloh, in the Records of the Past, 2nd series, vol. 11. pp. 89, 90, and in Heuzey-Sauzec, Decouvertes, vo., pp. avii., xviii.; Jensty, Inschriften der Könige und Stätthalter von Lagdsch, in the Keilschriftliche Bibliothek, vol. iii. 1st part, pp. 50, 51).

<sup>&</sup>lt;sup>2</sup> All the details which follow are taken from the tablet in the British Museum (RAWLINSON, Cun Ins. W. As., vol. 1v. pl- 32, 33), discovered and translated by Saves, A Bubylonian Saints' Calendar, in the Records of the Past, 1st series, vol. vii. pp. 157-168, and The Religion of the Ancient Bubylonians, pp. 69-76. Uf. the fragment cited by Saves, The Religion of the Ancient Bubylonians, p. 69, note 3

Thus on the 6th, the 16th, and the 26th of the second month of Elul, in the document mentioned in the preceding note, and which has been entirely translated by Sayce at two different periods.
 Thus the 7th of the same month of Elul, then the 14th, the 21st, and the 28th.

The king, as soon as he succeeded to the throne, repaired to the temple to receive his solemn investiture, which differed in form according to the gods he worshipped: at Babylon, he addressed himself to the statue of Bel-Merodach in the first days of the month Nisan which followed his accession, and he "took him by the hands" to do homago to him.1 From thenceforth, he officiated for Merodach here below, and the scrupulously minute devotions, which daily occupied hours of his time, were so many acts of allegiance which his fealty as a vassal constrained him to perform to his suzerain. They were, in fact, analogous to the daily audiences demanded of a great lord by his steward, for the purpose of rendering his accounts and of informing him of current business: any interruption not justified by a matter of supreme importance would be liable to be interpreted as a want of respect or as revealing an inclination to rebel. By neglecting the slightest ceremonial detail the king would arouse the suspicious of the gods, and excite their anger against himself and his subjects: the people had, therefore, a direct interest in his careful fulfilment of the priestly functions, and his piety was not the least of his virtues in their eyes.2 All other virtues -bravery, equity, justice-depended on it, and were only valuable from the divino aid which piety obtained for them. The gods and heroes of the earliest ages had taken upon themselves the task of protecting the faithful from all their enemies, whether men or beasts. If a lion decimated their flocks, or a usus of gigantic size devastated their crops, it was the king's duty to follow the example of his fabulous predecessors and to set out and overcome them.3 The enterprise demanded all the more courage and supernatural help, since these beasts were believed to be no mere ordinary animals, but were looked on as instruments of divine wrath the cause of which was often unknown, and whoever assailed these monsters, provoked not only them but the god who instigated them. Piety and contidence in the patron of the city alone sustained the king when he set forth to drive the animal back to its lair; he engaged in close combat with it, and no sooner and he pierced it with his arrows or his lance, or felled it with axe and

<sup>1</sup> The History of the meaning of this ceremony is due to Winckler, who, after having noticed it in a contsory manner at the end of his maugural dissertation, De Inscription. Surgonia right Assimile que vocatur' Annalium, th. 4, furnished proofs of his opinion in his Studien und Beitrage zur balmlonisch-assyrischen Geschichte (in the Zeitschreit für Assyriologie, vol. n. pp. 302-301); et the facts since brought together to confirm the hypothesis of Winckler, by LIHMANN, Schamaschschumulen. König von Babylonien, p. 44, et seq.

The cylinder of Cyrus (RAWLINSON, Cun. Inc. W. As., vol. v. pl. 35; cf RAWLINSON, Notes on a unvely discoursed Clay-cylinder of Cyrus the Great, in the Journ. of Royal As. Soc , new series, vol. All 14. 70-97) shows in the most striking manner the influence which this manner of regarding the religious rôle of the king exercised upon politics; the priests and the people mentioned in it considered Cyrus's triumph as a revenge of the Chaldwan gods whom Nabonidos had offended.

Of the struggles of Gilgames with the bull and the lions on pp. 581-583 of this volume, the poem represents faithfully, in this and several other points, the Chaldson ideas of a king's duties about three thousand years before our ora.

dagger, than he hastened to pour a libation upon it, and to dedicate it as a trophy in one of the temples.1 His exalted position entailed on him no less perils in time of war: if he did not personally direct the first attacking column, he placed himself at the head of the band composed of the flawer of the army, whose charge at an opportune moment was wont to secure the victory. What would have been the use of his valour, if the dread of the gods had not preceded his march, and if the light of their countenances had not struck terror into the ranks of the enemy?2 As soon as he had triumphed by their command, he sought before all else to reward them amply for the assistance they had given him. He poured a tithe of the spoil into the coffers of their treasury, he made over a part of the conquered country to their domain, he granted them a tale of the prisoners to cultivate their lands or to work at their buildings. Even the idols of the vanquished shared the fate of their people: the king tore them from the sanctuaries which had hitherto sheltered them, and took them as prisoners in his train to form a court of captive gods about his patron divinity.8 Shamash, the great judge of heaven, inspired him with justice, and the prosperity which his good administration obtained for the people was less the work of the sovereign than that of the immortals.4

• We know too little of the inner family life of the kings, to attempt to say how they were able to combine the strict sacerdotal obligations incumbent on them with the routine of daily life. We merely observe that on great days of festival or sacrifice, when they themselves officiated, they laid aside all the insignia of royalty during the ceremony and were clad as ordinary priests. We see them on such occasions represented with short-cut hair and naked

<sup>4</sup> Gilgames dedicates in this manner, within the temple of Shamash, the spoils of the urus of Ishtar which he had vanquished; see p. 582 of this volume.

<sup>&</sup>lt;sup>2</sup> Indingiranagin, son of Akurgal and King of Lagash, like his father, attributes his victorioto the protection of Ningirsu (Hillery-Sarzio, Découvertes en Chaldée, pl. 31, 2; cf. Offert, Inscriptions archatques de trois briques chaldéenues, in the Revue d'Assyriologie, vol. ii. pp. 86, 87). Gréba is led to the attack by the god Ningishzida (Statue B de Gudéa, in Hillery-Sarzio, Découver and Chaldée, pl. axi. col. iii. ll. 3-5; cf. Amald, The Inscriptions of Telloh, in the Records of the Part, 2nd sories, vol. ii. p. 77). The expressions used in the text are taken from Assyrian inscriptions. \*\*

1 t was in the above manner that Marduknådinakhe, King of Babylon, took the statues of

<sup>&</sup>lt;sup>2</sup> It was in the above manner that Marduknådinakhe, King of Babylon, took the statues of Ramman and the goddess Shala from Tiglath-pileser, first King of Assyria (Inscription of Bavian, in Rawlinson, Cun. Ins. IV. As., vol. iii. pl. 11, ll. 48-50). On the other hand, Assurbanipal varried back to Uruk from Sus. the statue of the goddess Nanâ, which Kudurnakhunti, King of Elam, had taken away 1535 or 1635 years before (Rawlinson, Cun. Ins. IV. As., vol. iii. pl. 38, No. 1, ll. 12-18, and vol. v. pl. 6, ll. 107-121); he carried away at the same time as prisoners to Assyria the Elamite gods and their priests (Rawlinson, Cun. Ins. IV. As., vol. v. pl. 6, ll. 30-47).

<sup>&</sup>lt;sup>4</sup> Cf. what is said above of the part played by Shamash as god of justice, p. 658 of this volume. A fragment of bilingual inscription of the time of Khamaurabi, of which Amau has at two different times made a special study, Une inscription bilingue de Hamaurabi, roi de Bubylone, in the Recueil de Travaur, vol. i. pp. 181-190, and Inscription bilingue de Hamaurabi, in the Recue d'Assyriologi, vol. ii. pp. 4-19 (cf. Jessen, Inschriften aus der Regiorungszeit Hammurabi's, in the Keilschriftliche Bibliothek, vol. iii. pp. 110-117), shows how the kings referred to the gods and took them as their models in everything relating to conduct. The sacerdotal character of the Assyro-Babylonian sovereigns has been strongly insisted on by Tiele, Babylonisch-Assyrische Geschichte, pp. 491, 492.

breast, the loin-cloth about their waist, advancing foremost in the rank, carrying the heavily laden "kufa," or reed basket, as if they were ordinary slaves; and, as a fact, they had for the moment put aside their sovereignty and were merely temple servants, or slaves appearing before their divine master to do his bidding, and disguising themselves for the nonce in the garb of

servitors.1 The wives of the sovereign do not seem to have been invested that semi-sacred character which led the Egyptian women to be associated with the devotions of the man, and made them indispensable auxiliaries in all religious ceremonies;2 they did not, moreover, occupy that important position side by side with the man which the Egyptian law assigned

THE BING UNINA BEARING THE " BUIA." !

to the queens of the Pharaohs. Whereas the monuments on the banks of the Nile reveal to us princesses sharing the throne of their husbands, whom they embrace with a gesture of frank affection, in Chaldwa the wives of the prince, his mother, sisters, daughters, and even his slaves, remain invisible to posterity. The harem in which they were shut up by custom, rarely opened its doors: the people seldom caught sight of them, their relatives spoke of them as little as possible, those in power avoided associating them in any public acts of worship or government, and we could count on our fingers the number of those whom the inscriptions mention by name.4 Some of them were drawn from the noble

This is the attitude in which we observe Urums on the tablets published by Herzey-Sar re-Decouvertes en Chaldee, pl. 2 bis, or that of the bionze statuettes of Dungi (HLITEL-Single). Decouvertes, etc., pl 28, 1, 2) and of Kudur-Mabug (Planot-Chienz, Histoire de l'Art dans l'Antiquete, vol. ii. p. 530), which bear the inscriptions of these sovereigns, and are in the possession of the Louvre (III rzer, Nouveaux Monuments du roi Ournina, decouverts par M de Sarzee, in the Reque d'Assyriologie, vol. in p. 11, et seq ).

<sup>2</sup> See what has been said of Egyptian queens on pp. 270-272 of this volume.

Most of them are mentioned with their husbands or lathers on the votive offerings placed in the temples; for example, the wife of Gudes, Gendunpae (OPPERT, L'Olice de Guden, in the Zeitschrift fur Amyriologie, vol. i. pp. 489, 410), or Giunmunpauldu (Irasen, Inschriften der Konige und Statthalter von Lagasch, in the Keilschriftliche Bibliothek, vol. nil. pp. 61, 65), upon the cylinder m the museum at the Hague, to which Manar called attention and which he published (Les C limbes Orientaua du Masse de la Haye, pl. vn., No. 35, pp. 59, 60), or Ganul, wife of Vamma\_h un, vice. gerent of Lagash (HEUZEY, Génealoques de Sirpurla, d'après les decourertes de M. de Sarzec, in the Revue d'Assyriologie, vol. ii. p. 79; cf. JENSTN, Inschriften der Konige und Statthalter von Tagasch.

families of the capital, others came from the kingdoms of Chaldra or from foreign courts; a certain number never rose above the condition of mere concubines, many assumed the title of queen, while almost all served as living piedges of alliances made with rival states, or had been given as hostages at the concluding of a peace on the termination of a war. As the kings, who put forward no pretensions to a divine origin, were not constrained, after the fashion of the Pharaohs, to marry their sisters in order to keep up the purity of their race,2 it was rare to find one among their wives who possessed an equal right to the crown with themselves: such a case could be found only in troublous times, when an aspirant to the throne, of base extraction, legitimated his usurpation by marrying a sister or daughter of his predecessor.3 The original status of the mother almost always determined that of her children, and the sons of a princess were born princes, even if their father were of obscure or unknown origin.4 These princes exercised important functions at court, or they received possessions which they administered under the suzerainty of the head of the family; 5 the daughters were given to foreign kings, or to scions of the most distinguished families. The sovereign was under no obligation to hand down his crown to any particular member of his family; the eldest son usually succeeded him, but the king could, if he preferred, select his favourite child as his successor even if he happened to be the youngest, or the only.

in the Keilschriftliche Bibl., vol. ini. pp. 71, 75, where the name of the lady is read Ninkandu). On the contrary, in another place, we find the wife of Rimsin, King of Larson, whose name is unfortunately mutilated, dedicating a temple for her life and for that of her husband (Wingle, Rome and Akkad, in the Mittellungen des Ak. Orientalischen Vereins, vol. i. p. 17, and Inschriften von Königen von Sumer und Akkad, in the Keilschriftliche Bibl., vol. ini. pp. 96, 97). Some queens, however, appear to have had their names inveribed on a royal canon; for instance, Ellât-Gula (Sulla, Early Hist. of Babylonia, in the Transactions of the Bibl. Arch. Soc., vol. i. pp. 52, 53), or Bau-cllit, in Sumeman Azag-Bau (Records of the Past, 2nd series, vol. 1, p. 32), but we know nothing further about her, nor when she reigned.

¹ Political marriage-alliances between Egypt and Chaldma were of frequent occurrence, according to the Tel cl-Amarna tablets (Bezold-Budge, The Tell-cl-Amarna Tablets in the Brilish Museum process. With regard to the marriages of the Pharaolis with their sisters, of what is said on p. 270, et seq., of this volume.

<sup>2</sup> Nummaghani, vicegerent of Lagush, probably owed his elevation to his marriage with the sister of the vicegerent Urbau (Hatzev, Généalogies de Sirpurla, d'après les découvertes de M. de Sarsee, in the Revue d'Assyriologie, vol ii. pp. 78, 79).

'This fact is apparent from the introduction to the inscription in which Sargon I. is supposed to give an account of his life (cf. pp. 597, 598 of this volume): "My father was unknown, my mother was a princess;" and it was, indeed, from his mother that he inherited his rights to the crown of Agade.

<sup>5</sup> This is the conclusion arrived at after a study of the bas-reliefs of Lagash, where we find Akurgul, while still a prince, succeeding to the post of cupbearer, occupied previously by his brother Lidda (Heuzek-Sarzeo, Decouvertes in Chaldee, pl. 2 bis, No. 1, and Nouveaux Monuments, etc., in the Comples results de l'Académie des Inscriptions, 1852, p. 314, and in the Revue d'Assyriologie, vol. iii. p. 16).

one born of a slave.1 As soon as the sovereign had made known his will, the custom of primogeniture was set aside, and his word became law. We can well imagine the secret intrigues formed both by mothers and sons to turry favour with the father and bias his choice; we can picture the jealousy with which they mutually watched each other, and the bitter hatred which any preference shown to one would arouse in the breasts of all the others. Often brothers who had been disappointed in their expectations would combine secretly' against the chosen or supposed heir; a conspiracy would break out, and the people suddenly learn that their ruler of yesterday had died by the hand of an assassin and that a new one filled his place. Sometimes discontent spread beyond the confines of the palace, the army became divided into two hostile camps, the citizens took the side of one or other of the aspirants, and civil war raged for several years till some decisive action brought it to a close. Meantime tributary vassals took advantage of the consequent disorder to shake off the yoke, the Elamites and various neighbouring cities joined in the dispute and ranged themselves on the side of the party from which there was most to be gained: the victorious faction always had to pay dearly for this somewhat dubious help, and came out impoverished from the struggle. Such an internecine war often caused the downfall of a dynasty -at times, indeed, that of the entire state.2

The palaces of the Chaldean kings, like those of the Egyptians, presented the appearance of an actual citadel: the walls had to be sufficiently thick to withstand an army for an indefinite period, and to protect the garrison from every emergency, except that of treason or famine. One of the statues found at Telloh holds in its lap the plan of one of these residences: the external outline alone is given, but by means of it we can easily picture to ourselves a fortified place, with its towers, its forts, and its gateways placed between two bastions.<sup>3</sup> It represents the ancient palace of Lagash, subsequently enlarged and altered by Gudea or one of the vicegerents who succeeded him, in which many a great lord of the place must have resided down to the time of the Christian era.<sup>1</sup> The site on which it was built in the

Akurgal appears to have had an older brother, Lidda, who did not come to the throne (HLCZEY, Nonvocux Monuments, etc., in the Revue d'Assyriologie, vol. ii., pp. 15, 16).

<sup>&</sup>lt;sup>2</sup> The above is perfectly true of the later Assyrian and Chaldean periods: it is scarcely needful to recall to the reader the murders of Sargon II and Sennacherib, or the revolt of Assurdainpal against his father Shalmaneser III. With regard to the earliest period we have merely indications of what took place; the succession of Kinz Uraina of Lugash appears to two been accompanied by troubles of this kind (Heller, Genealogies de Sirparla, etc., in the Reon d'Assyriologie, vol. 11 pp. 52, 83), and it is certain that his successer Akurgal was not the chlost of his sons (Hulzer, Nonceaux Monnacout, etc., in the Comptes readus de l'Academie des Inscriptions, 1892, p. 341, and in the Revue d'Assyriole jie, vol. iii. pp. 16, 18, 19), but we do not at present know to what events Akurgal owed his clevation.

HLUZEY-SARZEO, Découvertes en Chalde, pp. 138, 139, who believes it to be a tortre-synther than a palace (cf. Un l'alais chalden, p. 15); in the East a palace is always more or less trained.

<sup>4</sup> This pulses was discovered by Mons. de Sarzee during his first exervations, and her as described it with great detail (Helzer-Sarzee, Decouvertes en Chaldée, pp. 13-51); an abstract of the description and an attempt to restore the edifice will be found in Helzely, Un Palais chaldren, d'après les décou-

Girsu quarter of the city was not entirely unoccupied at the time of its

foundation. Urban had raised a ziggurat on that very spot some centuries proviously

and the walls which he had constructed were falling into iuin. Gudea did not destroy the work of his remote predecessor

he merely incorporated it into the substruc-

building, thus

showing an indifference similar to that evinced by the Pharaolis for the monuments of a former dynasty.3 The palices, like the temples, never rose directly from the soil, but were invariably built on the top of an artificial mound of crude brick. At Lagash, this solid platform rises to the height of 10 feet above the plain, and the only means of access to the top is by a single narrow steep stancise, easily out off or defended.4 The palace which surmounts this artificial eminence describes a sort of megular rectangle, 174 feet long by 69 feet wide, and had, contrary to the custom in Egypt, the four angles orientated to the four cardinal points. The two principal sides are not parallel, but swell out slightly towards the middle, and the flexion of the lines almost follows

vertes de M de Sarzee, Pans 1888. It was restored during the Puthran period by a small local I maket named Hadadmakhe a vasad of the kings of Mesena (Hi (11) - ARZLe, Decouvertes en (halde, pp. 17, 18, 32)

I This identification of the name of Girsu with the site on which the palace of Guder is built was proposed in mathe very first by Americo, Surpourla, d'après les inserrations de la collection de Sar c, p 5, and adopted by HITTIY SALZIE, De ouvertes en Chaldee, p 53

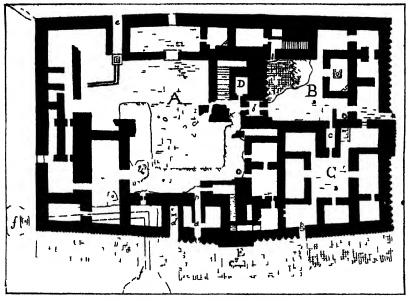

Drawn by Frucher Gudin, from Herrix Saizer, Decouvertes, etc., pl 15, No 1. The plan is truced upon the tablet held in the Lip of Statue Lain the Louvie (Herzin-Sanzie, Decouvertes, etc., pl 16, ct seq). Below the plan can be scenthe ruler marked with the divisions used by the architect for drawing his designs to the desired scale, the scribe's stylus is represented lying on the left of the plan Prof Petre has shown that the unit of measurement represented on this ruler is the cubit of the Pyramid-builders of Lgypt —Ti ]

HILDZI Y-SALLIL, Hecowerles, etc., pp. 13, 11, 29, 30, 50-53, Hrt zer, Un Palais chalden, pp. 30-31 The small square construction, marked fin the plan on the opposite page, is one of the older portions buried under the more rea at bricks of Gude i's platform.

For the substructure, see Hills - Salle, Deomertes, etc., pp. 13, 14. In one part of the mound, the platform constructed for Urban's edifice uplears to have reached the height of 33 feet (HILLY 1-521 ALC. D councities, ctr., p 53, note) The structures is not mentioned in the account of the exercitations by Mons de Saixee, perhaps it was destroyed in ancient times

Drawn by Faucher Gudin, from the facsimile by Placi, Nince et l'Assyrie, pl. 78, No 2.

the contour of one of those little clay cones upon which the kings were wont to inscribe their annals or dedications. This flexure was probably not intentional on the part of the architect, but was owing to the difficulty of keeping a wall of such considerable extent in a straight line from one end to another; and all Eastern nations, whether Chaldwans or Egyptians, troubled themselves but little about correctness of alignment, since defects of this kind.

HAN OF THE INCHING PURDINGS OF THEFT IC.

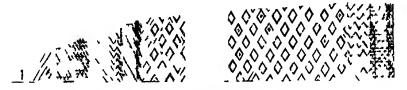

were scarcely ever perceptible in the actual edifice, and are only clearly reveiled in the plan drawn out to scale with modern precision. The façade of the building faces south-east, and is divided into three blocks of unequal size. The centre of the middle block for a length of 18 feet projects some 3 feet from the main front, and, by directly facing the spectator, ingeniously masks the obtuse angle formed by the meeting of the two walls. This projection

<sup>1</sup> This is the very expression used by Mons de Suzce (Helzer-Sarzer, Describe en Chalae 1-15), and the resemblance is indeed striking the moment we look at the ground-plan of the build n

<sup>&</sup>quot;Drawn by Paucher (adding from Hiller, Notice, December, etc., plan A.

Mons Henzey thinks that the outward deflecting of the lines is owing "merely to a primitive aith of obtaining greater solidity of construction, and of giving a better foundation to these I is to, des, which are placed upon artificial terraces of crude brick always subject to cracks and settle lights" (Herzer, Un Palais Chalden, p. 20). I think that the explanation of the facts which I have men in the text is simpler than that ingeniously proposed by Mons Henzey; the missons have a guit to build the wall at one end, were unable to carry it on in a straight line until it reached the pet f denoted on the architect's plan, and therefore altried the direction of the will what they detected their error; or, having begun to build the will from both ends simultaneously, were not accessful in making the two lines meet correctly, and they have trankly patched up the junction by a mass of projecting brickwork which conce its their unskillulness.

is flunked right and left by rectingular grooves, similar to those which ornament the freques of the fortiesses and brick houses of the Ancient Empire in Light 1 the regular alternation of projections and hollows breaks the monotony of the freing by the play of light and shade. Beyond these, at in, the will surface is broken by semicicular pilasters some 17 inches in digneter, without bases, expitals, or even a moulding, but placed side by side like so many tree-trunks or posts forming a paliside. Various schemes of decoration succeed each other in progressive sequence, less ornate and at greater distances up it, the further they recede from the central block and the nearer they approach to the extremities of the figure. They stop short at the southern angle, and the two sides of the edifice running from south to west, and again from west to north, are flut, bare surfaces, unbroken by

DECRAFINGI COURID COMES ON THE IACALL AT UIU 3

piojection or groove to relieve the poverty and monotony of their appearance. The decoration reappears on the north-cast front, where the arrangement of the principal figure is purtly reproduced. The grooved divisions here start from the angles, and the engaged columns are wanting, or rather they are transferred to the central projection, and from a distance have the effect of a row of grantic organ-pipes. We may well ask if this squat and heavy mass of building, which must have attracted the eye from all parts of the town, had nothing to relieve the dull and dismal colour of its component bricks. The idea might not have occurred to us, had we not found elsewhere in attempt to lessen the gloomy appearance of the architecture by coloured plastering. At Uruk, the walls of the palace are decorated by means of terrecetty comes, fixed deep into the solid plaster and painted red, black, or yellow, forming interlaced or disper patterns of chevions, spirils, lovenges, and trangles, with a very fair result, this mosaic of coloured plaster covered all

intervals: two opened from the principal façade, but on each of the other sides there was only one entrance. They were arched and so low that admittance was not easily gained; they were closed with two-leaved doors of cedar or 'cypress, provided with bronze hinges, which turned upon two blackish stones firmly set in the masonry on either side, and usually inscribed with the name of the founder or that of the reigning sovereign. Two of the entrances possessed a sort of covered way, in which the soldiers of the external watch could take shelter from the heat of the sun by day, from the cold at night, and from the dews at dawn.1 On crossing the threshold, a corridor, flanked with two small rooms for porters or warders, led into a courtyard surrounded with buildings of sufficient depth to take up nearly half of the area enclosed within the walls. This court was moreover a semi-public place, to which tradesmen, merchants, suppliants, and functionaries of all ranks had easy access. A suite of three rooms shut off in the north-east angle did duty for a magazine or arsenal. The southern portion of the building was occupied by the State apartments, the largest of which measures only 40 feet in length. In these rooms Gudea and his successors gave audience to their nobles and administered justice. The administrative officers and the staff who had charge of them were probably located in the remaining part of the building. The roof was flat, and ran all round the enclosing wall, forming a terrace, access to it being gained by a staircase built between the principal entrance and the arsenal.2 At the northern angle rose a ziggurat. Custom demanded that the sovereign should possess a temple within his dwelling, where he could fulfil his religious duties without going into the town and mixing with the crowd. At Lagash the sacred tower was of older date than the palace, and possibly formed part of the ancient building of Urbau. It was originally composed of three stories, but the lower one was altered by Gudea, and disappeared entirely in the thickness of the basal platform. The second story thus became the bottom one; it was enlarged, slightly raised above the neighbouring roofs, and was probably crowned by a sanctuary dedicated to Ningirsu. It was, indeed, a monument of modest proportions, and most of the public temples soared far above it; but, small as it was, the whole town might be seen from the summit, with its separate quarters and its belt of gardens; and beyond, the open country intersected with streams, studded with isolated villages, patches

<sup>&</sup>lt;sup>1</sup> HLUZEV-SARZEC, Decouveries en Chalder, pp. 18, 19; HLUZEV, Un Palais chalden, pp. 26, 27. The most important of these covered ways is marked d in the plan on p. 711 of the present work.

The whole of this semi-public part of the palace is described at length in Herzey-Karzie, Decounters, etc., p. 30, et seq. In the course of the excavations it will no doubt be found necessary to modify some details in the attributions proposed; at all events, it is probable that we know at present the general arrangement of the principal divisions of the edifice and the uses to which they were put.

of wood, pools and weedy marshes left by the retiring inundation, and in the far distance the lines of trees and bushes which bordered the banks of the Euphrates and its confluents. Should a troop of enemies venture within the range of sight, or should a suspicious tumult arise within the city, the watchers posted on the highest terrace would immediately give the alarm,

and through their warning the king would have time to close his gates, and take measures to resist the

invading enemy or crush the revolt of his subjects.1

The northern apartments of the palace were appropriated to Gudea and his family. They were placed with their back to the entrance court, and were divided into two groups; the sovereign, his male children and their attendants, inhabited the western one, while the women and their slaves were cloistered, so to speak, in the northern set. The royal dwelling had an external exit by means of a passage issuing on the north-west of the enclosure, and it also communicated with the great courtyard by a vaulted corridor which ran along one side of the base of the ziggurat: the doors which closed these two entrances opened wide enough to admit only one person at a time, and to THE DOORS IN THE PALACE the right and left were recesses in the wall which enabled the guards to examine all comors unobserved,

OF GUDEA.2

and stab them promptly if there were anything suspicious in their behaviour. Eight chambers were lighted from the courtyard. In one of them were kept all the provisions for the day, while another served as a kitchen: the head cook carried on his work at a sort of rectangular dresser of moderate size, on which several fireplaces were marked out by little dividing walls of burnt bricks, to accommodate as many pots or pans of various sizes. A well sunk in the corner right down below the substructure provided the water needed for culinary purposes. The king and his belongings accommodated themselves in the remaining five or six rooms as best they could.3 A corridor, guarded as carefully as the one proviously described, led to his private apartments and to those of his wives: these comprised a yard, some half-dozen

cells varying in size, a kitchen, a well, and a door through which the servants could come and go, without passing through the men's quarters.1 The whole description in no way corresponds with the marvellous ideal of an Oriental palace which we form for ourselves: the apartments are mean and dismal. imperfectly lighted by the door or by some small aperture timidly cut in the ctiling, arranged so as to protect the inmates from the heat and dust, but without a thought given to luxury or display. The walls were entirely void of any cedar woodwork inlaid with gold, or panels of mosaic such as we find in the temples, nor were they hung with dyed or embroidered draperies such as we moderns love to imagine, and which we spread about in profusion, when we attempt to reproduce the interior of an ancient house or palace.2 The walls had to remain bare for the sake of coolness: at the most they were only covered with a coat of white plaster, on which were painted, in one or two colours, some scene of civil or religious life, or troops of fautastic monsters struggling with one another, or men each with a bird seated on his wrist.3 The furniture was not less seanty than the decoration; there were mats on the ground, coffers in which were kept the linen and wearing apparel, low beds inlaid with ivory and metal and provided with coverings and a thin mattress, copper or wooden stands to support lamps or vases, square stools on four legs united by crossbars, armchairs with lions' claw feet, resembling the Egyptian armchairs in outline,4 and making us ask if they were brought into Chaldwa by caravans, or made from models which had come from some other country. A few rare objects of artistic character might be found, which bore witness to a certain taste for elegance and refinement; as, for instance, a kind of circular trough of black

<sup>1</sup> HEFZEY-SARZEC, Decourertes en Chalder, pp. 22, 24.

<sup>&</sup>lt;sup>2</sup> Mons, de Sarzec expressly states that he was unable to find anywhere in the palace of Guda a "the slightest trace of any coating on the walls, either of colour or glazed brick. The walls appear to have been left bare, without any decoration except the regular joining of the courses of brickwork" (Helevy-Sarzec, Decoursetes en Chaldee, p. 20) The wood panelling was usually reserved for the topples or sacred editices: Mons, de Sarzec found the remains of carbonized codar panels in the runs of a sanctuary dedicated to Ninginsu (Heuzey-Sarzec, Decoursetes, etc., p. 65, note, and Un Palats chalden, p. 53). According to Mons, Heuzey, the wall-hangings were probably covered with geometrical designs, similar to those formed by the terra-cotta cones on the walls of the palace at Uruk; the inscriptions, however, which are full of minute details with regard to the construction and ornamentation of the temples and palaces, have hitherto contained nothing which would lead us to infer that hangings were used for mural decoration in Chaldwa or Assyria (Heuzey, Un Palais chaldeen, pp 18-20).

<sup>&</sup>lt;sup>3</sup> This was the case in the palace of Eridu, excavated by Taylor, Notes on Abu-Shahrein and Tel-tl-Lahm, in the Journ. of the Royal Asiat. Soc., vol. xv. pp. 408, 410; cf. Perrot-Chippez, Histoin de l'Art, vol. ii. p. 149.

<sup>&</sup>lt;sup>4</sup> A few fragments of tapestry cushions were found in the tombs of Mughefr (Taxlon, Notes on the Ruins of Mughefr (Taylon, Notes of furniture, seats, stools, and linen chests, figure upon the cylinders. The most marked example of an armediar of Egyptian style is given on the cylinder of Urbau, King of Uru (J. Ménant, Recherchesur la Glyptique orientale, vol i. pl. iv. 2), on the antiquity of which, however, doubts have been raised (Ménant, Le Cylindre de Urkham au Musée Britannique, taken from the Revue Archéologique, p. 14, et soq.).

stone, probably used to support a vase. Three rows of imbricated scales surrounded the base of this, while seven small sitting figures lean back against the upper part with an air of satisfaction which is most cleverly rendered. The decoration of the larger chambers used for public receptions and official ceremonies, while never assuming the monumental character which we observe in contemporary Egyptian buildings, afforded more scope for tichness and variety than was offered by the living-rooms. Small tablets

of brownish limestone, let into the wall or affixed to its surface by terra-cotta pegs, and deconated with inscriptions, represented in a more or less artless fashion the figure of the sovereign officiating before some divinity, while his children and servants took part in the ceremony

STAND OF BLACK STONE FROM THE PALACE OF THE LOIL

scribed bricks celebrating the king's exploits were placed here and there in conspicuous places. These were not embedded like the others in two layers of bitumen or lime, but were placed in full view upon bronze statues of divinities or priests, fixed into the ground or into some part of the masonry as magical nails destined to preserve the bricks from destruction, and consequently to keep the memory of the dedicator continually before posterity. Stelse engraved on both sides recalled the wars of past times, the battle-field, the scenes of horror which took place there, and the return of the victor and his triumph. Sitting or standing figures of diorite, silicious sandstone or hard limestone, bearing inscriptions on their tobes or shoulders, perpetuated the features of the founder or of members of his family, and commemorated the pious donations which had obtained for him the favour of the gods: the palace of Lagash contained dozens of such

<sup>&</sup>lt;sup>1</sup> Mons. Koldewey, who has found several of these pegs, believes with Taylor that the shape represents the phallus, images of which have been found among them (R. Koldewex, Die Althabyleneschen Grüber in Surghul und El-Hiba, in the Zeitschrift jur Assyriologie, vol. 11, pp. 416, 417). A peg of this kind, found during Mons de Sarzee's excavations at Telloh, is given as the tailpiece on p. 784 of this volume (Helzey-Sarzie, Decouvertes en Chalder, p. 38).

statues, 'several of which have come down to us almost intact—one of the ancient Urbau, and nine of Gudea.1

To judge by the space covered and the arrangement of the rooms, the vicegerents of Lagush and the chiefs of towns of minor importance must, as a rule, have been content with a comparatively small number of servants; their court probably resembled that of the Egyptian barons who lived much about the same period, such as Khnûmhotpû of the nome of the Gazelle, or Thothotpû of Hermopolis.2 In great cities such as Babylon the palace occupied a much larger area, and the crowd of courtiers was doubtless as great as that which throughd about the Pharaohs. No exact enumeration of them has come down to us, but the titles which we come across show with what minuteness they defined the offices about the person of the sovereign.3 His costume alone required almost as many persons as there were garments. The men wore the light loin-cloth or short-sleeved tunic which scarcely covered the knees; after the fashion of the Egyptians, they threw over the loin-cloth and the tunic a large "abayah," whose shape and material varied with the caprice of fashion. They often chose for this purpose a sort of shawl of a plain material, fringed or ornamented with a flat stripe round the edge; often they seem to have preferred it ribbed, or artificially kilted from top to bottom.4 The favourite material in ancient times, however, seems to have been a hairy, shaggy cloth or woollen stuff, whose close fleecy thread hung sometimes straight, sometimes crimped or waved, in regular rows like flounces one above another.5 This could be arranged squarely around the neck, like a mantle, but was more often draped crosswise over the left shoulder and brought under

<sup>&</sup>lt;sup>1</sup> HLI ZEY-SARZEC, Decouveries on Chaldee, p. 77, et seq., where the description of these monuments is given in length: see the status of Gudea on pp. 611, 613 of this volume.

<sup>&</sup>lt;sup>2</sup> (f. pp. 523-526 of this volume for these two princes in particular, and pp. 295-301 for the general condition of the Egyptian barons.

The only document which could furnish us with information regarding the grades of Chaldson functionances similar to that contained in the Hood Papyrus on Egyptian offices (cf. p. 277, note 4, of this volume), is the list published in Rawinson's Can. Ins. W. As., vol. ii. p. 31, No. 5, interpreted by Fr. Di Litzsen, Assyrische Studien, vol. i. pp. 128-135; and by Oppi re-Menant, Documents juridiques de l'Assyrie et de la Chaldse, pp. 71-78, with several lacunce and doubtful readings. It was written under the Sargonids, but the orthography of the names contained in it points to a Chaldson origin; several of the civil and religious offices at the Assyrian court were only reproductions of similar offices existing at the court of Babylon.

<sup>4</sup> The relatively modern costume was described by Herodous, i. 111; it was almost identical with the uncient one, as proved by the representations on the cylinders and monuments of Tellot. The short-sleeved tunic is more largly represented, and the loin-cloth is usually hidden under the abayah in the case of hobles and kings. We so the princes of Lagash wearing the simple loin-cloth, on the monuments of Urnina, for example (Heleza-Sanzeo, Decourtees on Chalder, pl. 2, Nos. 1, 2; and Helez-Lelles, 1892, pp. 312-311). For the Egyptian abayah; and the manner of representing it, cf. 19, 55 57 of this volume.

<sup>&</sup>lt;sup>5</sup> This is the material, as Mons. Hencey has ingeniously shown (Les Origines Orientales de l'Art, vol. i. pp. 120-136), to which the Greeks subsequently gave the name of kaunakês.

the right arm-pit, so as to leave the upper part of the breast and the arm bare on that side. It made a convenient and useful garment—an excellent protection in summer from the sun, and from the icy north wind in the winter.1 The feet were shod with sandals, a tight-fitting cap covered the head, and round it was rolled a thick strip of linen, forming a sort of rudimentary turban, which completed the costume.2 It is questionable whether, as in Egypt, wigs and false beards formed part of the toilette. On some monuments we notice smooth faces and close-cropped heads; on others the men appear with long hair, either falling loose or twisted into a knot on the back of the neck,3 Egyptians delighted in garments of thin white linen, but slightly plaited or crimped, the dwellers on the banks of the Euphrates preferred thick and heavy stuffs patterned and striped with many colours. The kings were the same costume as their subjects, but composed of richer and finer materials, dyed red or blue, decorated with floral, animal, or geometrical designs; 4 a high towershaped tiara covered the forehead,5 unless replaced by a diadem of Sin or some of the other gods, which was a conical mitre supporting a double pair of horns, and sometimes surmounted by a sort of diadem of feathers and mysterious tigures, embroidered or painted on the cap.6 Their arms were loaded with massive bracelets and their fingers with rings; they were necklaces and carrings, and carried each a dagger in the belt.7 The royal wardrobe, jewels, arms, and insignia formed so many distinct departments, and each was further divided

One fushion of wearing the abayah is shown in the initial vignette to chap, viin, on p. 621 of this volume.

<sup>&</sup>lt;sup>2</sup> Cf. the head belonging to one of the statues of Telloh, which is reproduced on p. 613 of this volume. We notice the same head-dress on several intaglies and monuments, and also on the terracetta plaque which will be found on p. 768 of this volume, and which represents a herdsman wrestling with a lion. Until we have further evidence, we cannot state, as G. Raweinson did (The Five Great Monarchies, 2nd edit., vol. i. p. 105), that this strip forming a turban was of came I's hare: the date of the introduction of the camel into Chaldea still remains uncertain.

<sup>&</sup>lt;sup>3</sup> Dignitaries went bareheaded and shaved the chin; see, for example, the two bas-reliefs given on pp. 608 and 707 of this volume; cf. the heads reproduced as tailpieces on pp. 536, 622. The khot of har behind on the central figure is easily distinguished in the vignette on p. 723 of this volume Upon Egyptian wigs, see p. 54 of this volume.

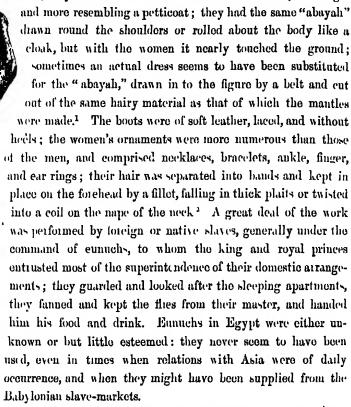

<sup>\*</sup> The details of colour and ornamentation, not furnished by the Chaldran monuments, are given in the wall-painting at Beni-Hasan representing the arrival of Asiatics in Egypt (cf. pp. 168, 469 of this volume), which belongs to a period contemporary with or slightly anterior to the reign of Gaden The resemblance of the stuffs in which they are clothed to those of the Chaldran garments, and the identity of the petterns on them with the geometrical decoration of painted cones on the palace at Virak (cf. p. 712 of this volume), have been pointed out with justice by H. G. TOMKINS, Studies on the Times of Abraham, p. 111, ct seq.; and Hielery, Les Origines orientales de l'Art, vol. i. pp. 27, 28 (cf. Hielery-Sarge, Découvertes en Chaldre, p. 82).

The high time is represented among others on the head of Mardukurdinakhe. King of Rabylon: of what is said of the conteal mitre, the head-dress of Sin, on pp. 545, 655 of this volume.

<sup>\*</sup> As on the protecting divinity of Idingiranagin upon one of the fragments of the Stele of the Valtures (Heurry-Sarzio, Fouldes en Chaldee, pl. 4, Nos. B, C; Hluzuy, Las Origines orientales de l'Art, pp. 71, 72); cf. p 606 of this volume.

Decorneries on Chaldee, pl 14

<sup>&</sup>lt;sup>4</sup> All these officials are represented later on in the Assyrian bas-reliefs, as well as in Botta, Le Monument de Ninive, pl. 14, et seq., where we see officials passing before Sargon and bringing offerings; the official posts which they occupied were probably ancient ones, which had existed in

few monuments and the obscurity of the texts permit of our judging, we find indications of a civil and military organization analogous to that, of Egylt: the divergencies which contemporaries may have been able to detect in the two national systems are effaced by the distance of time, and we are struck merely by the resemblances. As all business transactions were carried

on by barter or by the exchange of morchandise for weighed quantities of the precious metals, the taxes were consequently paid in kind: the principal media being corn and other cereals, dates, fruits, stuffs, live animals and slaves, as well as gold, silver, lead, and copper, either in its native state or melted into bars fashioned into implements or ornamented vases. Hence we continually come across fiscal storehouses, both in town and country, which demanded the services of a whole troop of functionaries and workmen: administrators of corn, cattle, precious metals, wine and oil; in fine, as many administrators as there were cultures or industries in the country presided over the gathering of the products into the central depôts and regulated their redistribution. A certain portion was reserved for the salaries of the employes and the pay of the workmen engaged in executing public works: the surplus accumulated in the treasury and formed a reserve, which was not drawn upon except in eases of

CONTLAID OF A CHAIDTA

extreme necessity. Every palace, in addition to its living-rooms, contained within its walls large store-chambers filled with provisions and weapons, which made it more or less a fortress, furnished with indispensable requisites for sustaining a prolonged siego either against an enemy's troops or the king's own subjects in revolt. The king always kept about him bodies

early Chaldman times, and several of their names figure on lists, the earliest forms of which zo back, apparently, very far (RAWLINSON, Cun. Ins. W. As., vol. n. pl. 31, No. 5, col. i. l. 11, and col. v. l. 29, the dagger-bearer, col. i. ll 9, 10, the cup-bearers; cf. Diarrzson, Assyrische Studien, vol. i. p. 1.32; Offfger-Menant, Les Documents juridiques de l'Assyrie and de la Chaldée, pp. 71, 74). For the same staff of functionatics at the court of Pharaoh, and about the Egyptian nobles, cf. what is said on pp. 277-280 of this volume.

<sup>&</sup>lt;sup>1</sup> All these functions and the duties they represent are made known to us by RAMLINSON'S list, Cun. Ins. W. As, vol. ii. pl. 31, No. 5, which has been mentioned in the preceding note; the "administrators of corn" (col. ii. l. 2) and of "precious metals" (col. ii. l. 3), the "chiefs of vines" (col. iii. l. 22), and "of herds of oxen" (col. vi. l. 1), or "of birds" (col. vii. l. 5).

<sup>&</sup>lt;sup>2</sup> Drawn by Faucher-Gudin, from the all baster statuette in the Louvre, published in H11/11, les Origines orientales de l'Art, vol. i. pl. v. She holds in her hand the jar full of water, and ogous of the streaming vase mentioned above, p. 713 (ct. H11/L1, Las Origines orientales de l'Art, vol. i. 157 et son.)

For the military offices of Assyran times, see the commentary by Fr. Di Litzsch, Assyrische Mudien, vol. i. pp. 128-139 on Rawlinson's list, Cun. Ins. W. As., vol. ii. pl. 31, No. 5; the majority I them go back to Chaldsan times, as is shown by the forms of the names.

of soldiers who perhaps were foreign morcenaries, like the Mazaiû of the armies of the l'haraohs, and who formed his permanent body-guard in times of peace. When a war was imminent, a military levy was made upon his domains, but we are unable to find out whether the recruits thus raised were drawn indiscriminately from the population in general, or merely from a special class, analogous to that of the warriors which we find in Egypt, who were paid in the same way by grants of land. The equipment of these soldiers was of the rudest kind: they had no cuirass, but carried a rectangular shield, and, in the case of those of higher rank at all events, a conical metal helmet, probably of beaten copper, provided with a piece to protect the back of the neck; the heavy infantry were armed with a pike tipped with bronze or copper, an axe or sharp adze, a stone-headed mace, and a dagger; the light troops were provided only with the bow and sling. As early as the third millennium B.C., the king went to battle in a chariot drawn by onagers, or perhaps horses: he had his own peculiar weapon, which was a curved bâton probably terminating in a metal point, and resembling the sceptre of the Pharaohs.2 Considerable quantities of all these arms were stored in the arsenals, which contained depôts for bows, maces, and pikes, and even the stones needed for the slings had their special department for storage.3 At the beginning of each campaign, a distribution of weapons to the newly levied troops took place; but as soon as the war was at an end, the men brought back their accourrements, which were stored till they were again required. The valour of the soldiers and their chiefs was then rewarded; the share of the spoil for some consisted of cattle, gold, corn, a female slave, and vessels of value; for others, lands or towns in the conquered country, regulated by the rank of the recipients or the extent of the services they had rendered. Property thus given was hereditary, and privileges were often added to it which raised the holder to the rank of a petty prince: for instance, no royal official was permitted to impose a tax upon such lands, or take the cattle off them, or levy provisions upon them; no troop of soldiers might enter them, not even for the purpose of arresting a fugitive.4 Most of the noble

<sup>&#</sup>x27; See the cylinder reproduced on p 723, on which soldiers are represented leading a band of men and women prisoners; see also the remains of the "Stele of the Vultures," p. 606 of this History

<sup>-</sup> This is nearly the same as the "būqū" of the Egyptians (cf. p. 60, note 3, of this volume), known best under the form which it took in later times, but of which several variants are exactly like the Chaldrean weapon. Mons Heuzey believes it to be a weapon for throwing, perhaps analogous to the boomerang.

<sup>&</sup>lt;sup>3</sup> RAWLINSON'S list, Cun. Ins. W. As., vol. ii. pl. 31, No. 5, gives for example "overseer of the bows" (col. vi. 1. 6) and "keeper of the stones for slings" (col. vi. 1. 7; cf. Ovelet-Menant, Les Documents juridiques de l'Assyrie et de la Chaldée, p. 75), and other similar chiefs of the arsenal, the meaning of whose titles is at present uncertain. Place found at Khorsabad large stores of iron and copper weapons (Place, Ninive et l'Assyrie, vol. i. pp. 84-90), which show what these depôts of arms must have been like.

<sup>\*</sup> All these particulars are taken from the inscription in RAWLINSON, Cun. Ins. W. As., vol. v

families possessed domains of this kind, and constituted in each kingdom a powerful and wealthy feudal aristocracy, whose relations to their sovereign were probably much the same as those which bound the nomarchs to the Pharnoh The position of these nobles was not more stable than that of the dynastics under which they lived: while some among them gained power by marriages or by continued acquisitions of land, others fell into disgrace and were ruined. As the soil belonged to the gods, it is possible that these nobles were supposed, in theory, to depend upon the gods; but as the kings were the vicegenents of the

gods upon earth, it was to the king, as a matter of fact, that they owed their elevation. Every state, therefore, comprised two parts, each subject to a distinct régime: one being the personal do main of the suzerain, which he managed himself, and from which he drew the re

A SOLDIER LLINGING TRISONERS AND SP II

venues; the other was composed of fiels, whose lords paid tribute and owed cont un obligations to the king, the nature of which we are as yet unable to define

The Chaldean, like the Egyptian scribe, was the pivot on which the machinery of this double royal and seignorial administration turned. He does not appear to have enjoyed as much consideration as his fellow official in the Nile Valley: the Chaldean princes, nobles, priests, soldiers, and temple or royal officials, did not covet the title of scribe, or pude themselves upon holding that office side by side with their other dignities, as we see was the case with their Egyptian contemporaries.<sup>3</sup> The position

<sup>18 55-57,</sup> translated by Hitpercher, Predict of Nebukadne art's I Konigs om Budglomen, 188, at 1 by Pinchi's Budgl, On an I'diet of Nebuchadnez at I, in the Proceedings of the Society of Bulle of Archaelogy, 188, 84, vol. vi. pp. 144-170. ct. Another charter of the same king, the thing of estimate donation, has been published by Aldin-Santin, Assurian Letters, in pls viii, in, and translated by Briton Wilsenia, I in Treduct Nebul adnezar's II, in the Neduchorit for Assurian Isoprofuse viii v. pp. 200 207 (where it is by emistake ditributed to Nebuchadiezza II), and by Priste I I triften Natuladuzar's I, in the Kedschriftliche Bibli the k, vol. vii 1st prifup 172, 17. Directions of the sure kind, but apparently not so extensive, are engaged on stone, and take us back to the time of Warduknadin ikho (Olitah-Minna), Documents pieulaques, etc., p. 98, et seq.)

<sup>1</sup> Cf what is briefly and on this subject on pp 678, 679 of this volume

<sup>2</sup> Driwn by Faucher-Gudin, from the Chaldern inter his in the British Mulcum (Minant Rechirches sur la Glyptique orientale, vol. 1, pl. 111, No. 1, and pp. 104, 100)

I the scribe's name of "dubshir," Asymmeted into "tipshir," signifies, preparly speaking "writer of tablets," and the word passed into the H brow language at the time of the int in it connection between Judges and Asymir, towards the VIII<sup>th</sup> century between our ept. Schinder was the tirst to give its real signification, it had been proviously translated "military chief," "enjtim" "satrap" (Oppenr, Expedition on Mésopotamie, vol. 11, p. 361)

of a scribe, nevertheless, was an important one. We continually meet with it in all grades of society-in the palace, in the temples, in the storehouses, in private dwellings; in fine, the scribe was ubiquitous, at court, in the town, in the country, in the army, managing affairs both small and great, and seeing that they were carried on regularly. His education differed but little from that given to the Egyptian scribe; he learned the routine of administrative or judicial affairs, the formularies for correspondence either with nobles or with ordinary people, the art of writing, of calculating quickly, and of making out bills correctly. We may well ask whether he ever employed papyrus or prepared skins for these purposes. It would, indeed, seem strange that, after centuries of intercourse, no caravan should have brought into Chaldaea any of those materials which were in such constant use for literary purposes in Africa;1 yet the same clay which furnished the architect with such an abundant building material appears to have been the only medium for transmitting the language which the scribes possessed. They were always provided with slabs of a fine plastic clay, carefully mixed and kept sufficiently moist to take easily the impression of an object, but at the same time sufficiently firm to prevent the marks once made from becoming either blurred or effaced. When a scribe had a text to copy or a document to draw up, he chose out one of his slabs, which he placed flat upon his left palm, and taking in the right hand a triangular stylus of flint, copper, bronze, or bone,2 he at once set to work. The instrument, in early times, terminated in a fine point, and the marks made by it when it was gently pressed upon the clay were slender and of uniform thickness; in later times, the extremity of the stylus was cut with a bevel, and the impression then took the shape of a metal nail or a wedge. They wrote from left to right along the upper part of the tablet, and covered both sides of it with closely written lines, which sometimes ran over on to the edges.<sup>3</sup> When the writing was finished, the scribe sent his work to the potter, who put it in the kiln and baked it, or the writer may have had a small oven at his

<sup>1</sup> On the Assyrian monuments we frequently see scribes taking a list of the spoil, or writing letters on tablets and some other soft material, either paperus or prepared skin (cf. Lavard, The Monuments of Ninerch, 2nd series, pls. 19, 26, 29, 35, 37, etc.). Sayes has given good reasons for behaving that the Chaldmans of the early dynastics knew of the paperus, and either made it themselves, or had it brought from Egypt (Saxel, The Use of Paperus as a scriting material among the Accadians, in the Transactions of the Biblical Archaelogical Society, vol. i. pp. 343-345).

the plan on the tablet of Gudea, p. 710 of this volume. The Assyrian Museum in the Louvre possesses several large, flat styli of bone, cut to a point at one end, which appear to have belonged to the Assyrian seriles (A. de Longrébee, Notice des Antiquités Assyriens, 3rd edit, p. 82, Nos. 414-417; cf. Oppur, Expedition en Mésopotamie, vol. i. p. 63). Taylor discovered in a tomb a Eridu a flint tool, which may have served for the same purpose as the metal or bone styli (Notes on Abu-Shahrein and Tel-el-Lahm, in the Journ. of the As. Soc., vol. xv. p. 410, and m of plate ii.).

MI NANT, La Bibliothèque du Palais de Ninive, pp. 25-27.

own disposition, as a clerk with us would have his table or desk. The shape of these documents varied, and sometimes strikes us as being peculiar: besides the tablets and the bricks, we find small solid cones, or hollow eylinders of considerable size, on which the kings related their exploits or recorded the history of their wars or the dedication of their buildings. This method had a few inconveniences, but many advantages. These clay books were heavy to hold and clumsy to handle, while the characters did not stand out well from the brown, yellow, and whitish background of the material; but, on the other hand, a poem, baked and incorporated into the page itself, ran less danger of destruction than if scribbled in ink on sheets of papyrus. Fire could make no impression on it; it could withstand water for a considerable length of time; even if broken, the pieces were still of use: as long as it was not pulverized, the entire document could be restored, with the exception, perhaps, of a few signs, or some scraps of a sentence. The inscriptions which have been saved from the foundations of the most ancient temples, several of which date back forty or fifty centuries, are for the most part as clear and legible as when they left the hands of the writer who engraved them or of the workmen who baked them. It is owing to the material to which they were committed that we possess the principal works of Chaldwan literature which have come down to us-poems, annals, hymns, magical incantations; how few fragments of these would ever have reached us had their authors confided them to parchment or paper, after the manner of the Egyptian scribes! The greatest danger that they ran was that of being left forgotten in the corner of the chamber in which they had been kept, or buried under the rubbish of a building after a tire or some violent catastrophe; even then the débris were the means of preserving them, by falling over them and covering them up. Protected under the ruins, they would lie there for centuries, till the fortunate explorer should bring them to light and deliver them over to the patient study of the learned.1

The cunciform character in itself is neither picturesque nor decorative. It does not offer that delightful assemblage of birds and snakes, of men and quadrupeds, of heads and limbs, of tools, weapons, stars, trees, and boats, which succeed each other in perplexing order on the Egyptian monuments, to give permanence to the glory of Pharaoh and the greatness of his gods. Cunciform writing is essentially composed of thin short lines, placed in juxtaposition or crossing each other in a somewhat clumsy fashion; it has the appearance of numbers of nails scattered about at haphazard, and its angular

<sup>&</sup>lt;sup>1</sup> The Assyrians and later Babylonians subsequently sought after these ancient decuments in order to copy them afresh; see, for examples of recopied texts, pp. 594, note 1, and 597 of this volume.

configuration, and its stiff and spiny appearance, gives the inscriptions a dull and forbidding aspect which no artifice of the engraver can overcome. Yet, in spite of their seemingly arbitrary character, this mass of strokes had its source in actual hieroglyphs.1 As in the origin of the Egyptian script the earliest writers had begun by drawing on stone or clay the outline of the object of which they desired to convey the idea. But, whereas in Egypt the artistic temperament of the race, and the increasing skill of their sculptors, had by degrees brought the drawing of each sign to such perfection that it became a miniature portrait of the being or object to be reproduced, in Chaldaea, on the contrary, the signs became degraded from their original forms on account of the difficulty experienced in copying them with the stylus on the clay tablets: they lost their original vertical position, and were placed horizontally,2 retaining finally but the very faintest resemblance to the original model. For instance, the Chaldran conception of the sky was that of a vault divided into eight segments by diameters running from the four cardinal points and from their principal subdivisions (\*\*); the external circle was soon omitted, the transverse lines alone remaining - , which again was simplified into a kind of irregular cross -J-8 The figure of a man standing, indicated by the lines resembling his contour, was placed on its side and reduced little by little till it came to be merely a series of ill-balanced lines Eye or Elect. We may still recognize in El, El the five fingers and palm of a human hand IIII; but who would guess at the first glance that \_\_\_ stands for the human foot \ ? In later times lists were

made, in which the scribes strove to place beside each character the special hieroglyph from which it had been derived. Several fragments of these still exist, a study of which seems to show that the Assyrian scribes of a more recent

period were at times as much puzzled as we are ourselves when they strove to get at the principles of their own script: 5 they had come to look on it as

<sup>&</sup>lt;sup>1</sup> The hieroglyphic origin of the cunciform characters was pointed out by the earlier Assyriologists, and particularly by Operar, Expedition scientifique on Mesopotamic, vol. ii. pp. 63-69. It has been established anew by Delitz-ch, Die Entstchung des ältesten Schriftsystem, 1897.

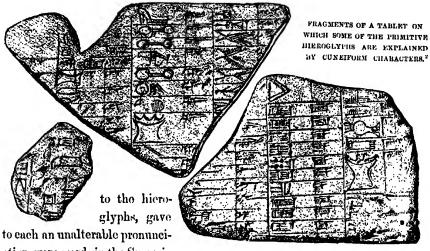

This fact, which had been suspected by Oppert, was placed beyond doubt by the discovery of the inscriptions at Lagash (O) pure, Die Französischen Ausgrabungen in Childau, in the Abhandlungen des 5<sup>th</sup> Internationalen Orientalisten-Congressen, 2<sup>th</sup> Theil, i. pp. 250-211; cf. Hommer, Die Semitischen Volker und Sprachen, pp. 270-273, and Geschichte Babyloniens und Assyriens, pp. 35-37).

<sup>&</sup>lt;sup>3</sup> This sign is generally supposed to be derived from that representing a star. Opport, who at first admitted this derivation, has since thought that it was meant to be a conventional image of the Chaldean heaven, and his opinion is confirmed by Jensen, Die Kosmologie der Babylonier, p. 4.

<sup>\*</sup> HOMMIL, Geschichte Budyloniens und Assyrians, pp. 35, 36. This sign is taken from Statue B of Gudea (HILZLY-Sauzle, Deconvertes en Chuldee, pl. avi. col. vii. 11. 59, 61).

<sup>&</sup>lt;sup>5</sup> The fragment which turnishes us with these facts has been noticed and partly translated by Oppler, Expedition scientifique on Mesopotamir, vol. ii. p. 65. It comes from Konyunjik, and is preserved in the British Museum. It has been published by Ménanc, Leçous d'épiquaphie assyrieure.

nothing more than a system of arbitrary combinations, whose original form had passed all the more readily into oblivion, because it had been borrowed from a foreign race, who, as far as they were concerned, had ceased to have a separate existence. The script had been invented by the Sumerians in the very earliest times, and even they may have brought it in an elemental condition from their distant fatherland.1 The first articulate sounds which, being attached

ation, were words in the Sumerian

tongue; subsequently, when the natural progress of human thought led the Chaldwans to replace, as in Egypt, the majority of the signs representing ideas by those representing sounds, the syllabic values which were developed side by throughout all its forms, designates in the first place the sky, then the god of the sky, and finally the concept of divinity in general. In its first two senses it is read ana, but in the last it becomes dingir, dimir; and though it never lost its double force, it was soon separated from the ideas which it evoked, to be used merely to denote the syllable an wherever it occurred, even in cases

pp. 51, 52; and since by W. Houghton, On the Hieroglyphic or Picture Origin of the Characters of the Assyrian Syllabary, in the Transactions of the Bibl. Arch. Soc., vol. vi., plate facing p. 454. Collections of archaic characters, entirely defaced, but nevertheless translated into the more recent cunciform, have been discovered and commented on by Pinches, Archaic Forms of Babylonian Characters, in the Zeitschrift für Keiljorschung, vol. ii. pp. 149-156.

<sup>&</sup>lt;sup>1</sup> The foreign origin of the cunciform syllabary was pointed out for the first time by Οννεπτ, Sur l'Origine des Inscriptions cunciformes, in the Athéneum Français, for the 20th of October, 1851; Rapport adresse à Son Exc. le Ministre de l'Instruction publique et des Cultes, p. 71, et seq. (cf. Archives des Missions scientifiques, 1st series, vol. v. p. 186, et seq.); Expedition scientifique en Misopolamie, vol. i. pp. 77-86. Opport attributed the honour of its invention to the Seythians of the ancients.

<sup>&</sup>lt;sup>2</sup> Drawn by Faucher-Gudin, from the photograph published by Houghton, On the Hieroglyphic or Victure Origin of the Characters of the Assyrian Syllabary, in the Transactions, vol. vi. p. 454.

where it had no connection with the sky or heavenly things. The same process was applied to other signs with similar results: after having merely denoted ideas, they came to stand for the sounds corresponding to them, and then passed on to be mere syllables—complex syllables in which several consonants may be distinguished, or simple syllables composed of only one consonant and one vowel, or vice versa. The Egyptians had carried this system still further, and in many cases had kept only one part of the syllable, namely, a mute consonant: they detached, for example, the final u from pu and bu, and gave only the values b and p to the human leg 1 and the mat . The peoples of the Euphrates stopped halfway, and admitted actual letters for the vowel-sounds a, i, and u only. Their system remained a syllabary interspersed with ideograms, but excluded an alphabet.

It was eminently wanting in simplicity, but, taken as a whole, it would not have presented as many difficulties as the script of the Egyptians, had it not been forced, at a very early period, to adapt itself to the exigencies of a language for which it had not been made. When it came to be appropriated by the Semites, the ideographs, which up till then had been read in Sumerian. did not lose the sounds which they possessed in that tongue, but borrowed others from the new language. For example, "god" was called ilu, and "heaven" called shami: - and - , whon encountered in inscriptions by the Semites, were read ilu when the context showed the sense to be "god," and shami when the character evidently meant "heaven." They added these two vocables to the preceding ana, an, dingir, dimir; but they did not stop there: they confounded the picture of the star - with that of the sky, and The same process was applied to all the groups, and the Semitic values being added to the Sumerian, the scribes soon found themselves in possession of a double set of syllables both simple and compound. This multiplicity of sounds, this polyphonous character attached to their signs, became a cause of embarrassment even to them. For instance, -, when found in the body of a word, stood for the syllables bi or bat, mid, mit, til, ziz; as an ideogram it was used for a score of different concepts: that of lord or master, inu, bilu; that of blood, damû; for a corpse, pagru, shalamtu; for the feeble or oppressed, kabtu, nagpu; as the hollow and the spring, nakbu; for the state of old age, labaru; of dying, matu; of killing, mitu; of opening, pitu; besides other meanings. Several phonetic complements were added to it; it was preceded by ideograms which determined the sense in which it was to be read, but which, like the Egyptian determinatives, were not pronounced, and in this manner they succeeded in limiting the number of mistakes which it

## THE POLYPHONOUS CHARACTER OF THE CUNEIFORM SIGNS. 729

was possible to make. With a final it would always mean bilu, the master, but with an initial - (thus - - ) it denoted the gods Bel or Ea; with Em, which indicates a man Em, it would be the corpse, pagra and shalamtu; with - [(] prefixed, it meant - [(] mutanu, the plague or deathand so on. In spite of these restrictions and explanations, the obscurity of the meaning was so great, that in many cases the scribes ran the risk of being unable to make out certain words and understand certain passages; many of the values occurred but rarely, and remained unknown to those who did not take the trouble to make a careful study of the syllabary and its history. It became necessary to draw up tables for their use, in which all the signs were classified and arranged, with their meanings and phonetic transcriptions. These signs occupied one column, and in three or four corresponding columns would be found, first, the name assigned to it; secondly, the spelling, in syllables, of the phonetic values which the signs expressed; thirdly, the Sumerian and Assyrian words which they served to render, and sometimes glosses which completed the explanation. If it were desired, for instance, to verify the possible equivalents of the sign +1-, a syllabary would furnish-

Even this is far from exhausting the matter.<sup>3</sup> Several of these dictionaries went back to a very early date, and tradition ascribes to Sargon of Agade the merit of having them drawn up or of having collected them in his palace. The number of them naturally increased in the course of centuries; in the

later times of the Assyrian empire they were so numerous as to form nearly one-fourth of the works in the library at Nineveh under Assurbanipal. Other tablets contained dictionaries of archaic or obsolete terms, grammatical paradigms, extracts from laws or ancient hymns analyzed sentence by sentence and often word by word, interlinear glosses, collections of Sumerian formulas translated into Semitic speech—a child's guide, in fact, which the savants of those times consulted with as much advantage as those of our own day have done, and which must have saved them from many a blunder.<sup>1</sup>

When once accustomed to the difficulties and intricacies of their calling, the scribes were never at a standstill. The stylus was plied in Chaldwa no less assiduously than was the calamus in Egypt, and the indestructible clay, which the Chaldwans were as a rule content to use, proved a better medium in the long run than the more refined material employed by their rivals: the baked or merely dried clay tablets have withstood the assaults of time in surprising quantities, while the majority of papyri have disappeared without leaving a trace behind. If at Babylon we rarely meet with those representations, which we find everywhere in the tombs of Saqqara or Gîzeh, of the people themselves and their families, their occupations, amusements, and daily intercourse, we possess, on the other hand, that of which the ruins of Memphis have furnished us but scanty instances up to the present time, namely, judicial documents, regulating the mutual relations of the people and conferring a legal sanction on the various events of their life. Whether it were a question of buying lands or contracting a marriage, of a loan on interest, or the sale of slaves, the scribe was called in with his soft tablets to engross the necessary agreement. In this he would insert as many details as possible—the day of the month, the year of the reigning sovereign, and at times, to be still more precise, an allusion to some important event which had just taken place, and a memorial of which was in the official annals, such as the taking of a town,2 the defeat of a neighbouring king,3

<sup>&</sup>lt;sup>1</sup> The expression "child's guide" was applied to the grammatical and lexicographical tablets of the Assyrian libraries for the first time by Fig. Lenormany, Essat sur la propagation de l'Alphabet phenicien, vol. 1. p. 48. These texts have formed the subject matter of an immense number of publications and detailed memoirs, of which an almost complete bibliography up to 1886 will be found in Bi zord, Kurzyfaester Ucherblick über die Bahylonisch-Assyrische Literatur, p. 197, et seq. Since that time the number of works has been considerably augmented.

<sup>&</sup>lt;sup>2</sup> (ontract of "the year of the taking of Ishin" (Meisser, Beiträge zum altbabylonischen Pricatricht, p. 33), another of the "6th Shebat of the year in which the wall of Mair was destroyed' (In, thid, p. 85)

<sup>&</sup>lt;sup>3</sup> Contract dated "the 10th Kislev of the year in which the King Rimsin smote the wicked, his enemics" (Maissale, Beitrüge zum altbabylonischen Privatrecht, p. 17); another which was scaled on the date "of the 23rd She bat of the year in which the King Khammurabi, in the strength of Anu and Bel, established his right, and in which his hand struck to the ground the ruler of the country of Iamuthal, the King Rimsin" (Jensen, Inschriften aus der Regierungszeit Hammurabis, in the Keilschriftlische Bibliothek, vol. iii. 1st part, pp. 126, 127).

the dedication of a temple, the building of a vall or fortress, the opening of a canal, or the ravages of an inundation: 4 the names of the witnesses and magistrates before whom the act was confirmed we e also added to those of the confracting parties.5 The method of sanctioning it was curious. An indentation was made with the finger-nail on one of the sides of the tablet, and this mark, followed or preceded by the mention of a name, "Nail of Zabudamik," "Nail of Abzii," took the place of our more or less complicated sign-manuals.6 In later times, only the buyer and witnesses approved by a nail-mark, while the seller appended his seal; an inscription incised above the impress indicating the position of the signatory.7 Every one of any importance possessed a seal.9 which he were attached to his wrist or hung round his neck by a cord; he scarcely ever allowed it to be separated from his person during his lifetime, and after death it was placed with him in the tomb in order to prevent any improper use being made of it.9 It was usually a cylinder, sometimes a truncated cone with a convex base, either of marble, red or green jasper, agate, cornelian, onyx or rock crystal, but rarely of metal. Engraved upon it in intaglio was an emblem or subject chosen by the owner, such as the single tigure of a god or goddess, an act of adoration, a sacrifice, or an episode in the story of Gilgames, followed sometimes by the inscription of a name and title.10

1 Contract dated in the "mouth of Adar in which Khammurabi restored for Ishtar and Nank the temple of Eiturkalama" (Meis-nen, Boitrage zum altbabylonischen Privatrecht, pp. 88, 89)

" Taylor found at Mugheir a skeleton having his seal still attached to his wrist (Notes on the Ruins of Muqeyer, in the Journ. of the As. Soc., vol. xv. p. 270). For the manner of wearing the scal, et MI NANT, Catalogue des Cylindres Orientaux du Cabinet royal des Médailles de la Haye, pp. 3, 1.

The impressions left by the cylinders and seals on the cunciform tablets have been collected

The cylinder was rolled, or, in the case of the cone, merely pressed on the clay, in the space reserved for it. In several localities the contracting parties had recourse fo a very ingenious procedure to prevent the agreements being altered or added to by unscrupulous persons. When the document had been impressed on the tablet, it was enveloped in a second coating of clay, upon which an exact copy of the original was made, the latter thus becoming inaccessible to forgers: if by chance, in course of time, any disagreement

THE TABLET OF TELI SIFE, BROKEN TO SHOW THE TWO TENTS.

should take place, and an alteration of the visible text should be suspected, the outer envelope was broken in the presence of witnesses, and a comparison was made to see if the exterior corresponded exactly with the interior version. Families thus had their private archives, to which additions were rapidly made by every generation; every household thus accumulated not only the evidences of its own history, but to some extent that of other families with whom they had formed alliances, or had business or friendly relations.

The constitution of the family was of a complex character. would appear that the people of each city were divided into clans, all of whose members claimed to be descended from a common ancestor, who had dourished at a more or less remote period. The members of each clan were by no means

<sup>1</sup> For example, at Tell-Sifr, Lorrus, Travels and Researches, etc.

Drawn by Faucher-Gudin, from Lorius, Travels and Researches, etc., p. 269.

The tablets of Tell Sifr come from one of three family collections. They all, in number about one hundred, rested on three enormous bricks, and they had been covered with a mat of which the half-decayed remains were still visible: three other crude bricks covered the heap (Lorrus, Travels and Researches, etc., p. 26%, et seq.). The documents contained in them relate for the most part to the families of Siminana and Amiliani, and form part of their archives.

The most celebrated of these families, under the New Chaldran Empire and the Persian Dominion, appears to have been that of Egibi, in whom Mr Boscawen wishes to recognize an agency for innancial affairs, and a bank carrying on business under the name of Egibi and Sons (Bubylonian)

all in the same social position, some having gone down in the world, others

having raised themselves; and amongst them we find many different callingsfrom agricultural labourers to scribes, and from merchants to artisans. No mutual tie existed among the majority of these members except the remembrance of their common origin, perhaps also a common religion, and eventual rights of succession or claims upon what belonged to each one individually.1 The branches which had become gradually separated from the parent stock, and which, taken all together. formed the clan, possessed each; on the contrary, a very strict organization. It is possible that, at the outset. the woman occupied the more important position. but at an early date the

TABLET BEARING THE IMPRESS OF A SEAL.2

man became the head of the family,8 and around him were ranged the wives,

dated Tablets and the Canon of Ptolemy, in the Transactions of the Bibl. Arch. Soc., vol. vi. p. 6). M. Oppert was the first to show that the people in question were a tribe, an actual clan, and indicated the division of the Chaldean population into clans (Les Tablettes juridiques de Babylone, in the Journal Astatque, 1880, vol. xv. p. 543, ot seq., and the Condition des esclaves à Babylone, in the Comples rendus de l'Acad. des Iusc., 1888, pp. 120, 121). This system of division appears to date back to the most ancient times, in spite of our having found up to the present time but few traces of it on the monuments of the First Chaldean Empire. It is possible, however, that allusion was made to it in passages analogous to that in which Guden is proclaimed to be the faithful shepherd, whose power Ningirsu has established among the tribes of men (Statue D in the Lourre, col. iii. 11. 10, 11, in Heuzen-Sarzed, Decouvertes en Chaldee, pl. 16); but the translation of this text is not quite certain.

OPPERT, Les Tublettes juridiques de Bubylone, in the Journal Asiatique, 1880, vol. xv. p. 549, note 7; and Un Acte de vente conserve en deux exemplaires, in the Zeitschrift für Keilforschung, vol. iii. pp. 61, 62. It is a question whether the god and goddess who watched over each man, and of whom he was the sen (cf. pp. 682, 683 of the present work), were not originally the god and goddess of the clan-

Drawn by Faucher-Gudin, from a sketch by LAYARD, Nineveh and Babylon, p. 609.

The change in the condition of women would be due to the influence of Semitic ideas and customs in Chaldren (Hornitz, Die Semitischen Völker und Sprache, pp. 416-418; Pinches, Notes upon

children, servants, and slaves, all of whom had their various duties and privileges. He offered the household worship to the gods of his race, in accordance with special rites which had come down to him from his father; he made at the tombs of his ancestors, at such times as were customary, the offerings and prayers which assured their repose in the other world, and his powers were as extensive in civil as in religious matters.1 He had absolute authority over all the members of his household, and anything undertaken by them without his consent was held invalid in the eyes of the law; his sons could not marry unless he had duly authorized them to do so. For this purpose he appeared before the magistrate with the future couple, and the projected union could not be held as an actual marriage, until he had affixed his seal or made his nail-mark on the contract tablet.2 It amounted, in fact, to a formal deed of sale, and the parents of the girl parted with her only in exchange for a proportionate gift from the bridegroom.8 One girl would be valued at a silver shekel by weight, while another was worth a mina, another much less; 4 the handing over of the price was accompanied with a certain solemnity.5 When the young man possessed no property as yet of his own, his family advanced him the sum needed for the purchase.8 On her side, the maiden did hot enter upon her new life empty handed; her father, or, in the case of his death, the head of the family at the time being, provided her with a dowry suited to her social position, which was often augmented by considerable presents from her grandmother, aunts, and cousins.7 The dowry

some Recent Discoveries in the Realm of Assyriology, with special Reference to the Private Life of the Babylonians, in the Journal of the Transactions of the Victoria Institute, vol. xxvi. pp. 138, 139, 181).

<sup>1</sup>The unlimited authority with which the father of the family was invested, has been admitted, at least with regard to the period of early Chaldman history, by all Assyriologists; cf. Opper, in the Güttingische gelehrte Anzeiger, 1879, pp. 1601–1606; HOMMEL, Die Semitischen Volker und Sprachen,

p. 116; MIISSTER, Beiträge zum altbabylonischen Privatrecht, pp. 14, 15.

<sup>2</sup> MITI-SNLE, Beiträge, etc., p. 13. This right remained unaltered down to the latest times, and we possess a document of the VIII<sup>th</sup> year of Cyrus (Strassmayer, Inschriften von Cyrus, König von Babylon, No. 312), where the judge annuls a mariage which had been celebrated without the consent of the bridegroom's father (Konler-Peiser, Aus d-m Babylonischen Rechtsleben, vol. ii. pp. 6-10). The necessity for the bridegroom's obtaining the paternal consent is also indicated in the fragments of Sumerian legal texts, translated into Assyrian, which have been published by Rawlinson, Cun. Ins. W. As., vol. ii. pl. 9, col. iv. 1. 4, et seq. (cf. Olfert-Menant, Documents juridiques, etc., p. 44).

\* MEI-SNER, Beiträge, etc., pp. 13, 14.

Shamashnazir receives, as the price of his daughter, ten shekels of silver (Mrissnan, Beiträge, etc., pp. 69, 70), which appears to have been an average price in the class of life to which he belonged.

<sup>5</sup> A passage in the old Sumerian texts relating to marriage (Rawlinson, Cun. Ins. W. As., vol. v. pl. 21, ll. 48-52) seems to say expressly that the bridegroom "placed the price of the woman upon a dish and brought it to the father" (MLISSNER, Briträge, etc., p. 14, note 3).

6 Meisenra, Beiträge, etc., p. 14.

The nature of the dowry in ancient times is clear from the Sumero-Assyrian tablets in which the old legal texts are explained (RAWLINSON, Cun. Ins. W. As., vol. ii. pl. 9, col. iii. ll. 5-8), and again from the contents of the contracts of Tell-Sifr, and the documents on stone, such as the Michaeux stone (Oppert-Menant, Documents juridiques, etc., p. 85, et seq.), in which we see women bringing their possessions into the community by marriage, and yet retaining the entire disposition of them. For questions relating to the nature of the dowry among the Chaldesans of later periods, of Oppertunents, Documents juridiques, etc., p. 85, et seq.; E. and V. Révillout, Les Obligations en

would consist of a carefully marked out field of corn, a grove of date-palms, a house in the town, a trousseau, furniture, slaves, or ready money; the whole would be committed to clay, of which there would be three copies at least, two being given by the scribe to the contracting parties, while the third would be deposited in the hands of the magistrate.1 When the bride and bridegroom both belonged to the same class, or were possessed of equal fortunes, the relatives of the woman could exact an oath from the man that he would abstain from taking a second wife during her lifetime; a special article of the marriage agreement permitted the woman to go free should the husband break his faith, and bound him to pay an indemnity as a compensation for the insult he had offered her.2 This engagement on the part' of the man, however, did not affect his relations with his female servants. In Chaldea, as in Egypt, and indeed in the whole of the ancient world, they were always completely at the mercy of their purchaser,3 and the permission to treat them as he would had become so much of a custom that the begetting of children by their master was desired rather than otherwise: the complaints of the despised slave, who had not been taken into her master's favour, formed one of the themes of popular poetry at a very early period.4 When the contract tablet was finally sealed, one of the witnesses, who was required to be a free man, joined the hands of the young couple; 5 nothing then remained to be done but to invite the blessing of the gods, and to ond the day by a feast, which would unite both families

droit egyptien, p. 329, et seq.; Kohler-Petsen, Aus dem Babylonischen Rechtsliben, vol. ii. pp. 10-15, which give us an idea of the difficulties caused by the payment of the dowry in instalments, and of

restoring it in cases of divorce.

<sup>1</sup> Iu more modern times, notices inscribed on several tablets prove that the two parties received each a copy (Peisen, Babylonischen Verträge des Berliner Museume, pp. 156, 157, 291). We possess three copies of the same deed of sale in the museums of Europe-for example, in the British Museum and the Louvre; of others we possess but two copies (Bezold, Kurzgefussler Ueberblick über die Bubylonisch-Assyrische Literatur, pp. 154, 155; Strassmayle, Die Bubylonesche Inschriften im Museum zu Liverpool, in the Actes du Ve Congres International des Orientalistes à Leyle, 2nd part, sect. 1, p. 580, No. 67, p. 583, No. 89).

The existence of this clause is known of at present in the times of the New Chaldren Empire, and perhaps is applicable to a marriage with a woman of inferior position to that of the man (Pr 181 B, Studien zum Babylonischen Rechtswesen, in the Zeitschrift für Assyriologie, vol. iii. pp. 78-80; Kohler-L'HEBR, Aus. dem Babyl. Rechtsleben, vol. i. p. 7; OPPERT, Les Documents juridiques cuneiformes, in the Mitschrift für Assyr., vol. iii. pp. 182, 183, and Jug-ment approbatif d'un contrat, in the Journal Asiatique, 1886, vol. iii. pp. 555, 556; Boissii B, Recherches sur quelques contrats bubyloniens, pp. 40, 42).

The care which was taken, in the Achemenian contracts, in cases where a slave was hired or given as a security, to forbid the hirer or the creditor using her improperly, shows that the right of

the master over the female slave remained absolute down to the latest periods,

This Sumero-Assyrian text, published in RAWLINSON'S Cun. Inc. W. As., vol. ii. pl. 35, No. 4, Il 61-76, and previously translated by Oppper-Menant, Documents juridiques, etc., pp. 61-67, has been completely elucidated by Fr. Lynormant, Etudes Accadiennes, vol. iii. pp. 168, 169. The slave thus disdained might in time become a malovolent being, against whom precautions were taken by magical conjurations (Fr. Lenormant, Lindes Accadientes, vol. iii. pp. 77, 78).

OPPERT, Les Inscriptions juridiques, etc., in the Actes du VII. Congres International des Orien talistes tenu à Vienne, 2nd sect., pp. 178, 179, 181; the custom to which the document pointed out by Opport alludes, goes back to the very earliest times. [Traces of it may be noted in (icn. xvi. 2, and

\*xx. 4, 9.-TR.]

and their guests. The evil spirits, however, always in quest of an easy prey, were liable to find their way into the nuptial chamber, favoured by the confusion inseparable from all household rejoicing: prudence demanded that their attempts should be frustrated, and that the newly married couple should be protected from their attacks. The companions of the bridegroom took possession of him, and, hand to hand and foot to foot, formed as it were a rampart round him with their bodies, and carried him off solemnly to his expectant bride. He then again repeated the words which he had said in the morning: "I am the son of a prince, gold and silver shall fill thy bosom; thou, even thou shalt be my wife, I myself will be thy husband;" and he continued: "As the fruits borne by an orchard, so great shall be the abundance which I shall pour out upon this woman." The priest then called down upon him benedictions from on high: "Therefore, O ye (gods), all that is bad and that is not good in this man, drive it far from him and give him strength. As for thee, O man, exhibit thy manhood, that this woman may be thy wife; thou, O woman, give that which makes thy womanhood, that this man may be thy husband." On the following morning, a thanksgiving sacrifice celebrated the completion of the marriage, and by purifying the new household drove from it the host of evil spirits.3

The woman, once bound, could only escape from the sovereign power of her husband by death or divorce; but divorce for her was rather a trial to which she submitted than a right of which she could freely make use. Her husband could repudiate her at will without any complicated ceremonies. It was enough for him to say: "Thou art not my wife!" and to restore to her a sum of money equalling in value the dowry he had received with her; "he then sent her back to her father, with a letter informing him of the

¹ This part of the ceremony is described on a Sumero-Assyrian tablet, of which two copies exist, discovered and translated by Pinches, Notes upon some of the Recent Discoveries in the Recent of Assyriology, with special Reference to the Private Life of the Babylonians, in the Journal of Translations of the Victoria Institute, vol. axvi. pp. 143, 145, 159, 160, 169, 170. The interpretation appears to me to result from the fact that mention is made, at the commencement of the column, of impious beings without gods, who might approach the man; in other places magical exercisms indicate how much those spirits were dreaded "who deprived the bride of the embraces of the man" (Fr. Liekobanker, Ltudes decadiance, vol. iii. pp. 79, 80). As Pinches remarks (op. cit., pp. 144, 115), the formula is also found in the part of the porm of Gilgames, where Ishtar wishes to marry the here (cf. p. 580 of this volume), which shows that the rite and its accompanying words belong to a remote past.

<sup>&</sup>lt;sup>2</sup> The text that describes these ceremonies was discovered and published by Pinches, Glimpses of Babylonian and Assyrian Life, III. A Babylonian Wedding Coremony, in The Babylonian and Oriental Record, vol. i. pp. 145-117. As far as I can judge, it contained an exercism against the "knotting of the tag," and the mention of this subject called up that of the marriage rites. The ecremony commanded on the day following the marriage was probably a purification: as late as the time of Herodotus, the union of man and woman rendered both impure, and they had to perform as ablution before recommencing their occupations (i. 198).

The sum is fixed at half a mina by the text of the Sumerian laws (RAWLINSON, Cun. Ins. W. As., vol. v. pl. 25, l. 12); but it was sometimes less, e.g. ten shekels, and sometimes more, e.g. a whole mina (Meissnes, Beiträge zum altbabylonischen Privatrecht, p. 149).

dissolution of the conjugal tie.¹ But if in a moment of weariness or anger she hurled the fatal formula at him: "Thou art not my husband!" her fate was sealed: she was thrown into the river and drowned.² The adulteress was also punished with death, but with death by the sword; and when the use of iron became widespread, the blade was to be of that metal.³ Another ancient custom only spared the criminal to devote her to a life of infamy: the outraged husband stripped her of her fleecy garments, giving her merely the loin-cloth in its place, which left her half naked, and then turned her out of the house into the street, where she was at the mercy of the first passer-by.⁴ Women of noble or wealthy families found in their fortune a certain protection from the abuse of marital authority. The property which they brought with them by their marriage contract, remained at their own disposal.⁵ They had the entire management of it, they farmed it out, they sold it, they spent the income from it as they liked, without interference from any one:

<sup>1</sup> Repudiation of a wife, and the ceremonial connected with it, are summarized, as far as ancient times are concerned, by a passage in the Sumero-Assyrian tablet, published by RAWLINSON, Cun. Ins. W. As., vol. v. pls. 24, 25, who follows LENORMART, Choix de Textes cuneiformes, p. 35, ll. 47-52, and translated by Opperr-Menant, Documents juridiques, etc., p. 51. Bertin (Akkadian Precepts for the Conduct of Man in his Private Life, in the Transactions of the Bibl. Arch. Soc., vol. viii. pp. 236, 237, 252, 253), on the contrary, takes the same text to be a description of the principal matriage-14 s. and from it he draws the conclusion that the possibility of divorce was not admitted in Chaldren between persons of noble family. Meissner (Beiträge, etc., p. 12) very rightly returns to Oppert's interpretation, a few details in which he corrects.

This fact was evident from the text of the so-called Sumerian Laws converning the Organization of the Family (RAWLINSON, Cun. Ins. W. As., vol. ii. pl. 10, col. i. II. 1-7; cf. vol. v. pl. 25, col. 1.), according to the generally received interpretation: according to that proposed by Oppert-Menant, Douments juridiques, etc., pp. 57, 58, 60-62, it was the woman who had the right of causing the husband who had wronged her to be thrown into the river (cf. Oppert, in the Göttingische Gelehrte Anzeigen, 1879, p. 1610). The publication of the contracts of Iltani and of Bashtum appear to have shown conclusively the correctness of the ordinary translation (Meissner, Beiträge, etc., pp. 70-72). uncertainty with regard to one word prevents us from knowing whether the guilty wife were strangled before being thrown into the water, or if she were committed to the river alive.

<sup>3</sup> Opper, Jugement approbatif d'un contrat, in the Journal Asiatique, 1886, vol. vii. p. 556, and Les Documents juridiques consifermes, in the Zeitschrift für Assyriologie, vol. iii. p. 183. Perhaps the mention of the iron sword is introduced to show that the woman was beheaded, and did not have her threat cut.

\* This is indicated by the Sumero-Assyrian tablet, in which are given the expressions relating to things concerning marriage (RAWLINSON, Cun. Ins. IV. As., vol. ii. pl. 10, col. ii. ll. 1-21; and In Nemant, Choix de textes caneiformes, pp. 35, 36); the passage has been translated by Oppert-Menney, Documents juridiques, etc., pp. 55, 56, with some corrections by Oppert, in the Göttingische Gelehrte Anzeiger, 1879, pp. 1613, 1614. Here, again, Bertin (Akkadian Precepts, in the Transactions of the Bibl. Arch. Soc., vol. viii. pp. 237-240, 252, 253) believes that it treats of marriage and of the education to be given to the eldest son, and that it is a question of repudiation or divorce.

MEISSER, Beiträge, etc., p. 14. In the documents of the New Chaldrean Empire we find instances of married women selling their property thomselves, and even of their being present, seated, at the conclusion of the sale (Opper, Un Acte de veule conservé en deux exemplaires, in the Zeitschrift für Keilforschung, vol. i. pp. 52, 53), or of their ceding to a married daughter some property in their own possession, thus renouncing the power of disposing of it, and keeping merely the income from it (Opper, Liberté de la femme à Babylone, in the Revue d'Assyriologie, vol. ii. pp. 89, 90); we have also instances of women reclaiming valuables of gold which their husbands had given away without their authorisation, and also obtaining an indemnity for the wrong they had suffered (Priser, Habylones he Vertige des Berliner Museums, pp. 12-15, 230, 231); also of their lending money to the mother-inlaw of their brother (Peiser, Babylonische Vertige, etc., pp. 18-21, 233, 234); in fine, empowered to deal with their own property in every respect like an ordinary proprietor (cf. Kohler-Pliser, Ausdem Babylonischen Rechtsleben, vol. iii. pp. 8, 9).

the man enjoyed the comforts which it procured, but he could not touch it. and his hold upon it was so slight that his creditors could not lay their hands on it. If by his own act he divorced his wife, he not only lost all benefit from her property, but he was obliged to make her an allowance or to pay her an indemnity; 2 at his death, the widow succeeded to these, without prejudice to what she was entitled to by her marriage contract or the will of the deceased.3 The woman with a dowry, therefore, became more or less emancipated by virtue of her money. As her departure deprived the household of as much as, and sometimes more than. she had brought into it, every care was taken that she should have no cause to retire from it, and that no pretext should be given to her parents for her recall to her old home; her wealth thus obtained for her the consideration and fair treatment which the law had, at the outset, denied to her. When, however, the wife was poor, she had to bear without complaint the whole burden of her inferior position. Her parents had no other resource than to ask the highest possible price for her, according to the rank in which they lived, or in virtue of the personal qualities she was supposed to possess, and this amount, paid into their hands when they delivered her over to the husband, formed, if not an actual dowry for her, at least a provision for her in case of repudiation or widowhood: she was not, however, any less the slave of her husband-a privileged slave, it is true, and one whom he could not sell like his other slaves,4 but of whom he could easily rid himself when her first youth was passed, or when she ceased to please him.<sup>5</sup> In many cases the fiction of purchase was set aside, and mutual consent took the place of all other formalities, marriage then becoming merely cohabitation, terminating at will. The consent of the father was not required for this irregular union, and many a son contracted a marriage after this fashion, unknown to his

<sup>&</sup>lt;sup>1</sup> E. and V. Révillout, Les Obligations en droit egyptien comparées aux autres droits de l'Antique. p 3 fc, et seq.

The restitution of the dowry after divorce is ascertained, as far as later times are concerned, from documents similar to that published by Kohler-Peiser, Ausdem Babylonischen Rechtsleben, vol. 11. pp. 13-15, in which we see the second husband of a divorced wife claiming the dowry from the first husband. The indemnity was fixed beforehand at six silver mine, in the marriage contract published by Opper, Jugement approbatif d'un contrat, in the Journal Asiatique, 1886, vol. vii. pp. 555, 556

<sup>&</sup>lt;sup>3</sup> On this point, cf. PLISER, Justeps udentiw Babylonica que supersunt, p. 27; Kohler-Peiser, its dem Babyl. Rechtsliben, vol. i. p. 45.

<sup>4</sup> It appears, however, in certain cases not clearly specified, that the husband could sell his wife, if she were a shrow, as a slave (Meirralla, Beitrüge, etc., pp. 6, 70, 71).

This form of marriage, which was of frequent occurrence in ancient times, fell into disuse among the upper classes, at least of Babylonian society. A few examples, however, are found in late times (Officer, Jugement approbatif, in the Journal Asiatique, 1886, vol. vii. pp. 555, 556; and Les Documents juridiques cune-formes, in the Zeitschrift fur Asyniologie, vol. iii. pp. 182, 183; Palela, Studien zum Babyl. Rechtsweien, in the Zeitschrift für Asyniologie, vol. iii. pp. 77-80; Konlein-Palela, Aus dem Babyl. Rechtsleben, vol. ii. pp. 7-9). It continued in use among the lower classes, and flerodolus affirms that in his time marriage markets were hold regularly (i. 196), as in our own time fairs are held for hiring male and female servants.

relatives, with some young girl either in his own or in an inferior station: but the law refused to allow her any title except that of concubine, and forced her to wear a distinctive mark, perhaps that of servitude, namely, the representation of an olive in some valuable stone or in terra-cotta, bearing her own and her husband's name, with the date of their union, which she kept hung round her neck by a cord.1 Whether they were legitimate wives or not, the women of the lower and middle classes enjoyed as much independence as did the Egyptian women of a similar rank. As all the household cares fell to their share, it was necessary that they should be free to go about at all hours of the day: and they could be seen in the streets and the markets, with bare feet, their head and face uncovered, wearing their linen loin-cloth or their long draped garments of hairy texture.2 Their whole life was expended in a ceaseless toil for their husbands and children: night and morning they went to fetch water from the public well or the river, they bruised the corn, made the bread, span, wove, and clothed the entire household in spite of the frequent demands of maternity.8 The Chaldran women of wealth or noble birth, whose civil status gave them a higher position, did not enjoy so much freedom.' They were scarcely affected by the cares of daily life, and if they flid any work within their houses, it was more from a natural instinct, a sense of duty, or to relieve the tedium of their existence, than from constraint or necessity; but the exigencies of their rank reduced them to the state of prisoners. the luxuries and comforts which money could procure were lavished on them, or they obtained them for themselves, but all the while they were obliged to remain shut in the harem within their own houses; when they went out, it was only to visit their female friends or their relatives, to go to some temple or festival, and on such occasions they were surrounded with servants, ennuchs, and pages, whose serried ranks shut out the external world.4

<sup>2</sup> For the long garment of the women, see the status represented on p. 721 of the present work; for the loin-cloth, which left the shoulders and bust exposed, see the bronze figure on p. 720. The litter was no doubt the garment worn at home by respectable women; we see by the punishment inflicted on adulteresses that it was an outdoor garment for couriesans, and also, doubtless, for slaves and women of the lower classes.

customa ty also in Egypt (Chanas, L'L'gyptologie, vol. ii. pp. 41, 45).

For the numerous suite attending on noble ladies, cf. what is said by Herodetus of the Chaldrens women of this time, when they repaired to the temple of Mylitia to comply with her rates (1. 199;

<sup>1</sup> See the example quoted by Kohler-Pfier, Aus dem Babylonischen Rechteleben, vol. i. pp. 7 3: mention is made of the mark given publicly by the magistrate to women who accepted this kipd of free union. Terra-cotta clives, belonging to Babylonian women, and discovered at Khorsabad by Place (Oppeur, Les Inscriptions de Dour-Sarkayan, in Place, Ninice et l'Assyrie, vol. ii. pp. 307, 30%), probably furnish us with examples of their shape, and enable us to give their approximate tenor.

Women's occupations are mentioned in several texts and on several aucient monuments. On the val., h impress of which is given on p. 699 of this volume we see above, on the left, a woman land high and grashing the coin, and before her a row of little disks, representing, no doubt, the leaves land for baking. The length of time for suckling a child is fixed at three years by the Sumero-vian tablet relating the history of the foundling (Rawlinson, Can. Ins. W. As., vol. ii. pl. 9, od. p. 11, 45.50; cf. Opplant-Menant, Documents juridiques, etc., p. 43); protracted suckling was customery also in Egypt (Charas, Ulayptologie, vol. ii. pp. 41, 45).

There, was no lack of children in these houses when the man had several mistresses, either simultaneously or successively. Maternity was before all things a woman's first duty: should she delay in bearing children, or should anything happen to them, she was considered as accursed or possessed, and she was banished from the family lest her presence should be a source of danger to it.1 In spite of this many households remained childless, either because a clause inserted in the contract prevented the dismissal of the wife if barren, or because the children had died when the father was stricken in years, and there was little hope of further offspring.2 In such places adoption filled the gaps left by nature, and furnished the family with desired heirs. For this purpose some chance orphan might be brought into the household-one of those poor little creatures consigned by their mothers to the river, as in the case of Shargani, according to the ancient legend; s or who had been exposed at the cross-roads to excite the pity of passers-by,4 like the foundling whose story is given us in an old ballad. "He who had neither father nor mother,-he who knew not his father or mother, but whose earliest memory is of a well-whose entry into the world was in the street," his benefactor "snatched him from the jaws of dogs--and took him from the beaks of ravens.-- He seized the seal before witnesses—and he marked him on the sole of the foot with the seal of the witness,—then he entrusted him to a nurse,—and for three years he provided the nurse with flour, oil, and clothing." When the weaning was accomplished, "he appointed him to be his child,—he brought him up to be his child,—he inscribed him as his child,—and he gave him the education of a scribe." 5 The rites of adoption in these cases did not differ from those attendant upon birth. On both occasions the newly born infant was shown to witnesses, and it was marked on the soles of its feet to establish its identity; 6 its registration in the family archives did not take place until these precautions had been observed, and children adopted in this manner were regarded thenceforward in the eyes

Divorce for sterility was customary in very early times. Complete sterility or miscarriage was thought to be occasioned by evil spirits; a woman thus possessed with a devil came to be looked on as a dangerous being whom it was necessary to exercise (Fr. Lenormant, Études Accadiennes, vol. ii. pp. 57, 68).

<sup>&</sup>lt;sup>2</sup> Several documents of various periods furnish examples of women who, having had children by a first husband, had none by the second, but were not on that account divorced.

<sup>&</sup>lt;sup>3</sup> Cf. pp. 597, 598 of the present volume for the legend of Sargon the Elder, King of Agade.

<sup>&</sup>lt;sup>4</sup> Many of these children were those of courtesans or women who had been repudiated, as we learn from the Sumero-Assyrian tablet of RAWLINSON, Cun. Ins. W. As., vol. v. pl. 24, ll. 11-15 (cf Fs. Lenormant, Choix de Textes canciformes, p. 36): "Sho will expose her child alone in the street, where the serpents in the road may bite it, and its father and mother will know it no more."

<sup>\*</sup> RAWLINSON, Cun. Ins. W. As., vol. ii. pl. 9, col. ii. 11. 28-66. This curious story was first, translated into French by Opper-Menant, Documents juridiques, etc., pp. 21-44; and more finited v. Fr. Lenormant, Étules Accadiennes, vol. iii. pp. 164-168.

<sup>\*</sup> Meissner, Beiträge zum altbabylonischen Privatrecht, p. 15.

of the world as the legitimate heirs of the family. People desiring to adopt a child usually made inquiries among their acquaintances, or poor friends, or cousins who might consent to give up one of their sons, in the hope of securing a better future for him. When he happened to be a minor, the real father and mother, or, in the case of the death of one, the surviving parent, appeared before the scribe, and relinquished all their rights in favour of the adopting parents; the latter, in accepting this act of renunciation, promised henceforth to treat the child as if he were of their own flesh and blood, and often settled upon him, at the same time, a certain sum chargeable on their own patrimony.1 When the adopted son was of age, his consent to the agreement was required, in addition to that of his parents. The adoption was sometimes prompted by an interested motive, and not merely by the desire for posterity or its semblance. Labour was expensive, slaves were scarce, and children, by working for their father, took the place of hired servants, and were content, like them, with food and clothing.3 The adoption of adults was, therefore, most frequent in ancient times. The introduction of a person into a fresh household severed the ties which bound him to the old one; he became a stranger to those who had borne him; he had no filial obligations to discharge to them, nor had he any right to whatever property they might possess, unless, indeed, any unforeseen circumstance prevented the carrying out of the agreement, and legally obliged him to return to the status of his birth.3 In return, he undertook all the duties and enjoyed the privileges of his new position; he owed to his adopted parents the same amount of work, obedience, and respect that he would have given to his natural parents; he shared in their condition, whether for good or ill, and he inherited their possessions.4 Provision was made for him in case of his repudiation by those who had adopted him, and they had to make him compensation: he received the portion which would have accrued to him, after their death, and he then left them. Families appear to have been fairly united, in spite of the elasticity of the laws which governed them, and of the divers elements of which they were sometimes composed. No doubt polygamy and frequently divorce exercised here as elsewhere a deleterious influence; the harems of Babylon were constantly the scenes of endless intrigues and quarrels among the women and children of varied condition and different

<sup>&</sup>lt;sup>1</sup> Of. for a more recent period a document of the reign of Cyrus, King of Babylon, certifying the adoption of a little boy of three years of I, and determining the amount settled on him by the adopting tather (Echiler-Prize, Aus dem Babylonischen Rechtsleben, vol. 1. pp. 9, 10).

MEISENER, Beiträge zum altbabylinischen Privatrecht, pp. 16, 151, ot sog.

<sup>\*</sup> Meisener, Beiträge, oto., p. 15.

The above facts are gleaued, as regards early times, from documents 97, 98, published and communication by Meissner, Beiträge, etc., pp. 77, 78, 153.

For more recent times, cf. Kohleb-Peiser, Aus dem Babylonischen Rechtsleben, vol. 11. 140-18.

parentage who filled them. Among the people of the middle classes, where restricted means necessarily prevented a man having many wives, the course of family kie appears to have been as calm and affectionate as in Egypt, under the unquestioned supremacy of the father: and in the event of his carly death, the widow, and later the son or son-in-law, took the direction of affairs.1 Should quarrels arise and reach the point of bringing about a complete rupture between parents and children, the law intervened, not to reconcile them, but to repress any violence of which either side might be guilty towards the other. It was reckoned as a misdemeanour for any father or mother to disown a child, and they were punished by being kept shut up in their own house, as long, doubtless, as they persisted in disowning it: but it was a crime in a son, even if he were an adopted son, to renounce his parents, and he was punished severely. If he had said to his father, "Thou art not my father!" the latter marked him with a conspicuous sign and sold him in the market. If he had said to his mother, "As for thee, thou art not my mother!" he was similarly branded, and led through the streets or along the roads, where with hue and cry he was driven from the town and province.2

"Ere slaves were numerous, but distributed in unequal proportion among the various classes of the population: whilst in the palace they might be found literally in crowds, it was rare among the middle classes to meet with any family possessing more than two or three at a time. They were drawn partly from foreign races; prisoners who had been wounded and carried from the field of battle, or fugitives who had fallen into the hands of the victors after a defeat, or Elamites or Gutis who had been surprised in their own villages during some expedition; not to mention people of every category carried off by the Bedouin during their raids in distant parts, such as Syria or Egypt,

¹ for the respect shown to the eldest son, cf. V. and E. Révillout, Sur le droit de la Chaldée, in E. Rivillout, Les Obligations en Droit Égyptien, p. 356, et seq.

<sup>2</sup> RAWLINSON, Cun. Ins. W. As., vol. ii. pl. 10, col. i. ll. 22-45; cf. vol. v. pl. 25, l. 23, et seq. 1 have adopted the generally received meaning of this document as a whole, but I am obliged to state that Opper Minary, Documents juridiques de l'Assyrie et de la Chaldee, pp. 56, 57, 60, 61, admit quite a different interpretation. According to them, it would appear to be a sweeping remunciation of children by parents, and of parents by children, at the close of a judicial condemnation. Opper has upheld this interpretation against Haupt, in the Göttingische gelehrte Auseigen, 1879, p. 1604. et seq., and still keeps to his opinion. The documents published by Meissner. Betträge, etc., pp. 73-78, 152, show that the text of the ancient Sumerian laws applied equally to adopted children, but made no distinction between the insult offered to the father and that offered to the mother: the same peralty was applicable in both cases.

<sup>\*</sup> For information on slavery in Chaldres, see particularly the memoir by Offer, La Condition des Esclaves à Babylone, in the Comptes rendus de l'Academie des Inscriptions et Belles-Lettres, 1888, p. 120, et seq.; and the special memoir by Meysener. De Servitute Babyloniaca; and scattered notices in Kohles-Paiser, Aus dem Babylonischen Rechtsleben, vol. i. pp. 1-7, vol. ii. 6, 40-50, 52-56, etc.

whom they were continually bringing for sale to Babylon and Uru, and, indeed, to all those cities to which they had easy access. The kings, the vicegerents, the temple administration, and the feudal lords, provided employment for vist numbers in the construction of their buildings or in the cultivation of their domains; the work was hard and the mortality great, but gaps were soon filled up by the influx of fresh gangs. The survivors intermarried, and their children, brought up to speak the Chaldwan tongue and conforming to the customs of the country, became assimilated to the ruling race; they formed, beneath the superior native Semite and Sumerian population, an inferior servile class, spread alike throughout the towns and country, who were continually reinforced by individuals of the native race, such as foundlings, women and children sold by husband or father, debtors deprived by creditors of their liberty, and criminals judicially condemned. The law took no individual account of them, but counted them by heads, as so many cattle: they belonged to their respective masters in the same fashion as did the beasts of his flock or the trees of his garden, and their life or death was dependent upon his will,2 though the exercise of his rights was naturally restrained by interest He could use them as pledges or for payment of debt, could and custom. exchange them or sell them in the market. The price of a slave never rose were high: a woman might be bought for four and a half shekels of silver by weight, and the value of a male adult fluctuated between ten shekels and the third of a mina The bill of sale was inscribed on clay, and given to the purchaser at the time of payment: the tablets which were the vouchers of the rights of the former proprietor were then broken, and the transfer was completed.8 The master seldom ill-treated his slaves, except in cases of reiterated disobedience, rebellion, or flight; 4 he could arrest his runaway slaves wherever he could lay his hands on them; he could shackle their ankles, fetter their wrists, and whip

<sup>&</sup>lt;sup>1</sup> MLESSER, Betträge, etc., pp. 6, 7. For example, sons condemned to servitude by their tight, according to the laws above mentioned, p. 712 of the present work; or the wife, whom the husband is entitled, by a clause in the marriage contract, to sell for disobedience (document 86 in Milessell, Betträge, etc., pp. 70, 71). A story of a fugitive slave, preserved in a tablet published by RAMINSON, Cun. Ins. W. As., vol. ii. pl. 13, col. ii. l. 6, refers, perhaps, to a son sold in this way (Fig. Landmann, Etudes Accadience, vol. iii. pp. 232, 233).

The murder of a slave by a person other than the master was punished by a fine paid to the latter (Rawiinson, Oun. Ins. W. As., vol. ii. pl. 10, col. ii. ll. 13-22. of Orden-Minnel, Documents juridiques, etc., pp. 58, 59, 61; V. and E. Riviilour, Sur le Droit de la Chablé, in E. Riviiloui, Ics Obligations en Droit Égyption comparé aux anties droits de l'Antiquite, pp. 371, 372; Kontiek Piisla, Ans dem Babylonischen Rechtsliben, vol. i. pp. 32, 33). See the rape of a female slave prosecuted in Konler-Piisla, Ans dem Babylonischen Rechtsleben, vol. ii. pp. 49, 50

Meisenen, Reiträge zum altbabylonischen Privatricht, pp. 6, 7.

Runaway slaves are mentioned in one of the Sumero-Assyrian tablets published by Rawinson, "in. Ins. W. As., vol., ii. pl. 13, col. ii ll. 6-11, and "ran-lated by Opper-Minani, Documents integras, etc., p. 14, and by Fr. Lindmani, Itudes Accadiance, vol. iii. pp. 232, 233 cf. tor the runaway slaves at the time of the Second Chaldran Empire, Kohita-Pristing the Babylonischen Rechtsleben, vol. i. pp. 5-7

them mercilessly. As a rule, he permitted them to marry and bring up a family; 1' he apprenticed their children, and as soon as they knew a trade, he set them up in business in his own name, allowing them a share in the profits.2 The more intelligent among them were trained to be clerks or stewards; they were taught to read, write, and calculate, the essential accomplishments of a skilful scribe; they were appointed as superintendents over their former comrades, or overseers of the administration of property, and they ended by becoming confidential servants in the household. The savings which they had accumulated in their earlier years furnished them with the means of procuring some few consolations: they could hire themselves out for wages, and could even acquire slaves who would go out to work for them, in the same way as they themselves had been a source of income to their proprietors.8 If they followed a lucrative profession and were successful in it, their savings sometimes permitted them to buy their own freedom, and, if they were married, to pay the ransom of their wife and children.4 At times, their master, desirous of rewarding long and faithful service, liberated them of his own accord. without waiting till they had saved up the necessary money or goods for their enfrauchisement: in such cases they remained his dependants, and continued in his service as freemen to perform the services they had formerly rendered They then enjoyed the same rights and advantages as the old native race; they could leave legacies, inherit property, claim legal rights, and acquire and possess houses and lands. Their sons could make good matches among the daughters of the middle classes, according to their education and fortune; when they were intelligent, active, and industrious, there was nothing to prevent them from rising to the highest offices about the person of the sovereign. If we knew more of the internal history of the great Chaldwan cities, we should no doubt come to see what an important part the servile element played in them; and could we trace it back for a few generations, we

<sup>&</sup>lt;sup>1</sup> The documents cited by Opper, La Condition des esclares à Babylone, in the Comptes rendus de l'Académie des lus riptions et Belles-Lettres, 1888, pp. 125-127, give us information concerning these families of slaves; from these it would appear that care was taken to sell them all together, and that they avoided as much as possible separating children from their tather and mother.

For the apprenticing of slaves in the time of the Second Chaldman Empire, cf. Kohler-Pei-Er, Aus dem Babylonischen Rechtsleben, vol. ii. pp. 52-56.

We find two good examples of a slave hiring himself out to a third person, and of another receiving as a pledge a slave like himself, in Oppmar, La Condition des esclaves à Bubylone (Comptes rendus de l'Académie des Inscriptions et Belles-Lettres, 1888, pp. 127-129).

MILENALE, Beitrage, etc., p. 7. The existence of the right to purchase their own freedom in the times of the Ancient Chaldann Empire is proved by expressions in the Sumero-Assyrian legal tablet published in RAWLINSON, Cun. Ins. W. As., vol. ii. pl. 43, col. ii. ll. 15-88; cf. Opper-Menant Documents juridiques, etc., p. 14.

For these slaves capable of being enfranchised, see what is said by Opper, La Condition des esclaves à Babylone, in the Comptes rendus de l'Académie des Inscriptions, 1888, p 122.

THE ASPECT OF THE TOWNS AND DISTRIBUTION OF THE HOUSES. 745

should probably discover that there were few great families who did not reckon a slave or a freedman among their ancestors.

It would be interesting to follow this people, made up of such complex elements, in all their daily work and recreation, as we are able to do in the case of contemporary Egyptians; but the monuments which might furnish us with the necessary materials are scarce, and the positive information to, be gleaned from them amounts to but little. We are tolerably safe, however, in supposing the more wealthy cities to have been, as a whole, very similar in appearance to those existing at the present day in the regions which as yet have been scarcely touched by the advent of European civilization. Sinuous, narrow, muddy streets, littered with domestic refuse and organic detritus, in which flocks of ravens and wandering packs of dogs perform with more or less efficiency the duties of sanitary officers; 2 whole quarters of the town composed of huts made of reeds and puddled clay, low houses of crude brick, surmounted perhaps even in those times with the conical domes we find later on the Assyrian bas-reliefs; crowded and noisy bazaars, where each trade is located in its special lanes and blind alleys; silent and desolate spaces occupied by palaces and gardens, in which the private life of the wealthy was concealed from public gaze; and looking down upon this medley of individual dwellings, the palaces and temples with their ziggurats crowned with gilded and painted sanctuaries. In the ruins of Uru, Eridu, and Uruk, the remains of houses belonging doubtless to well-to-do families have been brought to light.3 They are built of fine bricks, whose courses are cemented together with a thin layer of bitumen, but they are only lighted internally by small apertures pierced at irregular distances in the upper part of the walls: the low arched doorway, closed by a heavy two-leaved door, leads into a blind passage. which opens as a rule on the courtyard in the centre of the building. In the interior may still be distinguished the small oblong rooms, sometimes vaulted.

<sup>&</sup>lt;sup>1</sup> For information on this subject reference can be mide to the descriptions given of Misulby the traveller Ohvier (Voyage dans l'Empire Othomae vol. n. pp. 356, 357), of Eagled (ed., vol. ni. pp. 331, 382), and of those which Niebuhr has given of Bassorah (Voyage en Arabie, vol. ni. p. 172) towards the end of the last century, and which have been contrined, as far as the beginning and middle of the present century are concerned, by the accounts of Kittelle Personal Narrative of a Journey from India to England, by Bassorah, Baydad, the Ruins of Babylon, etc., vol. 1, p. 69.

<sup>•</sup> Cf. on p. 740 of the present volume, the account of the child exposed by the side of the well whence the woman came to draw water, and of the adopting parents rescuing it from the jaws of dogs and from the beaks of crows.

<sup>&</sup>lt;sup>2</sup> Excavations have been carried on at Uru and at Uruk by Lovius, Tracels and Researches in Chaldra and Susiana; and by Tamlor, Notes on the Ruins of Muquer, in the Journal of the Royal relatic Society, vol xy, pp. 260-276; at Eridu by Tamlor, Notes on Tel-el-Lahm and Abou-Shahrein, in the Journ. of the As. niches here and there. The majority of the rooms were merely store-chambers, and contained the family provisions and treasures; others served as living-rooms, and were provided with furniture. The latter, in the houses

of the richer citizens no less than in those of the people, was of a very simple kind, and was mostly composed of chairs and stools, similar to those in the royal palaces: the bedrooms contained the linen chests and the beds with their thin mattresses, coverings, and cushions, and perhaps wooden head-rests, resembling

PLANS OF HOUSES FXCAVATED AT ERIDI AND IRU.

those found in Africa,<sup>4</sup> but the Chaldwans slept mostly on mats spread on the ground. An oven for baking occupied a corner of the countyard, side by side with, the stones for grinding the corn; the askes on the hearth were always aglow, and if by chance the fire went out, the fire-stick was always at hand to

<sup>&</sup>lt;sup>1</sup> Texton, Vites on the Ruins of Mageyer, in the Journ, of the Royal As Soc, vol. xv. p. 266, found the remains of the palm-tree beams which formed the terrace still existing. He thinks (Notes on 161 el-1 alim, etc., in the Journ of the Royal As Soc., vol. xv. p. 411) with Loftus that some of the chambers were vaulted. Cf. upon the custom of yaulting in Chaldran houses, Perraci-Chines, He torre de l'Art, vol. n. p. 163, et seq.

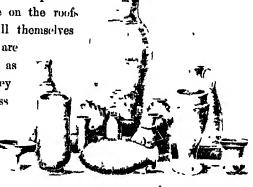

Drawn by Funcher-Coulin, from the sketch by Taylor, Notes on the Ruins of Muquyer, in the Journ of the Royal As Soc., vol xv. p. 266.

These plans were drawn by Frucher-Gudin, from sketches by Tayron, Notes on the Ruans of Muquyer, in the Johan of the Ruans of xxx. pl. iii. The houses reproduced to the left of the plan were these uncovered in the ruans of Uru; those on the right belong to the ruans of Erida. On the latter, the nucles mentioned in the text will be found indicated.

<sup>\*</sup> The diesanz of the har in colls and claborate creetions, as seen in the various figures engined upon Chald can intaglios (cf. what is said of the different ways of arranging the hair on p. 719 of this volume), appears to have necessitated the use of these articles of furnitude; such complicated creetions of hair must have listed several days at least, and would not have kept in condition so lon-except for the use of the head-rest.

relight it, as in Egypt.¹ The kitchen utensils and household pottery comprised a few large copper pans and earthenware pots rounded at the base, dishes, water and wine jars, and heavy plates of coarse ware,² metal had not as yet superseded stone, and in the same house we meet with bronze axes and hammers side by side with the same implements in cut flint, besides knives,

scrapers, and mace-heads.<sup>3</sup> At the present day the women of the country of the Euphrates spend a great part of their time on the roofs of their dwellings.<sup>4</sup> They install themselves there in the morning, till they are driven away by the heat; as soon as the sun gets low in the heavens, they return to their post, and either pass the night there, or do not quit at till very late in the evening. They perform all their household duties there, gos sipping with their friends on reighbouring roofs whilst they

CHALDTAN HOUSEHOLD UTINSHS IN TERRASCOLLA

bake, cook, wash and dry the linen; or, if they have slaves to attend to such menial occupations, they sew and embroider in the open air. They came down into the interior of the house during the hottest hours of the day. In most of the wealthy houses, the coolest room is one below the level of the courtyard, into which but little light can penetrate. It is paved with plaques of polished gypoum, which resembles our finest grey

The use of the investick among the Choldwins was pointed out alm st signal inconstraint (www.), On some Furth Edylandrous II Fadian Inscriptions, in the Transactions of Sec. of Bull to he, vol. vi., pp. 279-281, and by Hercotton, On the Hieroglophic or Petus Origin of the Character (the Assyrian Sullabory, i'rd), pp. 466-468, of 461 Egypt, p. 488 of this volume.

These pairs are represented in the seenes reproduced on p. est, et seq, of this volume. The jetti y discovered by I ofton in the course of his everyations, and by Taylor (Not somethe Ruins et Mupur), in the Journ, of the Royal to See, vol. xv. p. 274, et seq.) among the ruins rod tembs of Mu heir and Wurka (et the tonds reproduced on pp. 684, (88, 68) of this volume), is now in the 1 attsh Museum (cf. Perrod Church, Hist de l'Arthons l'Artipate, vol. u, pp. 70) 711), specieus of that found at Telloh are the I ouvie (Hi exp. 88) view, however, have been by a tonathe tombs of the (18 view, Motes on this Stab. in, etc., p. 415) and in the remains of the price of Telloh Hi (23 88) view. Deconcepts, etc., pp. 20–36, 61, etc.)

Implements in flint and other kinds of stene have been discovered by Tsyron, Notes on the Julium, etc., in the Journ of the As, Sec., vol xv. pp. 410, 411, and pl. n., and are now in the British Vacuum. The bronze implements come partly from the tombs at Wughen, and partly from the runs pleted by Loftus at Tell Sife—that is to say, the mound ettes of Uni and Larsin the name of ill-sife, the "mound of copper," comes from the printity of objects in copper which have been a covered there.

OUVIER, Voyage dans l'Empire Othoman, vol u pp 356, 397, 381, 382, 392, 393 Drawn by Fanchez-Gudin, from the sketch by G Rewitsson, The Free Great Mexic has, 2nd 25, vol 4, p 91, and the heliogravure in Helicix-Sykare, Decountries, etc., pl 42

and-white marble, and the walls are covered with a coat of delicate plastering, smooth to the touch and agreeable to the eye. This is watered several times during the day in hot weather, and the evaporation from it cools the air. The few ruined habitations which have as yet been explored seem to bear witness to a considerable similarity between the requirements and customs of ancient times and those of to-day. Like the modern women of Bagdad and Mosul, the Chaldaean women of old preferred an existence in the open air, in spite of its publicity, to a seclusion within stuffy rooms or narrow courts. The heat of the sun, cold, rain, and illness obliged them at times to seek a refuge within four walls, but as soon as they could conveniently escape from them, they climbed up on to their roof to pass the greater part of their time there.

Many families of the lower and middle classes owned the houses which they occupied.1 They constituted a patrimony which the owners made every effort to preserve intact through all reverses of fortune.3 The head of the family bequeathed it to his widow or his eldest son,3 or left it undivided to his heirs, in the assurance, no doubt, that one of them would buy up the rights of the others. The remainder of his goods, farms, gardens, corn-lands, slaves, furfiture, and jewels, were divided among the brothers or natural descendants, "from the mouth to the gold;" that is to say, from the moment of announcing the beginning of the business, to that when each one received his share.1 In order to invest this act with greater solemnity, it took place usually in the presence of a priest. Those interested repaired to the temple, "to the gate of the god;" they placed the whole of the inheritance in the hands of the chosen arbitrator, and demanded of him to divide it justly; or the eldest brother perhaps anticipated the apportionment, and the priest had merely to sanction the result, or settle the differences which might arise among the lawful recipients in the course of the operation. When this was accomplished, the legatees had to declare themselves satisfied; and when no further claims arose, they had to sign an engagement before the priestly arbitrator that they

<sup>&</sup>lt;sup>1</sup> This fact is established by the relatively large number of documents, in which we find people of the middle class either mortgaging or selling their houses, or giving them as bail.

<sup>&</sup>lt;sup>2</sup> A house could be let for various lengths of time—for three months (Prislis, Babl. Vertrage. pp. 56, 57, 251, 255), for a year (id., pp. 60-63, 256), for five years (id., pp. 194-197, 300, 301), for an indefinite term (id., pp. 196-199, 301), but with a minimum of six months, since the rent is payable at the beginning and in the middle of each year. For the liabilities and rights of the tenant and the landlord, see for later times, the memoir of Kohler, in Kohler-Piblis, Babyl. Verträge, pp. 44, 15

It is no doubt this "duty of the elder brother" which is alluded to in an obscure passage of the text of the so-called Sumerian laws (Bawlinson, Can. Ins. W. As., vol. ii. pl. 9, col. ni. ll. 7-9. Fr. Lenormant, Choix de Tertes Cunciformes, p. 13); for a case of property left undivided after the death of the father during the time of the New Chaldwan Empire, cf. Kohler-Peiser, Aus dem Bubylonischen Rechtsleben, vol. iii. pp. 11, 899.

This is, at least in the main, the interpretation which Meissner, Beiträge, etc., p. 146, has proposed of this original expression.

would henceforth refrain from all quarrelling on the subject, and that they would never make a complaint one against the other.1 By dint of these continual redistributions from one generation to another, the largest fortunes soon became dispersed: the individual shares became smaller and smaller, and scarcely sufficed to keep a family, so that the slightest reverse obliged the possessor to have recourse to usurers. The Chaldmans, like the Egyptians, were unacquainted with the use of money, but from the earliest times the employment of precious metals for purposes of exchange was practised among them to an enormous extent.2 Though copper and gold were both used, silver was the principal medium in these transactions, and formed the standard value of all purchaseable objects. It was never cut into flat rings or twists of wire, as was the case with the Egyptian "tabnu;" it was melted into small unstamped ingots, which were passed from hand to hand by weight, being tested in the scales at each transaction.4 "To weigh" was in the ordinary language the equivalent for "payment in metal," whereas "to measure" denoted that the payment was in grain.5 The ingots for exchange were. therefore, designated by the name of the weights to which they corresponded. The lowest unit was a shekel, weighing on an average nearly half an ounce. sixty shekels making a mina, and sixty minas a talent. It is a question whether the Chaldwans possessed in early times, as did the Assyrians of a later period, two kinds of shekels and minas, one heavy and the other light.6 Whether the loan were in metal, grain, or any other substance, the interest was very high.7 A very ancient law fixed it in certain cases at twelve drachmas

<sup>&</sup>lt;sup>1</sup> Milessia, Beitrüge zum althabylonischen Privatricht, p. 16; cf. Acts, Nos. 101-111, where the whole procedure followed in such a case is illustrated by the examples themselves which have come down to us.

<sup>&</sup>lt;sup>2</sup> Questions relating to this use of precious metals have been summarized by Fig. Lenormant, I i Monnaie dans l'Antiquité, vol. i. pp. 110-122. See Rawlinson, Cun. Ins. W. As., vol. in 'pl. 41, il. 15–30, where the equivalent of a field is given in various objects, i.g. charlots, asses, bulls, stuffs, etc., whose value in silver is inserrhed in front of each article (Optr R1-M) nant, Incum ats juridgales, etc., pp. 116-119, 122, 124-134; Bilania, Babylonische Kudurru-Inschriften, in the Beiteige zur 1-syriologie, vol. in, pp. 121-127, 151, 152)

<sup>&</sup>quot; See what is said of these Egyptian metal "taban" on pp. 323-326 of this volume.

If the primitive meaning of the all organs by which the shekel is represented in the inscriptions is indeed that of the "more-head" "globe," as Lenormant believes, we may conclude that the ingots used by the Chaldreans were usually of the ovoid, slightly flattened shape of the early Lydian on (F). Lanormany, La Monacie dans Cantiquite, vol. i. pp. 112, 113).

<sup>&</sup>quot;He weights silver, he measures grain" (RAMENSON, Caus. Ins. W. As., vol. ii. pl. 13, c.) ii. ll. 14, 15; of Offiret-Menant, Documents juridiques, etc., p. 12; Fr. Lendouner, Links Accordings, vol. ii. p. 2).

<sup>&</sup>lt;sup>6</sup> Cf. for all the questions raised by the double system of weights in use by the Assyrians, and he weights in general, with their equivalents, in our own money, O(r) n), L'Halon des mesnies issuriennes fixe par les textes cutréjornes, p. 69, et seq , and the observations of Lehmann in M(1888) n, Pedrüje, etc., pp. 95-101.

We find several different examples, during the Second Chaldwan Empire, of an exchange of corn for provisions and liquids (Pristin, *Babylonische Verträpe*, pp. 76-79), or of brams for dates (id., b 207, 305, 306). As a fact, exchange has never completely died out in these regions, and at the

per mina, per annum—that is to say, at twenty per cent.1—and more recent texts show us that, when raised to twenty-five per cent., it did not appear to them abhormal.2

The commerce of the chief cities was almost entirely concentrated in the temples. The large quantities of metals and coreals constantly brought to the god, either as part of the fixed temple revenue, or as daily offerings, accumulated so rapidly, that they would have overflowed the storehouses. had not a means been devised of utilizing them quickly: the priests treated them as articles of commerce and made a profit out of them.8 Every bargain necessitated the calling in of a public scribe.4 The bill, drawn up before witnesses on a clay tablet, enumerated the sums paid out, the names of the parties, the rate per cent., the date of repayment, and sometimes a penal clause in the event of fraud or insolvency: the tablet remained in the possession of the creditor until the debt had been completely discharged. The borrower often gave as a pledge either slaves, a field, or a house,5 or certain of his friends would pledge on his behalf their own personal fortune; 6 at times he would pay by the labour of his own hands the interest which he would otherwise have been unable to meet, and the stipulation was previously made in the contract of the number of days of corvée which he should periodically fulfil for his creditor.7 If, in spite of all this, the debtor was unable to procure the necessary funds to meet his engagements, the principal became augmented by a fixed sum-for instance, one-third-and continued to increase present day, in Chaldwa, as in Egypt, corn is used in many cases either to pay Government taxes or

present day, in Chaldæa, as in Egypt, corn is used in many cuses either to pay Government taxes or to discharge commercial debts.

<sup>1</sup> The old Sumero-Assyrian text published in Rawlinson, Cun. Ins. W. As., vol. ii. pl. 12, col. i. ll. 20, 21; cf. Opplet-Mexant, Documents juridiques, etc., pp. 19, 23; Pristin, Babyl. Vertrüge, etc., p. 227. On the balls published by Milssner, Beitrüge, etc., 21-29, mention is made of the interest to be paid with the capital without specifying the amount.

<sup>2</sup> RAWLINSON, Cun. Ins. W. As., vol. iii. pl. 47, No. 9; cf. Opper-Manant, Documents juridiques, etc., 193-195. The documents are Assyrian, and belong to the reign of Assurbanipal.

<sup>3</sup> Meissner, Beiträge, etc., p. 819. It was to the god himself. Shamash, for example—that the loan mas supposed to be made, and it is to him that the contracts stipulate that the capital and interest shall be paid. It is curious to find among the most successful money-lenders several processes consecrated to the sun-god (Meissner, Beiträge, etc., p. 8). Cf. pp. 678, 679 of the present vol.

\* The documents relating to these transactions were first studied by Oppler, Les Inscriptions commerciales on caracteres canciformes, in the Revue Orientale et Americaine, 1st series, vol. vi. pp. 331-337; the different kinds of notes relating to those transactions are summarized by Fr. Landemani, La Monnaie dans l'Antiquité, vol. i. p. 113, et seq.

Bawlinson, Can. Ins. W. As., vol. ii. pl. 13, col. i. Il. 27-29; cf. Opplet-Minant, Documents juridiques, etc., p. 15; Fr. Landrent, Études Accadiennes, vol. iii. p. 42; Meisnell, Beitrüge, etc., p. 9. Easy credit was allowed on the security of slaves (Prisia, Behyl. Vertrage, pp. 111-117), on fields (Opplet-Minant), Documents juridiques, pp. 155-157, 184, 185, 231-236; Prisia, Babyl. Verträge, pp. 110-113, 164, 165), on a house (10., ibid., pp. 4-7, 10-13, 42, 43, 72-75); in other cases jewelogold (10., ibid., pp. 130, 131, 280, 281), or a charge on the temple revenues (In., ibid., pp. 158-161, 292, 293), served as a pledge to a creditor.

We see, for example, a father going bail for his son (Opperat-Menant, Mocuments juridiques, etc., pp. 260-262).

e 7 We find in a document of a recent period a clause imposing two days of work on the debter (Oppert-Mleant, Documents juridiques, etc., pp. 266-268).

at this rate until the total value of the amount reached that of the security .1 the slave, the field, or the house then ceased to belong to their former master, subject to a right of redemption, of which he was rarely able to avail himself for lack of means.2 The small tradesman or free workman, who by some accident had become involved in debt, seldom escaped this progressive impoverishment except by strenuous efforts and incessant labour. Foreign commerce, it is true, entailed considerable risk, but the chances of acquiring wealth were so great that many individuals launched upon it in preference to more sure but less lucrative undertakings. They would set off alone or in companies for Elam or the northern regions, for Syria, or even for so distant a country as Egypt,3 and they would bring back in their catavans all that was accounted precious in those lands. Overland routes were not free from dangers; not only were nomad tribes and professional bandits constantly hovering round the traveller, and obliging him to exercise ceaseless vigilance, but the inhabitants of the villages through which he passed, the local lords and the kings of the countries which he traversed, had no scruple in levying blackmail upon him in obliging him to pay dearly for right of way through their maches or territory. There were less risks in choosing a sea route: the Euphrates on one side, the Tigris, the Ulaî, and the Uknu on the other, ian through a country peopled with a rich industrial population, among whom Chalda in merchandise was easily and profitably sold or exchanged for commodities which would command a good price at the end of the voyage.5 The vessels genetally were keleks or "kufas," but the latter were of immense size. Several

It is easy to threse, from the contracts of the New Assyrian or Bubylonian Empire, how in this mainer the original sum lent became doubled (Original Minner), Docume its puriliques pp. 186-187) and trobled (In., dud., pp. 10% et seq., 187-188), generally the interest accumulate Italian was quadrupled (In., dud., pp. 181, 182, 226-228, 252-254, 259, 240, 247, 248), after which, no doubt, the secrifix was taken by the credit of They probably edealated that the capital and composition for the person or object given is a security

<sup>\* (1</sup> what is said of the commerce of Uru, pp. 613-616 of the present work... A proper name, Shamsin, found on a contract of the time of the first Babylonian dynasty, so we that there were relations between Psypt and Chaldra it it is correct to translate it by "The Layltim" is Merman believes (Best app. etc., pp. 21, 107).

We have no information it in Babylonian sources relating to the state of the reads in large dimers which increliants encountered in foreign lands—the F spitian documents path supply what is here lacking. The "instructions" contained in the Siller Pappyros, No 11, has will at well the inscription of the traveller (playing 16-8), and the Identures of Sinahit (llagon of Masters I Centes populatives de l'Egypte aucunne 2nd edit, pp. 100, 100) allude to the insecurity of the 1 is in Sying, by the very care with which the hero relates all the prevaitions which here the first tection. These two documents are of the NII or Allieb dynasty—that is to say, entempered with the kings of Uru and with Code?

<sup>\*</sup> For the maxime commerce of the Chaldem cities, of what is said on pp 61 + 616 of the creent volume.

individuals, as a rule, would club together to hire one of these boats and freight it with a suitable cargo.¹ The body of the boat was very light, being made of osier or witlow covered with skins sewn together; a layer of straw was spread on the bottom, on which were piled the bales or chests, which were again protected by a rough thatch of straw. The crew was composed of two oarsmen at least, and sometimes a few donkeys: the merchants then pursued their way up stream till they had disposed of their cargo, and taken in a sufficient freight for their return voyage.² The dangers, though apparently not so great as those by the land route, were not the less real. The boat was liable to sink or run aground near the bank, the dwellers in the neighbourhood of the river might intercept it and pillage its contents, a war might break out between two contiguous kingdoms and suspend all commerce: the merchants' career continually wacillated between servitude, death, and fortune.

Business carried on at home in the towas was soldom the means of enriching a man, and sometimes scarcely afforded him a means of livelihood. Rent was high for those who had not a house of their own; the least they could expect to pay was half a silver shekel per annum, but the average price was a whole shekel. On taking possession they paid a deposit which sometimes amounted to ofe-third of the whole sum, the remainder being due at the end of the year. The leases lasted, as a rule, merely a twelvemonth, though sometimes they were extended for terms of greater length, such as two, three, or even eight years. The cost of repairs and of keeping the house in good condition fell usually upon the lessee, who was also allowed to build upon the land he had leased, in which case it was declared free of all charges for a period of about ten years, but the house, and, as a rule, all he had built, then reverted to the landlord.3 Most possessors of shops made their own goods for sale, assisted by slaves or free apprentices. Every workman taught his own trade to his children, and these in their turn would instruct theirs; families which had an hereditary profession, or from generation to generation had gathered bands of workmen about them, formed themselves into various guilds, or, to use the customary term, into tribes, governed by chiefs and following specified customs. A workman belonged to the tribe of the weavers, or of the blacksmiths, or of the corn-merchants, and the description of an individual would not

We find in Siras-mairr, Die Bubylonischen Inschriften in Museum zu Lierrpool (in the Actor du VI Congres International des thientalistes, 2nd part, sect. i. p. 575, No. 28, and pls. xxvn., xxvin.), a lit of prophe who had hired a boat. The payment demanded was something considerable; the only contract which I know of existing for such a transaction is of the time of Darius I., and exacts a silver shokel per day for the hire of boat and crow (Prisen, Bubyl. Verträge, pp. 108-111, 273).

<sup>.2</sup> These are the vessels seen and described by Herodotus (i. 194). Very similar ones are still in use on the Tigris (LANARD, Ninerch and its Remains, I. ch. xiii., and H. ch. v).

Meissner, Betträge zum altbabylonischen Privatrecht, pp. 71, 72

have been considered as sufficiently exact, if the designation of his tribe were not inserted after his name in addition to his paternal affiliation.1 The organization was like that of Egypt, but more fully developed.2 The various trades, moreover, were almost the same among the two peoples, the exceptions being such as are readily accounted for by the differences in the nature of the soil and physical constitution of the respective countries. We do not meet on the banks of the Euphrates with those corporations of stone-cutters and marble workers which were so numerous in the valley of the Nile. The vast Chaldrean plain, in the absence of mountains or accessible quarries, would have furnished no occupation for them: the Chaldwans had to go a long way in quest of the small quantities of limestone, alabaster, or diorite which they required, and which they reserved only for details of architectural decoration for which a small number of artisans and sculptors were amply sufficient. The manufacture of bricks, on the other hand, made great progress; the crude bricks were larger than those of Egypt, and they were more enduring, composed of finer clay and better executed; the manufacture of burnt brick too was carried to a degree of perfection to which Memphis or Thebes never attained. An'ancient legend ascribes the invention of the bricks, and consequently the construction of the earliest cities, jointly to Sin, the eldest son of Bel, and Ninib his brother:8 this event was said to have taken place in May-June, and from that time forward the third month of the year, over which the twins presided, was called, Murga in Sumerian, Simanu in the Semitic speech, the month of brick.4 This was the season which was especially devoted to the processes of their manufacture: the flood in the rivers, which was very great in the preceding months, then began to subside, and the clay which was deposited by the waters during the weeks of overflow, washel and refined as it was, lent itself readily to the operation. The sun, moreover, gave forth sufficient heat to dry the clay blocks in a uniform and gradual manner: later, in July and August, they would crack under the ardour of his rays, and become converted externally

<sup>&</sup>lt;sup>1</sup> The existence of these corporations or tribes is proved, at Babylon, for instance, by the documents of the Second Chaldrean Empire, which almost always firmush the name of the tribe together with the affiliation of the individuals engaged in any legal claims. This fact was pointed our by thereir, Babylone et less Babylonicus (in the Encyclopédic des Gens du Monde, 2nd edit, vol. i. p. 658), in which the meaning "caste" was suggested; cf. Les Tablettes juridiques de Babylone, in the Journal Asiatique, vol., xv. 1880, pp. 513, 514.

<sup>2</sup> On the corporations and handicraftsmen in Egypt, see pp. 310, 311 of the present work

<sup>&</sup>lt;sup>2</sup> The legendary origin and the manufacture of bricks have been fully treated by Fig. LENORMANT, Less Origines de l'Histoire, vol. i. p. 141, et seq.

These names have been taken from a tablet in the British Museum, which was first published by Enwix Norms, Assyrian Dictionary, part 1, p. 50; afterwards by Drilizsin, Assyriache Less stucke, "ad edit., p. 70, No. 3. The proof that Smann, the Siwan of the Jews, was the month divoted to the manufacture of bricks, was first met with in the inscription called "the Barrels" or "Cares" of argon, which was first examined by Opprax, Expedition scientifique on Mesopolamic, vol. 1, pp. 353, '6, and Les Inscriptions de Dour-Sarkayan, in Placer, Nance, vol. it, p. 290.

into a friable mass, while their interior would remain too moist to allow them to be prudently used in carefully built structures. The work of brick-making was inaugurated with festivals and sacrifices to Sin, Merodach, Nebo, and all the deities who were concerned in the art of building: further religious ceremonies were observed at intervals during the month to sanctify the progress of the work. The manufacture did not cease on the last day of the month, but was continued with more or less activity, according to the heat of the sun, and the importance of the orders received, until the return of the inundation: but the bricks intended for public buildings, temples, or palaces, could not be made outside a prescribed limit of time.1 The shades of colour produced naturally in the process of burning-red or yellow, grey or brown-were not pleasant to the eye, and they were accustomed, therefore, to coat the bricks with an attractive enamel which preserved them from the disintegrating effects of sun and rain.2 The paste was laid on the edges or sides while the brick was in a crude state, and was incorporated with it by vitrification in the heat of the kiln. The process was known from an early date in Egypt, but was rarely employed there in the decoration of buildings,3 while in Chaldaca the use of such enamelled plaques was common. The substructures of palaces and the exterior walls of temples were left unadorned, but the shrines which crowned the "ziggurat," the reception-halls, and the headings of doors were covered with these many-coloured tiles. Fragments of them are found to-day in the ruins of the cities, and the analysis of these pieces shows the marvellous skill of the ancient workers in enamel; the shades of colour are pure and pleasant to the eye, while the material is so evenly put on and so solid, that neither centuries of burial in a sodden soil, nor the wear and tear of transport, nor the exposure to the damp of our museums, have succeeded in diminishing their brilliance and freshness.1

To get a clear idea of the industrial operations of the country, it would be necessary to see the various corporations at their work, as we are able to do, in the case of Egypt in the scenes of the mastabas of Saqqara, or of the tock-chambers of Beni-Hasan. The manufacture of stone implements gave

<sup>&</sup>lt;sup>1</sup> These facts are deduced from the passage in the "Barrel Inscription," II, 57-61, in which Sargon, King of Assyria, gives an account of the founding of the city of Dur-Shariukin.

In regard to enamelled brick, and the part it played in Chaldrean decoration, see Placor-Chicalz, Hi toire de l'Art dans l'Antiquité, vol. ii. p. 295, et seq.

The only encent example known would be the sepulchral chamber of the step-pyramid of Saqqara, if, as I believe, the enamelled bricks which case it date back, in part, at least, to the Memphite empire; see p. 213, note 1, of the present work.

<sup>\*</sup> Taylor found numerous fragments of these, most of them blue in colour, at Mucheir, in the rums of Uru (Notes on the Ruins of Muqeyer, in the Journ. Royal Asiat. Noc., vol. xv. p. 262); Lottus (Travels and Researches in Chaldza and Susiana, p. 185) brought to light as many in the ruins of Truk. It is possible that these fragments are to be attributed, not to the early structures, but to the works of restoration undertaken in these temples by the kings of the Second Chaldzan Empire

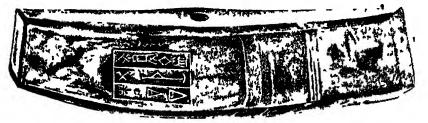

considerable employment, and the equipment of the dead in the tombs of Uiu would have been a matter of small moment, if we were to exclude its flint implements, its knives, cleavers, scrapers, addes, axes, and hammers. The

cutting of these objects is bold, and the final touches show skill, but we rarely meet with that purity of contour and intensity of polish which distinguish similar objects among Western peoples. A few examples, it is true, are of fairly artistic shape, and bear engraved

CHAIDIAN SIONI INPLUMENTS

inscriptions: one of these, a flint hummer of beautiful form, belonged to a god, probably Rumman, and seems to have come from a temple in which one of its owners had deposited it.' It is an exception, and a remarkable ex-

CHAILTAN ST AT HAMMER TEAPING AN INSCRILLION !

ception. Stone was the material of the implements of the poor—implements which were coarse in shape, and cost little: if much care were given to their execution, they would come to be so costly that no one would buy them, or, it sold for a moderate sum, the seller would obtain no profit from the transaction. Beyond a certain price, it was more advantageous to purchase metal implements.

of copper in the early ages, afterwards of bronze, and lastly of iron. Among the metal-founders and smiths all kinds of examples of these were to be found -axes of an elegant and graceful design, hammers and knives, as well as culinary

and domestic utonsils, cups, cauldfons, dishes, mountings of doors and coffers, statuettes of men, bulls, monsters, and

gods-which could be turned promptly into amulets by inscribing on them, or pronouncing

over them, some prayer or formula; ornaments, rings, earrings, bracelets, and ankle-rings; and lastly, weapons of all descriptions—arrow and lance heads, swords, daggers, and rounded

CHAID FAN IMPLEMENTS OF BRONZE 2

helmets with neck-piece or visor. Some of the metal objects manufactured by the Chaldwans attained large dimensions; for instance, the "brazon seas" which were set up before each sanctuary, either for the purpose of receiving the libations, or for the prescribed rites of purification. As is often the case among half-civilized peoples, the goldsmiths worked in the precious metals with much facility and skill. We have not succeeded up to the present in finding any of those golden images which the kings were accustomed to dedicate in the temples out of their own possessions, or the spoil obtained from the enemy; but a silver vase dedicated to Ningirsu by Entena, vicegerent

<sup>&</sup>lt;sup>1</sup> It was at first thought that all the objects found in the tombs of Uru were of bronze; Berthelot's an dyses (Introduction à l'Étude de la Chimie des Anciens et du Moyen Age. p. 225) have demonstrated that some at least are of pure copper.

<sup>&</sup>lt;sup>2</sup> Drawn by Faucher-Gudin, from RAWLINSON'S Five Great Monarchies, 2nd edit., vol. i. p. 97 On the right two axes, in the middle a hammer, on the left a knife, and below the head of a lance.

The axes, adve-heads, hammers, and knives come from the tombs of Uru, as well as part of the cups and domostic vessels (Taylor, Notes on the Ruins of Muquyer, pp. 271, 273). The mountings and the statuettes were found almost everywhere in the ruins at Lagush (Hitzer-Saizher, Roulles en Chalde, pp. 28, 29), or in the modern town of Afaji, mar Bagdad (A. dd Lor Lovanielle, Le Muse Appellon, vol. in. pl. ii.), or at Kalwadha (inscription in W. A. Inse., vol. i. pl. iv., No. 15). The originates and weapons come from either Uru or Uruk (Taylor, Notes on the Ruins of Muquyer, in the Journ. Asiat. Soc., vol. xv., pp. 272, 273; Notes on Abu-Shahrrin, ibid., p. 115), or from Lagash and its neighbourhood (Hitzer, La Lauce colossale d'Izdoubar, etc., in the Comptex Rendus de l'Acad. des Inse. et Belles-Lettres, 1893, vol. xvi. pp. 305–310). Helmets are seen on the remains of the "Vulture Stele" (see p. 606 of the present work); the Louvre possesses one of the same shape (A. dd Lova pleale, Notices des Antiquités Assyriennes, 3rd edit., p. 53, No. 223), which belonged to the Assyrien et och, and came from Khorsaba i. The bronze or copper lance descovered by Sarze at Tellon shows that the Chaldae as sinths were not afraid to undertake colossal objects; it is decounted with engraved designs of a remarkable clearness.

<sup>&</sup>lt;sup>1</sup> King Urmma of Lagash set up a "Great" and "Little Sca," and the word which he used "zu d." "abzu," is that which designates the cole-tial Ocean (see p. 537 of the present work), in whose bosom the world rests (Hever-Sarzer, Defrouvertes en Chable, pl. 2, No. 2, col. id. Il 5, 6, col. iv. Il. 6, 7, Opplier, Hear Texts très anciens, in the Comptes Rendus de Lacad, des Insc. et Belle-Lettres, vol. No. 1883, p. 75, ct seq.; Amiaud, Inscriptions of Telloh, in the Recards of the Past, 2nd senes, vol. ii. p. 66). The comparison of these "abzu," so common in ancient Chaldean temples with the "brazen sea" of the temple of Solomon, was made Sayco by in a note to the translation of Amaud (Records of the Past, 2nd series, vol. i. p. 65, note 1).

of Lagush, gives us some idea of this department of the temple turniture.1

stands upright on a small square bronzo pedestal with four feet. A piously expressed inscription runs round the neck, and the bowl of the vase is divided horizontally into two divisions, framed above and below by twisted cord-work. Four two-headed eagles, with outspread wings and tail, occupy the lower division; they are in the act of seizing with their ' claws two animals, placed back to back, represented in the act of walking: the intervals between the eagles are filled

up alternatively by two lions, two wild goats, and two stags. Above, and close to the rise of the neck, are disposed seven heifers lying down and all looking in the same direction: they are all engraved upon the flat metal, and are without relief or incrustation. The whole composition is harmoniously put together, the posture of the animals and their general form are well conceived and boldly rendered, but the details of the mane of the lions and the feathers

of the eagles are reproduced with a realism and attention to minute which belong to the infancy of , art. This single example of ancient goldsmiths' work would be sufficient to prove that the carly Chaldeans were not a whit behind the Egyptians in this handicraft, even if we had not the golden ornaments, the bracelets, car and tinger rings to judge from, with

which the tombs have furnished us in considerable numbers.3 Alongside the goldsmiths there must have been a whole army of lapidaries and gem-cutters occupied in the engraving of cylinders. Numerous and delicate operations were required to metamorphose a scrap of crude 10ck, marble, granite, agate, onyx, green and red jasper, crystal or lapis-lazuli, into one of those marvellous seals which are now found by the hundred scattered throughout the museums of Europe. They had to be rounded, reduced to the proper proportions, and polished, before the subject or legend could be engraved upon them with the burin. To drill a hole through them required great dexterity,

<sup>&</sup>lt;sup>2</sup> Drawn by Faucher-Gudin, from HEI/II SALZEC, Decouvertes on Chaldee, pl. 28, No. 6 The initial vignette of the present chapter (p. 703) gives a good idea of this kind of amulet.

TAYLOR, Notes on Abu-Shahrein, in the Journ. Asiat. Soc , vol. xv. p. 415:

<sup>4</sup> Drawn by Fauchor-Gudin, from HEUZLY-SALTIC, Decouverles on Chaldee, pl. 43.

and some of the lapidaries, from a dread of breaking the cylinder, either did not pierce it at all, or merely bored a shallow hole into each extremity to allow it to roll freely in its metallic mounting. The tools used in orgraving were similar to those employed at the present day, but of a rougher kind. The burin, which was often nothing more than a flint point, marked out the area of the design, and sketched out the figures; the saw was largely employed to cut away the depressions when these required no detailed handling; and lastly, the drill, either worked with the hand or in a kind of lathe, was made to indicate the joints and muscles of the individual by a series of round holes. The object thus summarily dealt with might be regarded as sufficiently worked for ordinary clients; but those who were willing to pay for them could obtain cylinders from which every mark of the tool had been adroitly removed, and where the beauty of the workmanship vied with the costliness of the material.1 The scal of Shargani, King of Agade, that of Bingani-shar-ali,2 and many others which have been picked up by chance in the excavations, are true bas-reliefs, reduced and condensed, so to speak, to the space of something like a square inch of surface, but conceived with an artistic ingenuity and executed with a boldness which modern engravers have rarely equalled and never surpassed. There are traces on them, it is true, of some of the defects which disfigured the latter work of the Assyrians-heaviness of form, exaggerated prominence of muscles and hardness of outline-but there are also all the qualities which distinguish an original and forcible art.

The countries of the Euphrates were renowned in classic times for the beauty of the embroidered and painted stuffs which they manufactured.<sup>3</sup> Nothing has come down to us of these Babylonian tissues of which the Greek and Latin writers extolled the magnificence, but we may form some idea, from the statues and the figures engraved on cylinders, of what the weavers and embroiderers of this ancient time were capable. The loom which they made use of differed but slightly from the horizontal loom commonly employed in the Nile Valley, and everything tends to show that their plain linen cloths were of the kind represented in the swathings and fragments of clothing still to be found in the sepulchral chambers of Memphis and Thebes. The manufacture of fleecy woollen garments so much affected by men and women alike indicates a great

<sup>&</sup>lt;sup>1</sup> The numerous operations required in the manufacture of cylinders have been treated by Ménant, Recharakes our la Glyptique orientale, vol. i. p. 45, et seq.

<sup>&</sup>lt;sup>2</sup> The Shargani cylinder is reproduced on p. 601, that of Bingani on p. 582 of the present work.

<sup>3</sup> Plany, Hist. Nat., vii. 71: "Colores diversos pictura intexere Babylon maxime celebravit, et nomen imposuit." Most modern writers understand by tapestry what the ancients were accustomed to call needle embroidery or painting on stuffs: I can find no indication on the most ancient manuments of Chabkea or Egypt of the manufacturing of real tapestry.

dexterity. When once the threads of the woof had been stretched, those of the warp were attached to them by knots in as many parallel lines—at regular intervals—as there were rows of fringe to be displayed on the surface of the cloth, the loops thus formed being allowed to hang down in their respective places: sometimes these loops were retained just as they stood, sometimes they were cut and the ends frayed out so as to give the appearance of a shagey texture. Wost of these stuffs preserved their original white or creamy colour—especially

those woven at home by the women for the requirements of their own toilet, and for the ordinary uses of the household. The Chalda ans, however, like many other Asiatic peoples, had a strong preference for lively colours, and the

outdoor garments and gala attire of the rich were distinguished by a protusion of blue patterns on a red ground, or red upon blue, arranged in stripes, zegzigs, cheeks, and dots or cucles.<sup>1</sup> There must, therefore, have been as nach occupation for dyers as there was for weivers, and it is possible that the two operations were carried out by the same hands. We know nothing of the bakers, butchers, carriers, mason, and other artisans who supplied the necessities of the other they were doubtless able to make two ends meet and nothing more, and it we should succeed some day in obtaining information about them, we shall probably find that their condition was as miserable as that of their Egyptian contemporaries.<sup>4</sup> The course of their lives was monotonous enough, except when it was broken at prescribed intervals by the ordinary festivals in honour

of the gods of the city, or by the casual suspensions of work occasioned by the triumphant return of the king from some warlike expedition, or by his irauguration of a new temple. The gaiety of the people on such occasions was the more exuberant in proportion to the undisturbed monotony or misery of the days which preceded them. As soon, for instance, as Gudea had brought to completion Ininnu, the house of his patron Ningirsu, "he felt relieved from . the strain and washed his hands. For seven days, no grain was bruised in the quern, the maid was the equal of her mistress, the servant walked in the same rank as his master, the strong and the weak rested side by side in the city."1 The world seemed top-y-turvy as during the Roman Saturnalia; the classes mingled together, and the inferiors were probably accustomed to abuse the unusual licence which they momentarily enjoyed; when the festival was oversocial distinctions reasserted themselves, and each one fell back into his accustomed position. Life was not so pleasant in Chaldra as in Egypt. The innumerable promissory notes, the receipted accounts, the contracts of sale and purchase—these cunningly drawn up deeds which have been deciphered by the hundred-reveal to us a people greedy of gain, exacting, litigious, and almost exclusively absorbed by material concerns. The climate, too, variable and oppressive in summer and winter alike, imposed upon the Chaldean painful exactions, and obliged him to work with an energy of which the majority of Egyptians would not have felt themselves capable. The Chaldwan, suffering greater and more prolonged hardships, earned more doubtless, but was not on this account the happier. However lucrative his calling might be, it was not sufficiently so to supply him always with domestic necessities, and both tradespeople and operatives were obliged to run into debt to supplement their straitened means. When they had once fallen into the hands of the usurer, the exorbitant interest which they had to pay kept them a long time in his power. If when the bill fell due there was nothing to meet it, it had to be renewed under still more disastrous conditions; as the pledge given was usually the homestead, or the slave who assisted in the trade, or the garden which supplied food for the family, the mortgagor was reduced to the extreme of misery if he could not satisfy his creditors. This plague of usury was not, moreover, confined to the towns; it raged with equal violence in the country, and the farmers also became its victims.2

<sup>&</sup>lt;sup>2</sup> On the increase of the debt consequent upon failure to meet a bill, see pp. 750, 751 of the present work.

If, theoretically, the earth belonged to the gods, and under them to the kings, the latter had made, and continued daily to make, such large concessions of it to their vassals, that the greater part of their domains were always in the hands of the nobles or private individuals. These could dispose of their landed property at pleasure, farm it out, sell it or distribute it among their heirs and friends. They paid on account of it a tax which varied at different epochs, but which was always burthensome; but when they had once satisfied this exaction, and paid the dues which the temples might claim on behalf of the gods, neither the State nor any individual had the right to interfere in their administration of it, or put any restrictions upon them. Some probrietors cultivated their lands themselves-the poor by their own labour, the rich by the aid of some trustworthy slave whom they interested in the success of his farming by assigning him a certain percentage on the net return. Sometimes the lands were leased out in whole or in part to free peasants who relieved the proprietors of all the worry and risks of managing it themselves. A survey of the area of each state had been made at an early age, and the lots into which it had been divided were registered on clay tablets containing the name of the proprietor as well as those of his neighbours, together with such indications of the features of the land, dykes, canals, rivers, and buildings as would serve to define its boundaries; rough plans accompanied the description, and in the most complicated instances interpreted it to the eye.\(^1\) This survey was frequently repeated, and enabled the sovereign to arrange his scheme of taxation on a solid basis, and to calculate the product of it without material Gardens and groves of date-palms, together with large regions devoted to rough attempts at vegetable culture, were often to be met with, especially in the neighbourhood of towns; these paid their contributions to the State, as well as the owners' rent, in kind-in fruit, vegetables, and fresh or dried dates. The best soil was reserved for the growth of wheat and other cereals, and its extent was measured in terms of corn; corn was also the standard in which the revenue was reckoned both in public and private contracts.2 Such and such a field required about fifty litres of seed to the arma.3 Another needed sixty two or seventy-five according to the fertility of the land and its locality. Landed property was placed under the guardianship of the gods, and its

<sup>&</sup>lt;sup>4</sup> See the survey map of a vist property published by Father Schiff, Notes d'equi aplac, etc., in the Recard de Transac, vol. xvi. pp. 36, 37.

With regard to this mode of measuring they due of a field, which was also employed in Egypt (Masterio, I tudes I grationies, vol. n. pp. 235-238), see Orrent-Mexics, Documents pire liques de l'Assgree et de la Chaldee, p. 94; it is called in question by Delitzsch and his school (see, for the litest opinions, Bellelle, But ylonische Kudurru tuschriften, in the Beitrage zur Assgridone, vol. 11 pp. 130, 131).

latter in such case providing all the expenses of cultivation, on the understanding that he should receive two-thirds of the gross product. The tenant was obliged to administer the estate as a careful householder during the term of his lease: he was to maintain the buildings and implements in good repair, to see that the hedges were kept up, to keep the shadufs in working order, and to secure the good condition of the watercourses. He had rately enough slaves to manage the business with profit: those he had purchased were sufficient, with the aid of his wives and children, to carry on ordinary operations,

CHAID BAN FAIMING OFFRATIONS!

but when any pressure arose, especially at harvest-time, he had to seek elsewhere the additional labourers he required. The temples were the chief sources for the supply of these. The majority of the supplementary labourers were free men, who were hired out by their family, or engaged themselves for a fixed term, during which they were subject to a sort of slavery, the conditions of which were determined by law. The workman renounced his liberty for fifteen days, or a month, or for a whole year; he disposed, so to speak, of a portion of his life to the provisional master of his choice, and if he did not enter upon his work at the day agreed upon, or if he showed himself mactive in the duties assigned to him, he was liable to severe punishment. He received in exchange for his labour his food, lodging, and clothing; and it an accident should occur to him during the term of his service, the law granted him an

indemnity in proportion to the injury he had sustained. His average was from four to six shekels of silver per annum. He was also entitled by custom to another shekel in the form of a retaining fee, and he could claim his pay, which was given to him mostly in corn, in monthly instalments, if his agreement were for a considerable time, and daily if it were for a short period.

The mercenary never fell into the condition of the ordinary serf: he retained his rights as a man, and possessed in the person of the patron for whom he laboured, or whom he himself had selected, a defender of his

THE LARM OVEN 3

interests.<sup>3</sup> When he came to the end of his engage ment, he returned to his family, and resumed his ordinary occupation until the next occasion. Many of the tarmers in a small way earned thus, in a few weeks sufficient means to supplement—their—own

modest personal income. Others sought out more permanent occupations, and hired themselves out as regular farm-servants

The lands which neither the rise of the river nor the irrigation system could reach so as to render fit for agriculture, were reserved for the pasture of the flocks in the springtime, when they were covered with rich grass. The presence of hous in the neighbourhood, however, obliged the husbandmento take precautions for the safety of their flocks. They constructed provisional enclosures into which the animals were driven every evening, when the pastures were too far off to allow of the flocks being brought back to the sheepfold. The chase was a favourite pastime among them, and few days passed without the hunter's bringing back with him a young gazelle caught in a trap, or a hare killed by an arrow. These formed substantial additions to the larder, for the Chaldeans do not seem to have kept about them, as the Egyptians did, such tamed animals as cranes or herons, gazelles or deer: 4 they contented themselves with the useful species, oxen, asses, sheep, and goats. Some of the ancient monuments, cylinders, and clay tablets reproduce

very beautiful animal, with its grey glossy coat, and its lively and rapid action. If it is disturbed, it gives forth a cry, kicks up its heels, and dashes off: when at a safe distance. it stops, turns round, and faces its pursuer: as soon as he approaches, it starts off again, stops, and takes to its heels again, continuing this procedure as long as it is followed. The Chaldmans found it difficult to catch by the aid of dogs, but they could bring it down by arrows, or perhaps catch it alive by stratagem. A running noose was thrown round its neck, and two men held the ends of the ropes. The animal struggled, made a rush, and attempted to bite, but its efforts tended only to tighten the noose still more firmly, and it at

paroxysms, it became somewhat calmer, and allowed itself to be led. It was finally tamed, if not to the extent of becoming useful in agriculture, at least for the purposes of war: before the horse was known in Chaldea, it was used to draw the chariot. The original habitat of the horse was the great table-lands of Central Asia: it is doubtful whether it was brought suddenly into the region of the Tigrus and Euphrates by some barbaric invasion, or whether it was passed on from tribe to tribe, and thus gradually reached that country. It soon became acclimatized, and its cross-breeding with the ass led for centuries to the production of magnificent mules. The horse was known to the kings of Lagash, who used it in harness. The sovereigns of neighbouring cities were also acquainted with it, but it seems to have been employed solely by the upper classes of society, and never to have been generally used in the war-chariot or as a charger in cavalry operations.

The Chalda ans carried agriculture to a high degree of perfection, and succeeded in obtaining from the soil everything it could be made to yield. Their methods, transmitted in the first place to the Greeks, and afterwards to the Arabs, were perpetuated long after their civilization had disappeared, and were even practised by the people of Irak under the Abbasside Caliphs. Agricultural treatises on clay, which contained an account of these matters, were deposited in one or other of the sacred libraries in which the priests of each city were long accustomed to collect together documents from every source on which they could lay their hands. There were to be found in each of these collections a certain number of works which were unique, either because the authors were natives of the city, or because all copies of them had been destroyed in the course of centuries—the Epic of Gilgames, for instance, at Uruk; a history of the Creation, and of the battles of the gods

<sup>&</sup>lt;sup>1</sup> See Xinorinos, Anabasis, I. v. 2, from whom I take this description of the character of the animal The energy is now rare in this region, but it has not, as was believed, entirely disappeared, and several medern travellers have come across it (Lanaba, Ninerch and its Remains, vol. 1, pp. 323, 324).

<sup>&</sup>lt;sup>1</sup> This was, at least, the opinion of Mons. Hencey (Reconstruction partialle de la Stele da rol Lanaadon, dite Stele des Vautours, in the Comptes Rendus de l'Acad. des Insc. et Belles-Lettres, 1893, vol. xx. p. 265); the portion of the stele contaming the animals has been destroyed.

The "Nabata in Agriculture" of 1bn Wahshiyah contains an echo of these aneaut methods "It is possible that the method which is taught in them goes actually back, as far as the processes are concerned, to the most aneaut periods of A-syria; just as the Agrimensor's latini, so recent in regard to the editing of them, have precived for us flustoms and ceremonics which can be explained only by the Buhmanas' of India, and which are consequently associated with the early-stages of the Aryan acce" (E. Rlan, Memoire sur l'age du livre intitulé Agriculture Nabatéenne, p. 38). Gutschmid will sparcely allow the existence of anything of Babylonian origin in this work (Kleine-Schriften, vol. ii pp. 565-753).

with the monsters at Kutha: all of them had their special collections of hymns or psalms, religious and magical formulas, their lists of words and grammatical, phraseology, their glossaries and syllabaries, which enabled them to understand and translate texts drawn up in Sumerian, or to decipher those whose writing presented more than ordinary difficulty.1 In these libraries there was, we find, as in the inscriptions of Egypt, a complete literature, of which only some shattered fragments have come down to us. The little we are able to examine has produced upon our modern investigators a complex impression, in which astonishment rather than admiration contends with a sense of tediousness.4 There may be recognized here and there, among the wearisome successions of phrases, with their rugged proper names, episodes which seem something like a Chaldaan "Genesis" or "Ved1;" now and then a bold flight of fancy, a sudden exaltation of thought, or a felicitous expression, arrests the attention and holds it captive for a time. In the narrative of the adventures of Gilgames, for instance, there is a certain nobility of character, and the sequence of events, in their natural and marvellous develonment, are handled with gravity and freedom; if we sometimes cheounter enisodes which provoke a smile or excite our repugnance, we must take into account the rudeness of the age with which they deal, and remember that the men and gods of the later Homeric epic are not a whit behind the heroes of Babylonian story in coarseness. The recognition of divine omnipotence, and the keenly felt afflictions of the soul, awakened in the Chaldran psalmist feelings of adoration and penitence which still find, in spite of the differences of religion, an echo in our own hearts; and the unknown scribe, who related the story of the descent of Ishtar to the infernal regions, was able to express with a certain gloomy energy the miseries of the "Land without return," These instances are to be regarded, however, as exceptional: the bulk of Chaldwan literature seems nothing more than a heap of pretentious trash, in which even the best-equipped reader can set no meaning, or, if he can, it is of such a character as to seem unworthy of record. His judgment is natural in the circumstances, for the ancient East is not, like Greece and Italy, the dead of yesterday whose soul still hovers around

<sup>4</sup> For information on the temple libraries, set Savet. Bubylenian Literature, p. 9, et seq., who was inclined to think that they were accessible, like our own public libraries, to the bulk of the people. This has not been verified, and does not seem probable (Thir, Bubylonisch-Assyrische Geschichte, p. 582).

<sup>&</sup>lt;sup>2</sup> The sense of technismes predeminates, in the severe judgment of Gatschmid on the subject of der nicoterdrückenden Ode der ninevitischen Biedermaierpoesie aus Sardanapal's Bibliothek." (Neue Beiträge zur Geschichte des Allen Orients, p. 15, note) Enthusiasm, on the other hand, mark that of Hommel (Geschichte Babyloniens und Assyrien, p. 262, et seq.). Bezold (Kurzig fassler Usleiblich ober die Babylonisch-Assyrische Lateratur, p. 193) recommends a suspension of judgment until the Joetical texts have been completely explained and interpreted from a philological standpoint.

See the legend of Gilgames, pp. 575-587 of the present work; the "Descent of Ishtar," pp. 608-606, and the hymns and psalms, pp. 633-636, 614, 654-658, 682, 683.

us, and whose legacies constitute more than the half of our patrimony: on the contrary, it was buried soul and body, gods and cities, men and circumstances, ages ago, and even its heirs, in the lapse of years, have become extinct. In proportion as we are able to bring its civilization to light, we become more and more conscious that we have little or nothing in common with it. Its laws and customs, its methods of action and its modes of thought, are so far apart from those of the present day, that they seem to us to belong to a humanity utterly different from our own. The names of its deities do not appeal to our imagination like those of the Olympian cycle, and no traditional respect serves to do away with the sense of uncouthness which we experience from the jingle of syllables which enter into them. Its artists did not regard the world from the same point of view as we do, and its writers, drawing their inspiration from an entirely different source, made use of obsolete methods to express their feelings and co-ordinate their ideas. It thus happens that while we understand to a shade the classical language of the Greeks and Romans, and can read their works almost without effort. the great primitive literatures of the world, the Egyptian and Chaldann, have nothing to offer us for the most part but a sequence of problems to solve or of enigmas to unriddle with patience. How many phrases, how many words at which we stumble, require a painstaking analysis before we can make ourselves master of their meaning! And even when we have determined to our satisfaction their literal signification, what a number of excursions we must make in the domain of religious, ethical, and political history before we can compel them to render up to us their full import, or make them as intelligible to others as they are to ourselves! When so many commentaries are required to interpret the thought of an individual or a people, some difficulty must be experienced in estimating the value of the expression which they have given to it. Elements of beauty were certainly, and perhaps are still, within it; but in proportion as we clear away the subbish which encumbers it, the mass of glossaries necessary to interpret it fall in and bury it so as to stifle it afresh.

While the obstacles to our appreciation of Chaldwan literature are of such a serious character, we are much more at home in our efforts to estimate the extent and depth of their scientific knowledge. They were as well versed as the Egyptians, but not more, in arithmetic and geometry in as far as these had an application to the affairs of everyday life: the difference between the two peoples consisted chiefly in their respective numerical systems—the Egyptians employing almost exclusively the decimal system of notation, while the Chaldwans combined its use with the duodecimal. To express

the units, they made use of so many vertical "nails" placed one after, or above, each other, thus J, JJ, JJJ, W, etc.; tens were represented by bent brackets  $\langle , \langle \langle , , \langle \langle \langle , , \rangle \rangle \rangle$  up to 60; beyond this figure they had the choice of two-methods of notation: they could express the further tens by the continuous additions of brackets thus, 2000, or they could represent 50 by a vertical "nail," and add for every additional ten a bracket to the right of it, thus: 16 60, 166 70. The notation of a hundred was represented by the vertical. "nail" with a horizontal stroke to the right thus J-, and the number of hundreds by the symbols placed before this sign, thus []- 100, []]- 200, [][]-300, etc.: a thousand was written (]-, i.e. ten times one hundred, and the series of thousands by the combination of different notations which served to express units, tens, and hundreds. They subdivided the unit, moreover, into sixty equal parts, and each of these parts into sixty further, equal subdivisions, and this system of fractions was used in all kinds of quantitive measurements The fathom, the foot and its square, talents and bushels, the complete system of Chaldwan weights and measures, were based on the intimate alliance and parallel use of the decimal and duodecimal systems of notation. The sixtieth was more frequently employed than the hundredth when large quantities were in question: it was called a "soss," and ten sosses were equal to a "nor," while sixty ners were equivalent to a "sar;" the series, sosses, ners, and sars, being employed in all estimations of values. Years and measures of length were reckoned in sosses, while talents and bushels were measured in sosses and sars. The fact that these subdivisions were all divisible by 10 or 12, rendered calculations by means of them easy to the merchant and workmen as well as to the mathematical expert.1 The glimpses that we have been able to obtain up to the present of Chaldwan scientific methods indicate that they were on a low level, but they were sufficiently advanced to furnish practical rules for application in everyday affairs: helps to memory of different kinds, lists of figures with their names phonetically rendered in Sumerian and Semitic speech,2 tables of squares

<sup>2</sup> See the lists of numbers and their names in Sumerian and Assyrian in Fr. 1 (Nokatan), \* Index Accadicancs, vol. iii, pp. 225, 226; and in Pixcurs, The Akkadian Numerals, in the Proceedings of the Bibl. Arch. Soc., vol. iv., 1881-82, pp. 111-117

The mathematical knowledge of Chaldre ins and Assyrians, and their system of weights and measures, have been elucidated chiefly by Oppert in a long series of articles, of which the earliest deals with the Mesures de long ar chiefles Chaldrens (in the Bulletin Archado pape de eAthourum Français, 1856, pp. 33-36), and the most important with l'Italon des Mesures assyriances for par les toxies concessomes (in the Journ. Assatique, 1872, vol. xx. pp. 157-177, and 1874, vol. iv. pp. 417-186). The subject has called forth a considerable number of works (Fr. La sormant. Existing un Deur unt mathematique chaldren, etc., 1868) and discussions, in which Oppert, Leptus (In: Babylonisel-Asyrischen Langemasse nach der Tasel von Senkerch, 1877), and Aurès (Issai sur le System me reque Assyrien, in the Recueil de Travaux, vol. iii. p. 27, vol. iv. pp. 157-220, vol. v. pp. 159-156, vol. vi. pp. 8-15, 49-82, vol. viii. pp. 150-188, etc.) book part.

and cubes,1 and rudimentary formulas and figures for land-surveying, furnished sufficient instructions to enable any one to make complicated calculations in a ready manner, and to work out in figures, with tolerable acturacy, the superficial area of irregularly shaped plots of land. The Chaldwans could draw out, with a fair amount of exactness, plans of properties or of towns,2 and their ambition impelled them even to attempt to make maps of the world. The latter were, it is true, but rough sketches, in which mythological beliefs vitiated the information which merchants and soldiers had collected in their journeys. The earth was represented as a disk surrounded by the ocean stream: Chaldrea took up the greater part of it, and foreign countries did not appear in it at all, or held a position out in the cold at its extremities. Actual knowledge was woven in an extraordinary manner with mystic considerations, in which the virtues of numbers, their connections with the gods, and the application of geometrical diagrams to the prediction of the future, played an important part.3 We know what a brilliant fortune these speculations attained in after-years, and the firm hold they obtained for centuries over Western nations, as formerly over the East. It was not in arithmetic and geometry alone, moreover, that the Chaldarans were led away by such deceits: each branch of science in its turn was vitiated by them, and, indeed, it could hardly be otherwise when we come to consider the Chaldwan outlook upon the universe. Its operations, in their eyes, were not carried on under impersonal and unswerving laws, but by voluntary and rational agents, swayed by an inexorable fate against which they dared not rebel, but still free enough and powerful enough to avert by magic the decrees of destiny, or at least to retard their execution. From this conception of things each subordinate science was obliged to make its investigations in two perfectly distinct regions: it had at first to determine the material facts within its competence—such as the position of the stars, for instance, or the symptoms of a malady; it had then to discover the beings which revealed themselves through these material manifestations, their names and their characteristics. When once it had obtained this information, and could lay its hands upon them, it could compel them to work on its behalf: science was thus nothing else than the application of magic to a particular class of phenomena.

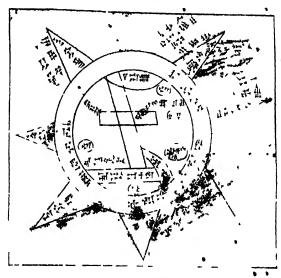

<sup>&</sup>lt;sup>1</sup> These came from Senkereh, see Lenormant, Textes Cunciformes, pp. 219-225, and Rawlinson, W. A. Insc., vol. iv. pl. 40, Nos. 1, 2.

<sup>&</sup>lt;sup>2</sup> Cf. the portion of a plan published by Pinches (On a Canciform Inscription relating to the Capture of Babylon, in the Transactions of the Bibl. Arch. Soc., vol. vii. p. 152), which is said to represent a part of Babylon named Tuma, near the "Great Gato of the Sun." Father Scheil discovered a survey with geometrical figures; cf. p. 761, note 1, of the present work.

<sup>&</sup>lt;sup>2</sup> Such was the fragment of the treatise, with figures, published by SAYCE, Babylonian Augury by means of Geometrical Figures, in the Transactions of the Bibl. Arch. Soc., vol. iv. pp. 302-314.

The number of astronomical facts with which the Chaldreans had made themselves acquainted was considerable. It was a question in ancient times whether they or the Egyptians had been the first to carry their investigations

into the infinite depths of celestial space, when it came to be a question as to which of the two peoples had made the greater progress in this branch of knowledge, all hesitation vanished, and the pre-eminence was accorded by the ancients to the priests of Babylon rither than to those of Heliopolis and Memphis 1 The Chalda ans had condueted astronomical observations from remote entiquity 2 Callisthenes

CHAILTAN MAP OF THE WILDS

collected and sent to his uncle Aristotle a number of these observations, of which the oldest had been made nineteen hundred and three years before his time—that is, about the middle of the twenty third century before our cra<sup>-1</sup> he could have transcribed many of a still culier date if the archives of Babylon had been fully accessible to him. The Chalda in priests had been accustomed from an early date to record on their clay tablets the aspect of the heavens and the charges which took place in them night after night, the appearance of the constellations, their computative brilliancy, the precise moments of their rising and setting and culmination, together with the more or less rapid movements of the

<sup>4</sup> The number 1963 is merely introduced by way of correction in the text of Simplified institution the De Calo of Aristotle, p. 503 a) to whom we are indebted, ifter P iphy v, to impount of the observations sent by Calbothenes to Aristotle

planets, and their motions towards or from one another. To their unaided eyes, sharpened by practice and favoured by the transparency of the air. many stars were visible, as to the Egyptians, which we can perceive only by the aid of the telescope. These thousands of brilliant bodies, scattered apparently at random over the face of the sky, moved, however, with perfect regularity, and the period between their departure from and their return to • the same point in the heavens was determined at an early date: their position could be predicted at any hour, their course in the firmament being traced so accurately that its various stages were marked out and indicated beforehand The moon, they discovered, had to complete two hundred and twenty-three revolutions of twenty-nine days and a half each, before it returned to the point from which it had set out. This period of its career being accomplished. it began a second of equal length, then a third, and so on, in an infinite series, during which it traversed the same celestial houses and repeated in them the same acts of its life; all the eclipses which it had undergone in one period would again afflict it in another, and would be manifest in the same places of the earth in the same order of time.\(^1\) Whether they ascribed these eclipses to some mechanical cause, or regarded them as so many w fortunate attacks made upon Sin by the seven,2 they recognized their periodical character, and they were acquainted with the system of the two hundred and twenty-three lunations by which their occurrence and duration could be predicted. Further observations encouraged the astronomers to endeavour to do for the sun what they had so successfully accomplished in regard to the moon. No long experience was needed to discover the fact that the majority of solar eclipses were followed some fourteen days and a half after by an eclipse of the moon; but they were unable to take sufficient advantage of this experience to predict with certainty the instant of a future eclipse of the sun, although they had been so struck with the connection of the two phenomena as to believe that they were in a position to announce it approximately.3 They were frequently deceived in their predictions, and more than one eclipse which they had promised did not take place at the time expected: 4 but their successful prognostications were sufficiently frequent

<sup>&</sup>lt;sup>1</sup> This period of two hundred and twenty-three lunations is that described by Ptolemy in the tourth book of his "Astronomy," in which he deals with the average motion of the moon. The Chaldaeius seem not to have been able to make a skilful use of it, for their books indicate the occurrence of lunar eclipses outside the predicted periods (RAWLISSON, W. A. Inse., vol. in. pl. 51, No. 7, and pl. 55, No. 1).

The mythological interpretation seems to have been still provalent in the treatise published by RAWLINSON, W. A. Insc., vol. 11, pl. 61, col. 11, 11, 15, 16; cf. LENGRINNT, Ins. Origina de l'Histoire, vol. 11, p. 523.

<sup>&</sup>lt;sup>2</sup> Tannery is of opinion that the Chaldwans must have predicted eclipses of the sun by means of the period of two hundred and twenty-three lunations, and shows by what a simple means they could have arrived at it (Poir Thistoire de la science Helline; de Tholès à Empédocle, pp. 57-60).

<sup>•</sup> An astronomer mentions, in the time of Assurbanipal, that on the 28th, 29th, and 30th of the month he prepared for the observation of an eclipse; but the sun continued brilliant, and the eclipse did not

777

to console them for their fulures, and to maintain the respect of the people and the rulers for their knowledge. Their years were vigue over a of three hundred and sixty days. The twelve equal months of which they we, composed bore names which were borrowel, on the one hand from events in civil life, such as "Simmu," from the making of back, and "Addaru, from the sowing of seed, and, on the other, from mythological occurrences whos origin is still obscure, such is "Nismu," from the iltu of Li und "Elul,", from a message of Ishtu! The adjustment of this year to istronomical demands was roughly carried out by the addition of a matherenty six years, which was called a second Adu, Elul, or Visin it or ling to the place in which it was intercalified. The neglect of the hours and minutes in their calculation of the length of the year became with them, is with the Layptians, a source of serious embarrissment, and we are still ignorant is to the means employed to meet the difficulty. The months had relations to the signs of the zodice, and the days composing them were made up I twelve doubt hours each. The Challe ins had invented two instruments both a them of a simple character to measure time, the elepsylva and the solucidock the little of which in liter times became the source The under the leavest to determine a number of ingle H Greek 'polos. to to which were in listensable in estimated a leulations such as the four on lind parts the martin of the place, the solstified in Lepuncetral opels and the elevation of the pole at the position of observation. The ensure ten t the sun-hal and lightly, it roted the poles also, is loubtly to be net it I back to a viv in a ne dat, but non-ct the texts ali als brught to be let makes menting of the employment of these instruments

With a self the state of the self to the self that the self that the self that the self the self that the self th

All these discoveries, which constitute in our eyes the scientific patrimony of the Chaldeans, were regarded by themselves as the least important results of their investigations. Did they not know, thanks to these investigations, that the stars shone for other purposes than to lighten up the nights-to-rule, in fact, the destinies of men and kings, and, in ruling that of kings, to determine the tortunes of empires? Their earliest astronomers, by their assiduous · contemplation of the nightly heavens, had come to the conclusion that the vicissitudes of the heavenly bodies were in fixed relations with mundanphenomena and events. If Mercury, for instance, displayed an unusual brilliancy at his rising, and his disk appeared as a two-edged sword, riches and abundance, due to the position of the luminous halo which surrounded him, would be scattered over Chaldara, while discords would cease therein. and justice would triumph over iniquity.2 The first observer who was struck by this coincidence noted it down; his successors confirmed his observations, and at length deduced, in the process of the years, from their accumulated knowledge, a general law. Henceforward, each time that Mercury assumed the same aspect it was of favourable augury, and kings and their subjects became the recipients of his bounty. As long as he maintained this appearance no foreign ruler could install himself in Chaldea, tyranny would be divided against itself, equity would prevail, and a strong monarch bear sway; while the landholders and the king would be confirmed in their privileges, and ob dience, together with tranquillity, would rule everywhere in the land, The number of these observations increased to such a degree that it was found necessary to classify them methodically to avoid confusion. Tables of them were drawn up, in which the reader could see at one and the same moment the aspect of the heavens on such and such a night and hour, and the corresponding events either then happening, or about to happen, in Chaldae. Syria, or some foreign land.3 If, for instance, the moon displayed the same appearance on the 1st and 27th of the month, Elam was threatened; but

A classification of astrological works, of which there is a collection in the British Museum, was made for the first time by Fa. Lendemant, Essai de Commentaire sur les fraquents cosmogeniques de Berove, pp. 25-10; the rest bave been examined and translated in part by Sayer, Astronomy and Astrological Re-Bolylonians, with Translations of the Tablets relating to these Subjects, in the Translations of the Bolylonians, with Translations of the Tablets relating to these Subjects, in the Translations of the Royal Arch. Sac., vol. in, 115-1331; and a summary of the results to which the Chaldwen astrologies are seed to moves given by Landemant, Landier in the Beinnes des Presuges chez les Chaldwens, pp. 1-15.

W. A. Ince, vol. iii. pl. 52, No. 1, II. 1-17; cf. SANCE, op. cit., pp. 193, 194, where the mane of the planet Gottam is rendered Jupiter, contrary to the opinion of Oppert (Tablettes Assyriences, in the Journal Asiatique, 1871, vol. viii. p. 445, and Un Annuaire Astronomique Babylonien, in the Journal Asiatique, 1890, vol. xvi. pp. 519, 520). Jenson (Die Kosmologie der Babylonier, pp. 131, 152, identified Guttam with Mars.

See the portents drawn from the conjunction of the sun and moon at different dates, favourable (W. A. Insc., vol. iii, pl. 58, No. 11, II, 9-14) or unfavourable to Akkad (ibid., vol. iii, pl. 58, No. 12, II/3-11), but favourable to Elam and Phomicia.

"if the sun, at his setting, appears double his usual size, with this of bluish rays, the King of Chaldra is runned". To the indicar is of the he wenty bodies, the Challe instadded the portents which could be deduced from atmospheric phenomena; 2 if it thander doen the 27th of Lammuz t' wheat harvest would be excellent and the produce of the cus magnificent but if this should occur six days later, that is, on the Indication floods and runs were to be apprehended in a short time togeth r with the death of the I may and the division of his empire? thus understood, was not merely the queen of sciences, it was the mistress of the world: taught secretly in the temples, its adepts—at least, those who had passed through the regular curriculum of study which it required—became almost a distinct class in society. The occupation was a lucritive one, and its accomplished professors had numerous rivals whose educational antecedents were unknown, but who excited the envy of the experts in their trading upon the credulity of the people. These quacks went about the country drawing up horoscopes, and arranging schemes of birthday prognostications, of which the majority were without any authentic warranty. The law sometimes took note of the fact that they were competing with the official experts, and interfered with their business: but if they happened to be exiled from one city, they found some neighbouring one ready to receive them.

Chaldea abounded with soothsayers and necromancers no less than with astrologers; she possessed no real school of medicine, such as we find in Egypt, in which were taught rational methods of diagnosing maladies and of curing them by the use of simples.1 The Chaldwans were content to confide the care of their bodies to sorcerers and exorcists, who were experts in the art of casting out demons and spirits, whose presence in a living being brought about those disorders to which humanity is prone. The facial expression of the patient during the crisis, the words which escaped from him in delirium, were, for these clever individuals, so many signs revealing the nature and sometimes the name of the enemy to be combated-the Fever-god, the Plague-god, the Headache-god.<sup>2</sup> Consultations and medical treatment were, therefore, religious offices, in which were involved purifications, offerings, and a whole vitual of mysterious words and gestures. The magician lighted a fire of herbs and sweetsmelling plants in front of his patient, and the clear flame arising from this put the spectres to flight and dispelled the malign influences, a prayer describing the enchantments and their effects being afterwards recited, "The baleful imprecation like a demon has fallen upon a man; -wail and pain have fallen upon him,-direful wail has fallen upon him,-the baleful imprecation, the spell, the pains in the head!—This man, the baleful imprecation slaughters

into Greek, and which became one of the chief classical texts of Graco-Roman Astrology (La Divination et la Science des Presages cluz les Chaldens, pp. 46, 47).

<sup>&</sup>lt;sup>1</sup> See, for an account of the practice of medicine in Egypt, pp. 214-220 of the pre-ent work. As late as the Persian period the physicians about the court of the Achainenides were Egyptians or Greeks, and not Babylonians; see in Herodotus (iii. 1) the story of the oculist sent by Amasis to Cyrus, and whose ill-will brought about the ruin of Egypt.

<sup>&</sup>lt;sup>2</sup> As to the malevolent genii, and the diseases which they could occasion by entering the bodies of men, see p. 6-3 of the present work; the same belief was entertained in Egypt (see p. 212 et seq.).

MEDICINE. 781

him like a sheep,-for his god has quitted his body-his goddess has withdrawn herself in displeasure from him, -- a wail of pain has spread itself as a garment upon him and has overtaken him!" The harm done by the magician, though terrible, could be repaired by the gods, and Merodach was moved to compassion betimes. Merodach east his eyes on the patient, Merodach entered into the house of his father Ea, saying: "My father, the baleful curse has fallen like a demon upon the man!" Twice he thus speaks, and then adds: "What" this man ought to do, I know not; how shall be be healed?" La replies to his son Merodach: "My son, what is there that I could add to thy knowledge? -Merodach, what is there that I could add to thy knowledge? That which I know, thou knowest it :--go then, my son, Merodach, --lead hum to the house of purification of the god who prepares remedies, - and break the spell that is upon him, draw away the charm which is upon him, -the ill which afflicts his body, --which he suffers by reason of the curse of his father,--or the curse of his mother,--or the curse of his eldest brother,--or by the curse of a murderess who is unknown to the man .-- The curse, may it be taken from him by the charm of Ea<sub>5</sub> -like a clove of garlie which is stripped skin by skin<sub>8</sub>—like a cluster of dates may it be cut off, his a bunch of flowers may it be uprooted! The spell, may heaven avert it, may the earth avert it!" The god him elf deigned to point out the remedy: the sick man was to take a clove of garlic, some dates, and a stalk bearing flowers, and was to throw them into the fire, bit by bit, repeating appropriate prayers at each stage of the operation. "In like manner as this garlie is peeled and thrown into the fire,—and the burning flame consumes it,--as it will never be planted in the vegetable garden, it will never draw moisture from the pond or from the ditch,—its root will never again spread in the earth, its stalk will not pierce the ground and behold the sun, -it will not serve as food for the gods or the king, -so may it remove the baleful curse, so may it loose the bond-of sickness, of sin, of shortcomings, of perversity, of crime! The sickness which is in my body, in my flesh, in my muscles, -like this garlie may it be stripped off,-and may the burning flame consume it in this day; -may the spell of the sorcerer be east out, that I may behold the light!" The ceremony could be prolonged at will: the sick person pulled to pieces the cluster of dates, the bunch of flowers, a fleece of wool, some goats' hair, a skein of dyed thread, and a bean, which were all in turn consumed in the fire. At each stage of the operation he repeated the formula, introducing into it one or two expressions characterizing the nature of the particular offering; as, for instance, " the dates will no more hang from their stalks, the leaves of the branch will never again be united to the tree, the wool and the hair will never again lie on the back of the animal on which they grew

and will never be used for weaving garments." 1 The use of magical words was often accompanied by remedies, which were for the most part both grotesque and disgusting in their composition: they comprised bitter or stinking woodshavings, raw meat, snake's flesh, wine and oil, the whole reduced to a pulp, or made into a sort of pill and swallowed on the chance of its bringing relief.2 The Egyptian physicians employed similar compounds, to which they attributed wonderful effects, but they made use of them in exceptional circumstances only. The medical authorities in Chaldaea recommended them before all others, and their very strangeness reassured the patient as to their efficacy: they filled the possessing spirits with disgust, and became a means of relief owing to the invincible horror with which they inspired the persecuting demons. The Chaldreans were not, however, ignorant of the natural virtues of herbs, and at times made use of them; 3 but they were not held in very high esteem, and the physicians preferred the prescriptions which pandered to the popular craving for the supernatural. Amulets further confirmed the effect produced by the recipes, and prevented the enemy, once cast out, from re-entering the body; these anniets were made of knots of cord, pierced shells, bronze or terra-cotta statuettes, and plaques fastened to the arms or worn round the neek. On each of the latter kind were roughly drawn the most terrible images that they could conceive, a shortened incantation was scrawled on its surface, or it was covered with extraordinary characters, which when the spirits perceived they at once took flight, and the possessor of the talisman escaped the threatened illness.1

However laughable, and at the same time deplorable, this hopeless medley of exact knowledge and gross superstition may appear to us at the present day, it was the means of bringing a prosperity to the cities of Chaldea which no amount of actual science would ever have produced. The neighbouring barbaric peoples were unbucd with the same ideas as the Chaldwans regarding the constitution of the world and the nature of the laws which governed it. They have delikewise in perpetual fear of those invisible beings whose changeable

<sup>&</sup>lt;sup>4</sup> The text of this easting of the spell was published in Rawitason, Cun. Ins. W. As , vol. iv. pl. 7, and was inscribed on the VI\* tablet of the series entitled "Shurbu." It was translated at length by Ir. Lenonicuit (Lludos Accadianus), vol. ii. pp. 225–238, vol. iii. pp. 83–93), Halevy (Documents reliquous de Lasqua et de la Bahalonie, pp. 15–144, 30–34). Jensen (De Incontententorium sumarieo assureo ii. et entre Zede heint far Kolfinschung, vol. i. pp. 279–322, vol. ii. pp. 15–61, 506–311, 446–120, and Zummein (Leatrup zur Kenntniss der Bahalonischen Reliquon, vol. i. p. 24–35, pl. vin.). An there series et me unt atems has been published and translated by Tarreyust, Die Assgreiche Beschwerter Maglu, 1895.

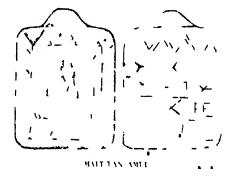

Examples of the error decreate formulas will be found in SANCI, An Amicut Babylonian Work on Medicine, in the Zeitschrift für Keilforschung, vol. ii. pp. 1-14. For the Egyptian recipes of the same kind, see what is said on p. 219 of the present work.

direction increased the distance between her capitals and the Mediterranean, and brought her armies further south. Asia would have practically ceased to exist, as far as Egypt was concerned, had not the repeated incursions of the Bedouin obliged her to make advances from time to time in that direction; still she crossed the frontier as seldom as possible, and recalled her troops as soon as they hadereduced the marauders to order: Ethiopia alone attracted her, and it was there that she firmly established her empire. The two great civilized peoples of the ancient world, therefore, had each their field of action clearly marked out, and neither of them had ever ventured into that of the other. There had been no lack of intercourse between them, and the encounter of their armies, if it ever really had taken place, had been accidental, had merely produced passing results, and up till then had terminated without bringing to either side a decisic advantage.

## APPENDIX.

## THE PHARAOHS OF THE ANCIENT AND MIDDLE EMPIRES

( 117-1-111 1770)

THE lists of the Pharaohs of the Memphite period app at to have been drawn up in much the same order as we now possess them, as cult, as the XH<sup>th</sup> dynasty, it is certain that the sequence was definitely fixed about the time of the XX<sup>th</sup> dynasty, since it was under this that the Canon of Turin was copied. The lists which have come down to us appear to follow two traditions, which differ completely in certain cases one has been preserved for us by the abbreviators of Manetho, while the other was the authority followed by the compilers of the tables of Abydos and Saqqua, is well as by the author of the Lurin Papyins.

There appear to have been in the first five dynastics accustin much not kings whose exact order and filtation were supposed to be well known to the compilers, but, at the sun-time there were others whose names were found on the monuments, but whose pisition with regard to their predicessors was indicated neither by he terical documents nor by popular romance. ther fore, in these two freditional lists as ares of sovereigns always eccupying the same position, and others novering around them, who have no decided place The hieroglyphic lists and the Royal Canon appear to have been chiefly concerned with the former, but the authorities followed by Minetho have studiously collected the names of the litter, and have interestated them in different places sometimes in the middle, but in stly if the end of the dynasty, where they form a kind of eight in itinin. The most stilking example of this arrangement is afforded us in the IVti dynists temporary monuments show that its kings formed a compact group to vineh are appended the first three sovereigns of the V-dynasty, always in the same Menkauf succeeded Kleifir Shopsiskit followed Minkium, Usnkit fellowed Shopsiskat, and so on to the end. The lists of Wanetho suppress Snopsiskal, and substitute four other individuals in his place, namely Ratoises, Bikheris, Scherkheres, Thamphthis, whose reigns must have ecenpred more than half a century, these four were doubtless ispirints to the throne, or bed kings belonging to the time between the  $\hat{\mathbf{I}}\mathbf{V}^{\mathrm{th}}$  and  $\hat{\mathbf{V}}^{\mathrm{t}}$  divisits show Manetho's authorities inscrited between the compact groups and any Khoops and his sons on the one hand, and of Usukit and his two red

786

or supposed brothers on the other, omitting Shopsiskal, and having no idea that Usukai was his immediate successor, with or without rivals to the throne

In a course of lectures given at the College de France (1893-95), I have commed at length the questions taised by a study of the various lists, and I may be able, perhaps, some day to publish the result of my researches: for the present I must confine myself merely to what is necessary to the elucidation of the present work, namely, the Manethonian tradition on the one hand, and the tradition of the monumental tables on the other. The text which I propose to follow for the latter, during the first five dynasties, is that of the second table of Abydos, the names placed between brackets [] are taken either from the table of Saqqara or from the Royal Canon of Turin. The numbers of the years, months, and days are those furnished by the list mentioned document.

From the VI<sup>n</sup> to the XII density, the lists of Minetho are at fully play give the origin and duration of the densities without furnishing as with the names of the kings. This blank is partially filled by the table of Arylos by the framents of the Turin Papyru, and by information supplied by the monuments. No such definitely establish disequence appears to have existed in this period, is for the preceding ones. The Herr hopolitand hynestes a guidely period, is for the Papyru and Later Memphate dynastics, the table of Abydos gives one series of Phariolis, while the Canon stopts a litterent one. After the close of the VI<sup>h</sup> dynasty and before the resiston of the IN<sup>th</sup>, there was, doubtless a period when several branches of the rivid runally claimed the supremier in Find an different parts of Lypt this is what we know to have taken place later between the NMII and the NMII have tradition of Abyd's hall perhaps, adopted one at the parameters.

788 APPENDIX.

contemporaneous dynasties, while the Turin Papyrus had chosen another; Manetho, on the other hand, had selected from among them, as representatives of the legitimate succession, the line reigning at Momphis which immediately followed the sovereigns of the VI<sup>th</sup> dynasty. The following table gives both the series known, as far as it is possible for the present to re-establish the order:—-

TABLE OF ABYDOS.	CANON OF TURIN.

The X1<sup>n</sup> (Theban) dynasty contains but a small number of kings according to the official lists. The tables on the monuments recognize only two, Nibkhrôun and Sônkhkarî, but the Turin Canon admits at least half a dozen. These differences probably arose from the fact that, the second Heracleopolitan dynasty having reigned at the same time as the earlier Theban princes, the tables on the monuments, while rejecting the Heracleopolitans, recognized as legitimate Pharaohs only those of the Theban kings who had ruled over the whole of Egypt, namely, the first and last of the series; the Canon, on the contrary, replaced the later Heracleopolitans by those among the contemporary Thebans who had assumed the royal titles. Whatever may have been the

cause of these combinations, we find the lists again harmonizing with the accession of the XII<sup>th</sup> (Theban) dynasty.

For the succeeding dynastics we possess merely the names enumerated on the frigments of the Turin Papvius several of which, however, are also found either in the royal charbor at Karrak, or on contemporary monuments. The order of the names is not dways certain at is, perhaps, best to take scribe the squence as we are able to gather it from the frigments of the Royal Papyius, without attempting to distinguish between this which I long to the XIII<sup>n</sup> and these which must be relegated to the fillowing dynastics.

About firty names still remain, but so mutilated and scattered over such small fragments of pipyrus, that their order is most uncertain. We possess monuments of about one fifth of these kings and the lengths of their regres, as far as we know them, all appear to have been short; we have no reason to doubt that they did it ally govern, and we can only hope that in time the progress of excavation will yield us records of them one after another. They below us down to the period of the my ision of the Shepherds, and it is possible that some among them may be found to be contemporaries of the XV<sup>th</sup> and XVI<sup>th</sup> dynastics.
